5000. Yes?—Even in that extreme case, I think, there are considerations which would lead me to say that I do, but, as a general rule, the case would not be so extreme. Taking the average case, I think it is the national interest to manifest the national capabilities.

5001. Turning to details, might I ask you whether on any given occasion, before deciding that you would apply for a Government grant in aid of representation on an exhibition, you have taken steps to find out whether exhibitors are likely to come forward?—Always.

5002. You have always found out that there will be exhibitors?—Always; I will not say to what extent, but that there was an opening for such an exhibition on the part of exhibitors in this country undoubtedly.

5003. You have felt their pulse?—Yes.

5004. When you have obtained the promise of a Government grant, and it had been decided to go in for a particular exhibition, have you found that manufacturers have come forward spontaneously and volunteered to exhibit?—In many cases.

5005. Or you have for the most part obtained exhibitors by inviting people to come forward?—In many cases we have done that. But alertness is not always a national characteristic, and we have had a large amount of work to do by notices, information, etc., in order to obtain exhibitors.

5006. Do you find that, generally speaking, the mercantile community in England is very alert on the subject of exhibitions?—My own reading of the situation is this—that very old-established houses, with a connection of their own, for which they have paid in forming it, are sometimes not disposed to do that which makes a highway for large numbers to come to the same terminus and share profits; and those houses have not always been too disposed to co-operate. I am in favour of the larger policy of making exhibitions, if they are to be useful at all, accessible to the general body of manufacturers and traders, large and small.

5007. I think the first exhibition which you helped to organise was the Antwerp Exhibition of 1894, was it not?—I think it was.

5008. And the last, the Milan Exhibition?—Yes.

5009. Did you find that there was any greater reluctance or any greater keenness in the case of Milan than there was in the case of Antwerp? Have people got tired of exhibiting since you first began to organise exhibitions?—I should say the feeling is much the same in both. I do not think the cases are quite parallel. Antwerp was not on the scale of Milan, and at that time perhaps the *entente cordiale* with Belgium was a little closer than (unfortunately, I think) it has been more recently.

5010. Have you found that the state of trade has much effect in influencing people to exhibit?—In the case of Milan, trade was so brisk, or was becoming so brisk, that manufacturers were occupied, and the time, for that reason, was even more inadequate than it otherwise would have been. Several exhibitors did say, "We are too busy to throw ourselves into it at this late hour."

5011. May I develop that, and put it to you that the brisker trade is the less need there is for exhibitions?—We know that trade moves in cycles, and you cannot keep it always brisk. Some attribute this to sun spots, but whatever it is—perhaps spots in men's minds—those things influence trade, whether we will or not, as does over-production, etc.

5012. With regard to the permanent organisation that you were indicating to the Committee, I think you said you would like to see different chairmen on different occasions?—I said I thought that the body, whatever it was, should elect its chairman. I think that is the best mode of selection; but if it were felt that the President or a high official of the Board of Trade should be the official chairman I should raise no objection to that; on the contrary, I should welcome such active co-operation. Still, I favour election as a principle.

5013. What would be the permanent mainspring of that committee? There would have to be somebody who would really do all the work, would there not?—Probably a standing executive committee with certain limited powers of action, and with its chairman either

elected or official, and probably, as Sir James Kitson suggested, with its permanent secretary.

5014. (*Mr. Harris.*) Following up that same point, you explained to the Chairman that the basis of the permanent organisation was to be Chambers of Commerce generally, I think?—I should rather put it in another way—that the basis should be commercial, and through the Chambers of Commerce.

5015. Could you, without having a Government or Departmental official, have that standing committee which you have just mentioned to Mr. Ramsay?—Do you mean standing alone?

5016. Yes?—I think it would be quite possible. The case of Brussels shows it, I think, on a small scale. Lord Curzon said: "I will trust the Chamber of Commerce to administer this small grant, and I should like to have in that case the personal services and assurance of Mr. Dredge and yourself in seeing that carried out." I think the same with the permanent Commission. The Government might say, "Very well; we will entrust you with these powers, subject to certain control and regulations."

5017. Then it would be no longer a committee of the Chamber of Commerce or of a series of Chambers of Commerce?—No.

5018. It would be almost a standing Royal Commission?—No, a standing Commercial Committee, which is a very different thing.

5019. A permanent Commission, then?—Yes, that is the best expression.

5020. That is your idea?—That is, I think, my idea.

5021. Would you mind telling us what produced the original appointment of the permanent committee of the London Chamber of Commerce for exhibitions? Do you remember?—We have a dozen standing committees. I do not know how the Exhibitions Committee originated, but probably from the time of the Antwerp Exhibition, and as a result of it. What was temporary then for Antwerp probably became the Exhibitions Committee, but I do not remember really that exact point.

5022. Do you happen to remember whether that committee has ever declined to take part in any exhibition?—Yes. May I say that it has always regarded them favourably, and, if it was not able to actively co-operate, we have always shown good will, published information, and helped as far as we could, and induced people, even if we did not appoint a Commission, to help the exhibition. We have done that in the case of the Jamestown Exhibition at the present time, and others I could mention. We did what we could in the case of the Jamestown Exhibition, but we did not participate. The same with the Dublin Exhibition and many others.

5023. With regard to Milan, we have been told that the British exhibits were scattered about in such a way that the whole thing was a fiasco, that space was wasted, and that effort was wasted; but I understand you to say something very different?—The word "fiasco" is absolutely inapplicable; it is a quite uncalled for reflection on the work which was done. That there was some distribution, which was rendered inevitable by the small time at our disposal, and the inability to erect our own pavilion, if we had thought proper, and so to aggregate our exhibit, is beyond question. But it was on a very small scale, and no fault of ours, but caused by the regulations or circumstances over which we had not control, and the alleged statement is a most exaggerated and unfounded description of the real state of affairs.

5024. On the whole, do you look upon Milan as a success, in spite of the fact which you stated—that our formidable competitor, Germany, did better in the higher awards?—Germany did slightly better. My answer is, I do, on the whole. I should just like to give one or two figures upon that point, as it has been mentioned. We got 3.34 per cent. of the awards made, and Germany was a portion of a decimal point higher, but we had most gold medals.

5025. (*Mr. Algernon Law.*) You say you were asked by Lord Curzon to undertake the formation of the Brussels Commission. Was that in an official letter or not?—Certainly in conversation, and, I believe, by an official letter. I have here the report of the Chamber for 1897, which contains these words:—"The Chamber received from the Foreign Office the compliment of being asked to form the British Commission for the Brussels International Exhibition, 1897, together with the suggestion that Sir Albert Rollit should be the president and Mr. Dredge the executive commissioner, both of which positions were accepted," and so on. I think there was also a further communication to that effect, but I would not be sure.

5026. With regard to the Milan surplus, you are going to return about half, and at the same time you have already apparently returned a proportion of the space charges; therefore, the actual surplus, if you had not paid those charges, would be still larger?—Yes.

5027. What would be the amount of the actual surplus if you had not paid the space charges?—It might have made a difference of another £500.

5028. Not more than that?—I am supposing that. We dare not deal with it too largely; we did just what we said we would if we could.

5029. With regard to the Brussels Exhibition of 1910, you have done no more than merely discuss it among yourselves, I understand; you have not entered into any pledge with regard to the participation of the London Chamber of Commerce?—No, not any pledge, but we have been ascertaining what is proposed, and so on, which takes a good deal of time, and we have resolved to help if needful. There is plenty of time, at any rate, in the case of this Brussels Exhibition.

5030. In forming the organisation to which the grant for Milan was eventually made, did you find any reluctance on the part of provincial manufacturers and provincial Chambers of Commerce to take part in the organisation?—No. I do not know that I have ever heard of any objection to join the Commission or any Committee or any other body, and, not overtly, of any objection to exhibitions; but I know that feeling exists to some extent.

5031. Or to the fact that the London Chamber of Commerce were taking the lead—because we have heard in evidence of such reluctance?—There is not a shadow of a pretext for any such suggestion. We were asked by Lord Curzon to move originally. We have received the thanks of the Government for doing so, and everybody has been most willing. When we have had a Commission we have had the Secretary of the Associated Chambers as one of the honorary secretaries.

5032. In connection with Milan we have certainly had it in evidence?—I never heard of it, and we had many representatives of the Chambers of Commerce on that Commission.

5033. With regard to the Paris Exhibition and your being placed on the Furniture Committee, did you object to that, and say you knew nothing about furniture?—No.

5034. Did you always attend the committee meetings?—Yes, generally. We had a good chairman in Sir George Birdwood, and I got to know something about it in the end, so it was educative.

5035. (*Mr. Wilson Fox.*) With regard to the length of interval which should take place between exhibitions, you said that there were certain exceptions which make frequent exhibitions difficult. Might I put one or two to you, as they have been put to us? I am now simply upon the question of the difficulty of any organisation getting up a fully representative British exhibit. Take, in the first place, the textiles. They have been shown from time to time, but the cotton manufacturers of Lancashire have themselves no personal interest in showing, because they sell their goods to merchants. They may show for patriotic reasons, and, though it will cost them a great deal of money to get up a representative exhibit for Lancashire, they will be prepared to do it occasionally. Still, their class of manufacture is such that they are not likely to be helped in their business by their goods being shown at any foreign capital. This is my question upon that: In the first place, you will not get Lancashire to help you to get up a representative exhibit if you show too often, and, secondly, if they do not pay for it your organisation will have to, and that will come very heavy on you. Taking that trade as an example, is that not one reason why we should not have exhibitions too often?—I agree to your first proposition, I do not disagree from the second, and I assent to the third. Generally, in that way, I agree.

5036. I do not want to raise unnecessary difficulties, and I am only putting to you some of the main ones that are put to us?—I think, if I may say so, that it

Sir A. K. Rollit.

18 April 1907.

is a very fair question, and I answer it in that way, by agreeing in general terms.

5037. There is another class of trades which might be prevented from showing too frequently, namely, those which cost a great deal for their transport, such as heavy machinery?—Yes, I understand.

5038. There, again, if the trades themselves were not willing to show, and we showed too often, the organisation, whatever it might be, would have to step in and contribute towards the expenses of the heavy-transport trades?—Or not do it.

5039. Or leave them out, you mean?—Yes.

5040. But then it would not be a really representative exhibition of the whole of British industry if we excepted certain trades?—No, it would not; but I take it the Commission would in all cases balance the considerations. They might render some assistance, full assistance, or no assistance, both generally and in the case of particular exhibits.

5041. Then, thirdly, there is a class, as we know, of people who have not got an export business, and do not want one, and who spend their money, sometimes very largely, on advertising at home?—Yes.

5042. So that that is a third illustration which I put with regard to the difficulties of holding exhibitions too often; or, alternately, if we do, we should have to contribute towards the expenses of those particular classes of industry in order to get them to join?—I agree.

5043. You have already told us—and I can quite understand it—of the difficulty of fixing on any particular period which you could lay down as a hard-and-fast rule, and of saying, "We shall not have an exhibition more than once in five years or ten years"?—I quite agree that if one came very closely following another, that would be one reason for not participating, but there would be cases in which you could not, I think, act solely on that reason.

5044. You would agree generally, would you not, that care must be exercised to see that we do not have these exhibitions got up too often, in case British manufacturers should get tired of them?—I quite agree on all grounds, and I should assume that a Commission so constituted would be men of judgment, discretion, and discrimination.

5045. If I may say so, I am not at all against a permanent organisation, but there is one danger, it seems to me, in a permanent organisation, and that is, that if we had this organisation, with its permanent secretary, they would be rather keen to get up exhibitions, or to participate in exhibitions whenever they turned up?—I agree this may be a danger, in a measure, but the Commission would control.

5046. You have mentioned the question of awards. I know nothing about the awards, because I have never been on a jury, but I should have thought that in some cases it must be rather difficult out at a foreign exhibition for the jury, unless they have very special knowledge, to say whether one particular class of goods will be better than another. Take the case of mustard: unless you have real experts in a case like mustard or jam, it would be very difficult for a jury with 20 samples before them to say who should get a gold medal, who should get the *grand prix*, and who should get a bronze medal?—Yes, it would. My answer to that is, it is very difficult sometimes to give a verdict, but twelve men have to do it; and equally we select as far as we can, though, of course, with fallible judgment, those we think will be best able to deal with such cases when they arise.

5047. Speaking for myself, I should much rather be called upon as a juryman to say whether a man has stolen a pair of trousers than to say whether Colman's mustard is better than somebody else's mustard?—Take the Customs laws of France; whether peas are grown in England or in France is determined by *expertise* and observation. That is very difficult—much more difficult than what you suggest.

5048. As a matter of fact—and I am only asking for information—do you get real experts upon a manufacture of that character?—Certainly. We get the best men we can, and I think the work has been very well done. When I tell you that each juror received only £25, just to defray expenses, and had to come and do a week's, or 10 days', or a fortnight's work, I think you will see they deserved well of their country.

5049. It has been said by one or two traders who have been here—with what truth I do not know—that there is a tendency on the part of juries to give the awards to large firms who have made their names, juries being influenced rather more by reputation than by the class of exhibit which those firms happen to show at that particular time?—I will turn the proposition round. Large firms do sometimes claim awards on the ground of reputation; that was resisted stoutly at Milan, and the awards were given, after that question was raised, according to the merits of the particular exhibits. It was contended, because we got a medal at Verona we ought to have a medal at Liège, and so on. Firms go down in reputation and in their work. That consideration was pointed out, and such cases were resisted.

5050. May I ask you one question about the expenses? I want to know whether you think that Government money should be spent on anything more than organisation in this country, perhaps in the cost of transport to the foreign capital, and in the cost of putting up the buildings, and possibly in the cost of the people who look after the buildings and guard them?—I have answered that question practically, but I prefer to answer it again. I think that some such lines of limitation would be perfectly admissible and perhaps fair—I am uncertain at the moment. My general position is that it is the national interest—not merely the individual exhibitor's interest, but the national interest—to show our national industries and progress and advancement in applications of modern science to industry, and the like, and that if we do not do that, everybody will suffer, because it will be thought that England's wares are not as good as they used to be, and so on. Therefore I think that it is a national matter, as well as an individual interest; but I think we must deal with it as men of business, and I agree that there are some general considerations which must be taken account of.

5051. Take as another instance the woollen and worsted trade; nobody down in Bradford wants to get up a collective exhibit, because the manufacturers there will get nothing out of it by showing?—I agree; it is so quite clearly.

5052. Would the central committee step in and say, "Now, look here, we must have a collective exhibit of woollens and worsteds in Paris, and if you get this up we will pay for it"?—I think they should do that, and I think a collective exhibit would be the cheapest and best way of dealing with the matter.

5053. Then another instance which you might put in the same category would be chemicals, would it not?—Undoubtedly. The more we show our chemicals and chemical products the better. You could not have found a more striking instance where we ought to exhibit.

5054. Of course, that is not a class of goods that would sell at an exhibition like pottery and glass, and therefore that requires consideration?—I think that is a matter for consideration. All these considerations are most important. If you have an adequate sum to deal with it, and reasonable time and Government sanction and good organisation, they would all be taken into account as a matter of course. But when you have to deal with things piecemeal to a certain extent, and under limited conditions, like everybody else in the world, you have to make the best of the materials you have and to do the best you can.

5055. My last questions relate to the organisation. In the first place, I understand that what you want is an organisation in this country for participation in exhibitions with some permanent element in it, so that we shall secure experience and continuity of policy?—Undoubtedly.

5056. Then we want an organisation sufficiently representative of commercial men, so that in no large section of the commercial community should there be jealousy?—Yes.

5057. You would agree, I suppose, that it should not only include the commercial element with that proviso, but that it should also include some independent men of well-known standing who would have no interest whatever in trade?—Some. It should include generalists and experts and specialists.

5058. Men who are well known, and who could not be said to be influenced by considerations towards one trade more than another?—I think that would be a valuable element, but not with too much of it, for social considerations or patronage.

5059. Then you would want a really good secretary?—Certainly.

5060. Now may I come to the exhibitions? We have heard complaints about the management of some of the exhibitions, and I hope you will not think for one moment that I am referring particularly to any of the exhibitions you have taken part in?—I am here to be examined; you may, of course, put anything to me you like, and I will try to answer to the best of my ability.

5061. I am taking the whole history of exhibitions for a number of years. We have had complaints that some of the traders have not had the civility which should be accorded them by the under officials. Who would you put in charge of the British section in a foreign capital? Would you put the class of man you put now—some distinguished gentleman of experience, whose social qualifications are sometimes more thought of than his business qualifications, perhaps; or, if not, what class of man would you put as controller of the exhibition?—I should not put anyone there for mere social considerations certainly. You want a man who has some knowledge of exhibitions generally and of commerce, and of men, and who would know how to deal with men. If I were to take the case of Milan, I think we had a good man in Mr. Cundall, who represented us there, and I think he had charge locally in the case of Brussels.

5062. Would you have a permanent man, do you think?—No, I do not think I should, because the language of the country in which the exhibition is held would be an important element and other circumstances, too.

5063. If you did not have a permanent man, probably he would not have had experience of the last exhibition?—That is so; but the language is so important. We selected Mr. Cundall because he knew Italian. I think that is a point of primary importance.

5064. It would not be possible, I suppose, to have a really high-salaried man as secretary of the organisation in London, and transfer him to manage the exhibition?—No. You want someone good at both ends both before the exhibition and when it is opened, and I think you would have to rely upon getting such men. I may say that I do not think there is any ground in any case I have heard of for charges of incivility or of incompetence, certainly not at Milan.

5065. I was not talking about the head man there, and I have not heard that about the Commissioner. The head representative of the Commission seems to me to be a very important person?—Yes, the chief representative in the foreign country individually is so.

5066. Because he has to look after so many of the social functions and amenities between foreign nations and ourselves, and he has also got to control all the business of the whole of our organisation?—Yes; but I do not think I should give primary importance to social considerations—although they would be one element.

5067. He is a difficult man to pick up from time to time, is he not?—Yes; but one has found them.

5068. Still you do not think you would have a permanent man of that sort?—We had a very good example of one in the gentleman you have at the Board of Trade now, in the Railway Department there—Sir Herbert Jekyll. That is the type of man you want, but he must have exhibition experience.

5069. Then about the under-staff. We have had some complaints from traders in respect of certain exhibitions that they cannot get attention paid to them, and that when they are put upon by the officials of the foreign country where the exhibition is taking place our people do not support them sufficiently, or that they do not get their space properly arranged. There have been complaints that our sections are under-staffed, and sometimes I have no doubt that being overworked they get rather short shrift from the under-officials?—I have not heard of such things in the case of Milan, but I should not be greatly surprised at it. The railway arrangements, terminally and in transit through Italy, broke down completely, through shortage of waggons and the like; and the confusion and delay were beyond complaint. I can quite imagine any man who was worth anything getting out of temper at times in dealing with such a state of affairs. But I do not think it so happened; at any rate I have not heard of it.

5070. I put this to you, that it would be rather a matter for the permanent commission to look after in the future, because these complaints we have had on that point are not infrequent, and they relate to all the exhibitions, including the large ones such as St. Louis and Paris?—I will accept that as a fact, of course. It ought to be prevented.

5071. (*Sir Swire Smith.*) There are just one or two points upon which perhaps you might make yourself a little clearer. With regard to the organisation, I suppose you would say that it is not wise that we should wait until an exhibition is about to be determined upon before we make that organisation?—Yes.

5072. In view of the possibility of exhibitions being started in any country, is it desirable that the organisation should be prepared beforehand?—What we ought to have is a sort of Standing Intelligence and Organisation Committee with regard to exhibitions.

5073. How would you form that Intelligence Committee?—I think that its basis, as I have said, should be commercial, that there should be the addition of some representation of Government departments, of experts, of specialists, and of men of general information and culture who would be able to assist. It should have a standing committee with its chairman and secretary when itself was not in session, and they should get information; and when there was an intention to participate, or a likelihood of participation, this Intelligence Committee should be called together to consider whether anything should be done, as to forming a Commission, etc.

5074. So that the sooner the organisation of this movement is begun the better in that sense?—I think so. But I do not mean an expensive department. I think the cost of such a committee would be trivial, and ought to be trivial.

5075. Practically the secretary could call the organisation together when necessary?—Yes—something like the Advisory Committee of the Board of Trade, on which some of us have served.

5076. (*Chairman.*) Who should appoint it—the Board of Trade?—No. I said something like that Advisory Committee in the shape of being honorary and not paid members and so forth.

5077. You do not get payment on the Advisory Committee of the Board of Trade?—That is so, and I said there should be no payment. I should say the men should take the position honorarily.

5078. How would they be appointed—by the Board of Trade?—No; that would be bureaucratic.

5079. Would they have to be appointed by election?—Yes, preferably by the Chambers of Commerce.

5080. (*Sir Swire Smith.*) I presume you would draw up your constitution to begin with, or the committee, say, might probably do it?—I think there would be no difficulty with regard to the Chambers of Commerce—and I say that should the basis—determining at a meeting the general constitution, and then conferring with the Board of Trade and arranging the system on which the Standing Committee should be formed and proceed.

5081. (*Mr. Harris.*) I rather gathered from one of your answers to me that you admitted the Government should take the first action in the matter?—Do you mean when an exhibition is approaching, or on the formation of an exhibition?

5082. You think this committee should have a commercial basis, but you have rather left it hanging in the air, and I want to get at who is to take the first step. (*Sir Swire Smith.*) That is just the point I want. Supposing an exhibition were likely to be held in any country, and that England were to be invited to take part in it or to be represented there, what should be the authority to take it up?—My opinion is that it should be, in the first instance, a permanent Standing Committee. In regard to the first formation of the committee, I think the Board of Trade might take the initiative and summon members of Chambers of Commerce, members of previous Commissions, experts, and any others whose names commend themselves to the Board, for the consideration of the subject, and that this committee should be formed with power to appoint a standing executive committee, the organisation being perfected in the usual way by rules and regulations.

5083. You did not seem to speak very favourably of the organisation of the German system?—It is bureaucratic, but it carries the advantage that if they act they pay, and pay well.

5084. We hear of the great efficiency of the German

Sir A. K. Rollit.

18 April 1907.

exhibits in the different exhibitions?—Yes, I agree; but we are not such a bureaucratic country.

5085. Is that not due somewhat to the power they have of getting the best which their country can send?—Undoubtedly. Some people say their conscription contributes also.

5086. Do you not feel that we are never sure in our exhibits of getting the best possible representation of our different industries?—I think the best mode of doing that would be through the Chambers of Commerce primarily; that would be better than through the Government, or a Royal Commission.

5087. Would you prefer the method you suggest to the German method?—I should; but the presence of some Government Departmental members upon that body would secure, I think, the advantage of both systems.

5088. You are not in favour of the Government providing all the money for the expenses of an exhibition, are you?—No; not all.

5089. How would you provide the balance?—I think the Government should make an adequate grant, and exhibitors contribute for space, etc., and then there might be guarantees given, as was the case with Brussels, and contributions, and surpluses from economical administration, which we ought to have had in hand now.

5090. Would you not say that if Great Britain does enter upon an exhibition at all, it should go into it as well equipped financially as any of the other countries?—Undoubtedly.

5091. And there is no source from which that money can be provided but the Government?—Practically none, except voluntarily and by guarantees, and except the advantage of honorary service which Germany does not get in her system.

5092. It is very necessary that we should in every exhibition send our best?—Certainly.

5093. And your method is that you could get that best through the Chamber of Commerce?—Yes, the Chambers of Commerce, not one Chamber only.

5094. (*Sir Isidore Spielmann.*) You have said that you are in favour of collective exhibits?—Yes, as an element.

5095. Do you advocate that on your International Exhibitions Committee of the London Chamber of Commerce?—Certainly, and attempt it.

5096. Have you succeeded in any measure?—We had, I think, a collective exhibit at Brussels—perhaps one or two.

5097. Of what?—I think of textiles, but I am not quite sure; I am speaking now of 10 years ago. We certainly attempted it in the case of Milan, but we found that, according to the regulations, textiles as such could not be received, but only textiles in course of production by machinery. We could not get a collective exhibit, naturally, so as to show the courses of production, where the machines might differ largely; it would have been too unwieldy.

5098. Do you advocate on the Exhibitions Committee the formation of collective exhibits wherever possible?—I do; but it is full of difficulty owing to the competition between commercial houses and so on.

5099. (*Chairman.*) I am afraid I am rather dull, but I am still hazy as to the actual proposition you make about the Commission. Do you want to replace the present commissions of the London Chamber of Commerce by a body constituted on a larger basis?—The London Chamber of Commerce, by organising commissions within and without itself, has done most valuable work, and when no one else has been doing it. I quite agree that if we want the best result from the whole country there should be a wider and more representative organisation; and though we have always taken with us—and they have come with us readily—the provincial and foreign Chambers of Commerce, I think any new organisation should be founded upon the Chambers of Commerce of the country generally, with additions such as I have mentioned.

5100. That is, I suppose, the Government in the first instance would approach the Chambers of Cemmerce?—No, I do not think they would necessarily do that. I should have thought, and I do think, that the Government would approach naturally the London Chamber of Commerce, which has had the experience, has been doing the work, has returned surpluses, and so on. That, after all, is only a minor point, but I should have thought that was the channel, with a view to the wider organisation.

5101. You think that the London Chamber of Commerce, having done the work in many instances——?—And having had the experience.

5102. And having done the work, as you say, most efficiently and well, it should organise this new Commission?—No, I do not say that. I think the initiative should be taken by the Government, but I think naturally—I should almost expect it—that the body which had been doing for the Government, originally at the request of the Government, this work should be the first body to be approached. Beyond doubt the ultimate body to be formed should be representative of all the Chambers of Commerce of the country. You have put the point to me, or else I would not have gone into it.

5103. Certainly, I want to get this from you; it is your views we want, not ours?—Very well; I say that is the course I should take.

5104. You think that through the Associated Chambers you could get this body chosen?—I do not doubt it; or rather that the Government, in co-operation with us at the London and other Chambers, or if you like it with such help as we could render, could achieve that result.

5105. There you come back to the Government, you see. The Government does a good many things on the advice of other bodies, Chambers of Commerce, for instance, which it continually asks and gets?—I will put it in another way. If it was suggested to us that, having regard to what has been done and to our experience and services, we might summon a meeting of the Chambers of Commerce and others at the Board of Trade or elsewhere with a view to some such organisation, we would readily do it, but I do not want to put that as a condition at all. If the Government or the Board of Trade prefer to call such a meeting, I think it would naturally confer with us, perhaps, first, and we should very gladly co-operate, and give every information and assistance, of which we have much means, owing to our long experience.

5106. It does strike me as a little awkward. Where you want to have a permanent Government grant one would think that the Government or some department must be responsible to Parliament for the appointment of this body who will administer the grant?—Not *quâ* appointment. I do not think it would be desirable that it should be official, or Governmental, or departmental, or bureaucratic; but naturally, if such a thing is considered desirable upon your report, the Board of Trade would take the initiative in carrying it out. If they thought, having regard to the experience we have had at the London Chamber, we might do that in the first instance, we should be very glad to take any course which might be suggested, but I do not press that at all.

5107. I could not quite understand whether you wanted it to be on the lines of the Advisory Committee of the Board of Trade. I think they have got one for the Marine Department now?—Yes.

5108. You have had great experience now on the Advisory Committee, and you know that they spend money in having commercial inquiries made abroad and so forth?—Yes.

5109. I did not know whether you thought that it would be in that same form that the Commission or the Committee should be appointed?—I think it should be more autonomous than a mere advisory consultative committee, and that it should have for exhibitions more money to deal with than in my experience, up to the present, the Advisory Committees have had.

5110. (*Mr. Wilson Fox.*) You said you would call the Chambers of Commerce "and others" together?—Yes, I meant the general class you indicated.

5111. You have put it into my mind that this association would have to promote the showing of the exhibits of various industries; should not the public bodies representing some of those large industries, like the Iron and Steel Institute, the Master Builders' Association, and so on, who are experts in particular lines of business, be represented on it?—Certainly; and if it were thought desirable that they should take part in summoning such a meeting, by all means it might be so. I do not want to put the London Chamber unduly in the front of the matter at all.

5112. You said "and others," and I wanted to follow

that out?—Certainly, I said "and others," because that covered the case you put to me and others.

5113. (*Sir James Kitson.*) Is the London Chamber of Commerce in the Association?—Yes, and subscribes more than any other Chamber.

5114. Then would not the Associated Chambers rather be the body than the London Chamber of Commerce?—There is this difference, that the Associated Chambers of Commerce have not done anything with regard to exhibitions, beyond their secretary being one of the secretaries of the organisation and having individual members. You want, I think, to begin with, some practical experience of the work.

5115. Still, they would include your experience in the Association?—I do not want to put the London Chamber of Commerce Commissioners invidiously to the front, but still, as a matter of fact, we have done the organisation work, and then administered the grants, and done it successfully, as I think; and therefore I consider we are naturally the channel—but that is a very secondary consideration. I think, if I may say so, the suggestion of Mr. Wilson Fox that some such associations as those which have been mentioned should be associated in any movement is a very excellent one. *Sir A. K. Rollit.* 18 April 1907.

5116. (*Chairman.*) Then it comes to the summoning of these different associations?—I think it comes very much to that.

5117. And having the discretion as to whom you should summon and whom you should not?—I think so.

5118. On whom would that discretion rest?—I think practically with the Board of Trade, after conferring, as I would suggest, with the London Chamber and its Standing Committee, and other bodies.

5119. You do think that that would be usefully done by a department, after conferring with you and other Chambers?—Exactly.

5120. That seems more practical?—I wish it to be clearly understood that whatever the London Chamber of Commerce has done—I take exception to some things that have been said and suggested; but subject to that, I do not want it to take any invidious primary position, though I think there should be a fair remembrance of what it has done, and originated, when nobody else was doing the work.

Mr. Arthur Greenwood, called and examined.

5121. (*Chairman.*) You are chairman and managing director of Greenwood and Batley, Ltd., are you not?—I am. *Mr. A. Greenwood.*

5122. At what place?—Leeds.

5123. What do you manufacture particularly?—We are general electrical and mechanical engineers, and we are manufacturers of machine tools.

5124. You have had a good deal of experience in connection with exhibitions, I think?—We have.

5125. You were at Moscow in 1872, at Philadelphia in 1876, at Paris in 1878, at Sydney in 1880, at Calcutta in 1884, at Melbourne in 1888, and at Paris in 1889?—Yes.

5126. The goods you exhibit, I understand, are engineers' machine tools?—Principally.

5127. What was the value of them, at the last exhibition, say?—At the last exhibition we had one machine tool which we exhibited there which alone was worth £10,000; but, generally speaking, £2,000 or £3,000 would be about the average value of our exhibits.

5128. Have you had any increase of business with foreign countries which you can attribute to exhibiting?—It is most difficult to trace that in our business, but I think we may have had a slight increase.

5129. Have you had any actual disadvantages that you can trace—from being copied, for instance?—In the early stages of exhibitions there is no doubt the English manufacturers did suffer a great deal, because, speaking of some years ago, England was practically the only place where machine tools were made before the trade was developed on the Continent. There is no doubt that our exhibits then were very much copied. I remember, both at the Exhibition of 1851 and at the Exhibition of 1862, in England, they were very much copied.

5130. Do you attach value to the awards which you obtain?—No; I do not think that the awards help us at all in selling our class of goods.

5131. I suppose you have obtained a good many?—Yes, we always get awards, generally the highest.

5132. Do you not put them on your billheads?—No. With the class of business we have, I do not think that would have any effect. It is all right if you are making small articles which are sold retail, and so on.

5133. Have you ever bought from British or foreign manufacturers from having seen their goods exhibited at exhibitions?—Yes. I have often found quite new things exposed at exhibitions, both English and foreign, and have bought pretty often machines we have seen exhibited.

5134. In your proof you give an interesting instance at the Antwerp Exhibition, where you saw the Delaval steam turbine?—Yes. I was a member of the jury at the Antwerp Exhibition, so I was there a good deal at that time. I saw the Delaval steam turbine there, which was really exhibited then practically for the first time. It was exhibited, I believe, in Chicago the year before, but it was not in a complete state then. I was very much struck with it. I followed the business up, and the making of these Delaval steam turbines has now become a very large branch of our business. There is no doubt that we have seen at different times, notably at the last two Paris Exhibitions, great improvements exhibited by foreign manufacturers, principally in cutting metals both for finish and high speed.

5135. I see you do now refrain from exhibiting, because the Paris Exhibition of 1889, which is a good many years ago now, seems to have been the last exhibition at which you exhibited?—That is so.

5136. Have you refrained from exhibiting in recent years on account of the cost?—Very largely; the cost is such a fearful tax upon manufacturers.

5137. You mean in the case of your machinery?—Yes. To send this heavy machinery abroad costs such a fearful lot of money that after the Paris Exhibition of 1889 we got rather tired of it. We found that our exhibition account was getting very heavy, and so we refrained from it. Another thing that has made us refrain from exhibiting has been the very poor shows which have been made by English exhibitors of recent years in comparison with what foreign exhibitors have made.

5138. You did not like to take part in a British show which was so inferior to the foreign sections?—Yes. I think a great many people have the same feeling, that the exhibits recently have not been quite worthy of England. I am speaking, of course, of my own business, the engineering business, more particularly.

5139. Have you been to the recent exhibitions?—Yes, I have visited very many.

5140. You have seen what is shown, but you do not go to the great expense of showing yourself?—I was at the last Paris Exhibition and I was at the one at Milan a short time ago.

5141. This is outside your proof, but what did you think of the Milan Exhibition; did you think the British section showed well?—I thought the British section was quite unworthy of the country.

5142. In everything?—In everything, yes.

5143. Do you think that anything might be done, if there were a permanent organisation, to minimise the trouble and cost; and do you think that in that way we should get better exhibits from this country?—I think we should get better exhibits in the first instance if the cost were reduced. It is a very great tax for any man in the engineering business to send over a large machine. The amount of money that he has standing idle in the exhibition is in itself a very heavy tax, and then he has got possibly hundreds or thousands of pounds to spend in taking the machinery there, putting it up, setting it to work, and so on. I think that those expenses, if not entirely borne by the Commission, ought to be borne by it to a large extent.

5144. Because you cannot get your money back, either by selling those machines or getting orders there?—I do not think you can. You see it is not a small article that we sell, and the mere fact that I am exhibiting a very large machine tool does not create a

Mr. A. Greenwood.

18 April 1907.

demand for that machine tool—it only shows people where it can be bought when they are in want of such a tool.

5145. It shows where it can be bought, and that it is a very good one, I suppose?—Yes. If you are making corkscrews, or small articles of that kind, of course you create a demand by exhibiting them.

5146. I gather that you are not in favour of this country holding aloof from international exhibitions?—I think we cannot afford to do so; I think that would be a serious matter. We look upon exhibitions as a cost that we are bound to incur, and I think that if we hold aloof from exhibitions we shall be rather left out, particularly having regard to the reports that are given by the Commissions, which visit the various exhibitions. There are, as you know, Commissions appointed very often by foreign Governments, and there are Commissions appointed by various institutions; they report, and if they do not see English manufacturers well represented there, I think that is very much against us. In fact, I have found that so. When I have been on the Continent selling my own things, people have said to me, "Why don't you exhibit? The German people are exhibiting, and the French people are exhibiting," and so on.

5147. What would you suggest to us as a possible means of getting such firms as yours to exhibit?—I think, to begin with, that the exhibitors ought not to be put to any expense, particularly as regards space and power. In many exhibitions we have to pay for space and power, and that seems to me to be a ridiculous thing. When we go to the expense of locking up £5,000 or £10,000 for six months in an exhibit, we ought not to be bothered with expenses of that kind.

5148. The cost of space and power?—Yes, and I think carriage, too.

5149. You think you ought to have carriage?—Yes. I do not know whether you are aware of the fact, but in connection with the recent St. Louis Exhibition, which unfortunately I did not visit, they actually sent representatives over to England and offered, on behalf of the Commission, to pay carriage from England to America.

5150. Was that the British Commission?—No, the United States Commission for the exhibition; they offered to pay carriage so as to get a good show there.

5151. (*Sir Swire Smith.*) That would be for specialties?—Yes.

5152. (*Chairman.*) And that even did not tempt you?—No, it did not. As a matter of fact, we had not very much trade in America.

5153. Were you at the time doing a great business here?—Yes, we were very busy.

5154. You had not time, I suppose, to show?—At the time of the St. Louis Exhibition we were excessively busy. We did think of exhibiting at one time, and, of course, the inducements were very great because they offered to pay the carriage on the machines; but we were so busy, as a matter of fact, that we could not prepare what I proposed to exhibit, so we did not show; otherwise I think I should have taken advantage of that offer. Then I think we ought to have some selection of exhibitors.

5155. By whom?—By the authorities here.

5156. For that would you have a Royal Commission, or some body of that sort?—I presume it would be a Royal Commission. I do not want to say anything disrespectful of Royal Commissions.

5157. You can here?—I see an enormous number of gentlemen's names on the Commissions that do not do very much good. What should be at the disposal of the Commission should be a committee of experts who should pass the exhibits. I would make it a great privilege to send an exhibit abroad to a foreign exhibition.

5158. You would rather imitate the German system then?—Yes, I would.

5159. You know the German system, I suppose?—I do not know it in detail, but I know that they do that.

5160. You know the broad feature is that the Government, through its Commission, do exercise great power as to who should send and what is to be sent?—Quite so. I think we ought to do something of the sort. Some of the exhibits that we have had in some of the exhibitions are not creditable to us.

5161. You are speaking, I take it, of the exhibitions that you know of yourself?—I am speaking generally in that respect. If the Government assisted the exhibitors in expenses they would naturally be entitled to have some say as to the exhibits sent out. That seems to be reasonable.

5162. Would you prefer a Commission appointed by the Government, which is usually called a Royal Commission, or a Commission acting by the choice of the Chambers of Commerce, and quite independent of the Government, except that they would want Government money, of course?—They would want Government money. Do you mean they would be selected by the Chambers of Commerce.

5163. By the London Chamber of Commerce or by the Associated Chambers?—That would be better than the present system; but surely the Royal Commission might select a committee.

5164. You would see no objection to a Royal Commission if they got the best men on it?—Exactly.

5165. That is, if they associated with themselves good experts and commercial men?—That is my idea. The Paris Exhibition of 1889 was very good in that respect. That was the exhibition in which the Government did not take any part, as you may remember, and there was no Royal Commission then. They had a very good committee in that case, and I think the exhibits were very well done; but, of course, it was an enormous cost to the exhibitors, because we had no assistance of any kind.

5166. That is, there was no assistance from the Government at that time?—That is so. I think that exhibition cost my firm about £4,000 in transport, in putting up our exhibit, and so on. That is a very heavy tax.

5167. And you do not think you got much of it back?—No, I do not think so. I think it does some good. I think it is a negative business. If you do not exhibit it does you harm; you cannot afford not to be there.

5168. Yours is an old-established firm, I think?—Yes, we have been in business over fifty years.

5169. Do you think that new firms are more interested in showing at exhibitions?—Yes. There is no doubt that new firms are; the very first thing they try to do is to do that.

5170. To get their space?—To get their space, and then to get reports and to be able to put awards on their paper.

5171. They do put their awards on?—Yes.

5172. But you do not?—You don't have to after a time.

5173. (*Sir Swire Smith.*) Your belief is that if we are to go in for exhibitions at all it should be done well?—It should be done very well indeed.

5174. And that the organisation for an exhibition should not be left simply to the trades?—No, it should not.

5175. But that it should be left to a general committee of experts of all trades, who would select the best goods of the country?—That is my opinion.

5176. How would you deal with the cost?—I should ask the Government, instead of giving a paltry £20,000 or £30,000 or £40,000, to put £200,000 or £300,000—a large sum of money—at the disposal of this committee.

5177. Whatever was necessary in fact?—Certainly.

5178. Your point would be that we cannot afford to be behind anywhere?—Exactly. If we are to be represented at exhibitions abroad, we must be represented as well, or better than foreign countries are.

5179. We cannot afford to take second position?—That is my feeling.

5180. Do you think that we have lost much in our national commerce through the copying of our goods by foreign nations?—I do not think so. I think what we have lost we have had the opportunity of gaining as well; there has been both give and take.

5181. If there is anything good to be seen, it is your duty to see it and to make the best of it?—Quite so.

5182. You have suggested in your remarks that it would be a very good thing that there should be a collective display?—Yes.

5183. Have you thought how that collective display could be got together? For instance, with regard to your own business, should there be a committee of experts who should select the things to send?—I think so. Take my own business, I should recommend not

so much the Chambers of Commerce, but our great institutions. We have the Institution of Civil Engineers, the Institution of Mechanical Engineers, and the Iron and Steel Institute; I should ask them to nominate the members of the committee.

5184. So that, so far as your particular industry is concerned, you would strongly suggest that the Iron and Steel Institute, and the Civil Engineers, and the Mechanical Engineers should have a strong voice in the selection of the governors in fact of this business?—Yes.

5185. And that where very large machines of a costly character are sent, there should be no hesitation at all about the Government paying for them?—That is my opinion.

5186. You might send a case of silk goods or of watches, or any small articles, at a very small cost, and they would still be a very interesting exhibit, of course, to all who could see them; but your view is that it is quite as important that the biggest engine that is made, if it is worth seeing, and if it has an educational influence, should be exhibited if necessary?—I do not think that we ought to let the people who attend these exhibitions assume that the Belgians and the Germans are the only people who can make big steam engines; and that is what they will do if we do not show any. I am thinking of some of the large exhibitions where their displays were very great indeed.

5187. Have you any view as to the formation of a body which should act together with these experts when an exhibition is about to be held—that is, would you wait for the announcement of an exhibition before you would form your governing body, or would you have that always ready?—I think I should wait. There is plenty of time when the intention to hold an exhibition is announced to get together a body of that sort, I think.

5188. We have been told that it often happens that the delay which is occasioned after it is first talked of till the people have decided as to what they shall do, has been so great that the best spaces have been often taken up in the meantime?—But surely if the Government are going to assist in an exhibition, the very first thing that would be done by the Government would be to see that space is available for British exhibitors.

5189. Then your view would be that this thing should be managed by the Government, the Government forming the nucleus, as it were, of a committee or of a body that should manage it?—Quite so.

5190. And that when this exhibition is talked of there should be an authority which could be appealed to at once, and which could call together all these experts?—That is it. I do not think that a special organisation made for this purpose would be of much use. I am afraid it would go to sleep when there was nothing going on.

5191. (*Sir Isidore Spielmann.*) Do you think that manufacturers are getting tired of exhibitions?—On every side I hear that. If you ask a man whether he is going to exhibit at so-and-so, he says: "I cannot do so; it is too much trouble and too much expense."

5192. What inducement should be offered? Meeting him in the matter of expense?—Meeting him in the matter of expense is one of the main points I lay stress upon.

5193. Apart from that, is there any other inducement that you could suggest?—Yes. I think, if the thing is taken up actively, and it is known that the English exhibit is going to be backed up by the Government and made a great success, you will find lots of people will be ready to exhibit. I think you will find many people are holding aloof because it has been nobody's business to look after this thing, and they have got tired of doing it at their sole cost.

5194. Do you think that the best class of manufacturers might be induced to participate?—I really do, because even recently some of the larger firms have exhibited. I will mention, as an instance, one firm in some way connected with my own business. Messrs. Armstrongs have taken a much more active part in exhibitions lately than they did a few years ago. They were driven, I suppose, into it by seeing Krupp and other foreign competitors putting up the enormous exhibits.

5195. I believe they participated in the exhibition at Liège recently?—They did.

5196. Were you there?—No, I was not. Liège was one of the exhibitions I did not visit.

5197. You did not visit it, then?—No.

5198. You referred to the poor impression created on your mind by the British sections at various exhibitions. Can you recall which they were?—Brussels, 1897, was one.

5199. That made a bad impression on you?—Yes. It was certainly unworthy of Great Britain; and the Antwerp Exhibition was very little better.

5200. Are you referring chiefly to the engineering section?—Principally; but I was really referring to the other sections as well.

5201. We have had here quite recently a witness who made a great deal of the machinery section; he said that it was very good at Brussels in 1897, but you are not of that opinion?—The British section did not strike me as being very good.

5202. Can you tell us of any exhibition where the British Industrial Section, particularly the machinery section, made a favourable impression upon you?—The Paris Exhibition of 1889 was the best exhibit of English machinery and engineering that we have had, I think.

5203. Since then, no exhibition that you have visited has shown a good exhibit of British machinery, would you say?—I think that at the last Paris Exhibition of 1900 the Machinery Section was not bad, but it was very small. There were some very good exhibits, but the section did not give one a good impression. I mean to say that, from a visit to that exhibition, and judging by the exhibits that were exposed there, you would not put England in front of the engineering trade.

5204. Were you at Milan?—Yes, I was.

5205. What sort of representation had the engineering trades there?—The ordinary engineering was very poor indeed, but the textile machinery was rather good. Of course, there was a very strong reason for textile machinery being good there—it is a great centre for cotton-spinning.

5206. You seem to have regretted not having been at St. Louis as an exhibitor; I think you said you were nearly induced to participate there?—Yes, we were.

5207. Would the duty have told against you in the matter of selling machinery in the United States?—Yes; as a matter of fact, the duty in the States practically excludes us. We used to do, years ago, rather a good business in the States, but now we do nothing. The duty on the things we make, which is 30, 40, or even 50 per cent., is so high that it is impossible to introduce them.

5208. If an exhibition organisation were established on improved lines, would you be disposed, as a manufacturer, to participate if you had certain expenses paid?—I would not only be disposed to exhibit, but I would advocate it amongst my other friends as well. I would like to see England properly represented.

5209. May I ask how often you would like to show at exhibitions?—I think if one exhibits well every five or ten years it is as much as you can expect people to do. I am speaking always of these exhibits which cost a lot of money. I am interested in other businesses, where we are ready to exhibit at any time, because it only means sending a glass case; that is all right, and one does not mind that.

5210. But, as regards heavy machinery, different considerations apply?—Yes; where you have to put the foundation in and build up these big machines the cost is fearful.

5211. Could you stand it every five years?—Yes; I think from five to ten years would be the period.

5212. (*Mr. Malcolm Ramsay.*) I suppose you would agree that, in talking about exhibitions, we have to consider them from two points of view, which cannot altogether be kept separate, but can be specified separately. First of all there is the international point of view and the cultivation of general good feeling, and, secondly, there is the purely trade aspect. Speaking from the point of view of trade, I do not quite understand the reasons why you recommend that we should participate in exhibitions. Supposing an exhibition is carried out under proper organisation and under good conditions, would you be inclined to par-

Mr. A. Greenwood.

18 April 1907.

ticipate because you think you would get business from it?—Yes, I think so; I think we should get business from it.

5213. Then you are in favour of it from the direct commercial side?—I am, from that as well as from the other point of view.

5214. You said just now that you thought a good many manufacturers, in your experience, were rather tired of exhibiting. Does that mean that they disliked exhibiting because the organisation did not give them a fair chance?—I think that is largely the reason.

5215. It is not that they have an objection in principle to exhibitions, and think they are not suitable means for pushing the trade of the country?—There are a great many people who do take that view, but I distinctly do not take that view. I think it is in our interest to exhibit and to show people that we are making these things.

5216. You think it is a good form of advertisement?—I do.

5217. I think you said just now that you would be glad to see exhibitors relieved of certain charges; for instance, of transport?—Yes.

5218. Would you apply that to everybody?—Yes, certainly.

5219. The consequences would be, of course, that the bill to the public would be very great—the cost would be enormous?—It would be great, undoubtedly.

5220. I think you mentioned £200,000 or £300,000 just now as the sort of sum that should be given?—Yes.

5221. Are you, as a taxpayer, willing to see the public pay £300,000 every five years for this purpose?—Yes; it is a bagatelle as compared with the commercial interest of this country.

5222. You think it is worth it?—Certainly it is worth it.

5223. And you would be in favour of relieving the exhibitors of those charges, not so much because they get direct benefit from it, but because of the national advertisement?—That is it.

5224. I suppose you would not go to the length of saying that as, from the individual trader's point of view, he stands to gain by getting a big sale from the exhibition, he ought to be assisted by the public?—No, I do not take that view at all. The assistance from the Government I should regard more particularly from a national point of view.

5225. It seems to me that it is much harder to justify it from the point of view of the individual trader, who may obtain business through exhibiting?—Of course.

5226. If you relieve him of his transport expenses, he gets a certain advantage as far as his individual trade is concerned which other people who do not exhibit do not have?—Quite so.

5227. There is some objection to the State paying for one trader what it cannot pay for another, is there not?—But every State trader will have an opportunity of exhibiting, and being assisted by the State.

5228. May there not be some industries which stand to gain much more by exhibiting than others?—I think there are, certainly. There are certain manufacturers who do gain more by exhibiting than people like myself, for instance. I think my own business gains perhaps the least directly.

5229. Because you have a large, heavy business?—Yes. But with anybody who can exhibit artistic manufactures in a glass case, I think it is quite another matter.

5230. I had that in my mind. Then one might apply a certain discrimination in relieving exhibitors of the transport charges?—Yes, because in many cases the cost would be very small. It is really only big machinery exhibits and things of that kind which are so very costly. If a man sends a locomotive, for instance, to an exhibition, the cost is tremendous; and so it is with marine engines, guns, and things of that kind.

5231. They are a special class rather, are they not?—Yes.

5232. In answer to Sir Swire Smith you spoke of the selection of exhibits. I suppose you, for your part, would have no objection to submitting your goods to the verdict of an expert jury?—Not the least.

5233. Even if they preferred in the end to take some other manufacturer's goods?—Not the least.

5234. Do you think the large firms would generally take that view?—I think they would—if it were a properly appointed committee, of course.

5235. I assume that?—It would have to be a committee not appointed by the Chambers of Commerce, or anything of that kind, because that would not do. It must be appointed by the big institutions which govern our engineering trade.

5236. That system answers in Germany, but we are more independent in this country, and some witnesses have expressed rather an objection to submitting themselves to a selection of that kind?—What I feel is that unless you do something we are going to run out of these exhibitions entirely, and then Germany—I say Germany, but I will say foreigners—will occupy the ground entirely; and I do not think that is wise.

5237. Any way, you would be prepared to stand or fall by the decision of the jury, whether they accepted your exhibits or not?—Certainly.

5238. (*Mr. Harris.*) Evidently, as you said in one of your replies, you take a negative view of the advantages of an exhibition. What would you say if there were an international agreement for the abolition of exhibitions; would you welcome that?—I should be very glad indeed to hear of that.

5239. That is to say, apart from the mere fact that you are forced into it by competitors, you would rather not exhibit?—I would rather not exhibit.

5240. In other words, you would rather not use exhibiting as a means of pushing your trade?—That is my view certainly.

5241. You have said that in the Paris Exhibition of 1889 Great Britain made one of the most satisfactory exhibits of machinery in particular?—Yes.

5242. Is that not an argument for leaving the British manufacturer to exhibit on his own account without any Government grant or help?—That exhibition was a very peculiar case, as I daresay you will remember. The Government refused to have anything to do with it on political and international grounds. It was in commemoration of the Revolution, was it not? It was very warmly taken up by the exhibitors generally.

5243. Was this their idea, "Now that the British Government stands out, we must just see what we can do"?—Yes, I think that feeling was very strong indeed. We had a very energetic chairman. I do not know whether you remember that Sir Polydore de Keyser was Lord Mayor of London at that time. He went into it with tremendous spirit. You know how much depends on how a thing is started; that was started with a very great flourish of trumpets, and it was a very great success, I think.

5244. Do you happen to remember what body managed it?—The Society of Arts had something to do with it. There was a general committee appointed, I think, by the Lord Mayor and the Council of the Society of Arts, and then an executive committee was selected from that.

5245. But you would not argue from that to the future, would you?—No. I think it did very well, but it would not do again; it caught on the first time, but I do not think it would catch on again.

5246. I have rather gathered from one or two witnesses here that machinery is one of the particular lines in which it pays men to exhibit at the present time; that is not your view apparently?—It is not altogether, but I think it is partially. Take countries like what Japan was—not what she is to-day, but what she was a few years ago. She always sent commissions round to these exhibitions, and they reported on the exports, and their reports were published in their own country. There is no doubt that that did influence a large amount of business from Japan.

5247. Do you think that you could trace a good deal of business in Great Britain to that?—Yes, I feel certain of it. Reports were given to the Japanese Government by the Commission, and that Government acted upon those reports.

5248. Are you able to say whether you think their reports were more in favour of Great Britain than of other nations?—That I could not say.

5249. (*Mr. Algernon Law.*) You said you would be ready to abide by the decision of an independent jury as to whether your exhibits, for instance, should go to an exhibition?—Yes.

5250. If, we will say, all the makers of machinery such as yours were to combine to share the expenses of

sending an illustrative example or selected exhibit on behalf of you all together, could you not then bear the expense?—I do not think so. I think my reply was based entirely upon the question of the Government finding the money for these things.

5251. Though you did do it by voluntary organisation in one instance?—We did in that one instance; but it is not a thing that we are likely to do every year, or every ten years.

5252. In the case of Paris in 1889, when there was no Government grant, you took part; but in the case of Paris in 1900, when there was a Government grant, you did not take part?—That is so.

5253. What was the special reason for that?—The special reason was that we were tired of it; the expenses we had been put to were too great, and the Government grant did not materially relieve exhibitors.

5254. And yet an interval of eleven years had elapsed?—In that case it had.

5255. You have mentioned the case of Messrs. Armstrong, who have now taken to exhibiting; but is not their case different from that of most makers of large engineering products? Do they not deal with Governments; and so is it not with the object of bringing their productions to the notice of Governments that they exhibit?—Yes.

5256. So that there is a special reason that actuates Messrs. Armstrong, but does not actuate locomotive makers, say?—That is so.

5257. Were you invited to take part in the Paris Exhibition by the Royal Commission, or their representatives?—We had the usual circular which was sent round.

5258. Was that followed up by a visit?—I do not think so; at any rate, I do not remember it.

5259. Were you invited to take part in the exhibitions at Liège and Brussels?—Of course we are invited to all these exhibitions.

5260. Was there any different procedure in those cases to that of a Royal Commission?—So far as I remember there was only a circular sent.

5261. There was no greater pressure in the one case than in the other?—No.

5262. (*Chairman.*) Do you belong to a Chamber of Commerce?—I am a member, I believe, of the London Chamber of Commerce and of the Chamber of Commerce of Leeds as well.

5263. I gather rather from what you said that you favour the management of these matters by the Institution of Civil Engineers and similar bodies—that is to say, by the people who have more to do with your particular line?—Yes; my reason for it being that they understand what they are talking about better than a Chamber of Commerce in that case. That is my only reason.

Mr. A. Greenwood.

18 April 1907.

5264. I did not quite understand whether you favoured a Government Department starting all these, and having the first management of the business—that is, appointing the Commission or Committee, or whatever it is?—That is my idea.

5265. You think the Government should do that?—It should take the iniative.

5266. Not the Chambers of Commerce?—No.

5267. The Government, you think, would be better?—Yes; I think the Government should do it.

5268. (*Mr. Algernon Law.*) You do not think the London Chamber of Commerce, from its experience of other exhibitions, is as well qualified a body to entrust the selection of a Commission or similar body to?—I do not think so, although of course it is a very representative body.

5269. But that is a view which has been pressed upon us?—I know the London Chamber of Commerce is a very representative Chamber, but I think it covers too big an area.

5270. (*Sir Swire Smith.*) It might be proper that they should take the organisation of the mercantile portion of it?—Yes, it might.

5271. But for a special section of engineering, such as yours, you would not think they are the proper authority?—No, although there is an Engineering Committee of the London Chamber of Commerce, and I believe I am a member of that committee myself.

5272. You would rather entrust it to the Iron and Steel Institute, to the Institution of Mechanical Engineers, and to the Institution of Civil Engineers?—Yes.

5273. That, you think, would be a much better authority?—Yes.

5274. (*Chairman.*) They are much better experts on such questions, of course?—Yes, they are expert bodies.

5275. And they are expert bodies to the highest extent in regard to your business?—Yes. We always know that Chambers of Commerce are influenced by the men who like to be before the public—*they* are the people who go to Chambers of Commerce.

5276. (*Sir Isidore Spielmann.*) Do you consider that the London Chamber of Commerce has sufficient influence to bring in important firms as exhibitors on the occasion of these international exhibitions?—I do not think they have. I think they can help, but I do not think they are quite so well qualified as other bodies. You see, they have not got much influence out of London.

5277. They have not the influence which a Royal Commission would have?—No.

SEVENTEENTH DAY.

Thursday, 25th April 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
The Right Hon. Sir James Kitson, Bart., M.P.
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Isidore Spielmann.
Mr. U. F. Wintour (*Secretary*).

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine, called in and examined.

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine.

5278. (*Chairman.*) (*To Mr. Powell.*) I think you are the chairman of Messrs. Humber, Limited?—(*Mr. Powell.*) I am chairman and managing director.

5279. (*To Mr. Edge.*) I think you represent S. F. Edge, Limited, who are interested in Napier motor cars?—(*Mr. Edge.*) Yes.

5280. (*To Mr. Woodfine.*) And you are the secretary of the Society of Motor Manufacturers and Traders?—(*Mr. Woodfine.*) Yes. May I place before you a letter which I have received from Mr. Govan (who is not able to come here from Glasgow to-day), in which he gives the views of his company on the subject?

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine.

25 April 1907.

5281. What firm does he represent?—Mr. Alec Govan is the managing director of Argyll Motors, Ltd. He wrote me on the 22nd inst. as follows:—

"I have your favour of 16th to hand, and have been trying to arrange business so that I could be in London on Thursday, the 25th. Unfortunately, I now find this impossible. If the Government are prepared to subsidise exhibits at international exhibitions, then I think we ought to take advantage of this, and, in my opinion, this could best be done by a joint exhibit, for, as a rule, those exhibitions last for a number of months, and it would not pay any firm to have attendants there all the time. While I believe that exhibition is a good thing to secure orders for cars, I have a still greater belief in demonstration, and if it could be arranged to give demonstrations of the running of the cars, either in or outside the grounds, I feel that this would greatly assist sales. We do not find this so necessary in Britain to-day, as our cars are well known to the public, but when trying to introduce business in a country where they are comparatively unknown, I maintain that demonstration is almost, if not indeed necessary.

"In answer to the formal questions—

"(1) We have not exhibited at an international exhibition abroad.

"(8) Our goods have not been exhibited at an international exhibition, because they are usually open a few months, and attendants would require to be kept there all the time. Further, there is in nearly evrey country a motor-car exhibition, to which people interested in motor-cars naturally go. These exhibitions usually last from seven to fourteen days.

"(9) If the trouble and cost of exhibiting at exhibitions could be appreciably reduced, then we would be willing to exhibit.

"(10) It is our opinion that Britain should be well represented at international exhibitions."

5282. I understand you gentlemen have come here to give us your views about international exhibitions in connection with your subject of motor-cars?—(*Mr. Powell.*) That is so.

5283. Has your firm exhibited much at international exhibitions yet?—My firm, Humber, Ltd., are manufacturers of bicycles as well as of motors, and we have exhibited at most exhibitions for a great number of years past. Generally speaking, we do so through our agents in the various countries; through our Italian agent in Milan, through our Australian agent in Melbourne, through our Paris agent in Paris, and so on.

5284. Did you exhibit at St. Louis?—No.

5285. Why was that?—At the time that was held we were not doing very much in cars, and I do not think it would have justified the expense to have exhibited English bicycles.

5286. Have you received any advantage from exhibiting in the shape of increased sales of your goods?—I think, if I may be permitted to put it in this way, that when a business is young you reap very great advantage in bringing it before the public through the medium of exhibition; but when a business is well established like ours is I do not think you do reap so much advantage. At the present moment, for instance, it scarcely pays us to exhibit bicycles anywhere, even at a trade exhibition; but it does pay to exhibit cars, because the motor-car industry is quite a new one, and the exhibitions are crowded.

5287. You have special exhibitions in this country in your trade, have you not?—Yes.

5288. And, I suppose, in other countries too?—Yes.

5289. I am thinking of exhibitions which are confined to motor-cars?—We have those in practically all countries.

5290. Should you be satisfied to have only those exhibitions, or do you want to take part in the big international exhibitions?—I think if there are large international exhibitions held, our industry ought to be represented.

5291. Do you mean for the sake of the country?—Yes.

5292. Not for the sake of you gentlemen yourselves?—No, but for the sake of the trade of the country.

5293. At the exhibitions at which you have exhibited have you got a good proportion of the awards that were given?—Yes. We are a little bit sceptical as to the way in which the awards are granted at foreign exhibitions. We think if an organisation were established, such as you suggest in your formal list of questions, one of the things it should bear in mind would be to see that the awards are properly made.

5294. Do you mean that the jury do not exercise proper care in advising on the awards?—I would simply say that we have not had very much confidence in the way in which the prizes have been awarded. I think that would apply to English traders generally.

5295. What particular exhibitions have you in your mind? Could you give me an instance of that?—No; I should not like to do that.

5296. Do you attach importance to getting awards at exhibitions?—I think they help us in the countries where the exhibitions are held; but I do not think they help us very much in England.

5297. Do you put on a card the grands prix and the medals which have been given you at exhibitions, and do you send those cards to people who are likely to purchase your goods?—We leave this to our agent.

5298. I mean, do you put them on your cards in your own business now?—We have not done so with regard to motor-cars, but we used to do so with regard to bicycles.

5299. I know that; in fact, I was thinking of the bicycle; I did not know whether you did the same with motor-cars?—No, we have not done so in the case of the cars, so far.

5300. Is it that nowadays people know more about those things than they used to know, and therefore they like to trust to their own judgment and to their own experience in trying your cars?—I think you are about right there. In buying a bicycle, a man would look to a thing of that sort, but an Englishman would not buy a car because he saw a foreign medal on the list.

5301. He would want to know a great deal more about the car than that?—Yes.

5302. You think you will want to take part in these international exhibitions in the future?—Yes. What we think is, that if you had, say, a car section, and the exhibition could be run under a good organisation like that which is suggested in these papers, that organisation could take the space, allot it amongst representative English houses, instead of allowing Jack, Tom, and Harry to try to get it, and take charge of the whole of the arrangements—that is, not only take the space, but see to the erection of stands, and so on. We find immense obstacles in our way, and we have to pay very heavily, not simply for the space, but for the work of getting the stands ready.

5303. For the labour, do you mean?—For labour, materials, and so on. Obstacles are placed in our way; we all know what it means.

5304. I suppose there are difficulties because we are strangers in the country, to a certain extent?—Yes, that is so.

5305. And therefore we have to pay more?—Yes. That is why we almost invariably—in fact, invariably now—do it through our own local agent instead of direct. If we had a well-managed English section organised by the Board of Trade, we should probably exhibit entirely ourselves; and that is what we should like to see.

5306. You do not think the State ought to pay all these expenses, do you?—I think the expense would be minimised. I think the State might help to some extent, but still this organisation would save us such an enormous amount of expense that I do not think it would cost us probably half what it does now.

5307. Do you mean that it should organise the whole of the exhibit, take your goods over, and then take charge of them as soon as they get there?—No, I did not mean that. If the organisation first of all got the space allotted to us, then erected and decorated the stand (which costs much more than the stand itself), and got everything ready, so that all we should have to do would be to send our goods there, then we could take charge of the goods ourselves. I do not think we could expect any organisation to take charge of the goods, unless we had a collective exhibit, of course.

5308. You do not want to have a collective exhibit, I suppose?—I think it would be good for some trades. It would depend on the size of the trade. I think, looking at the proportions of the motor-car trade at

the present moment, we should do it individually; I am speaking of the English firms.

5309. Would you like a national arrangement, or a class arrangement; in other words, would you like to have your motors in the same buildings as the motors of other countries or in buildings close by, or would you like to have them put separately in a great national section?—I should like to have them exhibited in a class by the side of the foreign motors.

5310. You would like them put into a class, so that everybody could compare them?—Certainly.

5311. So that they could go straight from your motors to those of France, say?—Certainly; that is what I should like.

5312. We have had different evidence about that?—Yes, I know. There are advantages from a national standpoint in the other way, but I am speaking from our individual standpoint.

5313. In the case of machines of great complication like yours, you do think there is an advantage in the easy comparison of the machines of one country with those of another?—Yes, I do.

5314. Then about the transit; you do not expect all the cost of the transit to be paid, I suppose?—No; but I think the organisation suggested could arrange for a cheap transit. Of course we do get cheaper transit now.

5315. You have got cheaper transit?—Yes, and we save Customs dues and that sort of thing; but still I think an organisation of this kind could assist us even further.

5316. Did you exhibit at the Paris Exhibition of 1900?—Yes, bicycles.

5317. Only bicycles?—Yes, only bicycles.

5318. The motor industry was hardly in a forward state enough for exhibition then, I think?—No, not then.

5319. Were you satisfied with the arrangements under the Royal Commission then?—I had not anything personally to do with it, so I really could not say. It was left to our sales manager and our Paris agent.

5320. I suppose you do not want to have very frequent exhibitions?—No.

5321. How often about?—I think an international exhibition in an important country once in 10 years or so would be amply sufficient.

5322. In an important country, do you say?—Yes, I think so.

5323. Do you mean by that that you would not care to exhibit in an international exhibition more than once in 10 years?—If it were held at a shorter interval we probably should; but I think that holding such an exhibition once in 10 years would be very much better.

5324. It seems likely that in your branch of trade, as things go so quickly, you may have quite a different machine in 10 years' time?—There is no doubt of it.

5325. You admit that?—There is no doubt of it.

5326. You have not reached perfection yet?—Not anything like it.

5327. And yet you think about once in 10 years is quite often enough for an international exhibition?—Yes. The trade exhibitions would show our improvements; we could still have our annual trade exhibitions.

5328. That is, you could have your annual trade exhibitions here?—Yes.

5329. Do you find that foreigners come to those exhibitions in London?—Yes. We have a large number of foreign exhibits. I do not say that there are many foreign buyers who come to it, but foreigners connected with the trade come in large numbers.

5330. Now you are speaking of the exhibitions at Olympia?—Yes. Then our foreign agents come, and we do considerable business there with them.

5331. I suppose you sell abroad through agents chiefly, do you not?—Yes; sometimes through agents living in the country, and sometimes through English agents who export.

5332. I do not remember the figures at this moment, but you are exporting more than you were, I think, are you not?—Yes.

5333. The import is very much larger than the export, I think?—We are exporting more cars now than we were making three years ago.

5334. Are you doing any business with the colonies yet?—We are doing a large business with them.

5335. Are you doing anything with Canada?—We are doing a large business with Canada. We also send cars in large numbers to Australia, India, New Zealand, Japan, etc.

5336. What sort of organisation would you favour—a Royal Commission?—I shuld prefer a permanent business organisation connected with the Board of Trade and managed solely by business men.

5337. Who would start the thing? Would you wish the Board of Trade to start it?—Yes, I think I should.

5338. The Board of Trade, either through Chambers of Commerce or through other institutions, would get together the best collection of business men that they could get?—Yes.

5339. I suppose your society represents almost the whole of the trade?—Yes.

5340. In your society would both the trade and the users of motors be represented pretty well, or is there any other representative body?—The users of motors you may say are represented by the Royal Automobile Club. The Society of Motor Manufacturers and Traders is purely a trade society, and we try to keep it so.

5341. There is a distinction, and a clear distinction between the two, then?—Quite a clear distinction.

5342. And you think the distinction should be kept up?—Yes. There is a good deal of feeling at the present moment in consequence of the action of the Motor Union in mixing itself up with business matters.

5343. I have heard something about that?—We do not like it.

5344. For exhibition purposes you think your society should be the one consulted?—Yes, most certainly—exclusively.

5345. I suppose you are a fairly well-off society?—Yes, we are very flourishing.

5346. You think that if this organisation were made you would not require a large State expenditure on your exhibits?—No. I think the assistance we should get, the economies that would be made, and the efficiencies that would be secured, together with our being saved from so many worries, would be worth much more than a contribution from the Imperial Exchequer. We should like the contribution all the same.

5347. (*To Mr. Edge.*) You have heard Mr. Powell's statement; do you agree generally with him?—Yes, I agree generally with it. So far as international exhibitions are concerned, we have shown through our own factories in Italy and in America.

5348. Have you factories in both of those countries?—Yes. The duty is so high that it does not pay to import into those countries. Our experience has been that so far as actual business is concerned, showing at these big exhibitions is practically valueless; but as a demonstration for the country it is of very great value. If a collective exhibit could be made at all international exhibitions I think it would be to the benefit of the whole country. As to the right sort of individuals exhibiting, let British manufacturers who wish to exhibit go to their society and let them decide the number of firms who should exhibit; they could show one or two motors, as the case might be, of each class at these international exhibitions. It does not pay an individual manufacturer to take a large and comprehensive place at an international exhibition; it may be good for his country, but it is not doing him good so far as his own particular firm is concerned.

5349. A collective exhibit would save his pocket at the same time?—Yes. He is there merely for the good of his country, and it would undoubtedly be better done in that way than by each firm exhibiting individually. It would be much better to have a collective show of vehicles representing, and truly representing, the best of the country's output, than to have the best show of one firm, however good that firm may be.

5350. How would that affect the smaller and the younger firms?—Undoubtedly for a time the smaller and the younger firms would have a difficulty in getting to the top, the same as they would have anywhere now.

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine.

25 April 1907.

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine.

25 April 1907.

5351. They would have a difficulty in getting represented at all, would they not?—Yes, certainly; and very rightly and properly so, because the thing should be in the hands of those who have made their vehicles a success. We do not want experimental vehicles shown; it is bad for the country to see something experimental shown.

5352. Why should not a young manufacturer make a very good machine?—If he did, then he would be selected by his own countrymen.

5353. You mean that the selecting committee should go by the quality of the goods?—Certainly.

5354. And not by the name of the firm?—Certainly not; the selection should be made for the purpose of showing the merits of the country, and of showing what its manufacturers can do.

5355. We have been told by other witnesses that for the purpose of distributing the awards a good deal is made of the fact that people have exhibited very often —very much more, indeed, than of the quality of what is shown?—No doubt that would be so, and very often rightly so.

5356. It may be rightly so, but still it is evident that it must be hard on the younger ones if they show something really good, and do not get a good prize because they happen to be a young firm?—But that is where the advantage would come in of showing an exhibit of a particular class of goods really under the country's name and not particularly under the maker's name, although his name would undoubtedly be known. The mere fact that these bicycles were being shown as representing a particular country—Great Britain, in fact—would give every firm an equal opportunity of showing their vehicles, provided the selecting committee in Great Britain chose them. I think that would be the best way for the country myself.

5357. Do you not propose to have the names put up?—You would have to leave the names on for this reason—whether you put the names on or not, any particular make of machine is well known, and all its various characteristics are well known, so that even if the names are all removed, any expert would know what make it was.

5358. I suppose that would be so; therefore, you would keep the names on?—On the vehicles, yes.

5359. If there were a collective exhibit, you would save in the cost of space, and you would get better arrangements, I suppose?—A collective exhibit means that no one manufacturer can make, or ought commercially for his own business to make, as good a show as he ought to make collectively as one of a dozen firms each paying £200 or £300, which is a very small amount. Collectively they would make a very fine show, and then it would be for the credit of the country. We have got to remember, directly we get abroad, that it is not the individual firm's success which helps the whole trade, but it is the success of the country. We want the name of the country as a manufacturing country for a particular article brought forward in that way.

5360. I suppose you have been struggling hard to get the reputation of this country for motor vehicles increased?—That is what we have been fighting for for the last five or six years.

5361. You have had a big struggle with France, I suppose?—Certainly; that has been the fight, of course —to get this country recognised as a good manufacturing country. That has been recognised all the time, but then it has been very severe on the few firms who have done anything in international events, either in shows or in anything else; it makes it very severe on them.

5362. I suppose this international competition, as you might almost call it, will go on for a great many years? —I should think for a great many years.

5363. In fact, I suppose there is no reason why there should not be always these competitions?—I think, to a certain extent, it will die out in this way: As each country becomes a motor manufacturing country, there will be no necessity for foreign vehicles to go into that country; and so I think it will very likely die out, as the cycle business has in foreign countries. At the present moment it is no use trying to establish an export trade in bicycles in foreign countries, because you can only look to have that business for a short time. That is why we have established a factory in Italy. We might try to build up a trade, but as soon as we succeed in building up a trade, and it becomes of any importance and competes with the local manufacturers, they put up the duty, and then it becomes impossible to import British cycles into that country. They will do the same with motor-cars undoubtedly.

5364. They got ahead of you in France?—Yes, at first.

5365. The terms used in the business, and so on, come to us from the French?—Yes. France had a start of many years, of course. But we have manufacturing advantages over here which they have not got there. We are in a better position to manufacture here than they are on the Continent.

5366. Do you agree that there is no reason why you should be treated exceptionally as regards the payment for space, for carriage, and so on?—I do not think there is the least necessity for that. If we could get a committee appointed to see that the exhibits were representative and good, I think it would get the support of all the manufacturers of this country. But then, of course, there are difficulties in the way. The selective difficulties might cause great heart-burnings; but I think people have simply got to go ahead with it and say, "We have got to do the best for our country; never mind whose toes we tread upon." If they do it firmly, you will find manufacturers will be bound to support them, and will be always trying to improve their efforts, and so on, in order to get their goods chosen by the selecting committee.

5367. So the great point is that it is a collective exhibit that you want?—Yes.

5368. (*To Mr. Woodfine.*) Have you much to add?—No. I might say, perhaps, that I happened to be living in Paris right through 1900, and I saw something of the working of the Exhibition.

5369. I should like to hear you on that?—I heard all the rumours that were going around as to spaces being forfeited and re-let, and so on, and I know several people who were completely ruined over it.

5370. What sort of people?—Show people. There was very great difficulty indeed, and the charges that were made to them for the least little bit of work they wanted done were very great. Then they were always confronted with the difficulties of foreign law. Anybody who wanted to get anything from them would always put them in a corner, and there they were up against such a law or such a regulation, and so on. I saw a good deal of the inside working of those difficulties. They were enormous; and certainly it would have been worth far more than the money for the space, or the money for the decoration, or the money for the transit, or any other item of expenses, if they could have had somebody there with sufficient authority, to whom they could have gone and said, "There is this difficulty and that difficulty; I want you to put it right and to straighten it out." What was wanted was an authority on the spot representing the country, with sufficient power to go to the Committee of the Exhibition, when all these difficulties arose, and insist on having these things put right. Exhibitors should not be always put to such troubles because something happened at the Custom House, or something else happened at the railway station, and something else happened elsewhere, so that they were brought up against some law or some regulation which the individual exhibitor was ignorant of, and which all the different contractors and others whom he was employing were taking advantage of to always squeeze him, making him late as to time and putting him up against extra expenses of every kind.

5371. But surely the British Commission were there always to be consulted and to help you?—It might have been so, but all the same these difficulties happened, and continually happened, and I saw a great deal of them. Probably, however, the majority of the complaints in question were from the proprietors of exhibits or shows not properly within the section. I also refer to an article in the Report of the B.C.C., Paris, for 1901 (p. 71), which goes to show that exhibitors (British) in the section were unwilling to act collectively, which of course meant a greater volume of individual difficulties.

5372. Did you hear great complaints?—I heard enormous complaints. I was right inside it, and I saw the enormous difficulties that these people had. Every body was always "having" them—always using the laws or the regulations as a lever against them, saying, "Well, if you don't like to take our contract for that, you will find you will have trouble at the Custom House, you will have trouble at the railway

station, you will have trouble with the police, you will have trouble with the fire authorities," and so on—always trouble, and apparently no power to go to who could say, "These things have got to be put right, and it has all got to be made clear and straight and simple." Then in addition to that, when the Exhibition was over, a very interesting little thing happened. Some genius wrote round to a large number of firms in England—big firms, too, and said, "You have got the first or the second or the third prize; if you will send us certain fees we will send you the medal or diploma." They manufactured a great many diplomas, or medals, and sent them over here for a few shillings or a few pounds each; and it was quite a long time before the people over here—and big firms, too, as I say—got to learn that these were not the official awards at all. People over here were buying any amount of them, and apparently there was nobody there to get a hold of all these things. Then, most of the trouble with Customs arose *after* the Exhibition—getting goods away.

5373. It is difficult to provide against every form of rascality, is it not?—Of course. Every one of those things I heard and saw over there, if there had been anybody there who thoroughly understood the matter, and who had got the power, he could have straightened them out.

5374. I think they did not consult the Royal Commission enough; the Royal Commission had offices in the Exhibition, and there were people always about?—I am aware that they had offices there.

5375. Do you approve of the idea of collective exhibits in your trade?—I am not here to speak as a trader, and I have no authority to speak on behalf of the Society. Certainly, to take the 1900 Exhibition at Paris, it would have been useless for any one English firm, supposing we had been all on the same level in manufacturing, to put up a show there. It would not have influenced the Press reports upon Great Britain as a motor-car manufacturing country, because it would not have been sufficient. It would not have been any good, as Mr. Edge says, because of the duties, because in France they do not have to get a law to increase the duty. The French Government have a number of agents who are always going round inquiring as to how the imports are running on this or that article, and as soon as they find that an article is running up against some of their own goods, they have not got to get a law—it is just an Order in Council, and up goes the duty.

5376. I think that is not quite a fair description of the operations of the French Customs, is it?—They do not have to get a law.

5377. I have had a good deal to do with Customs tariffs all my life, and I do not think they are as bad as that in France. There is the classification, of course, as we know?—They get it taken from one class to another.

5378. Very often there is a power given to the Government, whenever there is a doubt about the classification, to say that motor-cars, for instance, shall come under one class and not under another?—Yes, that is it.

5379. But the power is not given to raise the duty; it is only to give a more correct classification?—And it is done without a law; they do not have to pass a fresh law.

5380. They do not have to pass a fresh law for the purpose of the classification of certain things; I think that is the position?—That is a nicer way of doing it, but it has the same effect. They have agents, who are official agents, watching all over the country, and whenever those agents find that certain articles are competing with their home manufacturers, they classify them for their own benefit. That would certainly happen with us, when motor-cars or anything else began to compete with their local manufacturers.

5381. Have you known a case of the sort you describe?—I cannot put my finger on it, but I have heard of a great many. I can refer you to a gentleman who would be pleased to give them all to you. He is a friend of mine, who was for many years secretary of the British Chamber of Commerce in Paris.

5382. The British Chamber of Commerce in Paris are in very close touch with the British Embassy there, and they could complain to the Foreign Office?—It was from him that I had all these details, and he could certainly give you the absolute instances; I only remember the general case. Taking that Exhibition of 1900, it would have required a very big collective display to have impressed upon international visitors (and especially upon the Americans, who are great buyers and who may be here to-morrow, and who are influenced by fashion as to what car they buy and even of what nationality it should be) that England is the best country for motor-cars.

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine.

25 April 1907.

5383. Were you at the Milan Exhibition last year?—No.

5384. Then the Paris Exhibition of 1900 is the only one you have had any experience of?—It is the only international exhibition proper that I have experience of.

5385. (*Sir Isidore Spielmann.*) Can you tell us, Mr. Powell, what proportion of the British motor-car output your society represents?—(*Mr. Powell.*) It represents nearly the whole of the industry, I should think; but the secretary will be able to tell you better than I can. (*Mr. Woodfine.*) I think you can really say that there is no firm with any output at all that is outside of the membership of the society.

5386. Can you tell us about the number of cars that have been turned out by your society within a given time?—No. We have never had any complete statistics, though we did put before the recent Royal Commission on the Motor Car Acts some statistics of output, etc. (*Mr. Powell.*) It may give you some idea if I tell you, taking last week as an instance, that we sent out 95 cars, and over 100 cars the week before Easter. Every week our own firm is sending out from 60 to 80 cars. That will give you some idea of the growth of the industry.

5387. Are they all sold in this country, or are they exported?—They are both sold here and exported; many are bought, of course, in this country, but a good number go abroad.

5388. What proportion will go abroad?—I should think perhaps 7 or 8 per cent. at the present moment, but later in the year it will be a larger proportion. When the season is over here, it is still on abroad.

5389. I understood you to say that you export also to Australia?—Yes.

5390. What is the duty chargeable there, do you know?—I really cannot tell you that.

5391. Do you also export to foreign countries in Europe?—Yes. We have exhibited in Brussels and Berlin, and we are now sending a number of cars to Holland, Belgium, and Germany. We sent some to Chemnitz last week. We are sending a few to France, and a good number to Italy, Spain, and Portugal.

5392. Does the fact that you are now exporting cars make any difference to the number of foreign cars imported?—Yes. I think Mr. Woodfine has the figures. I believe the imports are actually going down. Our exports are increasing very rapidly, the English production of cars is increasing very rapidly, and I believe the returns show an actual decrease in imports; is that not so? (*Mr. Woodfine.*) There is a comparative decrease. (*Mr. Powell.*) Not an absolute decrease? (*Mr. Woodfine.*) No. (*Mr. Powell.*) It is only relative? (*Mr. Woodfine.*) Yes; there is apparently a slight increase still, but it is very much less than it was.

5393. Can you attribute that change to exhibiting cars at exhibitions?—(*Mr. Powell.*) No, I do not think it is to be attributed to that. We were hampered by legislation for a long time—you know, the old red flag business. That allowed the French and German makers to get a lot ahead of us; but we are overtaking them very rapidly.

5394. There is great competition, is there not, between British and foreign built cars here in England?—Yes.

5395. Can you tell us why we import the foreign mechanism and add the British-built carriage to it here?—My firm does not do it, though some firms do it. We make our engines, we make the chassis, and we make the bodies. The only things we import are some of the electrical fittings. (*Mr. Edge.*) We had better clear that point up before you go further, because there is rather a misunderstanding about it. The Board of Trade Returns are somewhat misleading. They show the imports in two forms. They show them as motor-cars and as parts of motor-cars. Under the head of parts of motor-cars they really mean what we call chassis. When we talk of motor-cars, the carriage body is not an essential point at all; that is nothing—it is a very small proportion of the cost of the whole, and it is quite immaterial where it is made. We do

Mr. E Powell, Mr. S. F. Edge, and *Mr. T. F. Woodfine.*

25 April 1907.

not care about that; it is a very small point. But the Board of Trade Returns show as parts what are not really parts. There are a certain number of true parts, but the bulk of them are correct chassis. In this country it has been suggested, and it was suggested no doubt by those interested in foreign motor-cars, that this large influx of parts which is shown on the Board of Trade Returns meant that British manufacturers were buying foreign parts and making them into British motor-cars. That is quite untrue. It is quite time that there was a change made in the Board of Trade returns which suddenly showed this rush, and what you have really got to do is to take the whole thing—the parts and the motor-cars—and add them together, so as to show your total imports of motor-cars. There is a certain number of true parts, such as valves and little bits of things, which come in in quite small quantities. At one time there were one or two firms who bought their engines abroad and put them into chassis here; but that practice is dying out now, and you may take it that when we speak of a British motor-car to-day it is a British motor-car with some small parts possibly brought from abroad; just in the same way as French manufacturers manufacture what are termed French motor-cars, but they buy their magnetos and that sort of thing in Germany. So in Italy, there are Italian-made motor-cars, but they produce practically nothing in their own country, and they have to buy nearly every bit of it from either England or France; and yet people talk about the Italian industry going ahead! But they make nothing there, and they have no material. I have a factory in Italy myself, and I know they have no material that they can buy in the country worth talking about. We supply them with most of their parts. The axles they get from this country, the springs from France, and so on right through. The Returns are quite misleading; but very few people know the truth about it, unless they have factories. And it is much the same thing in America at the present moment.

5396. (*Chairman.*) Do you suggest that there should be a better classification for motor-cars in the Returns than there is at present?—I do not know what difficulties there are in the way of having a correct classification, but I do suggest that there should be something better than we have at present.

5397. (*Sir Isidore Spielmann.*) Coming back to exhibitions, do I rightly gather that it does not assist you in your business to exhibit motor-cars at exhibitions?—(*Mr. Powell.*) It assists us greatly. What I meant to convey was that when a business is thoroughly established—for instance, like our bicycle business is—exhibitions do not assist us much. Our goods are well known, they are standardised, and there are very few alterations. But when the bicycle industry was in its infancy, it did assist us enormously. The motor industry is in its infancy now, and it will assist us to exhibit; but then a time will come when it will not assist us so much.

5398. The exhibitions at Olympia have been highly successful, I believe?—Yes, very.

5399. Reference has been made to unfairness in giving awards; can you point to any particular country where you have had an unfortunate experience in that respect?—Personally, my firm have never had any cause to complain. We are a well-known firm, and we have had awards which have quite satisfied us. I am only speaking generally. It is pretty well public talk, and it is quite understood in the trade, that the awards at foreign exhibitions are not given us quite on the right lines; they do not inspire that confidence in England that they ought to inspire.

5400. We have recently had witnesses here of some repute who have indignantly denied the statement that awards are occasionally given which are not given solely on account of merit; but you are of another opinion?—Yes, clearly.

5401. Have you had any experience of your cars or bicycles, especially the bicycles, being copied?—Yes, they have been copied very largely; but it is very difficult to trace that directly to an exhibition, because a rival trader can easily get a bicycle by going to one of our depots or agents' shops. So you cannot directly trace it to the exhibition, although exhibiting does assist in that direction.

5402. Have you exhibited at other exhibitions besides the Paris Exhibition of 1900 and the Milan Exhibition?—We exhibit at all the important exhibitions either directly or through our agents—almost invariably through our agents.

5403. In your opinion, have the British sections of machinery, in which I suppose bicycles come, been satisfactory?—I was not present at the Exhibition in 1900, and therefore I could not say anything about it; but the annual exhibitions abroad are not satisfactory. They do not treat English traders abroad as well as we treat foreign traders here. They put us in little corners, where our goods are not so well exhibited as their own. They do not treat us as being on an equality with their own firms like we do at our show at Olympia.

5404. To what do you attribute that?—I do not known. I suppose they are not cosmopolitan like we are, and that they are looking after the interests of their own people.

5405. Is it the fault, do you consider, of the management of the British Commission?—I am speaking now of the annual exhibitions abroad, and there is no Commission there.

5406. I was referring more to international exhibitions. Have you cause to complain of the treatment you have received at foreign exhibitions as regards space and attention, and so forth?—We have had no cause to complain as to the international exhibitions, but we have as to the annual exhibitions.

5407. As regards the cost of exhibiting, would you say you have often kept away from exhibitions on account of the great cost? If you were assisted in the cost of exhibiting, would you, or your firm, be willing exhibitors?—Yes, we should be perfectly willing to exhibit, and we should like it. But, as I said, I place more value upon the assistance we should get and the worry we should be saved if we had some organisation to take charge of these things, to take the space for us, and arrange all for us, decorating the stand and allocating the space to the various firms exhibiting. That would save us all the worry and trouble that we now have in dealing with foreign exhibitions. We would rather have that than a contribution, though we should like the contribution as well.

5408. I think Mr. Woodfine referred to the forging of awards and to false diplomas and medals being issued?—(*Mr. Woodfine.*) Yes.

5409. I am not here to defend the Paris Commission of 1900, but are you aware that that Royal Commission, as soon as it heard of it, sent out notices to all their exhibitors to beware of that particular firm, and that that particular firm in consequence took legal proceedings against the Royal Commission in England, and lost the action?—I am not aware of that.

5410. I only mention that to show you that the interests of the exhibitors were not forgotten?—I do not for a moment suggest that the Commission did anything which an English Court here would have held sufficient negligence for an action to be sustained against them. I am only suggesting that it might have been otherwise.

5411. (*Mr. Malcolm Ramsay.*) Am I right in inferring from your evidence that in deciding whether you will go to an international exhibition you have not been very much influenced by the consideration whether the Government was going to officially participate or not?—(*Mr. Powell.*) I think we should have been influenced by that; but as things are at present, as I have mentioned, we leave these matters to our local agents, as they can do it so much better and so much more cheaply. If we had it under the charge of a Government Department, who would look after everything for us and tell us: "There is your stand; all you have to do is to take your goods and put them there, and take charge of them," we should probably exhibit directly.

5412. Has it been your experience that the exhibitions where the British Government has officially participated have been better managed or more successful, from your own point of view, than those exhibitions where the British Government has not participated officially?—I could not say that I have really had any experience which is of any value of exhibitions where the British Government has officially participated.

5413. Your great point is that an efficient organisation is much more useful to you than anything in the way of a subsidy?—Certainly that is so.

5414. (*To Mr. Edge.*) Do you agree with that?—I do.

5415. I should like to ask you, Mr. Edge, what sort

of proportion your export trade bears to your whole trade?—It is about 14 per cent.

5416. Is your export growing in relation to the home trade?—Judging from the way things are going at the present time, I expect in three years from now to do more than half my trade abroad—that is, with the British colonies; but so far as the European countries are concerned, the large motor-using countries of the world, I see no hope except in establishing our own factories.

5417. But for the moment your foreign trade has been going up faster than the home trade?—It is growing in the British colonies, but not faster. The business itself, as a whole, is developing very fast indeed, and in looking at some of these figures one has to keep in mind that the business itself has for years now gone up two or three times each year—that is, has doubled and trebled itself.

5418. Are you speaking now of the whole turnover?—I am talking now of our individual firm. I should say the total development is infinitely greater than that.

5419. But your foreign export has not grown faster than your own home development?—No, it has not; but it is growing fast now, and I think we look forward to there being a very big future in that trade.

5420. (*Chairman.*) By foreign exports you mean chiefly colonial exports, do you not?—I mean colonial exports; I am perhaps wrong in calling it foreign.

5421. (*Mr. Malcolm Ramsay.*) Did you go to the St. Louis Exhibition?—I was exhibiting there through the American factory.

5422. Then you went as an American?—Yes, that is so.

5423. So I suppose you did not come across, or have very much to do with, the British Commission there?—That is so. I heard no reports of them.

5424. I do not think you have been asked whether you have any particularly strong view as to the sort of body which should be placed in charge of the British exhibits at an exhibition. Are you satisfied with the Royal Commission system?—I would have thought that a Royal Commission would have been exceedingly valuable; but, speaking for myself, I think that it could be enormously strengthened, if I may say so, by the addition of a representative from each of the trades that would be exhibiting at the exhibition—that is to say, supposing you bring in one representative from the motor trade, and another representative from some particular class of the steel trade, and another representative of textile materials, by that means you will be brought into touch with the men whose interests are fearfully keen in their particular thing, who are specialists in that particular thing, and who are sure to be able to suggest something to the general Commissioner which might very easily escape his notice, because he is not so keen on it, and he cannot be.

5425. Then you would like, more or less, a fixed nucleus with an expansive periphery of experts?—That is so. Our interests are absolutely bound up to that particular thing.

5426. It has been suggested by some witnesses who have given evidence before us, that the actual management of the British section at these international exhibitions has not been sufficiently in the hands of business men?—My suggestion would rather cover that.

5427. I do not know whether you would advise that business men—by which I mean people who are actually engaged in a business of their own—should be placed in charge of the exhibition?—I think that would be the worst thing in the world that you could do; for if they were any good they would be busy at their own business, and, as a rule, would not have the time to attend to something concerning the general good.

5428. For the really effective part, the carrying out of the details and the working out of the organisation, you would want more or less an exhibition specialist?—Yes; you would want a permanent staff undoubtedly.

5429. Or something in the nature of a permanent staff?—No doubt.

5430. Which could be advised as to the interests of particular classes of exhibitors by experts?—Yes.

5431. Who could be associated with that organisation?—Yes—with the Royal Commission, say.

5432. (*Mr. Harris.*) We have been asking you questions about international exhibitions, but I should like to make out clearly whether it is not the case that there has been, up to the present, no considerable exhibit of motors (in which you are chiefly interested) at any international exhibition; I rather gathered from Mr. Powell that there has not?—(*Mr. Powell.*) I have been trying to think; I do not remember that we exhibited at any one excepting the Milan and Melbourne Exhibitions; I think those are the only two at which we have exhibited motors.

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine.

25 April 1907.

5433. (*To Mr. Edge.*) Do you say the same?—That is so.

5434. So that, in fact, what you have been saying is a little on the border of theory rather than actual experience?—Yes, it is a little bit.

5435. You have referred to the annual exhibitions which are held abroad; could you explain what those exhibitions are, and who organises them? Are they called international exhibitions?—(*Mr. Powell.*) Some of them are. (*Mr. Edge.*) They are international Motor-car Exhibitions—that is to say, they are class exhibitions, but international.

5436. Would you mind telling me who organises them?—They are generally organised by the Automobile Club of the country, very often with a promoter possibly in the background. In the case of France, where the biggest exhibitions are held, they are promoted entirely by the French Automobile Club, who formulate the rules—for the benefit of the French exhibitors; that is to say, they make rules which give the French exhibitor a preference (which is very proper from their point of view), but make it quite impossible for any British firm to go there, except for the purpose of being put into a small space, so that a French manufacturer may say when you are talking about a Daimler or a Napier, "Go and look at Napier's stand over there in the far corner, and you can see what sort of firm they are"—whereas you are not in a position to do any better, because you are put down into a small space. That is the cleverness of their staff, and it *is* very clever from their point of view.

5437. Would you hold then that your trade has never had a fair run in any exhibition?—Yes.

5438. (*To Mr. Powell.*) Would you agree there?—I do. We exhibited at the Paris Motor-car Exhibition, two years ago, I think it was, and we did not consider that we were well treated. We have not exhibited since. I saw the Daimler stand, and I saw the Napier stand last year, and what Mr. Edge has said is quite true. They treat us very differently. (*Mr. Edge.*) I went there for two years when I could get a convenient stand, and when they put us more on an equality with the French manufacturers. I drew the second prize in the second year, and they altered the rules the next year and I got an inferior position.

5439. On the whole, would you rather stand out of international exhibitions altogether than go on with them?—(*Mr. Powell.*) No. (*Mr. Edge.*) I would rather see the country represented. I say Great Britain ought to be represented at every exhibition that is held.

5440. I understand that you are strong on collective exhibits, but I am not so sure that Mr. Powell agrees with you?—(*Mr. Powell.*) At the present moment there would be such a large number of firms wishing to exhibit motor-cars (because it is a new industry, and a large one), that I think you would find it very difficult indeed to manage a collective exhibit. That is what I mean. At the present moment, I would rather have an individual stand.

5441. May I take it that you would be afraid of the jealousies that would be excited by selection?—One must have such an enormous stand for a collective exhibit that I do not know how it could be managed. I think you would have to leave it to each individual firm to look after its own goods, but allocating to them certain space as at present.

5442. I should like to press you, Mr. Edge, upon this point: Why is it bad to show an experimental machine? Will it not do the trade of the country good?—(*Mr. Edge.*) It is not bad to show a good experimental machine, but it is very bad to show what we may call a freak machine; for this reason, that it makes the country a laughing stock. You see there are a great many people who bring out designs and that sort of thing which are quite impracticable.

5443. Have you actually seen that amongst the English exhibits?—That is one of the things that did most

Mr. E. Powell, Mr. S. F. Edge, and *Mr. T. F. Woodfine.*

25 April 1907.

harm to this country when we first inaugurated motor shows here. We got a large class of makers who thought there was a fortune to be gained in the motor trade by making something entirely different to anybody else. They showed those things, and those things were held up to ridicule in all the Continental and foreign papers; and very properly so.

5444. Were those things shown here, do you say?—They were shown here, and then they were illustrated in the foreign papers as examples of British manufacture. They did not show the good ones in their papers; they showed the bad ones, and they said, "There is a sample of a characteristic British exhibit." That was proper from their point of view, as they made the best of it for themselves.

5445. So that up to this point really about as much harm as good has been done to British trade by exhibiting motor-cars?—In that sense, yes.

5446. And generally?—In this country we have now managed to get a very fine show together; and it is an international show in which we exhibit very much on equal terms. Great Britain being such a large buying centre, the foreign firms have had to come here, and they could not ignore us. They had to come here through their representatives who were already here, or else they had to send. We opened our arms to them and said "Come along." What we did when we got them here was to put up cars against them which made it very difficult for them to compete; and that is why we have got a trade in this country for British motor-cars which is practically pushing out the foreigner. Every year the imports are not doing so well—in fact, for the first quarter of this year they showed a decrease, for the first time in the history of the trade.

5447. And all that you have done without any international exhibition?—And without any Government help of any sort, simply by the great vitality in the trade.

5448. So that it really comes to this, does it not, that, as a matter of practice and as a matter of experience, no great benefit is to be brought to the motor-car trade by an International Exhibition?—I would say "Yes, there would be great benefit." If it can be taken in hand in the way I have indicated by a collective exhibit, I think you would find the firms scrambling to get a share of the space. Mr. Powell suggested that there would be so many applying that you could not allow them all to exhibit. I think that it is wrong to assume that all should exhibit; for this reason, that obviously at an International Exhibition there is only going to be a certain amount of space allotted to the motor trade, and, therefore, if it is a question of whether you should pick out the 12 best motor-cars of the country, or try to squeeze in 24—12 good and 12 bad—my own opinion is that the best interests of the country would be served by some committee with full power saying, "We will take only a few of the best representatives of the trade of the country to show at an International Exhibition." That is my feeling. I say I do not care what happens to the other man, and I do not care how he feels. If this committee possesses the support of the trade, which they ought to have, they will pick out those which seem best for the interests of the country. That is what an International Exhibition, in my opinion, should be for—for the interests of the country, and not for the interests of the individual.

5449. (*Mr. Algernon Law.*) I think you mention decoration as one of the expenses which the Government might bear in case it participated in an International Exhibition?—(*Mr. Powell.*) What I meant by that was that at all these exhibitions you take a certain amount of space, and then you are supposed to cover that space in any way you think fit, which means that you cover it with a stand, and you decorate that stand, and that decoration of the stand costs you more than the space. What I mean is that if you had a uniform system by which a certain amount of space in the exhibition would be taken for the British section, then this organisation would arrange to take the space and decorate it—that is, to get suitable stands and put the decorations up; and then it could allocate the expense of that amongst the exhibitors.

5450. You would bear that expense, you mean?—Yes.

5451. And you would not expect the Government to do so?—No.

5452. In fact, you merely look to the Government for the organisation?—I think the Government might help a little pecuniarily also, perhaps.

5453. In what respects would you expect the Government to do that?—The Government might bear the whole expense of the staff and of the organising; but I do not know that we should expect much more than that.

5454. But there should be no direct contributions to the expenses of the exhibitor?—No, I do not think that to be necessary.

5455. In the case of the Paris Exhibition, did your agents require you to put their names on your goods, or did your own name stand there?—Our own name stands on the goods. The stand is taken in the name of our agent, but he puts himself up as agent for Humber cycles and cars.

5456. We have had evidence to the effect that agents practically prevent their principals from exhibiting, because they will not allow the name of the firm to appear, for fear that they should be dealt with direct?—We have not experienced that.

5457. So that would not apply to you?—No.

5458. Though you say that a well-established firm really does not gain by any exhibition, do you think they stand to lose by not exhibiting? In other words, is it necessary for the maintenance of their reputation that they should exhibit?—A good deal depends on their circumstances, of course. Some firms must constantly keep before the public, and must be constantly advertising. It would not do to hold absolutely aloof.

5459. I think you said you were represented at Milan?—Yes.

5460. Were you satisfied with the British organisation and arrangements there?—I was not there personally. We did that through our agent in Italy.

5461. You did not hear of any criticism from him, did you?—No; he seemed to be quite pleased with what was done.

5462. (*Chairman.*) Is there anything else you gentlemen would like to say before you go?—(*Mr. Edge.*) There is just one point. A question was asked of Mr. Powell just now with regard to the Government grant. It seems to me that a Government grant is quite an unnecessary thing, provided the exhibitor is sent out in an official way in a sense, because it would be an enormous advantage to a manufacturer in this country to be picked out as one of those sent to represent his country, and I think that would more than make up for any share of the Government grant. It would bring an enormous return to the company.

5463. You want your collective exhibit chosen without financial help, and then you want help from the State whilst you are out there?—I could take care of my firm's interests quite well, and pay everything in relation to it, provided we could get helped in that way.

5464. You want help in making your arrangements, when the exhibit has been got out there?—(*Mr. Powell.*) Yes. (*Mr. Edge.*) If you had a permanent staff who were looking after British interests as a whole there, to see that the vehicles, or whatever they may be, are shown in a proper manner and with a dignity worthy of the country, that would be better than the individual trader exhibiting on his own account.

5465. But you do not want a direct grant from the British Treasury towards the cost of transport and of space?—I think that is quite unnecessary. The great thing is to make it really worthy of the dignity of the country. That is the right thing to do.

5466. (*Mr. Harris.*) Would not any British exhibitor exhibiting through foreign agents, as you did at St. Louis, be going quite contrary to such a proposition as that which you make now?—Certainly. He would have to go into it as an American exhibitor.

5467. You would not help your business if you were exhibiting through a foreign agent, would you?—Not a bit. I would rather go as representing the country; I should like to exhibit on behalf of the country.

5468. I imagine that in the case of St. Louis, where you exhibited as an American, you could not help yourself?—We had got the factory there, and we hoped to do a certain amount of actual business. I was not thinking about my country there; I was merely thinking of selling some motor-cars to people. On this point now I am thinking much more of the country's good.

I think there is a great deal to be done by the Government actually taking these things up, looking after the interests of the country, and seeing that the goods are properly shown. If the goods are not shown properly, then a protest from a Government organisation would carry more weight than it would from any individual firm.

5469. Supposing there was another exhibition in America, and we had such a collective exhibit as you describe, giving the best from this country, would you exhibit against yourself in the American section?—Certainly.

5470. So that you would have two exhibits, one against the other?—Certainly. In the American section, one would be trying to sell goods. We should not be selling British goods, but we should be taking part in the collective exhibit for the good of Great Britain. That is very important for the trade of the country. We want the world to think well of us, because if they do not think well of us we shall not sell our goods, however good we are individually.

—5471. There is one thing that puzzled me a little bit in one of your replies. You say you have a manufactory in Italy in the same way as you have in America?—Yes.

Mr. E. Powell, Mr. S. F. Edge, and Mr. T. F. Woodfine

5472. But yet I gathered that they did not manufacture anything at all in Italy, so you have a manufactory to manufacture nothing?—We have it for this reason—to overcome the duty difficulties. They do work there, you should understand, but they have to buy their raw material from France or England. There is no raw material in Italy worth anything which is suitable for making motor-cars.

25 April 07.

5473. So you import all the parts into Italy, and put them together?—In some cases we machine them. We pay a great deal for labour in Italy. The stuff we send into Italy gets in practically without any duty, because it is raw material, and the money that is spent upon it and paid away to workmen is paid away to Italian workmen in Italy, which is a very fine and excellent arrangement from their point of view. They come to us in England and buy something which is worth very little, and then we pay them for all the labour of making it into an Italian motor-car.

Mr. GEORGE JENNINGS, called and examined.

5474. (*Chairman.*) I believe you are a director of the firm of George Jennings, Ltd.?—Yes.

5475. That is a very old firm which is engaged in sanitary engineering, I think?—That is so; it has been established since 1837.

5476. I understand you have exhibited since 1851 at nearly every international exhibition, both at home and abroad?—Yes, including the Exhibition of 1851.

5477. You have shown at the exhibitions at Paris, Vienna, Philadelphia, Sydney, Brussels, Nice, Antwerp, Barcelona, and other places?—Yes.

5478. I think you exhibited at the last Paris Exhibition?—Yes, we did.

5479. Your goods were sanitary fittings to the value of £1,000 and upwards, I understand?—Yes.

5480. Have you had much increase of business in foreign countries from exhibiting?—Yes, a very fair amount.

5481. But more formerly than you do now?—Yes.

5482. I suppose you have more competitors on the Continent than you had formerly?—I do not know; I think it has a great deal to do with the tariff question.

5483. The tariffs are high against your goods, I suppose?—Yes.

5484. But surely you led the way in sanitary fittings abroad; and there must be more makers of those fittings than there used to be 20 or 30 years ago?—Undoubtedly.

5485. Have you had any disadvantage from exhibiting, owing to your goods being copied?—Yes.

5486. I suppose they could have copied them by coming to London and buying specimens?—Yes; but the goods were brought more under their notice by being exhibited at exhibitions.

5487. I have no doubt you have got a good many awards?—Yes.

5488. Do you attach any value to those awards which you have got?—We attach some importance to the awards.

5489. Do you advertise those awards at all; that is, are they described on your letter-paper, your cards, and so on?—Yes.

5490. Have you ever been induced to buy from foreign manufacturers or British manufacturers from having seen their goods at exhibitions?—No, I do not think we have.

5491. I am thinking of machinery chiefly which cheapen your manufacture?—We buy abroad in some cases; but we have not been induced to do so through exhibitions.

5492. Have you ever derived any instruction in the way of economy in manufacture or how to produce improved machinery?—No.

5493. You have refrained from exhibiting your goods at certain exhibitions—for instance, Chicago and St. Louis—on account of the tariff restrictions shutting out your manufacturers?—That is quite true.

5494. Is the duty on your goods in America very high?—Yes, it is higher than in any other country.

Mr. G. Jennings.

5495. But I suppose that your goods would have been seen there by the Canadians who were present, and by South Americans too, and so it would have been in that way an advertisement?—No doubt that would be so; but the Americans copy very much. That is one reason why we did not exhibit.

5496. You do not send much to America, I suppose, now?—Very little.

5497. Chiefly on account of the tariff?—Quite so.

5498. Do you attach importance to this country taking part in international exhibitions for the credit of the country, and would you help to do so in future?—I should say not under existing conditions.

5499. What would you suggest that we should do in order to improve the organisation?—I do not know that it is in the organisation of the exhibition itself that I can suggest anything.

5500. Is it the heavy tariffs that you object to?—Yes.

5501. That would not stop you so much from exhibiting in our Colonies, because the tariffs are not so high as a rule there?—No, they are not. With regard to the Colonies I think that we should take part in any exhibition there—in fact, we have exhibited in New Zealand just recently.

5502. Have you had any business in consequence of that that you know of?—Yes, a little.

5503. I suppose in Canada you do a good deal of business?—We are doing more in Canada.

5504. You do not have branch factories in these highly tariffed countries, do you?—No.

5505. I suppose your home trade here forms by a good deal the greater proportion of your trade?—Yes.

5506. Have you any exhibitions over here, annually or otherwise, confined to your particular wares? We have been talking lately about a motor exhibition that comes up every year; usually there is a sanitary exhibition, is there not?—You are referring, perhaps, to the Royal Sanitary Institute. We have exhibited there.

5507. Are their exhibitions every year?—I will not be sure whether they take place every year or every two years.

5508. Do you exhibit in this country periodically?—Yes. We have taken part in one exhibition just lately, at Olympia.

5509. Do you think that that is of more benefit to you than a large general international exhibition?—Yes, I should say it is.

5510. You do not take very much interest in the question of the organisation, then, of international exhibitions, whether by Royal Commission, as the large ones have been organised hitherto, or by the London Chamber of Commerce or some other body?—No; I do not think that is a matter that concerns us very much.

Mr. G. Jennings.

25 April 1907.

5511. Do you sell your goods chiefly by travellers?—Yes.

5512. You have travellers continually about, then?—Yes.

5513. I suppose, looking out for what all the municipalities are doing all over the country when new systems come up?—Yes.

5514. (*Sir James Kitson.*) I rather gathered that you are looking for the improvement of your trade to an alteration in foreign tariffs; that is on your mind more than anything else, is it not?—Yes.

5515. At the same time your general business is expanding?—Yes, it is expanding, but not so fast as one could desire.

5516. You would like a little more, I suppose?—Yes.

5517. But still your business, notwithstanding the foreign tariffs excluding you, is a growing business?—Yes.

5518. You say you are not doing much in America?—No; hardly anything.

5519. But you would know that a good deal of sanitary ware, such as baths and things of that kind, does go to America from the North?—Yes; it would be the cheaper class.

5520. There is a very large business in that, is there not?—I do not think they import so many baths now as they did. They make them in America now, and they send them over here.

5521. I happened to be in Boston a couple of years ago, and I was at a very large establishment there, and I found that many of the baths were obtained from England. Are you surprised to hear that?—I am.

5522. There was a very large warehouse fitted up altogether with baths and sanitary ware manufactured in this country. They were Leeds ware. Do you know those baths?—Yes. I know that some years ago a good many went over there, but I think now that they are manufacturing them in America and sending them over to this market.

5523. My experience is only a small one, but I happen to have seen that. The business is still a considerable business in that class of things from the North of England, is it not?—Yes.

5524. So I suggest to you that the tariff does not altogether exclude these goods?—Well, it might not altogether.

5525. On the Continent of Europe one sees your ware pretty extensively?—Yes.

5526. And one sees the imitations, which are very inferior. There is no tariff question there, is there; it is a question of art and design, is it not?—The tariff does come in to some extent. It prevents us selling there as largely as we should otherwise.

5527. Is there a large business in your ware in France?—Yes, there is a very large business.

5528. And that is in spite of the tariff?—The tariff in France is not so high as it is in many of the countries; I do not think it is more than about 10 per cent.

5529. What is it in Germany?—More than that, I should think; but I am not sure, and I could not say for certain.

5530. Do the Germans exclude you?—Yes, very much.

5531. (*Mr. Malcolm Ramsay.*) Do I rightly understand you to say that your export trade has grown in consequence of your taking part in foreign international exhibitions?—To some extent; I will not say it is all due to the exhibitions.

5532. But still you think on the whole there has been an increase due to them?—Yes.

5533. Has that been the reason why you have exhibited so regularly?—Yes.

5534. I mean you have exhibited regularly because you have found that trade has followed your exhibits?—Yes.

5535. Have you ever considered the question of leaving off exhibiting? I should have thought your firm has been so long established, and is so very well known, that you could have afforded to let your name carry its own weight?—Certainly; that has been considered.

5536. Will you lose trade if you cease to go in for exhibitions?—It is very possible we might lose to some extent.

5537. You were at Paris in 1900, I think?—Yes.

5538. Could you tell us roughly what it cost you to exhibit there—what were your out-of-pocket expenses?—I am afraid I could not.

5539. £500?—More than that.

5540. £1,000?—Quite. We had a very large exhibit there, and we got the *grand prix*.

5541. Do the expenses which you incur in taking part in foreign exhibitions bear a very large proportion to your general expenses of advertising or pushing your business?—Yes.

5542. They form a large item in it?—Yes.

5543. (*Mr. Harris.*) May I infer from your answers so far that you have no great liking for exhibitions, and that you attach no great importance to exhibitions as a means of pushing your trade on the whole?—As I said before, not under existing conditions.

5544. Do you mind explaining that, "Not under existing conditions"?—I am thinking of the tariff question.

5545. What is your view of the purpose of an exhibition? Do you look upon an exhibition as an opportunity for pushing your particular goods?—Yes.

5546. Do you think the Government is justified in spending money upon helping a trader to do that?—That all depends, I take it.

5547. Were you at Paris yourself in 1900?—No, I did not go to Paris in 1900.

5548. Had you any of your employees there, or did you exhibit by an agent entirely?—We had employees there.

5549. Can you give me any opinion as to the management of that exhibition? Were there any complaints made to you about your treatment?—No.

5550. You have nothing you would like to say about that?—Nothing at all.

5551. As regards the awards at Paris or elsewhere, have you any views as to the methods employed in awarding medals or other awards of merit?—No, I do not think so.

5552. You think on the whole they are satisfactory as far as you know?—Yes.

5553. (*Mr. Algernon Law.*) What was the last International Exhibition in which you took part—Milan?—No, we did not take part in Milan.

5554. Are you influenced in taking part in an exhibition by the fact whether it is supported by the Government or not?—No.

5555. Not at all, would you say?—To some extent I should say we are.

5556. But not to any great extent?—Not to any very great extent.

5557. (*Mr. Wilson Fox.*) You say that you have taken part in exhibitions as an advertisement in the past, but not so much in recent years; is that because, having made a reputation, it is not necessary for you to show at exhibitions so much as you did formerly?—Yes, to some extent that is so.

5558. You have got your clients abroad more firmly fixed, and so your business does not require that particular form of advertisement?—We have agencies in most of the countries abroad.

5559. Do you go to foreign exhibitions which are held in places in which you have agents, as well as those which are held in places in which you have not agents? Supposing you had an active agent established in Paris, and doing a large business there for you; would you take the trouble to show there?—That is a matter for consideration. I should not be prepared to say we would or we would not.

5560. Do you have travellers as well as agents?—Yes.

5561. When you show at a foreign exhibition, do you show for the purpose of maintaining or increasing your export trade, or for the purpose of benefiting your home trade by getting the advertisement of an award?—For both.

5562. Do you show abroad mainly with the object of your export trade?—Yes.

5563. As regards your home trade, I suppose you rely upon the ordinary mode of advertisement?—Yes.

5564. Having got established as well as you are in the eyes of the public, if you did not show at these large exhibitions would you have any fear of competitors cropping up and gaining awards instead of you?—To some extent.

5565. How far has that element influenced you in showing?—That certainly would be taken into consideration.

5566. (*Chairman.*) How often would you like to show at an exhibition?—I do not know that I could answer that question.

5567. In your business are you making great changes or improvements from year to year?—Yes, certainly.

5568. And those you would show at these special exhibitions in the country, which I suppose are practically annual?—Yes.

5569. But you would not consider it necessary to show at a big International Exhibition more than once in five or ten years, would you?—About once in five or ten years. *Mr. G. Jennings.* 25 April 1907.

5570. That would be quite enough for your purpose?—I should say so.

5571. (*Mr. Wilson Fox.*) Expense is an element, I suppose, too, which you would consider?—Yes.

5572. It would be a very expensive thing for you to show at a foreign exhibition every year?—Yes; it would mean a great expense.

5573. And it would be very troublesome?—It would take some time to get the money back in the way of business.

5574. (*Mr. Harris.*) Have you traced any orders directly to an exhibition?—Yes.

5575. You have actually traced orders to an exhibition?—Yes, but not commensurate with the cost.

5576. That is, not commensurate with your outlay?—No.

EIGHTEENTH DAY.

Thursday, 2nd May 1907.

PRESENT:

Sir Isidore Spielmann (*in the Chair*).
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Mr. S. J. Waring.
Mr. U. F. Wintour (*Secretary*).

The Right Hon. Lord Brassey, G.C.B., and Mr. Charles Charleton, called and examined.

5577. (*Sir Isidore Spielmann.*) I understand, Lord Brassey, that you desire that we should examine Mr. Charleton first?—(*Lord Brassey.*) I should be glad if you would do so, as he can go more fully into the details than I can, but at the close of his statement perhaps the Committee will give me the opportunity of saying a few words upon some general points connected with your subject.

5578. (*To Mr. Charleton.*) I believe you are the Chairman of the Council of the London Chamber of Commerce?—(*Mr. Charleton.*) Yes.

5579. What has been your experience in regard to exhibitions?—My experience has been rather small. It has been principally hitherto as an exhibitor and a visitor, until quite recently, when I have been taking a very active part, together with yourself, in the arrangements for the Franco-British Exhibition for next year. I feel I am learning something every day, for my past experience, as I have said, has been rather more as an exhibitor and as a visitor.

5580. As Chairman of the Council of the London Chamber of Commerce, you take an interest, I suppose, also in the International Exhibitions' Committee of the Chamber?—Yes.

5581. Have you formed any opinion as to their effect on the manufacturing and export trade and on British Art?—The effects, in our opinion, are of two kinds: First, in making British industries, the reputation of which is so predominant abroad, better known in detail to foreign buyers; secondly, in keeping these British industries themselves up to date, by enabling English buyers and manufacturers to see on the spot the position to which foreign and competing industries have attained; thirdly, English industries are distinctly advancing on all lines where artistic development is necessary, and it is most essential, more so than ever, in the case of ordinary industrial manufactures, that the artistic side should ascertain direct what the taste of foreign countries is in order to facilitate supply, and at the same time to enable those who are responsible for artistic productions of various kinds to bring home to the foreigner the great progress which English art has realised. There is every reason to believe in regard to art, even apart from its industrial side, that it has benefited of recent years by the exhibitions of British paintings, water-colours, and statuary. *Right Hon. Lord Brassey, G.C.B., and Mr. C. Charleton.*

5582. You say that English industries are distinctly advancing, but that in the case of ordinary industrial manufactures it is most essential that the artistic side should ascertain direct what the taste of foreign countries is, in order to facilitate supply; can you give us any information on this head as to special manufactures? Have you anything in your mind that you can tell us particularly that you have noticed in regard to the taste of foreign countries? Do you refer to textiles and things of that sort?—Possibly, to some extent, to textiles. We are holding our place it may be in some iron work too, and in some parts of building work. I do not speak so much of public buildings as perhaps of the larger works of the bridge type and engineering type, where art can play a part. Perhaps also, to some extent, we are holding our place in furniture.

5583. Have you formed any opinion as to the effect of exhibitions on the general commercial relations of the countries?—Whatever the practical result to individual manufacturers may be, there is little doubt that exhibitions improve international relations, not only with the country in which the particular exhibition is held, but also from the advertisements which that exhibition supplies to the country in which the exhibition is held. There is little doubt that the recent exhibitions at Chicago and St. Louis have helped to develop and maintain British industrial reputation, although individual exhibitors may not, owing to the American tariff, have been able very largely to increase their business with the United States of America.

5584. On the whole, do you think that it is in specialities and not in staples that the benefits of international exhibitions are chiefly derived?—The results of these exhibitions vary to some extent according, first, to the degree of development which industries have attained in the country in which the

Right Hon. Lord Brassey, G.C.B., and Mr. C. Charleton.

2 May 1907.

exhibition is held, and secondly, on the tariff supplied by that country to similar British productions.

5585. Do you know of any industries or class of industries which are injuriously affected by exhibitions, and, if so, what are the industries and in what way are they affected?—I am disposed to think that it is only occasionally that an industry is affected by an international exhibition, and that is almost exclusively where processes of manufacture are shown, either having been covered by patents or where the amount of trade is not worth the expense of ensuring the protection by patent. At the same time, the Committee must take fully into account the difference between individual and national interest. It may be distinctly to the national interest that some well-known industry shall be represented at a particular exhibition, but the tariff, or the particular requirements of the country may not make it worth the while for British manufacturers to exhibit. The absence of a British exhibit might, on the other hand, cause the consumers of that country to assume that British manufacturers in this class were inferior, whereas the contrary might very well be the case. It is in instances of this kind that the question arises, how far certain industries may be advantageously represented at certain exhibitions at the expense of the State or by a combination of the industry in general, instead of at the sole cost of the individual exhibitor.

5586. Have you any experience as to whether certain British manufactures which have been exhibited at exhibitions have suffered from being copied by foreigners?—No, I have no personal experience of that. Of course there is a great deal of hearsay about this; one's brother manufacturers say they are being copied, and therefore they do not care to exhibit, but I have no practical experience enabling me to answer your question.

5587. Do you consider that the direct commercial results attained by the official participation of this country in international exhibitions have been such as to warrant the Government in making grants for the organisation of British exhibits?—There is little doubt that owing to the increasing tariff obstructions of the leading foreign nations it will in the future become increasingly difficult to induce producers to exhibit in markets from which they are precluded from doing regular business by the existing tariff. Individual manufacturers cannot be expected to maintain the reputation and the industrial glory of this country at their own private expense. I am therefore disposed to recommend that grants for the organisation of British exhibits should be forthcoming as being more necessary in the future than in the past. It might be necessary in this connection for the organising committees of exhibitions to be placed in the position to encourage, and, if necessary, to subsidise collective exhibits. If, for instance, the British steel industry should be represented, and the individual manufacturers in this country, for financial reasons, do not care to be represented owing to the tariff, or the dimensions of the trade, a committee of steel manufacturers should be organised who would undertake to produce a collective exhibit sufficiently representative of the leading manufacturers of English productions.

5588. To what extent would you recommend that those collective exhibits should be subsidised?—I think that would depend upon the circumstances of the particular exhibition and of the position at the time of the particular trade. I could not lay down a law for the amount. I think it would have to depend upon the size and nature of the exhibits.

5589. Would you make the manufacturers contribute anything at all towards the expense of it?—Yes, I think they should contribute something. I think they should be induced by assistance to come forward, because you can hardly expect a manufacturer to go out of his way to exhibit, when he knows not only that he is going to get no advantage out of it, but that possibly he may be prejudiced by his exhibit.

5590. Would you make him pay for space, for instance?—I would make him pay for some of the space. I would not offer him a gratuitous stand and all his expenses paid, but I would assist him.

5591. Would you assist him in one particular item of expenditure, or perhaps in more, or would you make him contribute, say, a percentage of the expenses—50 per cent., for instance, or less?—I should not like to name a sum, but I would assist him, and I would assist him for two reasons—in the first place to induce him to come forward, and in the second place to let him go away satisfied, so that he would be prepared to exhibit the next time an exhibition comes along.

5592. Do you think that you would have equally satisfactory results from private enterprise?—No, for the reasons already given, and in my opinion it is still less likely to be so in future than in the past.

5593. Why?—Because I think with these tariffs and with the enormous amount of competition we have that there is an even greater tendency on the part of our home manufacturers to stand aloof from exhibitions than there used to be. I have seen it only recently in Yorkshire with reference to our Franco-British Exhibition; they do not want to come forward.

5594. Do you think they are tired of exhibitions?—They are tired of them, and they are afraid of having their processes copied. Then, as a matter of fact, they have got their hands full, and they will not take the trouble.

5595. That being so, you have to offer them some strong inducement, do you think, to come forward and exhibit?—I think the stronger the inducement, the more likely you are to get a satisfactory exhibit. I am taking it, if I may say so, on a national line, and not on an individual line, the idea being the participation of a particular country from a patriotic point, and not from an individual point, and, therefore, you want to get in all the exhibitors you can, otherwise your country does not make a proper show from an international point of view. That is what I have in my mind.

5596. Rather than see England make a poor show, would you prefer that we should stand out altogether?—Certainly.

5597. Would you say, for instance, unless we could make a show equally as good as that of France or Germany?—Certainly.

5598. Assuming that public money is granted for the organisation of official exhibits, do you consider that the grant should be made subject to any special conditions as regards the accommodation and facilities offered by the exhibition authorities, or as to the number and quality of the exhibits sent in by British firms?—Speaking generally, I should not be disposed to advise the imposition of any conditions of this kind. The main thing to decide, it seems to me, in the early stages of a proposal for an exhibition is whether the undertaking is of a sufficiently assured character to justify the participation of this country. If that point is decided favourably, then a grant should be given which should enable a British section to be organised (either with or without a fine art section, according to circumstances) fully creditable to the reputation of this country. It is almost impossible to forecast at the commencement of the organisation of an exhibition how an English section is likely to develop, so that to impose limitations at this early stage would probably be to court failure in advance.

5599. How do you think we can ascertain whether the undertaking is of a sufficiently assured character to justify the participation of this country?—Only by minute investigation into the lines upon which the particular exhibition is going to be carried out, the persons who are directing it, what organisation or means are behind it, and how far other countries are likely to participate. That means spade work from the beginning.

5600. Have you found any reluctance on the part of British exhibitors to take part in exhibitions owing to their being organised by Royal Commissioners or by the London Chamber of Commerce?—Certainly not. I have never heard of the existence of any such reluctance. On the contrary, the London Chamber of Commerce is on the best of terms both with the Associated Chambers of Commerce of the United Kingdom individually and with the Chambers of Commerce of the Colonies; so that the intervention of the London Chamber of Commerce, far from leading to jealousy, would undoubtedly give confidence to any exhibition with which it was connected, and would tend rather to increase than to decrease the number of exhibitors.

5601. We have had witnesses here who have stated that the London Chamber of Commerce, and also the various Chambers of Commerce throughout the country, have not the influence they ought to have in inducing the best firms to participate, and that a Royal Commission has greater facilities; what is your opinion?—That is not my opinion, if I may venture to say so. I think the difficulty in bringing the exhibitors forward is

rather that which I ventured to point out in answering your previous question. I do not believe it is because the Chamber or any body in particular approaches them; it is rather an inherent reluctance to come forward. I do not think that any other body could induce them more effectually than we could—I do not mean to say less effectually than we could, but I do not think the inducement would be any greater.

5602. Then, provided they had a sufficient inducement, do you say it is quite immaterial whether it is a Royal Commission or the London Chamber of Commerce which is promoting the exhibition?—I do not insist that the London Chamber of Commerce is the only body that can promote an exhibition—far from it. But on the general question I am disposed to think that another class of body would be better than a Royal Commission. Of course, I speak as a manufacturer and as a commercial man purely; but I think, if I may say so in a word, that the lines of the French Committee are the best.

5603. Do you think there was any opposition from the North Country manufacturers arising through any jealousy of the London Chamber of Commerce?—No; for the reasons already stated I should say certainly not. There may, perhaps, have been some slight feeling of jealousy some 20 or 25 years ago, before the methods of the London Chamber of Commerce were fully realised and understood. Possibly, if that ever did exist, it was because our Chamber was only then itself in its infancy. Our Chamber is not one of the oldest Chambers, and we have only just kept our twenty-fifth anniversary. Some of the other Chambers who were a good deal older than we were naturally might look askance at a new Chamber coming forward, and might say, "What do you know about it?" That is the only possible reason for it, if there ever was that feeling. The successful manner in which the London Chamber of Commerce has since its foundation co-operated with other bodies, and the care it has always taken to give full representation in any joint enterprise, has, I am satisfied, completely done away with any feeling of this kind which may have existed when the London Chamber of Commerce was first formed. In illustration of the confidence reposed by other bodies, and particularly by the Chambers of Commerce in the North, in any project which the London Chamber of Commerce undertakes, I should like to mention the success which attended, three years ago, the visit to this country of the Canadian Manufacturers' Association, under the auspices of the London Chamber. It was known in advance that the Canadian manufacturers were not only Protectionists, but were, in many instances, active competitors of British producers; nevertheless, the suggestion of the London Chamber of Commerce that these gentlemen should be received and entertained throughout the manufacturing districts was most cordially taken up—particularly, I repeat, by the Northern Chambers of Commerce. I could give you a list, if you like, of the towns they visited. We had the heartiest welcomes, and Lord Brassey will bear me out that they were only too glad to receive the Canadians and show them all their works. (*Lord Brassey.*) Yes, I can confirm that.

5604. When you have invited the Chambers of Commerce throughout the country to assist the London Chamber of Commerce in procuring exhibitors for the various exhibitions in which you have been interested, have you found that they have come to your assistance and done really good work?—(*Mr. Charleton.*) As far as I could say, yes; but I am unable to give you any particular details.

5605. Do you know whether they have been able to bring in important exhibitors?—Yes, I think they have certainly done that; but I cannot give you any detailed list. I can obtain a list for you, of course.

5606. You cannot, offhand, say whether they have, as a rule, supplied you with good exhibitors, or disappointed you?—No, I am afraid I cannot give a very definite answer to that; but I can certainly say they have rather favoured us than otherwise. But there again the same point of reluctance comes in.

5607. Do you think that the appointment of a Royal Commission would constitute a satisfactory method of dealing with the organisation and preparation of a British exhibit?—No. I do not think that Royal Commissions, on the lines on which they have been formed in the past—namely, more or less of an official nature—have proved to be attractive to the average exhibitor. I think it would be preferable to follow the lines adopted either by the London Chamber of Commerce or by the French Exhibitors' Committee, under which those who are conversant with exhibition work, and whose names appeal to manufacturers and buyers, would practically constitute a co-operative association for the purposes of organising and carrying through a British section under a Government grant; in other words, the management should be placed in commercial and not in official hands.

Right Hon. Lord Brassey, G.C.B., and Mr. C. Charleton.

2 May 1907.

5608. As you are aware, on Royal Commissions there are a large number of very distinguished persons as a rule; do you think those distinguished names help to influence exhibitors?—Certainly I do. I should like to enlarge what I have just said by stating that many of these distinguished names would not only be desirable but essential to the success of such a body. I am not thinking of the particular work of the standing body, but of the incidental work of each individual exhibition. I would not take a big name simply because it was a big name, but I would take those big names that do represent large interests—not only commercial interests, but even what are, in a sense, the higher interests of an exhibition, namely, education, art and science.

5609. Are you prepared to submit a definite scheme for dealing with international exhibitions in the future?—In general terms, yes. I would suggest the adaptation to English requirements of the permanent Committee of Exhibitors which has been formed in France, and which has undoubtedly been the chief cause of the great success of the French sections at the various exhibitions in which the French Government has participated. Other witnesses, notably Mr. Serena, have already given the Commission details of this machinery, and I have no hesitation in recommending its adoption by, and adaptation to the requirements of, this country.

5610. Would you recommend its adoption without alteration?—It might require a certain amount of revision.

5611. This Committee has heard a great deal about the French Society?—You know all about it, do you not?

5612. It has been mentioned to us in evidence two or three times. You are probably thoroughly familiar with it, too. Would you recommend its being adopted without further assistance from distinguished persons, from experts, or from your own Chamber?—Practically, this French Committee combines all that. It has the leading men upon it, it has members of the Chambers of Commerce, it has manufacturers; in fact, it has all classes of men interested in exhibitions. I do not know whether a copy of the statutes relating to the Committee has been placed before you, but I should be very pleased to hand you this copy if it is of the slightest use to you. I think probably that you may have it.

5613. Thank you. Our secretary informs me that we already have a copy. Why should it be more likely that this country should retain its commercial supremacy by taking part in exhibitions when the position we have attained in the commercial world has not been produced, so far, by participation in international exhibitions?—Because it is to-day far more necessary than it was formerly to keep abreast of foreign competition and to meet by further activity on our part the great energy which has been shown by foreign industries, most of which did not exist on any important scale 50 or 60 years ago. I contend that it is particularly in those countries from which English manufacturers are to some extent excluded, either through tariffs, bounties, carriage facilities, or other methods, that English manufacturers should be able to show by State assistance that their productions and prices, apart from whatever tariff difficulties they may have, are equal, if not superior, to those of any other manufacturers.

5614. Speaking generally, is it not the fact that the largest and best of the English manufacturers are the least disposed to take part in exhibitions?—Yes, I am disposed to think that it is so.

5615. For the reasons that you have already given us?—Yes.

5616. Should we not expect the leading firms to take their share in the expense of international exhibitions?—Not necessarily. Firstly, because of the extent of their reputation, which to some extent enables them to dispense with the advertisement of an exhibition; and, secondly, because in certain markets, owing to the difficulties created by tariffs, bounties, shipping rings, and other obstructions already alluded to, these firms are aware that they are precluded from transacting normal business during the time when no exhibition is being held. Therefore, from the purely business point of view, these firms are not interested in the

Right Hon. Lord Brassey, G.C.B., and Mr. C. Charleton.

2 May 1907.

markets represented by the exhibition, and do not feel called upon to encourage expenditure for purely patriotic purposes.

5617. If their reputation is to be maintained, must they not participate as a matter of self-defence, as it were? If an important firm which has already taken the highest awards stands out and lets younger and less important firms take those awards, would that not be distinctly to their disadvantage?—Obviously they run that risk, and I fancy that some of them do make a point of keeping themselves before the public by these exhibits. On the other hand, there are a great many who sit upon their reputation, and who are not disposed to advertise in any form, and who will not stir themselves to come forward. I think probably that will be your own experience.

5618. Do firms participate chiefly to secure orders at exhibitions, or to maintain a position which they have already secured?—For both reasons.

5619. What is your opinion of the awards that are given at exhibitions? We have had witnesses here who attach no importance to them whatever; what do you say?—I attach very little importance to them.

5620. Is there any proof that foreign nations benefit by holding exhibitions?—I am not aware that it is possible to elicit specific proof that exhibitions in particular have assisted the development of foreign industries in competition with British, but there is no doubt that the number of exhibitions held in various countries is distinctly on the increase; and that fact can surely be taken as proof that foreign countries, whose subsidies are always larger, and even very much larger, than those simultaneously contributed by the British Government, do derive practical benefit sufficient to justify the continuance of these subsidies. Consequently the English Government, in my opinion, has no option but to maintain by an increasing scale of expenditure the position and reputation of British industries, which would be distinctly imperilled by their absence from these exhibitions.

5621. Can you tell us what the Government grant should be? Have you arrived at any opinion in your own mind as to what the British Government should give to assist in forming a large and important British section?—Generally speaking, do you mean?

5622. At a large international exhibition?—I am afraid I should not dare to mention the amount. I think it would depend entirely upon the size of the exhibition.

5623. Do you think that in dealing with the British exhibits sent to a foreign country it would be a good thing to ascertain early what goods it would be hopeless to push and what goods there was a prospect of pushing?—English business enterprise may be relied upon to effect this to a considerable extent. This, however, would not operate where tariff obstructions are excessive, as, for instance, in the United States of America. In a case of this kind the exhibits should be considered more from the point of view of the general reputation of the country than with the object of increasing business against insurmountable difficulties. The class of goods exhibited would require to be those maintaining the general reputation of this country throughout the various divisions into which the particular exhibitions may be divided.

5624. May I ask whether you think that the benefit of participating officially in exhibitions takes the form rather of keeping one's own country before the eyes of the world than of getting specific orders for individual exhibitors?—Yes. That, I contend, is the principle which should actuate His Majesty's Government in making adequate grants to these exhibitions, leaving it to the private exhibitor to make what business he can under the most favourable circumstances.

5625. Do you or do you not advocate that large financial grants should be made by the Treasury in favour of international exhibitions, such as were given in Paris and St. Louis?—Not necessarily, but on the system which I have advocated of a standing exhibitors' committee the Government would only be advised to participate in exhibitions which promise to be important and successful. The amount of the grant would be, therefore, to some extent, a secondary consideration, as it is probable that by good management, on the lines of that introduced by the London Chamber of Commerce, much of the primary expenditure would be reimbursed, but it is essential that the guarantee of the grant should be given in the first instance, and in an early stage of the organisation of the British section, in order that time may not be lost and that exhibitors and manufacturers may be enabled to commence the production of their exhibits at the earliest possible moment, with every assurance that it will be satisfactorily dealt with.

5626. In recommending the adoption of an exhibitors' committee, which has proved so successful in France, do I understand you to recommend that they should be under the control of the Board of Trade?—No. I do not see the necessity for the intervention of the Board of Trade at all, either by exercising control or in co-operation. What is wanted is a committee which shall secure the confidence of exhibitors, and with this object I think the less Departmental intervention there is the better.

5627. Do you think that if you invite a Government grant you can very well do without a certain amount of Government control and Government assistance?—Assistance certainly; not control. My answer to your last question is not intended to be offensive in the least to Government Departments—far from it—but I wish to draw a distinction between control and assistance. I should like to see a body formed in the same way that this French body is formed, so that it should be a practical, working, experienced body, with a knowledge of these particular subjects. I should like to see it in touch with the Government Departments. If I may put it in a homely way, I should like to see it have the blessing of the Government Departments—especially of the Board of Trade. I should like to see the Board of Trade represented upon it, either by some past permanent official who would be willing to give his time to it, or by somebody in the Board of Trade. I should like to feel—although we have not anything of the kind in this country—that such a body has been, to use the French expression, *reconnu d'utilité publique;* but that beyond that it should be allowed to do its own work. As I believe you are aware, when an exhibition comes forward in France this body takes it up. As soon as they have ascertained, by what I have ventured to call before spadework, that any particular exhibition is likely to be sufficiently important for France to be represented, they form a particular committee to further investigate and see how far the country should be represented. Then they go to the Minister of Commerce and state that this is an exhibition which should be supported by the country, and they leave it to the Government to decide whether they will intervene in such a sense as to make it official and appoint a Government Commissioner. If the Government takes it up, this Committee disappears *ipso facto;* but as a rule the Government immediately calls upon them to take up their functions again, and then it is under Government control.

5628. So that it is really the Government which forms the Commission?—No. The Government does not form the Commission; the Committee forms itself, but it is *reconnu d'utilité publique*. I have a copy of the decree here. The decree is dated and signed by the President of the French Republic.

5629. Who is it that takes the initiative in the first instance?—This standing committee takes the initiative in the first instance. I believe the history of the whole thing is contained in one of these French books which I have here, showing how it first arose, and so on. I believe it first arose from a meeting of persons interested in exhibitions.

5630. I gather that you would wish to see it done identically in the same way as the French?—Yes, candidly I would.

5631. (*To Lord Brassey.*) What is your general view as to the participation of the United Kingdom in international exhibitions?—(*Lord Brassey.*) I think the evidence is clear that in the judgment of those who are responsible for public action the participation of the United Kingdom in international exhibitions has been always approved. I go back to the first exhibition with which I had personally to deal—namely, that which was held in France upon a date which was fixed to synchronise with the Centenary of the French Revolution. At that time Lord Salisbury was Prime Minister, and he held, as the head of a Government under a monarchial system, that it was hardly consistent to give direct Government participation and sanction to the exhibition which was proposed to be held in France; but he strongly desired, in the interests of the industries of the United Kingdom, that we should participate and should be represented at the exhibition. Lord Salisbury accordingly communi-

cated with the then Lord Mayor, Sir Polydore De Keyser, and invited him to take suitable action with a view of encouraging exhibitors to take part in the proposed exhibition in Paris. The Lord Mayor asked me to associate myself with him in his efforts. I had much pleasure in doing so, and I remember with satisfaction that although it was without direct sanction on the part of the Government, nevertheless our country was well represented. I take a very much later instance—namely, the St. Louis Exhibition. That exhibition was held in a country which is strongly Protectionist; nevertheless the Government considered that it was desirable for the purpose of sustaining the general reputation of this country as a leading industrial nation, that we should be well represented at St. Louis. The desire of the Government to encourge British participation in the St. Louis Exhibition was attested by the very liberal grant which was made in aid of the British Section. So far as to the attitude of the Government of this country in regard to exhibitions. Then I turn to the general policy of all foreign Governments. With one voice they have signified their approval and their desire that their several countries should be well represented at international exhibitions. I therefore say, so far as public opinion is expressed by the action which Governments take, it is shown both in our own country and in all other countries that public opinion approves of the participation of the industries of the several countries in international exhibitions. Another clear evidence in favour of participation in international exhibitions is seen in the fact that those engaged in industries and in art production in all countries are found ready and eager to show what they can do when international exhibitions are held and their participation is invited. It is quite true that the tariffs are severe in Protectionist countries, and that our industries encounter considerable obstacles at the frontiers of those Protectionist countries; but the difficulties which the British exhibitors encounter in those countries are equally serious in the case of the exhibitors of other foreign nations. For example, if a French manufacturer exhibits in Germany, he does so with the knowledge that any trade he may hope to do with Germany is subject to the German tariff; and, similarly, if any German exhibitor exhibits in France, he knows that any goods which he may send to France will be subject to the French tariffs. In regard to the tariffs, British exhibitors are obviously in as good a position in every market as all other foreign manufacturers are; we have the position in all countries of the most favoured nation.

5632. I gather that you are distinctly in favour of this country participating in international exhibitions?—I am. I support that view by looking at the subject from another standpoint. I ask myself this: In so far as trade is affected by participation in exhibitions, what would have been the result that would have followed if we had systematically abstained from participating in international exhibitions? If the exhibitions which have been held at frequent intervals in all the leading countries ever since the exhibition of 1851 had been signalised by the entire absence of participation of British industries, many opportunities of calling the attention of consumers to the high quality and cheapness of British goods would have been lost. The general position of British trade in recent years has been of a very satisfactory nature. I do not trace the success of British industry principally to the fact that we have participated in exhibitions; but we have participated, and I hold that our effective participation has conduced, along with a number of other perhaps more important causes, if not to the prosperity, at any rate to the activity of British trade at the present time. May I say this with regard to the tariffs in relation to exhibitions? Those who take the strongest view in favour of Protection would concur in this, that under any tariff system an industrial country such as ours can hardly look for its chief market in countries, which, like ourselves, are very highly organised for the purposes of industry. We have to look for our chief market, not for all our goods, but for many descriptions of our goods, in countries which are industrially less advanced. The exhibitions that are held, it may be in the United States, it may be in France, it may be in Germany, are attended as we know by large numbers of persons coming from these countries in a less advanced industrial condition. Visitors from South America, for example, are at all times very numerous in France, and when an exhibition is held in Paris those persons visit that exhibition, and there, if our goods are effectively exhibited, they see what we can do in quality and in cost; and that has an effect, certainly, in promoting the expansion of British trade in South America. The same remark would apply to the presence of travellers from China or Japan; they may see British goods at an exhibition held in Paris, and that may stimulate the sale of British goods in the countries from which those travellers come. When we were making our preparations for the Milan Exhibition, my friend Mr. Serena asked me to associate myself with him—I was honorary president of the committee—in the endeavour to induce British exhibitors to take part in the Milan Exhibition. We spent a day in going round to the leading people in the upholstery and furniture businesses in London, and we obtained no support. These men said, "It is idle for us to prepare some work which shows our workmanship at its highest, when we shall never obtain a market for these things in Italy. There are the tariffs, and then, besides that, in skilled carvers Italy is better equipped than we are." And so they did not participate. But I wish to say this upon that point, that the British Chamber of Commerce of Genoa—which I was instrumental in founding, because we have a very large business in Genoa and Sardinia—advised us that there was a great and increasing demand in Italy for goods, not of the *chef d'œuvre* description, but ordinary furniture such as is used in houses which we all occupy. I have been assured by the President of the British Chamber of Commerce in Genoa, who is himself a Scotsman, that if we had participated there might have been established a very large market in Italy for goods of the ordinary description such as are manufactured in large quantities by firms like Maple and others. Upon this point of the desirability of participating in exhibitions with a view of sustaining the general reputation of the country and of particular firms, it is interesting to note that at Milan and also at the Bordeaux Exhibition (I am the president of the British committee for the Bordeaux Exhibition) the shipbuilders of this country made a very considerable effort. They have not looked in either case to large orders for the building of ships either from Italian shipbuilders or from French shipbuilders; but they have looked to the fact that to participate sustains their reputation, and to abstain tends to bring others into note while they are less prominent; and therefore they thought it good policy to participate in these exhibitions. I quite recognise that shipbuilders have particular facilities and resources for making a good appearance at exhibitions. It is part of their business to make a model of every ship that they build, and those models are hanging in their model room, and they have simply got t otake them down and away they go to the exhibition, and a good exhibit is made at no cost. It is quite a different thing to going to Hampton, we will suppose, and asking him to entertain the idea of making an expensive sideboard specially for an exhibition. But still, there is the fact that Armstrongs have made a great effort to appear suitably at Bordeaux, without looking to any immediate result from that exhibition. My friend Mr. Charleton said something about the jealousy of the British manufacturer who refrains from participating in exhibitions lest his works and his methods should be copied by his competitor. It is certainly to be noted in that connection that there is more jealousy on the part of British manufacturers of one another and of external foreign competitors, than there is on the part of manufacturers in any other country. It is a well-known fact that there is a largeness of view about those matters, for instance, in the United States; the manufacturers there exchange experiences with one another with a liberality which is wanting in this country, and perhaps a change here in that respect might be desirable.

Right Hon. Lord Brassey, G.C.B., and Mr. C. Charleton.

2 May 1907.

5633. Could you give us information on this very important point: Have you any suggestions to offer as to the constitution of a standing committee for the organisation of the British section at international exhibitions?—I agree with my friend Mr. Charleton; I think that a standing committee is desirable. I think it should consist not only or even one may say not chiefly, of persons nominated by Chambers of Commerce. I think if you want to have a strong and effective committee, communications should be made to the leading industrial organisations on each occasion when a committee is proposed to be formed, and they should be invited to nominate a representative. For example, if I were constituting a committee for a large exhibition, I should invite the Iron and Steel Institute to nominate a representative, I should invite the Institution of Naval Architects to do the same, the Institution of Civil Engineers might do the same, and the Institution

Right Hon. Lord Brassey, G.C.B., and Mr. C. Charleton.

2 May 1907.

of Mechanical Engineers the same. In that way I should form a committee which would be thoroughly representative of all the industries; associating with them, of course, representatives of the Chambers of Commerce. That is the sort of committee I should like to see.

5634. What views have you as regards a grant of public money to aid in the participation?—It should not be unduly lavish. It is impossible to say in any general way what the amount should be. You have got to take into consideration the character of the contemplated exhibition, the scale, and many other things. I cannot see that you can determine beforehand the particular amount which should be given from time to time. I can only say this, that under the admirable management of Mr. Serena the grant which was ultimately obtained from the British Government of £10,000 was far more than sufficient for that occasion; under his admirable management half the sum would have been sufficient. In another case—we may suppose the case of an exhibition in Paris—the demand and the necessity for an appropriation would be greatly increased. We should have an Art section, and paintings of the British school would be exhibited there, and you can see at once that the expenses must be very much greater. So I do not think we can say anything specific as to the amount. I hope that when the occasion arises the Government will not withhold that sufficient assistance which it ought to give. There is only one thing more with regard to grants which I should like to say. As an old official, I can hardly suggest that if a grant is made the Government should be without the means of controlling the expenditure.

5635. In that respect you do not agree with Mr. Charleton?—No.

5636. What do you say as to the awards that are given at exhibitions?—I will just say this—that the value of an award depends entirely upon the discretion with which awards are made. At the Milan Exhibition I think that hardly an exhibitor went away empty-handed; they all seemed to me to have received some kind of award. A thing which is universal cannot have the same value as some other thing which is given with more discrimination and with a less lavish hand. Nothing could be said generally, I think, with regard to the awards.

5637. (*Mr. Harris.*) As our time is running very short, I will confine myself to three points upon which I should like Mr. Charleton to clear his evidence, if he will. In one of the questions put by Sir Isidore Spielmann you were asked whether you thought that direct commercial results from exhibitions warranted our participation. I thought you did not quite face that question, although you showed that you thought well of exhibiting. Now, I should like to know whether you think that direct commercial results follow from exhibitions which warrant our participation commercially?—(*Mr. Charleton.*) On the whole, yes.

5638. Now, as to the French Committee which you put forward as a model of organisation; and as to your idea of the best organisation:—is the absolute absence of the Government which you postulate consistent with your belief that after all it is a very good thing to have big names on a Royal Commission? Do you not think that really when you go into the matter you will finally come to some arrangement whereby the Government has something to say in the permanent organisation?—I think the Government might have something to say; but my idea is rather that the actual control should not be with the Government Departments.

5639. No, not necessarily with the Government Departments; but should not the Government have a predominant voice on the committee?—I think, so far as concerns the point of exercising control over a grant of money, they should; but as to the general organisation I think otherwise. May I say with regard to the big names that the idea is, I think—at least my idea is—that it should be a standing committee—that is to say, that it should not be specially appointed for each exhibition, but that there should be a standing organisation similar to the French one. While Lord Brassey has been giving his evidence I have been looking up this very point in the history of the French Committee; I will not read it to you, as it is too long, but it is to be found on page 25 of the book. There you will see the way in which this committee was formed.

5640. On your own showing, does not that French Committee, when it really comes to business, come back into touch with the Government, and is not the Government really the motive power?—No, I do not think so; I think it is the other way about. It does come into touch with the Government, because it has the blessing of the Government Departments, especially of the Ministry of Commerce.

5641. That being so, does it not really get its motive force from that blessing? Is not the blessing the petrol, so to speak?—No, I do not think so. It is not exactly the petrol, but it is a mark of appreciation and approbation on the part of the Government. (*Lord Brassey.*) The Chambers of Commerce are much more closely connected with the Government in France than they are here; and I certainly think that they derive importance from their connection. (*Mr. Charleton.*) The French committee is a heterogeneous body, not confined, as you are aware, to Chambers of Commerce, but made up of all sorts and kinds of people. I have gone carefully through the list. There are included in it all sorts and kinds of *industriels, fabricants* and men of all kinds of business attainments; and not only those, but also, as Sir Isidore Spielmann mentioned just now, men with big names—names connected with the various sciences and arts and industries; and also Government men and legal men. I see they have a legal committee, too, which takes up any legal points that come before them; they call it the *Conseil Judiciaire.* (*Lord Brassey.*) In reference to any committee, whether a standing committee or an *ad hoc* committee whether constituted *ad hoc* for a particular exhibition, or whether it is a standing committee, the Government should have a voice in the selection of the committee, taking care that the selection was representative; but having once constituted the committee I think the Government should leave it to the comaction as they may think fit.

5642. (*Mr. Waring.*) I do not think I quite caught the last words?—I think in the constitution of any committee whether constituted *ad hoc* for a particular exhibition, or whether it is a standing committee, the Government should have a voice in the selection of the committee whether constituted *ad hoc* for a particular sentative; but having once constituted the committee I think the Government should leave it to the committee to deal with the matters referred to them.

5643. (*Mr. Harris.*) This is the third point on which I want enlightenment from you, Mr. Charleton. In one reply you suggested that you would rather see British representation absent than bad, and in another you said if Great Britain is absent that would be mischievous to the whole trade of Great Britain. Is there not some inconsistency in those replies? Would you mind pinning yourself down to one thing—should Great Britain be represented indifferently, or should we stand out altogether?—(*Mr. Charleton.*) I did not mean to be inconsistent, and I am afraid I have explained myself badly. I will say yes to your last question; if Great Britain cannot give a decent exhibit, it is better not to be there at all.

5644. (*Mr. Malcolm Ramsay.*) Do I rightly understand, Mr. Charleton, that you advocate the official participation of this country in exhibitions mainly on general grounds?—Yes.

5645. Those being, first, the general effect on international relations, and, secondly, the general commercial effect?—Yes.

5646. And that in your evidence you are approaching exhibitions rather from the general standpoint than from the point of view of the individual trader; is that correct?—Yes, it is quite correct.

5647. Would you say as regards the individual trader that some trades stand to gain a great deal more business advantage from exhibitions than others?—Undoubtedly.

5648. Then I think you have said, or indicated, that when business is brisk there is a greater difficulty in inducing exhibitors to come forward?—That is so.

5649. When you are advocating participation on the ground of the general advantage of the country, you will be faced with two kinds of exhibitors—first, the people who would go in any case, and, secondly, the people who do not find it to their own interest to go, and whom probably you would have to subsidise in some form in order to induce them to come forward from patriotic motives. Would you say that is so?—That is so.

5650. In settling how you are going to spend your grant, would you draw a distinction between various kinds of trades, and would you be inclined to let those exhibitors who are willing to go in any case to bear a

larger share of the expenses than the people who are not willing to go? For instance, would you subsidise particularly the heavy steel trade, or perhaps the textile people, who might not want to go individually?—I think that would depend a great deal upon the examination made by the committee into the details of a particular exhibition, and I think it would also depend to some extent upon the expenses which would have to be incurred by the different classes of exhibitors. Some men may refuse to exhibit, from that unfortunate apathy which I think we all agree exists amongst British exhibitors. Others might refuse to go, because in their particular instance—and you mentioned steel—the heavy expenses, not only of getting together the exhibit, but of getting it to the spot, would preclude them for two obvious reasons—one, the question of time, and the other, the question of cost. Those men would probably have to be considered more leniently than a man whose exhibit is packed in a small parcel. Take my friend, Lord Brassey's, instance of the shipbuilder with his models hanging round a wall, who simply moves them from one exhibition to another. I think you would have to take it in a sort of sense *pro rata* to the position of the particular exhibition.

5651. I do not think you have been asked at what sort of intervals you would suggest that the country should participate in exhibitions. I understand you are looking at these exhibitions rather as a national advertisement; as at first-class exhibitions the cost to the public may be very heavy, I suppose you would think that it would not be necessary to exhibit on a large scale for national reasons at very frequent intervals?—Not too frequent; if the exhibitions are too frequent the public loses interest in them.

5652. Are you prepared to specify the sort of interval? Would you think one in ten years sufficient?—I should think rather less than that. (*Lord Brassey.*) I would say once in five years. (*Mr. Charleton.*) And I would say once in five years, but that is only my individual opinion. I should think an international exhibition once in five years would not be too often. (*Lord Brassey.*) No, it would not. (*Mr. Charleton.*) But then again that depends very largely on the place, and it also depends on circumstances. If you are going to have it in a small town which is difficult of access, that is quite a different thing to having it in Paris or in London. For instance, next year at our Franco-British Exhibition we hope to get the whole world to come to it; we have got a huge place, and we are taking exceptional care to get ahead of time. That is an exhibition that might be repeated at more frequent intervals than one held in a small town. Then, again, there are political questions that arise from time to time.

5653. I suppose you contemplate that the committee you suggest should exercise very autocratic powers of selection as regards the exhibits which it receives?—Yes, I would arm it with full powers.

5654. You would arm it with full powers?—Yes, very full powers.

5655. Do you think that manufacturers generally would come into a scheme which involved a committee armed with powers of that kind?—Yes, and doubly so if they have the predominant voice.

5656. You think our manufacturers will drop their isolarity, so to speak, and submit to adjudication by a body of that kind?—I think they will. One of the reasons why I object to making this committee bureaucratic in any sense is because that will keep them off. If you will follow out what my friend, Lord Brassey, says, and ask the Iron and Steel Institute, the naval architects, the big trades and others to have a representative upon that committee, and with them members of the Chambers of Commerce and commercial men generally, and then those higher names that represent art, science, and so on, and then let them all know that they, and they only, have the preponderating voice in the matter, I think you will get them to come; but the moment you give them to understand that they are going to be ordered about, then they will draw back.

5657. I asked that question because that seems to me one of the great difficulties in the way of our adopting in this country either the French or the German system, each of which is more autocratic as regards the individual than anything we are accustomed to?—The German system differs very greatly from the French. The German system is the iron heel which goes down to the conscript and everything else in the country. (*Lord Brassey.*) With regard to the Bordeaux Exhibition now being held, the successful and effective participation of Great Britain in that exhibition is mainly due to the fact that Sir Philip Watts, a gentleman of great eminence, personally interested himself in the matter. Had we not had the advantage of his powerful influence, the representation of British interests there would have been very different.

5658. (*Sir Isidore Spielmann.*) Is it an important exhibition?—Very. It is an important maritime exhibition.

5659. How were the expenses met?—The exhibitors who have taken part are all powerful firms, such as Armstrongs and other great firms, and to them the expense of sending their exhibit is a matter that they are perfectly able to deal with. They have not to ask for any assistance, and do not require it.

5660. Has each firm paid its own expenses?—Yes. The Armstrong firm think it is policy to be represented at Bordeaux. To them the question of £1,000, or whatever it may be, is neither here nor there. Of course it would have been quite different if it had been an exhibition of small articles.

5661. (*Mr. Waring to Mr. Charleton.*) There is just one point on which you have expressed yourself on which I should like to gather an explicit idea of your view. You mentioned the point that if we were not well represented we ought not to be represented at all, but I take it that you are absolutely clear that we ought to be represented, and that it is the business of the nation to see that we are well represented?—Certainly, that is my view.

5662. It is your view?—Yes, strongly.

5663. As to your suggestion with regard to the control of exhibitions, you are clearly of opinion that the old method of a Royal Commission would be ineffective in the future?—I do not think it would be so effective as the other process; it is too slow.

5664. It is too cumbrous and it is not efficient?—Yes, and it does not get the right men upon it. In a word, what I should like to see is the certainty of the British exhibits at one of these great exhibitions coming up to the level of the French exhibits.

5665. Or better?—Or better. It is a long way to get better, but still we may hope.

5666. There is no reason why we should not?—No, but their whole system, the general arrangement and organisation of their show, is very much better than anything we have ever done yet. I do not mean to say that in certain individual instances we are not better than they are, but taking the general appearance of the whole exhibit and the artistic appearance of their exhibit—their cases and their lighting and their decoration, and everything else—their exhibit is very much better. That has been done by this organisation.

5667. That is a powerful argument in favour of a different form of control in the future?—Yes, it is.

5668. It indicates that the old method of handling exhibitions is inefficient in the light of to-day?—Yes.

5669. Clearly so?—Yes.

5670. You feel that we should base any future action on the reconstruction of the control of the organisation on French lines?—Yes.

5671. That is the best organisation of which you are aware?—In my humble opinion they appear to me to be working on the best lines.

5672. You are also quite clear that Government control should be limited to giving the exhibition (1) the *cachet* of its countenance, and (2) its financial help?—Yes.

5673. But, as Lord Brassey expressed it, the full responsibility and the direct responsibility should be centred in the important body that will be appointed from amongst various manufacturers and commercial men?—Yes, and in the men on the standing committee.

5674. That standing committee which you speak of should have full powers of action left to it, I assume?—Yes.

5675. The Government not interfering except on the two points—the point of giving it its name and the point of financially helping it?—Yes.

5676. (*Mr. Malcolm Ramsay.*) Is it not the case that the only change you advocate is in the composition of the body which is to administer the grant? I believe I am right in saying that hitherto when a grant has

Right Hon. Lord Brassey, G.C.B., and Mr. C. Charleton.

2 May 1907.

been given by Government no Government Department has claimed to exercise any control over the manner in which it should be spent?—That may be, but there is no existing permanent body to my knowledge.

5677. The money has been paid over to the Royal Commission, who have accounted for it without any interference?—I am asking for information, rather. Has not the Royal Commission hitherto been appointed *ad hoc?*

5678. Yes, I agree in that?—I want to see that done away with. I want to see a permanent existing body, not a Royal Commission, but a committee—an organising body.

5679. The only point I wish to make clear is that as far as finance is concerned the money has been paid over to the body which has been responsible for managing the exhibition in the past, and no question has been raised as to the precise way in which it should be spent. There has been no interference in the past, has there?—No.

5680. (*Mr. Waring.*) I do not quite recognise a similarity between the body suggested by you for the future and the composition of the past body. The composition of the past body has always impressed me as being that of a body which was more connected with the Government, and which had not that clean detached line which I take it is suggested by you?—Yes.

5681. Hence one's point in trying to emphasise that financial matters should be left absolutely with the body, whatever it is. I quite recognise that it has been so in the past, but it is suggested by you that it should be a different body in the future. There is another point one would like to have your views on. It is the fact, I understand, that in Germany and France a great deal of money is contributed by the Government to support the various exhibitors in defraying the cost of their exhibit. Although Lord Brassey said just now very clearly that, tariff reform or no tariff, we are not in the same position as another country, still there is a certain penalty, is there not, or a handicap on the English manufacturer if he is not placed on something like a comparative basis with the manufacturers in other countries, and is not receiving something like comparative assistance towards the cost of his exhibit?—Exactly; he would be handicapped to the extent of that difference.

5682. Would you suggest that that should be taken into consideration, and that he should be placed upon something like a comparative basis?—I think your standing committee, when you have formed it, would make itself acquainted with these various processes. and would endeavour to bring your organisation in this country to a similar level.

5683. I take it that your view of that committee is that the initiative would proceed from the committee clearly, and that the recommendation would proceed from that committee to the Government as to the sum which they thought the special exigencies of a particular exhibition demanded?—Exactly. I think that, as hitherto, the Government have left the conduct of the grant to the particular commission dealing wih the exhibition, which commission has been chosen specially for each exhibition, doubly so the Government might entrust this even more experienced and standing body that you are going to form with a similar disposition of the funds.

5684. (*Mr. Algernon Law.*) If you leave that to the discretion of the committee, does that not affect the amount that would be granted to the committee for a particular exhibition? If they are going to pay a large proportion of the exhibitors' expenses they would want a very large grant, and if the circumstances only suggest small grants the grants would be very small accordingly. Would you not arrive at a decision and then apply to the Government for a particular grant, and then would you not have to explain to the Government why the grant was so large or so small, or less large than usual?—Yes, I think so. I think very full information should be given to them—naturally every information should be given to the Government.

5685. Would that information be acquired at the time the exhibition was announced?—At the earliest possible moment.

5686. Would you make preliminary inquiries beforehand by means of the permanent committee?—Yes, that is exactly what I would do. I would adopt the French system. The moment an exhibition is announced anywhere this permanent body, existing either in this building or in any other building, would at once form a small committee or send somebody to find out what the exhibition means and what is its importance. If they find it is worth looking into, they will take it to a higher committee or to the full body, who would then consider whether it is worth while for us to be interested in the exhibition. Then, having done that, they will make up their minds how much money it is likely to cost and how many exhibits they are likely to get. Only they will begin with that *ab initio*, and they should not do what was done unfortunately at the time of the Milan Exhibition. There was a tremendous fight then, as you have been told in this room, to get the Government to give anything at all. Finally something was extracted from the Government, but the whole thing was too late to enable this country to make a proper show. Now by this system that would never happen.

5687. (*Mr. Malcolm Ramsay.*) Would the system you suggest lead to more or less frequent applications for Government grants?—I think that would depend entirely upon the importance of the particular exhibition. It would be always open to the Government to say, "No, we are not going to adopt your suggestion; we do not think this is good enough." But I think the wisdom of the committee would very soon be able to show itself. I think they ought after a time, at all events, to be wise enough not to approach the Government and ask them to subscribe to something unimportant. It would be against the whole character of their existence, and against the advisability of our participation in exhibitions, if they went indiscriminately to the Government and asked for money for any exhibition that turned up.

5688. (*Mr. Algernon Law.*) Have there not been many criticisms of our participation in Milan; and has it not been said that that was not an occasion on which we ought to have participated at all?—I do not attach much importance to those criticisms, whatever they were. I thnk a good many of them were very ill-natured. I say the Milan Commission—not because I was upon it, for I was not able to do very much detail work, as I had other work to do in connection with my Chamber—I say I am perfectly certain that that Commission did its best, and I am doubly certain that my friend Mr. Serena did everything he possibly could. It was all owing to the work of Mr. Serena; and the very best that could be done for Great Britain was done at the Milan Exhibition.

5689. (*Sir Isidore Spielmann.*) They have returned half the amount of their grant, have they not; why did they return that money?—We have not yet the actual figures, but something like half the grant has not been spent, for the simple reason that the money was obtained too late for us to be able to make use of all of it—I do not mean to spend all of it, or lavishly to spend all of it, but for it judiciously to be made use of.

5690. There is one last question I should like to put to you: Are you satisfied with the way in which the International Exhibitions' Committee of the London Chamber of Commerce have hitherto carried out their work?—Yes, I am. I think they have done everything they possibly could to foster and to assist exhibitions, and to take the lead at some exhibitions. I have got a list here of a good deal that they have done, but I suppose you have already had that information. Our Exhibitions' Committee is a committee of the Council; it is one amongst the many other committees of the Council, and it is there to deal with these matters, as I believe you are aware. These committees are gone over every year. Names are withdrawn and other names are put on, and the committees are brought up to date as well as they may be. The Exhibitions Committee, in the same way as all the other committees, then meets and elects its chairman. It rests with each committee to elect its chairman out of its own body; but this committee and all others are subject to the Council, and report to the Council.

5691. Who is the chairman of the International Exhibitions' Committee?—Sir Albert Rollit is at present the chairman.

5692. He has been chairman from the time the committee was established, has he not?—I believe he has, but I am not certain on that point. It is purely a question for the committee.

5693. Have you anything further to add?—No, thank you.

Mr. JOHN T. WILLIAMS, called and examined.

5694. (*Sir Isidore Spielmann.*) You are a member of the firm of Messrs. Hitchcock, Williams and Co., I believe?—Yes, I am the manager.

5695. Has your firm exhibited at any great international exhibitions abroad, and, if so, what are the exhibitions and where were they held?—We have exhibited at Paris in 1878, at Philadelphia in 1876, at Vienna in 1873, at Amsterdam in 1869, and at London in 1862.

5696. What is the nature of the goods exhibited by you?—They were made-up goods principally, such as costumes, mantles, shawls, and things of that kind in connection with our business.

5697. Have you had any increase of business with foreign countries which you can directly attribute to the exhibition of your goods and their inspection by visitors at such exhibitions?—Yes; I think there would certainly be an increase of business in the countries where they were admitted free. Of course, where there is a large duty, as there is on our class of goods, that makes a very great deal of difference. Where there is a 50 per cent. duty, you can understand that it is very difficult to compete against the people in their own country.

5698. In your heads of evidence you say that you have not had an increase of business with foreign countries, but that exhibitions have increased your business with the colonies; that is so, I take it?—Yes.

5699. How do you account for that?—I think it is due to the very fact of the advertisement which we get by showing at the exhibition. At these large exhibitions people come from different parts of the world; they see our goods exhibited, and they at once take down where they come from if they like the goods. In consequence of that, I think that a large increase of business did come from the exhibitions we are speaking of now.

5700. Have you ever experienced any actual disadvantage from exhibiting at such exhibitions, either from having your goods copied by foreign competitors or in any other manner?—That would not make so much difference to us, because in our class of goods we are continually changing. It is not like a steam engine, or anything of that kind, which goes for a long time; our goods change every season. Therefore if they copy them at one time, they would be out of fashion three months after. So that it really does not make so very much difference to us in our particular class of business.

5701. Do you attach any considerable value as a means of developing your business to the awards which you have obtained at exhibitions?—Yes, I think so. The medals that we obtain at each of these exhibitions have been put upon our different books and invoices, and of course we have various other ways of showing the medals. I think they certainly advertised us, and did a great deal of good at the time. We have six medals, for instance, on the top of our invoices and books. These medals are all stamped on, and I think they did us certainly a great deal of good.

5702. In your heads of evidence you say that the medals were more important to you in the earlier days, and that they are less so now?—I think that is so, because if you fill up your billheads with about six medals you have got as many as you want. I do not say that that applies to other people, but it applies to people who have six or seven medals.

5703. Have you been induced to buy from British or foreign manufacturers to any considerable extent as the result of having inspected their goods at any exhibition?—I do not think we have to any considerable extent, but certainly it has been an advantage in that way. We have seen the various exhibits and their addresses, and so on, and if we thought any one suitable for our line of business, we have taken notice of that—to some small extent at any rate we certainly have.

5704. Can you specify any definite points on which you have derived instruction or knowledge from visiting exhibitions, say, for example, methods of manufacture, economy in manufacture, or opportunity to purchase improved machinery and the like?—We certainly have done so in connection with these various new machines that have come out, both in France and in America, which are adapted to our business. We have certainly adopted them. There have been large improvements in that way in the last 30 years.

5705. If you have refrained from exhibiting your goods at great international exhibitions in the past, or have discontinued exhibiting, what briefly were the reasons by which you were actuated?—We have not exhibited lately because the commercial value of the awards has diminished, owing to the multiplication of small exhibitions.

5706. And, as you said just now, you have as many awards as you wish to have for advertising purposes?—I would not go quite so far as that. I think perhaps if you were having another exhibition we should go in for it.

5707. You would?—Yes, certainly. Therefore I do not think it would be quite correct to say that; at the same time, they are not so valuable now as they were at one time. We should not exhibit at a small exhibition now. For instance, an exhibition at the Crystal Palace, or anything of that kind, would not suit our class of business; we are principally wholesale and in a fairly large way, and therefore it would not suit us to exhibit there.

5708. Would you exhibit at international exhibitions?—Yes, we should.

5709. You are always inclined to exhibit at international exhibitions?—Most certainly.

5710. Do you attach greater importance to the orders you get at exhibitions than to the awards?—We do not suppose that we should get many orders there. It might influence the tradesmen of the country in which the exhibition was held, and of other foreign countries to come to our warehouse. That is the principal thing we should gain by exhibiting.

5711. If disinclined to exhibit from a business point of view, would you, with the object in ensuring that British manufactures were creditably represented among the exhibits of other countries, be willing to exhibit at great international exhibitions in future, provided that some permanent organisation were available which would minimise the trouble and cost to individual exhibitors?—That opens up a series of great questions as regards fair play. We should like to see the reciprocity which should exist between the various countries but which does not exist, and so we are not given the opportunity of getting back what they take from us. There is just that about it.

5712. Apart from that, are you willing to participate and pay your own expenses of exhibiting?—I cannot say, but we should consider it certainly.

5713. At these previous exhibitions, where you exhibited, did you pay your own expenses or were you assisted by the Commissions of the time?—We paid our own expenses, and should be quite willing to do that again. I do not think that any house of any importance would require assistance. It seems to me that these large houses which exhibit at the large exhibitions are wealthy houses, and do not require any assistance whatever.

4714-5. Why did you not exhibit in Paris in 1900?—The real reason we did not exibit was on account of the insults levelled at Queen Victoria by the French Press at the time.

5716. You require no financial assistance when you decide to exhibit?—Certainly not.

5717. Are you of opinion that this country should hold aloof from international exhibitions generally, or do you consider it indispensable that an effective display of British machinery, manufactures and works of art should be made at such exhibitions?—We are only speaking of our own trade. The foreign visitors take our ideas and use them against us, shutting us out of their own markets. This does not apply to our trade only, but we think it necessary that a good display of British goods and works of art should be made at all *bonâ fide* international exhibitions; by this we mean exhibitions that are thoroughly of an international character, and not those got up for the benefit of the hotels and towns, and called international, but which are only traps to catch unwary visitors.

5718. Is not the first part of that reply rather a contradiction of what you have already said? In reply to the question, have you ever experienced any actual disadvantage from exhibiting at such exhibitions either from having your goods copied by foreign competitors or in any other manner, you say in your heads of evidence, "No," but now you say, in reply to my last

Mr. J. T. Williams.

2 May 1907.

question, which is a somewhat similar one, that the foreign visitors take your ideas and use them against you?—They do that. "No" would not be quite a full reply to your earlier question. I think the answer that I have just given expresses our view more than "No" does.

5719. Have you had your ideas copied?—Certainly.

5720. On the other hand, have you ever copied things; for instance, American machinery?—We have not copied American machines, but we have used them as we should use any machinery. No doubt there is reciprocity in that respect, so we do get the advantage as well as the disadvantage.

5721. So you regard it as a matter of give and take at these international exhibitions?—Certainly we do. The only difficulty that we are in which tries us a great deal is the fact that we cannot send any goods there, and they can send theirs to us. That is the real point of the difficulty that we have, and it is annoying. For instance, the French people send into our country their goods free, but we cannot send our goods into their country free. We do to a very limited extent now send goods to France, but they charge us a duty of 50 per cent. That does not seem fair. We exhibit in those exhibitions, for instance, and we have our things there, but we cannot sell them. Our only advantage is because the colonial visitors, and the visitors from free countries come to these exhibitions to see the exhibits. But in the country itself where the exhibition is held, if it is protected, we do no business. If the exhibition was held in a free country, and some of our colonies, for instance, are free, then we have an opportunity of doing business in that country.

5722. Have you exhibited at the exhibitions in the colonies?—We have not done so, because we prefer the international exhibition, which answers all our purposes. We have no objection to exhibiting in the colonies, only it would be an expense that we should have to look at and consider. We do a large colonial business.

5723. At the exhibitions in which you have participated, were you satisfied with the management of the British sections?—No, not quite. I was going to remark about that. The general management was excellent, but the unhappy grouping of the exhibits was prejudicial to several exhibits, for instance, where delicate shades of colour were lost beside crude reds and yellows. The position was rather bad on that account, and we did not care about it. In another exhibition we shall be very careful where our case is placed, because whatever exhibition we exhibit in, it would cost us £1,000.

5724. (*Mr. Algernon Law.*) In the case of the Philadelphia Exhibition, was there official participation on the part of this country, or was it merely the local organisation that you complain of, or was it some unofficial English organisation which looked after the interests of the English exhibitors?—That I am not quite sure of, only the fact remains that we were put beside these people. That is a matter of grouping. The most important and the best exhibition that we have seen for that kind of grouping was the last Paris Exhibition, where it was beautifully done.

5725. The exhibition in 1900 you mean?—Yes, I was there.

5726. Did you take part in the exhibition of 1889?—No.

5727. And you did not take part in the exhibition of 1900?—No, we did not; but we went there, as we should go to all exhibitions for information, knowledge, and enlightenment. We found there that the grouping of this particular business of ours was beautifully done, better than in any other exhibition we have been to. We always go to any exhibition. It does not matter whatever exhibition it is, we are there in some form or other, whether we are participating or not. At the Paris Exhibition of 1900 it was beautifully done, the exhibits altogether being properly grouped with good taste and also with plenty of room, which is necessary for our business.

5728. (*Sir Isidore Spielmann.*) Are you referring to the British section there?—I am referring to the British section and to the French section, too, in our class of goods. I am now only speaking from our point of view.

5729. (*Mr. Waring.*) Are you speaking more particularly of the French section as regards the *ensemble* of colour being good?—I should speak more particularly of that in the French section.

5730. Would you say that it was better than usual in the English but best in the French?—Yes. I think that the grouping of the French section in our line of business at the last exhibition was nearly perfection. If we exhibit again at another exhibition, that would be the kind of improvement which we should like to see adopted.

5731. (*Mr. Algernon Law.*) Do you approve of collective exhibits—that is, would you join with others in the same line of business to form a collective exhibit?—No; we should not do that.

5732. Do you admit the principle in connection with other businesses? Do you think that where firms are reluctant to come forward the State should ask them to join in a collective exhibit to which the State should either pay a part or the whole of the expense?—We do not think so. We think anyone exhibiting would not do so unless they reaped some personal advantage out of it.

5733. Do you not attach importance, then, to the credit of the nation generally being kept up by a good exhibit all round?—I think they should be sufficiently loyal and patriotic to do it on their own account. That is my personal feeling in the matter.

5734. How often do you think an exhibition should take place? How often would you yourself be disposed to take part in exhibitions?—I think about once in ten years, or something like that, is the usual time. I am not quite posted up in that, but I should think once in about ten years.

5735. Have you any ideas as to the form the British organisation should take? Are you satisfied with the Royal Commission arrangement, or would you like a committee formed by manufacturers and traders themselves?—I think myself that there should be some manufacturers and tradesmen on the committee—most decidedly there should be some practical men on it. That is how I think the grouping and the general arrangement would be greatly improved.

5736. You say in your heads of evidence, "We should not exhibit unless the countries exhibiting (our competitors) would give us the same opportunities of doing business in their countries that we give them here"; and you also say that exhibitions, if they have taken place in foreign countries, have increased your business with the Colonies?—That is so. Since we exhibited—and the principal exhibits we made were some years ago, when the duties were not so high as they are now—they have extended the duties, I suppose, double.

5737. But do you think that exhibiting in foreign countries brings you trade?—Yes, decidedly.

5738. You did not exhibit at St. Louis, or at Milan, I think?—No. We did not think that those exhibitions were sufficiently important, really.

5739. Not the Milan one?—No.

5740. Nor St. Louis?—St. Louis was fairly good, but we did not think it of such importance as to decide us to exhibit there. Of course, if there was an international exhibition in London, Paris, Vienna, or some other large place, we certainly should exhibit. When we display, we should like three displays—that is, we should like our things changed. This is our difficulty in displaying our goods at these exhibitions. What you bring out for spring does not do for summer, and does not do for autumn; so we want three different opportunities of displaying our goods. If you went to an exhibition, for instance, in the middle of summer and looked at a spring exhibit in our line of business, that would not mean any great amount of business for us.

5741. (*Sir Isidore Spielmann.*) In your line of business fashion plays a very large part, does it not?—Yes, and we want to change it as the season turns, like the flowers. That is our difficulty, and that is why we want a few practical men at these exhibitions, so that we should be able to go a little into detail as regards the various things that we want to do, in order to improve on what has been done before.

5742. (*Mr. Waring.*) I think you are a thorough believer in the value of exhibitions?—Yes, I am.

5743. You were very good in saying just now that the question of cost did not altogether influence you; but then, on the other hand, I take it that when you are exhibiting in a country like St. Louis, the point that

would present itself to you would be, Is it worth while exhibiting in that country—that point being largely financial and necessarily financial?—I am not quite sure about St. Louis. If it was in New York it might be a different matter.

5744. I am taking now a remote point. I want really to get to this: The underlying motive with regard to exhibiting is, Will it pay to exhibit in any particular district? That would be one of the important questions which a manufacturer or a proposed exhibitor would ask himself, would it not?—Yes. But it would be very difficult to answer, because you cannot exactly tell whether it will pay or not; the paying part comes in afterwards.

5745. Whether you thought it would pay or not would influence you? It is only an impression, and it can only be an impression, because no one can say with definite certainty whether it is going to pay; but one of the points that would influence you in deciding whether to exhibit would be whether you thought a remote district like St. Louis, or a nearer point like New York, would better pay you in result?—Quite so; that would be one of the things we should think of very seriously.

5746. Therefore if it is suggested that an exhibition has got two aspects, a national and an individual aspect, and if you were thinking of exhibiting from a national standpoint, the question of whether you were to be assisted would be a consideration in coming to a determination whether you would exhibit or not, I take it?—I do not think it would in our case. We should argue somewhat in this way—if it is not sufficient to repay us the whole of the expense, we should not exhibit at all there; if it did not answer our purposes to exhibit on our own payment, we should not consider that worth our exhibiting in. I think something on that line would be my reply to that question.

5747. That is your own personal view?—Yes.

5748. Do you think that would be a view that would influence a great many other people?—I think it would influence all large houses. We should not like to be assisted. For instance, if St. Louis were to say to us, "We will pay half the cost if you exhibit here," we should say, "No, thank you; if we want to exhibit there, and it is worth exhibiting, we will pay our own cost of exhibiting."

5749. However, you are largely influenced by whether you think it is really worth your while to do it or not, irrespective of the cost?—Certainly.

5750. Quite irrespective of the cost?—Yes, for the standing of the house and for the whole thing, apart from being paid for it. No good house, I think, should be asked to be paid for it. They have plenty of money, if it is a large house, and therefore I think it is not at all necessary for them to be helped in any way.

5751. Take this point: Suppose other countries like Germany and France help their exhibitors by paying certain parts of the expense, such as transport, would you consider it rather handicapped an English exhibitor that he should not receive the same advantages from his country that the other exhibitors had from their countries?—It might do so in the case of some of the smaller exhibitors, but, at the same time, as far as we are concerned, it would not in any way influence us. There may be some who would say, "If they pay half the expense, I should like to exhibit"; but that is not our way.

5752. You have suggested in one of your answers that you do not get certain financial results from countries where you are practically barred out, except in an indirect way, such as Canada, say, seeing your exhibits in America and your getting business from that. That all seems to me to show that the determining point with regard to these exhibits is this question of whether it pays or not. I think some people are undoubtedly influenced by patriotic motives, but, however patriotic one may be, there is always the financial position to face with regard to the conduct of business?—Yes, of course, there is.

5753. Would not the generality be affected by that view rather than by the patriotic view?—I do not think so, and they should not be. There is the honour of getting the medal as well, apart from the payment. It is not only a question of whether the thing pays, though that certainly is one important item; but if you have a medal that shows you have beaten your competitors, and I think there is honour in doing that in any part of your line of business. I think a medal has something to do with it.

5754. Did you see the Paris Exhibition of 1900?—I did.

5755. What was your impression of the effects of the *ensemble* of the British Court, as compared with the German and the American Courts, say? How do you think we came out in point of comparison with those Courts?—Do you mean in our line of things?

5756. No, I am asking you now as to the whole effect of the British Court?—As regards machinery and all that kind of thing, I think we came out splendidly; but in our line of business I think the French section, in the grouping and in the general *ensemble*, was better than ours.

5757. What would be your personal impression in going through the various courts, including the English Court; would the English Court strike you as being the best and first court in the whole exhibition?—I preferred it to any other, speaking for myself.

5758. It struck you as being the best, did it?—Yes, taking everything—not in our particular line of things simply, but generally speaking.

5759. You are taking machinery now?—Yes.

5760. In your particular line, and other lines of a comparative nature with yours, did it look the best?—Yes.

5761. You would say that, on the whole, it looked the best?—Yes, I think, on the whole, it was quite as good as any.

5762. Do you think the desire to exhibit is dwindling or increasing?—What has really reduced the advantage of exhibiting is the small exhibitions, which have somewhat taken the place of these large exhibitions. The small exhibitions we should not exhibit at.

5763. Do you think the tendency and desire to exhibit is decreasing or getting keener?—If it was an international exhibition, it is quite as keen.

5764. I mean for an international exhibition?—I think it is quite as keen, if it is really an international exhibition—not for any set apart for one particular country or anything of that kind, but for a really international exhibition, I think the feeling is quite as keen now.

5765. Have you heard of any complaint from anyone that they would not care to exhibit again at an international exhibition; or have you heard it said that they are very satisfied with the result, and that they would be glad to exhibit again?—There is just one difficulty that I have put down in my notes in connection with that. When we exhibited in the Paris Exhibition, if we sold any one thing—a £20 gown, for instance—we could not sell that without paying duty on the whole exhibit, say £500. There are difficulties in connection with exhibits in that way which we want to get over, and we want practical men on the committee to be able to look into these things. We could not sell anything in Paris in consequence, because we could never sell any part of the exhibit until the end, and then we had to sell at 50 per cent. off, which was a loss of £500, because of not being able to sell singly in those protected countries without paying duty on the whole exhibit. That is a point which, I think, should be looked into.

5766. The great impression left on your mind is that we want to improve the control and management of these exhibitions, as against the cost?—I think so, certainly; and I think the last Paris Exhibition was a great improvement on anything that had been done before.

5767. (*Mr. Malcolm Ramsay.*) You said in reply to Mr. Waring that in considering whether you would go into an exhibition or not, you only considered whether it would pay you as a matter of business—that is, whether you would do business there. If you thought it would pay, you were prepared to go and to pay your own expenses, but if you thought it would not, you would leave it alone. Supposing now that the Government were to decide to take part in a large international exhibition and asked you to participate, and supposing that exhibition was one which you did not think it would pay you to go to, as a matter of fact, but the Government said "You are a large and important firm, and we are very anxious to have your line of business well represented, and although there is no business in it for you, we should be very glad if you can see your way to go and exhibit for the credit of the country," what answer would you give to such an invitation?—How much would they offer?

Mr. J. T. Williams.
2 May 1907.

5768. If you were asked that, would you be prepared to do it on your account or not?—That is one of the kind of questions we should ask—what do you mean to do in helping?

5769. Then would you expect to be helped or ask to be helped in that case?—No, we would not ask for it. If we were asked by the exhibition Commission to send there, that would be rather another thing. Certainly on our own account we should not ask for help; but if we were asked particularly to do it in our particular line of business, that would be rather another question, I think.

5770. I am putting it to you as another question; I was wanting to know how you would consider such an invitation?—We should do it, I think, very likely, for the honour of the country, if it was particularly wished, but on our own account we should not ask for it.

5771. Supposing that you did not want to go on your account, but the authorities were very anxious that you should, in order that the British exhibit in your particular line should be comprehensive and worthy of the country?—I think under those circumstances it would be a question that would be looked into very carefully.

5772. (*Mr. Harris.*) You said to Sir Isidore Spielmann just now that you would certainly go to Paris, for instance; but you did not go to Paris in 1900. How do you reconcile those two things—the fact and the statement?—I suppose that the general thought with us would be that we had had enough of exhibitions and there was no particular reason why we should, as we had six medals from six different exhibitions. But that would not be any reason why we should not exhibit again, I think.

5773. You have not exhibited for 20 years, or something like that?—That is so; we have not required to do so.

5774. Then you are rather changing your view? If there came a new chance you might say, "Perhaps we had better start again"?—We should not quite do that in protected countries, I think, but we should have to think of it very fully. We should do it in a free country.

5775. I have been listening to your evidence with great care; is not the real point of your evidence this, that you are so well established a firm that you really do not care very much whether you go into an exhibition or not?—Yes, there is a great deal of truth in that. If you are thinking about an exhibition in London we certainly should go in for it.

5776. Are you a member of the London Chamber of Commerce?—No, I am not.

5777. Would you like to see exhibitions under the ægis of the London Chamber?—On mature consideration, I should say no.

5778. Have you any views on that subject?—No, I have not.

5779. (*Sir Isidore Spielmann.*) Do you recollect what your expenses have been at the various exhibitions in which you have participated?—We reckon it costs £1,000.

5780. You do not consider that it would be of much consequence to you if you were assisted to the extent of half that sum?—No; unless we were asked to exhibit, when in some cases we should not otherwise do so. It would not make any difference, as regards assistance, as far as London is concerned, or any other large international exhibition, because we are prepared to pay our own costs. But of course, if you make a gift of £500, anyone would receive it; I mean to say as a firm doing business in pretty large ways, I do not think it is necessary to be asked.

5781. (*Mr Waring.*) You do not like the idea of taking money for these things?—Not at all.

5782. But if it were adopted as a general principle, you would not give it back again?—It would be very stupid, I think, to do that; you would not throw away £500.

Mr. Mark W. Zambra, called and examined.

Mr. M. W. Zambra.

5783. (*Sir Isidore Spielmann.*) Are you a member of the firm of Negretti and Zambra?—I am the manager actually, not a member of the firm.

5784. Has your firm ever exhibited at any great international exhibition; and if so, what were the exhibitions, and where were they held?—At the Paris Exhibition of 1855 we did not exhibit as a firm, but we sent certain instruments under the auspices of the Kew Committee, which instruments gained an Honourable Mention. We exhibited in Paris in 1878 as a firm, in Santiago in 1875, in Philadelphia in 1876, and in Paris again in 1900; and we are at present exhibiting at Christchurch under the auspices of the Meteorological Office. These exhibitions were all *abroad*. We also exhibited in London in 1851, and obtained the only prize medal, and in London in 1862, where we obtained two prize medals.

5785. What have you exhibited at these exhibitions?—Scientific instruments in general—meteorological, optical, and surveying.

5786. Have you had any increase of business with foreign countries which you can directly attribute to the exhibition of your goods at these exhibitions?—No. We are quite unable to trace any direct business having occurred. At the Paris Exhibition of 1900 the process we adopted was to have a number of postcards addressed to our firm's address, with writing in French on the back to the effect that if that addressed postcard was sent to us describing the nature of the goods in which the visitor was interested, we would send to his address the price list. We had some few applications on those postcards, not very many, and certainly not as many as one would expect. As to business therefrom, we were unable to trace any.

5787. What is your object in participating in international exhibitions if orders do not result?—Lest our absence should be taken as a sign that we were no longer making instruments, or that the firm was no longer in existence; in other words, to show that we are still where we were in the old days of the previous exhibitions at which we exhibited.

5788. At these various exhibitions where you have exhibited you have usually taken an award of some sort, I believe?—I think I may say invariably.

5789. What description of award?—Gold medals for the most part. For instance, in the Paris Exhibition of 1878 the firm were awarded the only gold medal in the British meteorological section; at Philadelphia we received, I believe, three gold medals; at Santiago we received one medal (it was not specified whether it was gold or not); and at Paris in 1900 we received two gold medals. So that you may say that, as a general rule, we have invariably been awarded a medal. In the Paris Exhibition of 1900 we were awarded the two gold medals in different sections of apparatus. We have heard nothing, so far, about Christchurch.

5790. That exhibition has just closed, has it not?—I was not quite sure. We have heard very little of it; the Director of the Meteorological Office has heard very little indeed, and he is unable to give us any information.

5791. Have you ever experienced any disadvantage from exhibiting at such exhibitions, either from having your goods copied by foreign competitors or in any other manner?—None that we can trace at all.

5792. Do you attach any considerable value as a means of developing your business to the awards which you have obtained at these exhibitions?—No; except for the reason that was stated just now—that they show that we are still in the field as makers of scientific instruments, and that we are still in a position to exhibit those instruments as being of the highest quality and in keeping with the name of our firm, as has been done before.

5793. Have you ever been induced to buy from British or foreign manufacturers to any considerable extent as a result of having inspected their exhibits at such exhibitions?—We have not experienced any such desire at all.

5794. Can you specify any definite points on which you have derived instruction or knowledge from visiting exhibitions, such as methods of manufacture, economy in manufacture, or opportunity of purchasing improved

machinery, and the like?—No; we have not, I think, profited at all in that sense.

5795. In your line of business the Germans usually show to great advantage, do they not?—My experience personally extends only to the Paris Exhibition of 1900. You must understand, in the first place, that the gentlemen who had the arranging of the previous exhibitions in 1855, 1875, and 1876 are now deceased; the late Mr. Zambra and the late Mr. Negretti, who were then heads of the firm and had this matter in their hands, are now deceased. Therefore we must come to a later date in which I had the arrangement—namely, the Paris Exhibition of 1900. I can only speak as far as that is concerned. Certainly at that exhibition, if my memory serves me rightly, the Germans had a very fine exhibit indeed, and they were very well served. If I recollect rightly, their instruments were divided up into certain sections, and certain firms were blended in a certain section—even in the same case, I believe; the consequence was that the net result of their exhibit was very fine collectively.

5796. It was what we describe as a collective exhibit?—Precisely.

5797. Are you in favour of collective exhibits?—I venture to suggest that that matter should be considered in its due course, depending upon the exhibition in question. I do not know if I am right in saying, on behalf of the firm, that we should not altogether favour it.

5798. Have you ever joined in a collective exhibit?—Never.

5799. Why would you not care to do so?—One rather has a tendency to keep one's own individuality, so to speak. One would not object if the appearance of all the cases was the same, but one would rather like to have one's own instruments entirely under one's own name. I think that is the view which our firm would take. It appears to me, from the discussions I have had with the firm as to past exhibits, that we should rather feel inclined to have all our various instruments under our own name.

5800. You did not exhibit at the St. Louis Exhibition, I think?—We did not.

5801. Were you invited to do so?—Yes, we were.

5802. I think an effort was made to form a collective exhibit there; was that so?—I have some recollection of it. It was under Mr. Agar Baugh.

5803. Do you happen to know whether it was on that account that you stood out?—Certainly it was not on that account; it was on account of the difficulty of transhipping goods to St. Louis.

5804. You have rather anticipated our next question?—I have, but it is very important to us.

5805. In your heads of evidence you say, "We have refrained at times, owing to the expense and inconvenience we suffer through the absence of a valuable member of our staff. We have, however, felt that our absence might be prejudicial to our interests, being taken by the public as indicating that we no longer maintained the prominent position which we had in the trade." Had cost anything to do with your not exhibiting at St. Louis?—Yes; indirectly it had, undoubtedly.

5806. In joining in a collective display you would probably be offered some portion of your expenses; would that not be an inducement to participate?—It would.

5807. Is exhibiting in your line of business a very expensive matter?—Very; because our instruments are of such a delicate nature, and are not understood by every person, so that it is necessary for us to send an experienced man, or to obtain the services of an experienced man on the spot, in order to receive those instruments, unpack and erect them in an intelligent manner, put them in good working order, so that when the judges come round the instruments would be in fair adjustment and not appear ridiculous.

5808. Do you recollect what your expenses were at the last large exhibition at which you exhibited?—We never attempted to arrive at them.

5809. You exhibited at Christchurch, New Zealand, because the British Government exhibited, and you were probably relieved of expenses there; but at the Exhibition in Paris in 1900 do you recollect what your expenses were?—We never attempted to arrive at the expense in any shape or form—neither my time, nor the assistant's time, nor the freight nor the breakages, nor so-and-so forth; none of those were taken into consideration at all—I mean to say they were not totalled up.

Mr. M. W. Zambra.

2 May 1907.

5810. If you were given a portion of your expenses towards a collective exhibit, your objection to a collective exhibit would no longer exist, would it?—I could not say that entirely, because we should want to be assured that there were some means taken on the spot, wherever it was, to secure that our instruments were displayed in their correct adjustment. I would venture, if I am not taking up too much of your time, to explain what our senior partner told me this morning. When our instruments were sent out to Philadelphia, we had a friend over there who undertook to unpack and erect them, and it is said in our firm that one of the instruments was hung upside-down, which was palpably ridiculous, and the judges would think that the firm did not know their business.

5811. From your experience of the Paris Exhibition were you satisfied with the organisation, which was a Royal Commission in that instance?—I did not come in contact very much with the Commissioner, and I remember that our first impression on arriving at the spot was that we were very badly situated as regards light. If I recollect rightly, there was a certain part of the hall in which a broad gallery ran, almost as broad as this room, and we were directly underneath that, with the result that a vast amount of light was taken away. In the second place, I remember that our particular case was down a by-way, off the main passage. We were not pleased with that at all—naturally enough. Thirdly, I recollect that we had on one side of us a firm of scientific instrument makers—I believe the Cambridge Scientific; and on the other side we had Mr. Clarkson, the wig-maker. In a section devoted to scientific instruments that hardly seemed the thing.

5812. Then you were dissatisfied with the space?—I may say we were very dissatisfied.

5813. Did you pay for it, or was it given to you?—I believe it was given.

5814. Did you complain to the Royal Commission that you were badly situated?—Certainly not. We made the best of a bad job. It was then too late; the case was over there and more or less in position, and we had to put the instruments into the case and do the best we could to improve the light.

5815. But you would not be dissuaded on that account from participating in future exhibitions?—No, not by any means, provided, of course, always, that the place is accessible for one of our staff to go over. Whether it is near like Paris or far like Milan or St. Louis, there should be some convenience for the erection of the instruments.

5816. Did you refuse to participate at Milan?—After great consideration, yes, on those very grounds which I have just mentioned. The matter was discussed, and we had very strong representations made to us for exhibiting there, ours being Italian names and so and so forth. We thought very seriously of it, and a certain gentleman in the City was very desirous that we should be there. We discussed the matter at very great length, but the same objection arose, that we should have to send one of our very best assistants to Milan to receive the instruments, unpack them, erect them in the case, and then to come home and afterwards to go out again in order to explain any points to the judges which might be necessary. I think I am right in saying that it is an important thing at an exhibition when the judges are passing an exhibit that the instruments should be explained to them, and the points you wish to make, the improvements and the inventions, should be pointed out to them. That would mean sending the same experienced assistant or another one who knew the language well presumably, to go over there and await the visit of the judges; and if our instruments were in two or three sections that might mean that the assistant might have to wait two or three weeks until the judges had visited all the sections.

5817. If you had been offered some inducement, such as the refunding of a portion of your expenses, would you then have gone to Milan?—No, certainly not, without the use of an experienced assistant at that end, or some convenience by which our own assistant might have lost very little time in attending to the exhibit. The cost, I venture to think, would be quite a minor detail in a case like Milan.

5818. You know of the existence of exhibitors' agents,

Mr. M. W. Zambra.

2 May 1907.

do you not?—I believe we have been approached by firms of carriers and such like people.

5819. I mean the agents who make it their business to represent a certain number of firms at exhibitions and to look after their interests there?—I am not aware that any such agent approached us over the Milan Exhibition. There was certainly some such talk about the St. Louis Exhibition, but at Milan I think I am right in saying no such approach was made to us.

5820. Do you regard exhibitors' agents with disfavour?—As regards our own instruments, I venture to think that if they are not well up in meteorology or surveying or physics of some sort, they are unable to appreciate the points of, say, a standard barometer.

5821. Are you referring now to the international jury?—No, to the agent of whom I understood you to be speaking. The agent is unable to understand the action of a standard barometer, let us say.

5822. For explanation to the jury?—No, for erecting even.

5823. Even for erecting?—Even for erecting and packing.

5824. Are you of opinion that this country should hold aloof from international exhibitions generally, or do you consider it indispensable that an effective display of British machinery, manufactures, and works of art should be made at such exhibitions?—I think we consider this country should make a good show at important international exhibitions, and by that we mean such exhibitions as St. Louis, Milan, and Paris. I believe Santiago was a big exhibition, but it was some years ago. On the other hand, I believe there are many small exhibitions where they just tack on a British section, do they not? I believe, if I recollect rightly, there was a small exhibition held at Marseilles last year or the year before, at which we were requested to exhibit, but it appeared to us that it was quite a minor exhibition, and that if there was a British section it would not be official, and no very great good would come of it.

5825. Have you any observations to make upon the organisation of British exhibits at the international exhibitions with which you have been acquainted in the past, or with regard to any improvement which could be made in the organisation of British exhibits in the future?—In reply to that I have simply to make the same observations as I did about the position of our case at the Paris Exhibition of 1900. I should like, if you will permit me, to reiterate the remarks I made about Milan—that it was not a question of cost in that instance which debarred us, but it was the difficulty of arranging for an assistant who would have the matter in hand as regards the unpacking and erecting, and being in sufficient command of the Italian language to see the things were satisfactorily erected and to explain to the judges the particular points of our instruments which we wished to impress upon them, and eventually to go over there again and repack the instruments so that they might return to us in good condition without breakage.

5826. Did you visit Milan as a visitor?—No, I regret I did not.

5827. Liège?—No.

5828. Brussels in 1897?—No.

5829. Nor any of the other exhibitions that you have enumerated in which you participated?—No.

5830. Have you any suggestions to offer as to the future organisation of British sections at exhibitions?—I am afraid that my experience in the business and in exhibitions is too small to permit of my offering any suggestion, much as I should like to do so. I simply have not had sufficient experience. I only have the rather disastrous experience at the Paris Exhibition, when I do not think that we did ourselves justice, in spite of two of us, an assistant and myself, taking some of the more delicate instruments over ourselves. I spent, I think it was, ten days over in Paris at the beginning of the exhibition, and I spent seven days later on towards the end of the exhibition. Our assistant spent a fortnight there at the beginning; he spent a fortnight in the middle of the exhibition; and I think he spent another fortnight towards the end of the exhibition. That was to endeavour to secure that our instruments were put into the correct adjustment, and that we should not appear ridiculous in the eyes of either the judges or the other instrument makers on the Continent who were at hand.

5831. Generally speaking, is your firm well disposed towards international exhibitions?—I should say so distinctly, because we have a firm belief that as we got medals in the first instance in the early days of the firm, so there is no reason why we should not get medals in the later days. We should do it with a view to showing that our instruments are still being made of high quality, and I trust with the same improvements as in previous years.

5832. We hear of a large exhibition to be opened in London next year, and of one to be opened in Brussels in 1910; do you think your firm would participate in those exhibitions?—I venture to think most emphatically they would. They absolutely could not do anything else than exhibit in London; I mean to say that all the objections which I have raised are done away with in that case.

5833. Even if you have to pay for your own space, and all your other expenses?—That would depend entirely upon the other expenses, naturally. I believe we have done that in nearly every exhibition except the Christchurch Exhibition, in which case, the freight was paid out to Christchurch. Even so, we had the expense of getting up the goods specially, and making them, as we might think, fit, and exhibiting them first of all at the Meteorological Office; then packing them in the very finest way, taking inventories, writing instructions, and so and so forth. The expense question would not be considered, I think, in either of those two, Brussels or London.

5834. (*Mr. Harris.*) You mention the exhibition of Buitenzog; what exhibition was that?—That was rather before my time, but we had a very good friend—I believe he was a distant relation of one of the members of the firm—who had a London house, and a house in Java. When this exhibition was mooted, I presume the members of the firm turned at once to this gentleman, and an arrangement was made by which his house over in Java received the instruments.

5835. You have no special lesson to draw from it, then? You have only mentioned it as part of your firm's history?—Quite so.

5836. Do I rightly gather from part of your evidence that you look upon yourselves as having rather got on to an inclined plane as regards exhibitions, and having once got on it, you must go on exhibiting? Would you, in fact, rather be without exhibitions at all, as a matter of business?—I hardly know how to answer that. I presume that if no one else in the scientific instrument trade exhibited, we should not feel the same necessity to do so.

5837. As long as somebody else exhibited, then you feel you must go too, for the sake of your reputation?—Certainly, with the other scientific instrument makers of London.

5838. Have you been able to trace any improvements in the actual volume of business you have done as the result of exhibitions so far?—Absolutely none at all.

5839. Would you go so far as to say that you do not think it has had any effect in bringing orders?—I do not think I should like to say that, because orders come in such a roundabout fashion that it is really impossible to trace them.

5840. You cannot trace such an effect?—No. There is an absence of the power of tracing, and we cannot systematise a thing like that.

5841. I should like rather to clear up your view as to Government aid. You apparently throw in any expenses you incur in exhibiting as part of the ordinary expenses of the firm?—Yes, certainly.

5842. You do not keep any separate accounts?—Certainly not.

5843. Therefore, may I infer that you look upon exhibiting rather as part of general expenses, and you do not attach much importance to the amount you spend on it?—I do not think I should like to go so far as to accept the latter proposition.

5844. Of course, I mean within a reasonable amount. You say, "We must go for the sake of the firm"?—Quite so.

5845. "And, therefore, we do not particularly examine our expenses"?—That is so. I can assure you that over the Paris Exhibition no summary of the expenses was made; in fact, it would be a difficult thing to arrive at, because, after all, the actual out-of-pocket expenses are only the freight of the goods over there, are they not? But you do not know what business you will be losing through the absence of an assistant, and you cannot put his absence down as so many weeks at such and such a price. Then you are

throwing more work upon the remaining staff. Personally, I could not say that I lost any orders while I was away; on the other hand, I might have done so. Then, of course, we take out a certain stock of instruments which might be sold if they were in London. Therefore, I think it is rather hard to arrive at the actual expenses.

5846. Would you attach importance to a regular organisation at this end, which would prepare the way for your exhibits?—Undoubtedly, speaking from the small experience I have had. In the smaller exhibitions at which we have exhibited, the Agricultural Hall, for instance, I find it very imperative to go up and see what sort of space is allocated, what light, what sort of stand will best suit, and what sort of instruments will make the best display; in other words, I find that it is very desirable that I should have some idea of how the exhibit will look afterwards.

5847. If at Paris they had practically done that for you, or put you in the way of doing that, would you have thought that the Government had done their duty, without doing anything in the way of grants or anything else?—Certainly. That is the whole point, that granted a certain plan of the space where one is exhibiting had been given, with some fair idea of the amount of light, and the position of the gangways, and the nature of the showcase, that is, which would be best; then we should have been in a better position.

5848. As a matter of fact, I understand that although you were so cramped in at the Paris Exhibition, you did get your awards all right?—Yes, we had two gold medals.

5849. Did the awards satisfy you, or do you think you would have done better in a better position?—I do not think I should like to say that altogether. I was thinking more particularly from the point of view of the passers-by—the people who visit the exhibition.

5850. You attach importance to the presence of the passers-by, do you not?—That is the original scheme of an exhibition, is it not—to let as many people as possible see the quality of your goods and the particular goods you produce, so that if they should ever want anything like it, they will remember the exhibit of the firm, and apply to you.

5851. Have you ever had any appreciable percentage of loss on your instruments at any exhibition; I mean have you had them damaged?—At Paris we did not, because we took such very great care, owing to this experienced assistant—pardon the reiteration of the phrase—going over. Then two of us deliberately went over with the more sensitive instruments under our care in the railway carriage, and when the cases arrived, very nicely packed, we did the unpacking; and in the same way we did the packing back again. I think I may say that there was nothing broken at Paris. I have no data for the previous exhibits; they were so long ago.

5852. (*Mr. Malcolm Ramsay.*) Do you regard exhibitions generally as a very suitable vehicle for advertising your particular trade?—Speaking on the spur of the moment, I should say it was a very desirable way, from the fact that I suppose a good many people visit an exhibition, and granted that your case is in due prominence, and in a good part, people have to pass it and will look at it.

5853. What I had in my mind was this: It seems to me that the demand for instruments such as you manufacture must come largely from scientific and expert people, who are a very highly specialised class, and that, consequently, you would be less likely to sell instruments and to get orders, as it were, over the counter, from an exhibition, than other trades which depend on qualities which are more superficial?—I see your point, in answer to which I should like to say that as our branches of instruments are so varied, we touch a good many of these special classes to which you refer. May I mention, for instance, surveying instruments? There are many engineers of all kinds in this world who want, perhaps, the merest surveying instruments, the merest clinometer rule or other small instrument, who, when they see that Negretti and Zambra make such an instrument, may apply for it. In the same way with nautical instruments, such as sextants; their users are numerous, are they not—cadets, lieutenants, captains, merchantmen, yachtsmen, and so and so forth.

5854. Then, in fact, the optical illustration in a show case at an exhibition, provided it is such as to show your goods to the best advantage, is worth a dozen catalogues, is that it?—That is more or less the idea, or rather it should be so.

Mr. M. W. Zambra.

2 May 1907.

5855. Do you advertise largely?—"Largely" is capable of many interpretations.

5856. Do you advertise?—Yes. We advertise in a good number of daily papers, a fair number of weekly papers, in scientific papers, and in occasional publications.

5857. Do you employ travellers?—We do not employ travellers.

5858. Then practically your business depends on advertising and on the general reputation which is handed on from customer to customer?—Precisely; chiefly the latter.

5859. I gather that you go more to exhibitions for the sake of keeping up your prestige than for any direct benefit in the shape of sales?—Undoubtedly.

5860. I was rather surprised to hear you say that, because I thought your name was so wide-world that you could have afforded to stand out and rest upon your reputation?—It is very kind of you to say so, I am sure; but may I suggest that supposing a gentleman knows our name in connection with meteorological instruments, it does not follow that he knows we make a sextant or a theodolite, or, again, that we do telescopes or binoculars. Therefore we, being general scientific instrument makers, try to touch as many people as possible.

5861. In considering whether you will exhibit at any particular exhibition, would you be influenced by the consideration whether the British Government was going to organise the British section or not?—That would be a consideration in favour of our exhibiting, I venture to think on the spur of the moment.

5862. That is what I want to know?—Undoubtedly. May I quote again the case of Christchurch? That is a small exhibition, but we were approached by the authorities at Christchurch, and on consideration of the matter by the firm, it was decided that we could not possibly send a vast quantity of intricate meteorological instruments all the way to Christchurch without anyone to receive them and erect them, and to put them together in a good position. So we declined to exhibit. But when the director of the Meteorological Office approached us, and said, "Would you exhibit under our auspices?" and we saw that we were going to have a good exhibit, that we were going to have due justice done to our instruments, and that we should have a fair share of the instruments shown, we were only too pleased to accept at once.

5863. Could you give us any idea of how often you would be prepared to exhibit at an international exhibition?—That is not a question I have thought of at all, and you must understand that my answer to it must be on the spur of the moment; but I should say that once in three years would be ample. I say that without consideration at all; but it appears to me from the work entailed in getting up an exhibit that if we had it once in three years that ought to be sufficient, from the point of view of preparing the exhibit. I do not know how that coincides with your idea at all.

5864. It depends so much on the particular class of instrument or article that you have to exhibit, I take it?—You cannot help its making a certain drain upon one's time, in addition to the ordinary routine of business. One has a routine of business which occupies the majority of our staff, and we have our duties allocated fairly well. Granted that there is a vast amount of work coming in in preparing certain instruments, in erecting them, in a trial of them, and in a hundred and one little details, so that your instruments may be above reproach, all that is, of course, a drain upon your time. I recollect that this small exhibition at Christchurch last year took a vast deal of the time of two or three of us in getting the things ready within a reasonable period and in decent order. We had to plot the thing out more or less carefully. And that was a comparatively small exhibit of only meteorological instruments.

5865. For the purposes of an exhibition, do you send out exactly what you are prepared to supply? Do you make better instruments, or instruments with a special finish?—At times we have done that. When some of our instruments have appeared to be of a nature not to attract people's eyes we have occasionally finished them rather better. I know one instrument which, if it were finished in the ordinary way in bronze metal, would appear insignificant; we did

Mr. M. W. Zambra.
May 19

once finish one of those bright so as to be a bit more attractive. The difference in the work was very little, and it was just done to liven up the case. Generally speaking, our exhibits are instruments finished in the ordinary way.

5866. (*Sir Isidore Spielmann.*) Coming back to the question of cost; apart from the expense of your agent, the cost is not very great, is it?—The cost of sending the instruments?

5867. The cost of forming the exhibit?—No; I venture to think that the cost is comparatively small.

5868. I mean that in regard to packing and the show case, a very great deal goes into a very small compass. I am thinking of the entire cost to you, apart from the expense of your agent; is that great?—No. As you say, the cost of packing is not very great, although in the case of a small exhibit like the Christ church one we made, I think, 17 cases of scientific instruments; but, of course, the expense of that is not very great.

5869. And that would be exceptional, would it not, because there, I suppose, you had to pack in zinc-lined cases?—Quite so.

5870. And therefore the bulk was very largely increased?—Yes, but so we should have to have done in St. Louis. I presume they would have been zinc-lined cases for St. Louis.

5871. We may take it that your firm is inclined to look upon international exhibitions with favour?—Yes, I think I am right in saying that is so.

5872. Is there anything you would like to add to your evidence?—I do not think so, thank you.

NINETEENTH DAY.

Thursday, 9th May 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Swire Smith.
Sir Isidore Spielmann.
Mr. S. J. Waring.
Mr. U. F. Wintour (*Secretary*).

Mr. John Moncrieff, called and examined.

Mr. J. Moncrieff.
9 May 1907.

5873. (*Chairman.*) I think you are the managing director of Messrs. John Moncrieff, Limited?—Yes.

5874. Where is your place of business?—At Perth, in Scotland.

5875. You have been in business there for some time, I suppose?—I personally have been in the business for about twelve or fifteen years, but our business has been in existence for about thirty-five years, I think.

5876. You have exhibited at a good many exhibitions, have you not?—Yes.

5877. You give us this list, I see. London, 1876; Philadelphia, 1876; Paris, 1878; Sydney, 1879; Melbourne, 1880; Calcutta, 1883; London, 1884; Adelaide, 1887; Paris, 1889; Edinburgh, 1890; Chicago, 1893; and St. Louis, 1904?—Yes, we have exhibited at all those.

5878. Did you exhibit at Paris in 1900?—No, we did not.

5879. What goods do you exhibit?—They are gauge-glasses—that is to say, they are glass tubes for showing the water-level in boilers.

5880. You say their value is small, as they are approximately sold at 6d. per lb.?—Yes.

5881. Are they sold by weight?—They are sold by weight or by size. In fixing the value you really calculate your cost by weight, so I gave it in that way. To give you the equivalent of a discount off a list price would really mean nothing at all. We have on our list gauges ranging from $\frac{1}{4}$in. diameter up to $1\frac{1}{2}$in. diameter, starting from 6in. long up to 36in. long, increasing by $\frac{1}{8}$in. at a time. If I were to give you those prices less the discount it would be a very lengthy and complicated statement.

5882. Your discounts vary, I presume?—Yes.

5883. At Birmingham, I know, they have very much the same system of discounts; sometimes the discount is very high, is it not?—Yes, unfortunately, it is a very high discount—very much higher than it used to be.

5884. You do that instead of lowering your price, do you not?—Instead of altering the list prices. Where you have got hundreds of prices, it would be impossible to work except on a list and with a discount.

5885. I understand from your heads of evidence that you have had a very large and steadily increasing business with foreign countries, but that you do not know how much of that is due to exhibitions?—That is so. Since I got your request to appear here, I have been making inquiries from our cashier, and from old servants in our employment, and I find that they distinctly remember a large increase of business, from France alone, after the first Paris Exhibition that we exhibited at (1878), and also after the Paris Exhibition in 1889. The exhibitions in Chicago in 1893 and St. Louis in 1904, are the only exhibitions that I have been personally connected with, and my agent in New York, who works all our business for us out there, on both occasions after the exhibitions said that the business had distinctly benefited by the advertisement, so to speak, which we got at the exhibition.

5886. I suppose there are not many manufacturers of your particular goods, are there?—No. There are probably five or six altogether in this country; and probably the same number at different places abroad.

5887. I think you said just now that you send goods to America?—Yes, we send most of our goods to America.

5888. You have to pay a high duty there, do you not?—They pay a duty of 60 per cent. on them, I think.

5889. On your list prices?—On the net prices.

5890. That is, the price here?—Yes.

5891. You also send your goods to the continent of Europe?—Yes. We send to nearly every country; wherever there is steam power we send.

5892. The Germans do not compete strongly with you, then?—There are some Germans from Jena who compete very strongly with us, but still, we supply quite a lot of gauge-glasses, even into Germany, and even against their tariffs.

5893. But, somehow or other, you have held your own?—Yes, we have managed to do so.

5894. You cannot quite tell whether that is through

exhibitions, but you think they have helped you?—I certainly think they have helped us.

5895. Then, of course, you do not consider that your interests have been adversely affected by exhibitions?—No, not at all.

5896. Do you think much of the awards which you have had?—No; I do not think they are of very great importance. But suppose you had two manufacturers, one with no awards and the other with awards, each trying to get to an unknown person—that is, to do business with a new firm entirely, I should certainly say the client would be more likely first of all to look into the offer made by the man who had exhibited and had got awards granted to him.

5897. I suppose you generally have awards granted to you?—We have always had the highest awards granted in every exhibition we have sent to.

5898. Have you had competing goods exhibited at those exhibitions generally?—I cannot speak to that personally. I believe that in Paris in 1889 there was a Paris maker competing against us, and the highest award at that exhibition was a silver medal for our class of goods, which we got.

5899. I suppose that people would buy your goods upon their intrinsic value to themselves and upon what they knew of them, rather than upon the awards?—I do not think they would ever buy our goods because of the fact of our having had awards, but I do think that having had awards would induce them to test our goods if they had not already used them or had not tried them.

5900. And so awards would enable you to keep your position at the top of the tree, I suppose?—Yes.

5901. Have you ever bought from British or foreign manufacturers to any extent from seeing their things at exhibitions?—No. We have no occasion to buy anything, because our goods are made from raw materials, such as sand and sodas, and neither of those products would ever be exhibited.

5902. There is no scope for new machinery in manipulating your products, I suppose?—No, there is no scope for that at all. It is all hand labour.

5903. Have you discontinued exhibiting, except at Paris and such places?—Our last exhibition was at St. Louis in 1904, and I do not know that we shall be exhibiting in the near future, but any particularly great exhibition that takes place we shall in all probability send our exhibit to.

5904. I suppose your class of goods does not form a subject large enough to have a special exhibition of its own?—No.

5905. Except perhaps with other glass wares?—It really ranks with machinery. It is always as machinery sundries that we are classified.

5906. Not under glass?—It would not be of any value to us to be classified under glass, because the only people who are interested in our goods are the people who have got machinery—steam boilers, of course, particularly.

5907. Do you prefer your goods to be shown as part of a national exhibit, or classified with similar goods from all other countries?—I would rather have them shown classified with similar goods from all the other countries. Any person who wishes to buy a certain thing naturally wants to see the exhibits of all the makers of it together, rather than have to go through the whole of the exhibition buildings and hunt up the various individual makers, the chances being that you may be overlooked.

5908. You can tell us about the last exhibition at St. Louis. Had you much to do with the organisation there—that is, with the Commissioners and the management of the exhibition from our side?—No. We appointed a firm in this country (of which I forget the name) who looked after our interests there. Their business is really travelling to exhibitions, and taking charge of a number of manufacturers' exhibits. You have to pay them so much for supplying a man to look after your things. In addition, I had to send out a man from my own works to build our exhibit up on the premises.

5909. Was that satisfactory?—Yes, it was very satisfactory. We had to send him there for that, but this firm who looked after our exhibit took the exhibit to pieces, and repacked it for us and sent it home.

5910. Can you give me any idea of what the cost was to you of all that?—Our total expenses, including building exhibit, sending the same to St. Louis and erecting the same, also including expenses of sending our workman to St. Louis and the payment of the Exhibitor's Agent's fees, amounted to about £300.

5911. Does that include transport and everything?—Yes.

5912. Did you make direct sales there?—We make all sales in America through one man, who is stationed in New York.

5913. You have an agent there?—We have a sole agent there, and we dare not sell anything to anyone. But, certainly, since St. Louis his sales have gone up each year, and he thinks that keeping the name of the goods before the public and buyers has helped him in that respect. I asked him particularly on that point when I was over there last year, and he said he thought that that had been so, and that he knew of certain firms who said that they had been buyers of glasses, but had not known our brand until they happened to see it in the exhibition, and then they sent to him for the particulars and prices. He said there were several cases of that sort.

5914. I suppose your goods are all bought by machinery makers as practically raw material for their work, are they not?—They are bought by factors, really.

5915. And the factors sell to them?—They sell to the users.

5916. Would the factors stock your goods?—Yes, they do. For instance, we send to this man in New York something like 4,000 dozen of gauge glasses each week, and he redistributes them to the factors, and these factors sell them to the users.

5917. I think you have not any suggestions to make to us as regards improving the British organisation at exhibitions?—No, because I have not a personal acquaintance with exhibitions by having been there to see where the difficulties arise. I certainly think that more people would exhibit could it be done at a more reasonable rate.

5918. Is that as regards the space or the transport?—The space in the last exhibition we got free, but the cost of transport, and the cost of looking after the exhibit when there, were very great. Many people have an exhibit that they cannot put under a glass case, and therefore they must have someone in charge. If some official could be appointed to look after the exhibits, and so save that expense to the exhibitors, I should imagine that there would be more firms who would avail themselves of the opportunity of showing.

5919. As regards British trade generally, you are in favour of our taking part still in international exhibitions, I suppose?—Yes. I do not see any reason why we should not take part in international exhibitions; I do not see where we should get any harm by it.

5920. Do you think it is worth while that this country should pay a large sum of money to go on taking part in exhibitions?—If anyone has anything new to show to a foreign country, exhibitions to my mind are probably the easiest way and the most effective way of showing that thing. Of course, it becomes a very doubtful question with firms who have been exhibiting their goods for many years, and whose goods are known to all the buyers or users of that particular line throughout the world. Exhibitions to them are losing their use, don't you see? But if anyone has something new in the way of new inventions, new machinery, or new processes for producing something, why, then I should think industrial exhibitions would be the best medium for showing this new invention or new product to the world at large.

5921. Do you get your sales through your travellers at all; do you have travellers who go round with samples?—We have travellers in a way. We appoint a travelling representative to a country, who calls round on all the buyers, and he gets a commission on all goods we sell to that country, whether we sell directly or indirectly. His duty is not to actually book orders, but to inform us of indents coming forward to this country, as most foreign buyers, especially in the colonies, buy through firms in London or Birmingham or Glasgow—they are what they call shipping houses and merchants. These merchants send on the inquiries or tender forms for us to fill in. Our traveller's or agent's object is to endeavour to get the buyer abroad to stipulate or indent for our particular article. He does not actually book the order, but he endeavours to get them to tell the shipper that he must have Moncrieff gauge glasses.

Mr. J. Moncrieff.

9 May 1907.

5922. In other words, that he must have gauges of your particular make?—Yes.

5923. (*Sir Swire Smith.*) Do you think the manufacturers of this country have suffered much from sending goods to exhibitions?—From my personal experience I do not know of any case at all, and I have not heard of any case either.

5924. You do not think that these foreigners would copy your goods in any way?—I do not think they need to wait for exhibitions to copy. If they wish to copy they can copy just as easily by coming over and seeing them in this country. Anyone who wants to imitate you will find out your goods.

5925. Would you consider that exhibitions have been very useful in enabling you and other English people to learn what others are doing?—We have had no reason to find out anything that has been made by opponents who have shown at exhibitions; so that really I am not personally in a position to answer that.

5926. Have you to meet a large competition abroad?—Yes; we have to meet foreign competition abroad, but more competition probably from our own country abroad.

5927. Even in other countries?—Yes, from our own country in other countries.

5928. Have you much competition in America with the Americans?—No, we have no competition with the Americans at all; the Americans do not manufacture gauge glasses.

5929. So that America is a clear and open country to you, in spite of their tariff?—Yes, and to all others as well.

5930. But you have the same chances as all other competitors, have you not?—Yes.

5931. Is it your view that even in the exhibition of your own particular line of goods it is better to have a collective exhibit?—I should prefer when exhibiting to have my goods exhibited with similar goods no matter whether they are of British manufacture or not. Whatever happens, you should get your goods exhibited in the class where it would be most likely that buyers would come and see your goods.

5932. Would you favour, in such a collective exhibit, that the selection should be made by some outside authority—that is, by some selected authority, such as a committee or some body of experts selected by the country?—What are they to select?

5933. The best that may be found in every industry?—The best representative manufacturers, do you mean, of each industry?

5934. Or the best representative goods?—I have not given any thought to that point.

5935. Arising out of that comes the question as to the cost of the exhibit. If the State made the selection, you might say that the State might bear perhaps a greater proportion of the cost than it does now; but if you are left to make your own exhibit, then, of course, you would bear the cost?—Would you mean to restrict the number? Take, for example, my own business; is what you mean that a committee would be appointed to select beforehand the number of manufacturers of gauge glasses who would be allowed to send to some industrial exhibition?

5936. No; my question would rather assume that this Committee would not necessarily choose the manufacturers, but would see the goods and select the best goods from each of the manufacturers, so that they would get the best possible exhibit of the particular kind of goods?—In other words, you would practically prejudge the exhibit.

5937. I am merely asking what your view would be as to the best way of getting the best of every manufacture?—I would certainly say, "Let each manufacturer have an equal chance with everyone else in sending his exhibit in, and allow the exhibition authorities to decide which is best."

5938. That really is the point I want to get at. You think that, generally, would be a fairer arrangement than leaving the exhibitors themselves to send what they care to send?—I say that I think every exhibitor should be allowed to send what he cares to send, and then leave it to the exhibition authorities at the exhibition to decide which is the best.

5939. It would be a pity, would it not, to send goods to a foreign country, and then for the authorities to have to refuse to exhibit them? Would it not be better that those goods should be selected in this country?—Why should there be any refusal to exhibit the goods? In other words, you are prejudging the opinion of the judges at the exhibition as to which is the best. It is presumed that the judges in an exhibition who are looking after a particular line of goods are experts in that particular line; whereas it would be more difficult probably to get a Government Committee to decide on all these odd lines without bringing in outside opinion—of course, it would have to bring in outside opinion, and, in other words, you would have to prejudge the merits of the exhibits.

5940. This could only apply in the case where the exhibition authorities in this country desire to obtain the very best possible examples of every industry; and in selecting those they would have the choice of throwing out such as they did not think to be equal to the standard. The Chairman mentioned to you the question of the organisation; have you thought out the best kind of organisation for the representation of this country at an exhibition in a foreign country?—No, I have not.

5941. (*Sir Isidore Spielmann.*) You told the Chairman, I think, that after the Paris Exhibition in 1878, as well as after the Paris Exhibition of 1889, an increase in your business was perceptible?—Yes, at that particular time, which was, however, before I was in business. When I was asked to appear here, I made inquiries from the older members of our staff, and they said that they remembered distinctly receiving letters after the Paris Exhibition, in which the writers mentioned that they had noticed our exhibits and the tests which were going on during the exhibition, and in consequence had written to us for prices. One of our largest buyers in Paris only started from the time of the first exhibition, or the second exhibition—that is one point I am not quite sure of—and when he first wrote to us, he mentioned the fact that he had seen our exhibit and had seen our tests going on during that exhibition. That was one particular case which some of my present office staff, who were members of the staff at that time, are perfectly aware of, as showing the advantage that we had obtained from that particular exhibition.

5942. I think you said your firm had a similar experience both as regards the exhibition of 1878 and the exhibition of 1889; that being so, why were you not induced to participate in the Paris Exhibition of 1900?—That was really a peculiar case. My late father died just a little prior to that exhibition of 1900, and we were not prepared to launch out into new things until we had had time to get a grasp of the business ourselves. I was very young then, and had practically always had somebody to overlook me all the time in any work I was doing, and then suddenly to be launched on one's own—it was only natural that we should not exhibit then.

5943. You did not exhibit in Brussels in 1897, did you?—No.

5944. Nor in Milan in 1906?—No.

5945. Did you visit the machinery sections of any of the exhibitions in which you did not participate as exhibitors?—No. I personally have not been at the exhibitions at all. My father used to attend the exhibitions. St. Louis and Chicago were the only two exhibitions that I was personally interested in, or, at least, was partly responsible for sending an exhibit to, and our agent at New York practically acted for us there, and took full charge.

5946. I think you said you have taken the highest awards?—Yes, in all cases.

5947. What may they be?—Ranging from gold medals down to bronze medals.

5948. When say a silver medal is the highest award, that does not mean that only one silver medal is given, does it?—I do not think so. There may be several people classed on the same level, all receiving the highest awards. I would not like to say for a certainty, but I believe that in most of the exhibitions that we have exhibited in, no one, although there may have been other exhibitors of the same class of goods, has received the highest awards except ourselves.

5949. When other firms, such as German firms or French firms, also take similar awards to yourself, would it not be more correct to say you took one of the highest awards; instead of saying you took *the* gold medal, would it not be more correct to say you took *a*

gold medal?—It is quite possible it would be more correct to say so, but, naturally, if you get it stated on the diploma that you have been awarded a gold medal, which is the highest award, you advertise it in that particular way—that is, in the same way as you get this award given to you; that is to say, you make the most of it.

5950. Now as to your experience of exhibitors' agents; I think you said that you employed a firm at St. Louis?—Yes.

5951. Was it the firm of Day or Hillman?—Hillman I think it was.

5952. What is your experience of these exhibitors' agents?—We had a workman over there as well. He found that Hillman looked after him very well. The workman was one of my firm's staff, and was very capable of looking after the exhibit himself, and he got the thing all nicely arranged. I would not like to trust to any agent to guarantee that they would fix up our exhibit to our satisfaction. That is where one of the most important points in these exhibitions comes in. You must send somebody from your own works if you wish to give the absolutely best possible display, and if you do not give the best possible display you are wasting money.

5953. You would not leave it to the agent to represent the merit of our exhibit to the international jury, for instance, would you?—I would be very pleased, if we were exhibiting, to leave it to anyone who would take it over, because it would only be a case of sending over someone to erect the exhibit, and then if you were absolutely certain of someone who would look after it and keep the place reasonably clean, and be responsible for having someone in attendance, that would be sufficient. We would be willing to pay for somebody in attendance practically during the exhibition, but then if you pay them and have nobody there to see that your man is actually in attendance, it is wasted money. The difficulty in exhibitions in far countries is to get someone to look after your exhibit honestly—that is to say, to look after it and be there all the time that he is supposed to be there, and not to be there probably for an hour or so in the week or in the day.

5954. (*Mr. Malcolm Ramsay.*) How often would you be prepared to exhibit at a large international exhibition?—In the future, do you mean?

5955. In the future?—I should not like to say at all.

5956. Could you give us any idea of the kind of interval which you would think reasonable?—I would not like to make any statement, but I certainly would be unlikely to exhibit before five years had elapsed after the last one.

5957. May we take it that your expenses of exhibiting at a large international exhibition amount to £300 or £400 at least?—It amounted to that at the last exhibition.

5958. That was at St. Louis?—Yes; but that was the most expensive one we have ever had. In Chicago, which is the only other exhibition I was interested in, we had a very much smaller exhibit for one thing, and consequently we did not need to send a man out. We were able to make a sketch of the exhibit, and get the agents, Hillmans, to build it exactly to our desires, without having to send anyone specially over. At St. Louis, we sent out a model made of gauge-glass tubes of a locomotive engine; there were about 14,000 separate tubes in this model, which was practically the length of this room, so we had to send a man out, as no one except a skilled man could possibly put it together.

5959. I suppose you would regard the expenses of participating in exhibitions as part of your ordinary advertisement expenditure?—Exactly; we always classify them as advertisement expenditure.

5960. I suppose you consider it proper to spread the cost over a few years, or until the next exhibition?—I am not very sure, but I think we spread our exhibition expenses over three years—that is, we write them off in three years' time.

5961. Do you advertise largely?—No, not largely at all.

5962. Speaking from the point of view of your own business, would you regard it as a misfortune if international exhibitions were altogether discontinued?—I am hardly prepared to answer, because we have the good fortune to be well known throughout the world now, and we can easily take other means than exhibitions of keeping our name known. I do not think it would affect me personally, but there must be other firms who have hitherto not exhibited, and I think it would be a hardship to them to stop exhibitions.

5963. Do you think that the advantage of an exhibition is mainly for the younger firms who have not got any established reputation?—Or for anyone who has anything new to show. Take a man who builds engines; they are altering in their shape and design and power and everything else, and naturally he may have something new which he wants to show. I think he would feel it a hardship if he had not the means of showing that through these industrial exhibitions.

5964. (*Mr. Harris.*) May I ask you to explain one of your answers to the Chairman? You spoke of exhibitions as the easiest and most effective form of advertisement, and you seemed to use the words as alternative; do you mean that they are the easiest form of advertising from your point of view—properly speaking, the easiest?—I do not remember using those words. Can you give me the question the Chairman asked me, to which I replied in that way?

5965. The Chairman was asking you about the value of exhibitions as an advertisement, and you said you regarded them as the easiest and most effective form of advertisement. I want to know really whether you meant that they are both the easiest and the most effective; or did you use the words inadvertently?—I do not recollect now using the words, but admitting that I did use the words, I was not referring to my own particular line of goods when I said "the easiest and most effective." I was remarking that if anyone had something new to bring before the public—and I would say it still—it is the case that possibly the most effective and the easiest method of introducing something new to all interested in machinery, for example, would be to send their goods to an exhibition; and the greater the exhibition, the more likely are you to have all sorts of industrial trades represented there.

5966. You mean that in an exhibition, we will say, of machinery——?—Yes; supposing, for example, I have a flying machine——

5967. If you have a new idea you would find that the very best way of getting it known to the world would be putting it into an exhibition?—I should consider it to be so; I should say that is one of the best ways.

5968. Do you think it is better than travelling or advertising?—No, not by any means, but then it is much less expensive; I mean to say, if you were to send a man travelling all over the world, you cannot do that under a great many hundreds of pounds per annum. I would certainly say that it depends on the size, and what you want to exhibit. I would certainly think still that if I had anything new to introduce, one of the methods that I would use in order to introduce it would be to send it to an exhibition.

5969. You have not exhibited at New Zealand this last year?—No.

5970. Did you consider whether you would send there?—No, I do not think we did, for the very good reason that we had exhibited in St. Louis, and, as I say, we would not exhibit again for five years at the very soonest. We have done sometimes quicker than that, but of recent years there have been much longer intervals between our sending to large exhibitions.

5971. Are there a good number of gauge-glass manufacturers in this country?—There would be five or six manufacturers, I should imagine, although I really have never had occasion to count them up. I know of five or six, I think, besides ourselves.

5972. Did any besides you exhibit at St. Louis, for instance?—I could not say at all.

5973. I mean from Great Britain?—I really do not know at all. As a matter of fact, I never asked our agent whether any other people were exhibiting. It was more in obligement to him that we sent the goods; at least, he urged us very strongly to do so.

5974. Your American agent urged you?—Yes.

5975. (*Mr. Algernon Law.*) Did your agent object to your exhibiting under your own name—I gather that he did not?—No.

5976. Some agents do?—We would never dream of sending to an exhibition except under our own name—there is no use in paying expenses otherwise; at any rate, we should not do so, unless the agent is going to pay all the charges.

5977. Is there any country where you find the tariff an insurmountable obstacle for the introduction of

Mr. J. Moncrieff.

9 May 1907.

your goods, and where you would not be inclined therefore to exhibit?—If the tariff is so high that you cannot get in, there is no use in exhibiting.

5978. Do you know of any such country?—I do not understand why some of the countries that we get into at the present moment allow our goods to come in at all. As a matter of fact, the only way that I can account for it is that they are not able to manufacture the same quality of gauge-glass.

5979. The machinery interests are too powerful in your favour; is that it?—I think it is this: Gauge-glasses being glass tubes can be made of any ingredient, practically, that glass is made of, and when they are subjected to steam pressure they are very liable to burst. I think that the engineering world practically everywhere have decided that our glasses are less liable to burst than others, and in consequence they will have them, no matter whether they have to pay dearer or not.

5980. (*Chairman.*) I suppose the duties are not so high on the Continent as they are in the States?—No; the States duty is the highest that I am aware of. But we never think of paying the duty ourselves—it is always the people we sell to who do that; so we really do not know about the duties.

5981. (*Mr. Algernon Law.*) Is there any internal competition in America by the natives with you?—I know of one firm in America who manufacture gauge-glasses, and I have been most particular to ask my agent if he has come into contact with them in severe competition, and he says "No." Probably one reason may be that their labour charges being so high, the cost of manufacture is greater than the 60 per cent. tariff.

5982. (*Mr. Wilson Fox.*) I understand from what you say that, having established your reputation, it is not much use your showing now?—It would not be so important for us to show now as it was in our earlier days.

5983. The answer you have just given, that manufacturers will have your goods because your glasses will not break, leads me to put this to you—the fact of engineers or any other members of the public seeing your glasses at an exhibition does not give them any idea of the excellence of their quality when in practical use—that is, of their non-bursting quality, does it?—It does, sometimes.

5984. In what way, now, would that be?—We frequently have in exhibitions a testing-machine for showing hydraulic pressure; and although that does not prove the quality of the glasses in regard to their steam-pressure powers, it certainly gives people a remarkable idea of their strength from another point of view, although it is not, as I say, a practical test.

5985. That is just what I want to elicit from you; it seems to me that there would be no use in showing your class of goods from your point of view unless there was a practical test?—That is so; but still, if we show a quantity of our particular goods in an exhibition, and the exhibit is well got up, people will stop and wonder what the exhibit represents, and when they find it represents gauge-glasses, we naturally conclude that they must have some thoughts on these lines—that anyone who will go to the trouble to send this exhibit to an exhibition will surely have something worth exhibiting.

5986. (*Mr. Harris.*) I suppose that was your idea in having a locomotive the length of this room built up of these gauge glasses?—Yes.

5987. Because that would be a striking thing?—Yes.

5988. (*Mr. Wilson Fox.*) Of course, this particular class of exhibit would only be of use, from your point of view, for getting increased trade, by being shown to experts, because nobody would understand your exhibit except an expert, I take it?—With hydraulic pressure you can show that a gauge glass can stand a pressure of 5,000 lbs., and then anyone who uses a steam boiler, if he sees your gauge glass will stand a hydraulic pressure of 5,000 lbs., immediately thinks it will stand steam pressure very well. Of course, there is no connection the one with the other, but at the same time that makes them stop, and if they see it, they make their inquiries and make their tests, if they have not already happened to have heard of it.

5989. Engineers and many others engaged in the trade visit these exhibitions, of course?—Yes.

5990. At all the large capitals have you got agents, or do you employ travellers; or how have you got your goods known? Is it entirely through the use of your goods, or through these people, so to speak, pushing them forward for you?—It is through the use of them that they have mostly become known. We have a travelling representative, or an agent, in Japan, and another agent in Germany; we have no agents in France, but we have customers all over France—just clients or people who buy from us. Then in South Africa we have a travelling representative, and in Denmark we have a travelling representative. They are not men who are paid a salary by us, but we undertake to pay to them a commission on all goods going in either through them directly or through any indirect source as long as we can trace their going into their country.

5991. Until anything like a severe competitor crops up, this particular form of advertisement, if I may call it so, is not for you really essential at the present time?—No; exhibiting is not essential for me now at all, and it would not injure me personally not to exhibit; but I understand that your idea is to get our view how it would affect other people. I would say that it might be a hardship to other exhibitors if no exhibition was coming forward, especially if a man had any new improvement of any particular thing which he wanted to show off to the world.

5992. May I put it in this way—exhibitions, as far as your particular industry, which is rather a special one is concerned, have, at any rate at the present time and for the present, more or less served your purpose?—Yes.

5993. (*Mr. Algernon Law.*) Are your travelling agents British subjects, as a rule?—No.

5994. So they are not likely to go near our Consuls?—No.

5995. So it does not follow that because a Consul does not find any travellers of yours about, that you are not really travelling?—No. You see the man is not our traveller alone. We could never possibly afford to do that for gauge glasses, for all the money that is in them; if you supplied the whole of the world you could not have a traveller in every country. He may represent probably five or six other firms at the same time. For example, our representative in Canada I am perfectly sure does not get £100 per annum all told from us but then he is representing a good many other firms.

5996. (*Sir Swire Smith.*) In other industries?—Yes, not in ours. In this way he manages to get a living out of it. I suppose the idea is that it is always a very good thing for a man in a country to get a small line like ours, because then he has the right of calling probably on very many firms, which for some other lines he represents he might not get in with.

5997. (*Mr. Wilson Fox.*) Would you say that anybody starting a business of your description ought to exhibit? Suppose you had not got your reputation, would exhibiting be likely to increase your export trade?—If I were making a new start, I should certainly send to exhibitions.

5998. (*Chairman.*) Has the variety of your glasses been affected by the changes in the shapes, sizes and so on of boilers?—Yes. We have had to discover new compositions to make the glass of, in order that it shall be able to stand the higher pressures that are now required.

5999. There have been great changes in machinery of late years?—Yes, there have.

6000. And that has anyhow led to new developments in your business?—Yes, it has led to new developments. The higher the steam power in the boilers the the stronger the gauge glass has to be, because whatever the boiler stands the glass must stand.

6001. (*Sir Isidore Spielmann.*) As you say that exhibitions have served your purpose, have you decided not to participate in any more?—No, we have not decided not to participate in any more, but if we can keep our trade together and go on increasing it without exhibitions, we are not likely to send to them. If there were any particular country where we were not making headway, or where we were going back, and a large International Exhibition was coming on, I fancy we would send to that particular country. We take very careful notes of all countries' business that we do, keeping each country separate in our books; and comparisons are made each year. When one country goes down, if there is any particular reason for it, we try other means, probably by direct writing to all buyers in that particular country, or else by sending someone

over to make a personal visit, and if there is an exhibition probably by trying an exhibit.

6002. (*Mr. Wilson Fox.*) I suppose this particular manufacture of yours is a secret process that you have found out?—It is secret in many ways. There are secret ingredients in the batch, for example, that the glass tubes are made of.

6003. There must be a good many people who would be glad to make glass that would not burst, if they knew how?—I am afraid none of us have discovered how to make glass that will not burst.

6004. You have got as far as you can, and that is further than other people?—We have got so far; but we hope we have not got to the end, still. I think there are a great many things that can be done in this country with a little more expense in the way of scientific investigation. *Mr. J. Moncrieff.* 9 May 1907

6005. Yours is not a process which is likely to be copied, because people cannot tell the ingredients by looking at a gauge?—You cannot tell them by looking at a gauge; it is only by laboratory research.

6006. Therefore there is no danger to you in showing, from the fear of being copied?—No, there is no such danger to me.

Mr. Alexander Gordon Maginnis called and examined.

6007. (*Chairman.*) I think you are the Managing Director of the Goldsmiths and Silversmiths Company, Ltd.?—That is so. *Mr. A. G. Maginnis.*

6008. You have been in business for some years, have you not?—Yes.

6009. Your firm is of some standing?—I think I may say, without any undue modesty, that it is one of the first firms of its character in London.

6010. You have exhibited at several great international exhibitions, I think?—Yes, as a private company and as a limited company we have been exhibiting now for several years.

6011. You were at Paris in 1889, I see?—Yes.

6012. You have not had your premises in London for a great many years, have you?—We were established here in November, 1880.

6013. Then I see you exhibited in Paris in 1900?—Yes; and also, as I have said, in 1889.

6014. But you did not exhibit in St. Louis in 1904?—No.

6015. Why was that?—The distance was rather too great, we considered, at the time.

6016. Were the duties too high?—No, because the duties did not affect the entrance of the exhibits at all; they went through in bond.

6017. I did not know whether you have many sales in the States?—The sales are effected here, but the goods would go through to the States notwithstanding the duty which had to be paid. In our particular business, more particularly in gems, whether the goods are sold on this side or in America, the duty has to be paid equally; on a bunch of pearls the duty is the same going into the States to be sold by a jeweller there, as when a private customer purchases here and takes them in himself.

6018. I suppose the private customer occasionally does not pay the duty?—I do not know about that. That has nothing to do with me, and I cannot give any official information on that subject.

6019. We may have our ideas about that?—Yes; but they are very strict now. There was a recent case in Paris—I do not know whether it has come to your notice—of a large necklace which was sold and which gave a considerable amount of trouble at the Customs at the other side, I am told.

6020. At the last exhibition in Paris I believe you exhibited diamonds, pearls, precious stones of all kinds, gem jewellery, gold plate and sterling silver goods of all kinds, clocks, watches, chronometers and electro-plate?—Yes.

6021. The value of your exhibit being, you say in your proof, £250,000; was that so?—Yes. One item in that exhibit was worth £90,000; that was one row of pearls, which only made a small feature in a large exhibit.

6022. You had some considerable expense in taking care of all those things I suppose?—Naturally. There was a staff of four over there always, and there was always somebody visiting—someone in authority going over and superintending.

6023. Can you tell me at all what it cost you to exhibit there?—It is very difficult to say; the insurance alone would be a very considerable item.

6024. You did not tot it up?—I could get the figures, but I did not look at them before I came here.

6025. (*Mr. Waring.*) Would it be over £5,000 altogether?—Yes.

6026. Would it be nearer £10,000, taking the expense in its entirety—that is, including cases, and so on?—If one takes into consideration certain advertising schemes and things of that sort, yes.

6027. (*Chairman.*) After spending all that, did you get any increase of business that you can directly attribute to exhibiting in Paris?—That is rather a difficult question to answer. Without being able perhaps to give you definite items, I should say undoubtedly we got an increase of business. You must bear in mind that in a place like Paris, which is the centre of the gaiety of the world, I suppose, there is a very large touring and visiting population during an exhibition. Through our exhibit there, we became known to those people in a way which we should never have had the opportunity of in the ordinary way, because a large number of those people do not come to London. But we became known to them at the exhibition, and since then we have opened up negotiations with them, and business has come along—it may be a year after, it may be two years after, or it may be three years after, but we became known to them there.

6028. You are speaking now of buyers from more distant places?—Yes.

6029. Do you mean private consumers?—Yes, I do mean private consumers. Our special business applies more particularly to private consumption than to large wholesale dealers. The only wholesale dealers that a firm like our own would be mixed up with would be the furnishers of a big hotel, or steamships, or things of that sort. We are not like large iron works or engine manufacturers, or makers of things of that sort, who get a wholesale order to fit out a railway, for instance. Our business is more applicable to personal requirements.

6030. You made a personal connection at Paris which was a good thing for you?—Undoubtedly.

6031. On the other hand, did you suffer any disadvantage from having your goods copied? We know you have very beautiful designs, which you probably exhibited?—I never felt any such disadvantage.

6032. You do not know of anything of that sort?—No. A design may have been copied, but it is very difficult to say that we have derived any disadvantage from it.

6033. Do you attach importance to the awards which you have had?—Undoubtedly.

6034. I see that at the Paris Exhibition of 1900 you got the *grand prix*?—Yes, and we are very proud of it ourselves. We have had from many of our customers and shareholders letters complimenting us on the fact of having got such an honour. Therefore we feel that it is a thing to be proud of, and a thing to try and achieve. It is thought a good deal of by the British public, and by the world at large, I think.

6035. Have you ever been induced to buy from seeing things that would help you in your manufacture at these exhibitions; very fine machinery, for instance?—That is hardly a question that appeals to us. Our products are products of nature to a great extent—nature and the artist.

6036. There is not much machinery used by you?—No; it is hand work.

6037. It is very fine handicraft, I suppose?—Yes, purely; so that that question really does not apply to our business.

6038. I suppose you are not even diamond-cutters, are you?—No; there is very little diamond-cutting done in London.

6039. Not more than there used to be?—No.

Mr. A. G. Maginnis.

9 May 1907.

6040. It is done still in Amsterdam?—In Amsterdam and Antwerp.

6041. Independent of that, are there any points on which you have derived instruction in visiting exhibitions?—I do not think anyone could go to an exhibition like Paris, which is the one we have been talking about, without having one's mind enlarged. Unconsciously you pick up things which are of use to any man who has got any brains. They may not appeal actually to his particular business, but they enlarge his mind. I could not say that I went to Paris and I saw things over there in my particular business which were of any great service to me afterwards—so that I might say when I took up a thing, "That is very nice; I will go home and make some of those." I do not think I can say that.

6042. But you think it had an unconscious effect on your mind?—Undoubtedly it had an educational influence; and I think it must have in the case of everyone.

6043. You have not exhibited at the smaller exhibitions lately, have you?—There have been none.

6044. There was the Milan Exhibition, for instance, of last year?—That was not very much, was it?

6064. You did not think it was worth while?—No.

6046. You did not think it was worth while?—No.

6047. Then you did not exhibit at Brussels in 1897?—No. I forget what our reason was for that—I cannot recall it.

6048. Then you have not exhibited at any of the Colonial exhibitions—for instance, the recent New Zealand Exhibition?—No. We do not consider that the market out there is sufficient to warrant it.

6049. That is what I wanted to get from you; that was your reason?—Yes; it is such a great distance off.

6050. I suppose you would have been at great expense in sending your representative there?—We would have had to send a staff of four or five men, and a very large stock. With a valuable stock like ours, it makes a very great difference if the exhibition is within easy distance. Paris, for instance, is within easy distance, and anyone responsible could run over to Paris and be on the spot in eight hours. But when our stock is a great many thousand miles away the responsibility is very great, and the expense, of course, is proportionately very much greater. Moreover, the Colonial exhibitions could not be called international exhibitions, could they?

6051. I believe they are called so?—The New Zealand Exhibition is not an international exhibition, is it?

6052. I think so. I believe there were not a great number of international exhibits, but it was called international?—That exhibition would appeal more to makers of agricultural machinery, I should think, than to the manufacturers of fancy goods. You see, we have to study our markets to a great extent, and the European market for our particular goods is far better than the Colonial market. Ours is an article of luxury, of course.

6053. You have the North American market and the South American market to a certain extent; is that not so?—The South American market is opening up into a very great field, I believe.

6054. But you do not think the Colonial market is of very much use for your goods?—Not for the more expensive goods. They have not the society and State functions out there that necessitate diamond tiaras and large pearl necklaces.

6055. Leaving your own particular goods for a moment, do you think this country should take part in international exhibitions generally?—By "generally," do you mean in all parts of the world?

6056. In the large exhibitions; do you think the country should be represented?—Outside our own particular class of industry, are you asking me?

6057. I am asking you now for your general views, outside your own particular class of industry?—I should say, yes.

6058. Would you like to see this country represented?—Yes, and better represented than it has been.

6059. How do you think that could be done?—By better organisation. Paris is the most recent example we have had of exhibitions, and, compared with Germany and the United States, England's court was not a thing to be proud of. England had a certain space allotted to her, America came next, and Germany a little further off. The week before the exhibition was opened, America had a nice sort of concerted court arranged according to the ideas and the requirements of the exhibitors—nicely furnished with carpets, nice decorations, and so forth. Three days before the exhibition was opened the British court was bare boards. The space was there, and it was left to the individual exhibitor to put up his stall independent of any scheme whatever. I was there on the spot for three weeks at a time, and I found that Great Britain was more or less a laughing-stock with the big exhibitors round about, because the nation on the whole had taken no interest in the scheme of exhibits.

6060. Was that owing to the organisation?—I am talking from the exhibitor's point of view.

6061. Were you not satisfied with the place in which your goods were?—No. We were a barn, and the other place was a little exhibition in itself; ours was simply the bare boards in fact.

6062. Did you not put up your own decoration?—On our own immediate stalls, yes.

6063. But you think more should have been done for you?—I think there should have been some general scheme carried out. The wishes of the individual stall-holders should be consulted to a certain extent, I think, because what suits one class of exhibitor will not suit another; otherwise, if you have got furniture, jewellery, perhaps bronzes or statuary, grand pianos, machinery, and one thing and another, you might have the same character of stall for each exhibit. Therefore, to a certain extent, one wants to know who the exhibitors are who are going to occupy the court, and then by consulting them as to their ideas as to what their requirements may be, to get some scheme together to include the whole in a little exclusive exhibition of its own, as it were.

6064. Did you have anything to do with the British Commission at Paris; did you have to go to them for anything?—Frequently; I spent a great many hours there.

6065. Did you find your relations with them and your communications all satisfactory?—Yes. We always got what we wanted. It took some time sometimes, but we generally got what we wanted.

6066. Do you think they were not quite equal to their duties?—No, I do not say that for one moment; and I should be very sorry to say it. I do not think that is quite a fair question to ask an exhibitor.

6067. What do you think was wrong?—I do not say anything was wrong.

6068. You said that it took you some time to get what you wanted?—Yes.

6069. You do not think it took a longer time than it ought to get what you wanted?—It took a longer time than anybody coming into my place would have to waste if they wanted the same sort of thing. As a business man, I should sack the men if they took as long to execute the orders.

6070. Then you think there was rather a lack of businesslike method?—I think so. Perhaps it was—but I do not quite know how to express it without putting it too strongly, and that I do not wish to do.

6071. Very well, we will talk no more about the past. Have you any suggestions for the future? You would like to make the organisation rather more businesslike, I gather?—I should.

6072. In your heads of evidence you say that you would like a small but influential executive committee of business men to be appointed?—Yes, because I feel that a business man knows more what a business man wants. If I were organising an exhibition I would organise it on a scheme which I have already sketched out to you. I should find out who the exhibitors were, the class of exhibit they were going to put in, what they consider to be the sort of stall, or whatever it is they wish to erect; and so work out some decorative scheme which would combine the whole.

6073. Have you thought at all what would be the composition of your Commission?—No.

6074. You did not think of beginning in that way?—No, I did not. I did not think it came within our scope.

6075. I will not press you on that. Anyhow, do you think that an executive committee of business men could be got to give their time?—That would remain to be seen. I simply express that opinion.

6076. You would like to get such a committee?—Yes. You asked what our opinion was, and we have expressed it. We do not say it is absolutely practicable.

6077. That is your idea of what you would like?—It is a thing we should like to obtain.

6078. (*Mr. Wilson Fox.*) Your class of business is just the one in which it is really essential to show your goods, is it not?—Undoubtedly.

6079. Your whole object is to exhibit the goods to the public and let them see them?—Exactly.

6080. It is naturally far more effective to see all these pretty and beautiful things than it is to advertise the fact that you have got pretty and beautiful things in your shop or on your premises?—Yes.

6081. Therefore your particular business of all others is one which is particularly suited for exhibitions?—Yes, I take it so.

6082. It is everything to you to exhibit your jewellery somewhere?—As long as we can make a decorative and attractive show.

6083. You want to catch the people's eye, people out on a holiday who might take a fancy to that £90,000 necklace of yours?—Yes. I take it that is the case with all exhibitions. One goes there with the idea of taking orders or selling goods; it was not purely for an educational or philanthropic object that we spent £10,000 in going to Paris.

6084. What I mean is that a person is more likely to take away a brooch or a ring as a souvenir of the exhibition than he is to take away a steam crane as a souvenir?—No; because in Paris they are very strict about selling rules. In Paris, no sales were effected in the exhibition, because of the duty. All the goods were in bond; they were checked when they went in by the Customs, and they were checked when they came out.

6085. Besides that, you could not renew your exhibit during the exhibition?—Naturally.

6086. Therefore you would only take orders?—Therefore the souvenir would not apply in that case.

6087. Still, they could order one?—That is true.

6088. We know that in all exhibitions you can only order?—Yes, the actual exhibit would be retained there, of course.

6089. You could send another across in a week?—If you came along and said you would like to purchase the £90,000 necklace at the end of the exhibition, there would be no difficulty in retaining it.

6090. I dare say you would be able to provide one in less time than that?—No.

6091. You would probably be able to provide me with one in a week from now?—No, I do not know of one. I wish we had that now; it would be worth double.

6092. You also show, I suppose, not only for the purpose of getting orders at an exhibition, but to get some regular export trade abroad in the future?—Yes.

6093. To make a connection?—Yes, certainly.

6094. And you also show, I suppose, with the object of helping your home trade?—Yes.

6095. I understand you to say you think that exhibitions are a very important element in the methods of pushing your business?—Judging from our own experience, yes.

6096. And therefore you are prepared to show abroad frequently, I suppose?—Yes. I am not going to say I would show at a very great distance from home. As I have explained to you before, the value of our goods, the expense of sending them out, and the responsibility of having goods of such value a long distance away from our fountain head is a great disadvantage to us.

6097. How often would you be prepared to show at a large exhibition, and incur this very large expense?—I should say that if exhibitions are held every year, they would be practically no good, and people would get sick and tired of them.

6098. How often would you care to show if you had your choice?—I should say every five years.

6099. That is quite good enough for you?—That is quite frequent enough for big exhibitions; it is the very smallest interval, and I should be inclined to put it at more.

6100. That is quite good enough for the purpose of advertising your goods?—To show once every five years is quite good enough.

6101. For the purpose of advertising your goods, you are content with five years?—For advertising my goods, no, because I am advertising my goods every day.

6102. I know that; I mean advertising them in this particular form?—Yes. I think if exhibitions were held more frequently the people would not go to them.

6103. And further, there is also the question of expense?—The question of the expense is, to a certain extent, the main one, because I do not think, if held frequently, they would pay the expense; they would be failures.

6104. Do you think if manufacturers show too often there would be a danger of their not making really effective exhibits?—I do not say that, but I think that the public who attend exhibitions would get tired of going to see the same sort of things periodically year after year. The exhibits may be equally nice and equally inviting, but the public will not go to see them.

6105. And that affects you, if the public do not go?—That affects us, naturally. Unless the exhibition is a success, it is no good our going.

6106. One other question, quite apart from your own business. You have made some criticism upon the way in which the British sections are decorated and made up; from what you saw at the Paris Exhibition during the three weeks you were there, how did the foreign exhibits—I am not speaking of the jewellery, but from a general point of view—compare with the English ones? Do you think they were good, bad, or indifferent, compared with the British ones? Were you proud of the British section compared with the others?—No, I was not.

6107. Was it the quality or the quantity that you had to complain about?—I do not think the right firms were represented, and there were not sufficient of the good firms represented—I mean the high-class firms of the country. If we took a directory, and took out certain firms of this country, and induced them to make an exhibit in Paris, I think we could, if we like, turn out a far better show than we had in 1900.

6108. Therefore, you think the British exhibit then was not really a good representative one of what England can do?—No, I do not think it was.

6109. (*Mr. Algernon Law.*) What steps do you think should be taken to induce good firms to exhibit for the credit of the country, not merely for their own benefit? Some firms are doing a very good trade, and do not care to exhibit, as they have established their reputation. If it is good to have British participation, what inducements would you hold out to these good firms?—I do not know indeed. We all want to do business.

6110. Do you attach importance to Government participation, and to the fact that there is a Royal Commission?—Yes, certainly.

6111. Do you attach importance to a body which is not a Royal Commission—such a body, for instance, as got up the Milan Exhibition, with the assistance of the Government, but not as a Royal Commission? Were you invited by that body, which was got up chiefly by the London Chamber of Commerce, to join in the Milan Exhibition?—We had certainly some documents sent to us, but I could not tell you where they came from?

6112. You did not attach any importance to them?—We did not consider that it was an exhibition sufficiently important to warrant our going into it.

6113. Was your decision influenced by the nature of the body that invited you?—No. I do not think we paid much attention to it; we thought more of Milan than of anything else, and of the possibility of doing business in connection with it.

6114. Did you exhibit at Glasgow?—Yes.

6115. Would the existence of a high tariff prevent your exhibiting in any particular country?—Can you think of any country where you would not exhibit on account of the tariff?—Not at all. That does not affect us, because the import is not ours. The customers pay the import duties; and if they choose to pay them it does not affect us at all.

6116. How do you think the difficulty of arranging exhibitions could be overcome? The Commission has a certain space assigned to it, and it must be difficult to know what will be the quantity of goods or the area covered by the goods of the various exhibitors?—I know the committee must have had very considerable diffi-

Mr. A. G. aginnis.

9 May 1907.

culty in coming to decisions. We have always had to beg, in the first place, for a great deal more than they were liberal enough to give us.

6117. I suppose it really could be overcome by having a small model of the exhibition at headquarters in London, and all the things being drawn to scale and fitted in; then people could come and see where they would be?—A man exhibiting furniture may put in £10,000 worth of furniture, and it will take up ten times the amount of room that we should want for £250,000 worth of goods.

6118. Unless it was all arranged beforehand, of course, there would be overcrowding?—It must be arranged beforehand.

6119. And it could apparently be arranged beforehand by a model?—I should say there would be no difficulty in that.

6120. (*Mr. Harris.*) An exhibition such as that at Paris costs the Government a good deal of money; supposing the Government withdrew all participation in international exhibitions, what would you do? Would you say, "That finishes it; we will drop out"?—There must be an organisation of some sort. For instance, there is to be an exhibition held next year in London, for which the Government has no Commission—the Franco-British Exhibition—at any rate, I do not think there is a Commission in connection with it. There is an organisation composed of a large body of influential gentlemen, who have held meetings and formed various organising committees and sub-committees.

6121. Do you not attach much importance to the participation of the Government?—Yes; I have said that I did. I think a Commission is a very good thing, and a thing to be desired. I put myself in the position of a foreigner. A foreigner coming here and thinking of exhibiting in England, if the exhibition were under the ægis of the Government, I think he would feel very much more satisfied that it was going to be a sound thing than if it were under the influence of a private committee. The same with yourself. If I was going over to Germany, I probably would not know anything about the private committee, which would be formed there, although it might be perfectly good in every way; but if it were under Government auspices, I should feel then that there was some guarantee that we were going to get something for our money.

6122. Would that fact have a material influence in determining you to exhibit or not?—In foreign countries I should say yes.

6123. Have you any notion what percentage of your general advertising expenses the cost of exhibiting at an exhibition may be?—No.

6124. Can you say at all whether it is a large proportion or a small proportion?—I do not know. Will you kindly repeat the question?

6125. Have you any notion what percentage of your general advertising expenses would be the cost of exhibiting at an exhibition which you would call a large exhibition?—That is the whole expenses of the exhibit?

6126. The whole expense, quite apart from the value of the exhibit; what proportion does that bear to your general expenditure on advertising?—An exhibition happens once in ten years perhaps, and advertising is going on every year; so if you split up the expense of advertising in an exhibition once in ten years, it would bear a very small proportion to the general advertising. But if you take the whole cost of exhibiting and put it against the general advertising for the same year, then of course the proportion is much greater.

6127. The point of view you took first was that which I was trying to get at. Now have you considered at all whether you would prefer at an exhibition to see the gold and silver trade of England represented by one large collective exhibit, of which you only form a small portion?—We were approached in that respect in 1900, but the scheme was never taken up warmly by the trade as a whole, and I feel sure it would never be a success.

6128. You are clearly against it, then?—I feel sure it would never be a success.

6129. When you say it would not be a success, do you mean that you do not think it would pay each firm?—I do not think you would get the firms to co-operate. It is hardly reasonable. Here am I, and my competitor is next door. We are practically cutting each other's throats in common parlance, and to ask us to go there and sit down side by side at an exhibition is not reasonable.

6130. But you now sit down side by side at an exhibition?—Yes, but we have our separate entrances and our exits, and there is a fence between us, so to speak. Then we each have our own men there guarding our interests, and we are purely separate institutions. No, I do not think it would ever be a success.

6131. Do you not think you could equally preserve your individuality if you had, as it were, a great national gold and silver exhibit?—No. I would not be a party to it.

6132. You referred to a committee of business men; in thinking of that, did it occur to you that possibly you might get a good deal of business jealousy—the very thing you have just referred to?—No, I do not think you would. I do not mean to say that each trade should be represented, but there are men, capable business men, at the head of very large establishments in this country, who would be above petty jealousies, I think, and if they could be induced to act as such a committee, I think it would be an ideal one; but, mind you, I am not here to suggest any names.

6133. At any rate, you express a pious hope?—Yes.

6134. (*Mr. Malcolm Ramsay.*) I suppose you do spend a considerable sum in advertising every year?—Yes.

6135. In fact, I know you must spend a great deal, because a good many of your catalogues reach me. Following up Mr. Harris's point, if you spread the cost of going to an exhibition over a series of years, it does not come very heavy in your bills, does it?—No. We are quite prepared to do that.

6136. May I go further, and say it is not more than you are prepared to do on your own account?—Certainly.

6137. You have been quite willing to go to these exhibitions where you have thought there was business in it, and to stand the racket of it?—Exactly so.

6138. As regards the future, will you go on, assuming that there is an international exhibition in a place that suits you?—Certainly.

6139. But you prefer, when you are going to an exhibition abroad, that you should be able to do that under the auspices of the Government?—Certainly.

6140. You think you would have a better chance, provided the organisation is effective, of insisting on your legitimate rights then?—Certainly, I think so.

6141. Do you claim that the Government should give you any financial help?—I do not see that we have any right to that. We are going there purely as a commercial venture, and if I thought it would not pay I would not go.

6142. (*Chairman.*) But you want some decorating done?—That is as regards the general scheme. You cannot expect us to decorate the whole of a court a hundred yards, or fifty yards, long, or whatever it may be.

6143. (*Mr. Malcolm Ramsay.*) Put it this way: Supposing the Government did the whole of the decoration and so on according to a uniform scheme, would you be prepared to pay your share *pro rata*?—May I ask a question before answering that? In previous exhibitions the Government have devoted a certain sum of money to the decoration of the courts in a way, I believe?

6144. Yes?—I know that in Paris they hung up flags, put down a carpet, and so forth. I presume there was a fund allotted by the Commission for the purpose of decoration, though the fund allotted by America and by Germany was much more liberal than the one allotted by the English Government. That is my point, I think; they did spend money on it.

6145. I was only asking if in future you would be prepared to contribute towards the expenses of having a more uniform decoration?—I do not know that I should have any strong objection to a reasonable payment. I do not say that positively; I should want to think the matter over and to have a suggestion made to me before I said anything positively on that subject.

6146. Following up Mr. Harris's question about coming forward in some form of a collective exhibit, would you be prepared to come into a system a part of which was that the organising committee or body

should have an absolute right of selection from amongst the would-be exhibitors? One object of the Government in approaching exhibitions might presumably be to get as good a display of the various trades of the country as it can; to do that it seems reasonable, does it not, that the Government, or that the managing body, should have strong rights of selection—that is to say, the individual exhibitor might apply to the committee for permission to exhibit so-and-so, and it should be for consideration whether he had a sufficient standing or not?—Has that not happened already with previous Commissions?

6147. To a certain extent I think it has?—In an exhibition which has been more or less successful, I think the undesirable ones have been squeezed out, so to speak, and there has been no room found for them. It is a thing which can be done, I think, without making any fuss about it.

6148. (*Sir Isidore Spielmann.*) You say in your heads of evidence that Great Britain should make the most effective display possible; if we could not make the most effective display, would you recommend that we should abstain?—I do not like the idea of crying bad fish; it means that really.

6149. Would you disapprove of our participating in the minor exhibitions, when they are perhaps badly done and we should not show to advantage?—When the exhibition is badly done, I should say "Certainly not; have nothing to do with it."

6150. You would rather see the country stand out altogether?—Unless it is an absolutely first-rate international exhibition.

6151. You have expressed your disapproval with the appearance of the English courts, and of the exhibits having all kinds and sizes of show-cases and so forth, have you not?—No, not that; I do not criticise that adversely, because it is necessary that exhibitors should have, and they must have, different sized show-cases. What suits a furniture dealer will not suit us, and *vice versâ*. Then a man showing needles and pins will want a different case. So there must be show-cases of diverse sizes. But what I think and say is that those should all be so arranged and contained in an ornamental court of some kind as to give a tone and character to the whole.

6152. Is it not just that fact, that all the exhibits in the German court and in the American court to which you have referred were of the same uniform nature, that gave them such a very attractive appearance, and is not that method capable of being applied in this country?—All the show-cases should be of a similar nature.

6153. Is it not the fact that they are uniform in Germany and the United States?—I do not agree about the decoration in the United States section. The decorations which Messrs. Tiffany had in the United States court were not adapted to Tiffany's business; they were too heavy altogether; they were quite dark, like a cavern.

6154. Can you expect us to make the same handsome appearance if we do not adopt the methods which Germany and the United States adopt?—I think it might be done.

6155. But not if we leave it to each individual exhibitor to do as he pleases?—No; it should be done under the superintendence of the executive committee. Anything that an exhibitor wishes, and any suggestions, should be submitted to the committee and approved, but he should have the right surely to have the sort of case which suits his business.

6156. In the case of firms joining and participating in collective exhibits, that also helps to make the courts uniform?—In a collective exhibit?

6157. Do you express disapproval?—I say a collective exhibit is out of the question in our particular business.

6158. But suppose you were approached and were asked to exhibit for the credit of the country, would you join in a collective exhibit so as to make a fine display?—If I were asked by whom?

6159. If you were asked to participate in a collective exhibit for the credit of the country, would you do so?—Then I should not look upon it at all from the point of view of an international exhibition.

6160. Would you hesitate before refusing?—Certainly. If I were asked for the credit of the country to send one or two special specimens of our work, I should be very pleased to do so.

6161. (*Mr. Wilson Fox.*) Would it not depend upon how often you were asked?—I should think it would very likely. But that is rather different from a collective display, I should think; we should be forming then a loan collection, I take it, like a museum, each firm sending one or two examples of their handicraft simply on loan.

Mr. A. G. Maginnis.

9 May 1907.

6162. (*Sir Isidore Spielmann.*) That is the idea.—Then it is a loan exhibition, surely. In our particular business, if we exhibit a fine thing, visitors want explanations, and so we like our man to be there on the spot to explain, to the people who appreciate them, the niceties of the different things. But if it were a loan exhibition, and the things were locked up in a case and simply exhibited to the public at large, it would not be of the slightest use to us.

6163. If you had your agent there, who to all intents and purposes managed your own exhibit, would you then object to participating in a collective display?—Yes, I should; because I would not send in a representative exhibit in a collective form. I would not mind, as I said just now, sending one or two fine examples of our work to be exhibited as a national exhibit.

6164. Would it not be an inducement to participate in a collective exhibit if you were assisted financially, if space were found you, if a show-case were found you, and if a certain portion of your expenses as regards transport, for instance, were found you?—Yes.

6165. (*Mr. Waring.*) I should say, from my knowledge of your business, that you are a good example of what I may call the retail trade; yours is one of the front rank houses in what one may call the retail trade, and therefore quite representative?—Yes.

6166. And of the modern spirit of progressive houses in the retail trade?—That is so.

6167. Therefore it is very interesting to have your views on such matters as Sir Isidore has been discussing with you. I would suggest that the spirit of what is known as the "shopkeeper" is rather in favour of exercising his own individuality as against the products from a neighbourhood like Bradford. The shopkeeper would be of your view, and would prefer to use his own individuality as regards the particular case and the particular form of treatment and arrangement of his goods?—That expresses exactly what is my idea.

6168. That is your point, I think?—Yes.

6169. You quite appreciate that where you take the textile industry, or anything of that kind, that may be a matter for a collective exhibit?—Yes, possibly.

6170. On your point as regards your own industry you are very decided and very definite?—Yes, most certainly.

6171. I understood you to say that you are an absolute believer in the principle of international exhibitions?—Yes.

6172. I suppose it is your impression—and you appreciate the two points of view—that there is the national point and there is the individual point, the national point being a national advertisement for the country and of the products of the country?—Yes.

6173. And then also there is its possibilities from your own standpoint of the retail trade?—Certainly.

6174. The individual point of view being your own *raison d'être* for going there, which is generally, in the case of a commercial man, a question of profit?—Exactly. I quite appreciate the two.

6175. And you quite believe that international exhibitions tend to develop and extend trade?—Undoubtedly. You say trade generally, but I am speaking of my own trade and as far as my knowledge goes.

6176. I am speaking now of your own personal experience. Even if you do not get trade immediately, on the spot, and no one walks away with your £90,000 necklace, indirectly and generally you feel the influence of it?—Undoubtedly, in the indirect result.

6177. But you are quite clear on that, with no reservation in your mind, from the business standpoint?—We do derive benefit; if not directly on the spot, then we get it afterwards.

6178. Do you think it would be a bad thing if the Government determined not to support international exhibitions, and not to give their countenance to them?—I do. So long as international exhibitions exist, I think they ought to be supported by the Government more particularly, if I may use the word, as an assurance that the exhibition and the executive

Mr. A. G. Maginnis.

9 May 1907.

are going to be right, and can be thoroughly relied upon and depended upon by foreign nations or exhibitors coming in. Go to Germany, and you will find that Herr this and Baron So-and-so from the executive committee; but we do not know who they are. If the executive is composed of members appointed by the Government, then we have confidence in going, and we know that we are going to be rightly treated, and that the thing is not going to turn out a swindle.

6179. As regards international exhibitions, our only point here is their control, organisation, and administration; and on those points I do not think you need be in any way apprehensive with regard to what you say in the way of criticism. The object of this inquiry is to improve upon the past, and with that object to know the defects of the past, in order that they may be rectified. So this question of the criticism of what took place is not a personal matter. I know a great many people felt as you have felt; your feeling was that, taking Paris as a case in point, it might have been very much better administered?—That is so.

6180. Instead of things being done in what you would call a businesslike manner, they were lethargic, and a number of obstacles were put in your way, instead of the friendly assistance that you think you should have had?—That is very nicely put, I think.

6181. But I think that is your point?—It expresses my views very well, and it is comprehensive.

6182. That is your feeling in the matter; and you think that if an exhibition is to be held, everything should be done to really help it in a vigorous, friendly way?—I do not see what the Commission is for—the executive committee, at any rate—unless it is to help the exhibitors.

6183. I do not want to say this in any way offensively, and it is not meant to be offensive, but it is a term which I am unfortunately obliged to use in a certain way in putting these things: there was a good deal of officialism, from your standpoint, in the way it was conducted, was there not?—You know the feeling, perhaps, of business men, about officialism?

6184. That is your point?—There is just the difference between a practical business method and officialism.

6185. The point being that in the one case, summing up the business man's method, there would be dispatch in getting things through?—Yes.

6186. And, in the other case, there was not that dispatch which you feel might have been exercised?—I do not want you to draw me out to say too much.

6187. You are clear that things could be considerably improved, and that there might be a much better conduct of the organisation?—I think so.

6188. Your impression is that you would not like exhibitions to be without the countenance of the British Government, or you would not like it to be without that connection and that character which is given to it by some form of Commission, providing it was done in combination with a body which, as you put it just now, understood the character and details of business or of the various classes of business?—That is so; I should wish for the countenance of the Government, certainly.

6189. That would be an ideal sort of thing, if it could be worked?—I would wish for that certainly.

6190. I would rather put your point in this way: I think you were suggesting that although you did not approve the German system or the American system of applying the same form of decoration to the whole of the exhibit, the end you have in view might be effected by a better classification and concentration of the different trades, bringing them all together, so to speak?—Yes.

6191. And, as you put it just now, the decoration of one, although effective as regards that group or class of trade, would not be perhaps the thing for other trades?—Certainly.

6192. All those are points, I take it, that you think should be determined by business men on the spot?—Not on the spot; they ought to be settled beforehand.

6193. But they would appreciate that?—I think so.

6194. They would foresee matters of that kind?—They ought to be pointed out to them.

6195. They would probably foresee them as business men?—I think so.

6196. The effect being that they would know their own requirements?—Yes.

6197. There is just one point with regard to the financial help: You were saying that Germany spent more money in assisting exhibitors than England, I think?—I made the remark, with reference to the decoration of the court, that England's contribution was a carpet and two or three flags.

6198. Would I be right in saying that you were very disappointed with what one may call the practical effect of the English court?—I was.

6199. You were very disappointed with the *ensemble*?—Yes.

6200. Might not the money have been more effectively expended, if less had been spent on the housing of the Commission and more on the court; would it not then have been more effectual from the country's standpoint?—I have not an idea what the housing of the Commission cost.

6201. If you had anything to do with it, you would certainly suggest, would you not, less expenditure there and more on the court?—I think the Commission should have a house worthy of its dignity, and I do not know what the expense was. You are alluding to the offices, I presume?

6202. To the Royal Pavilion?—That is a matter I do not know about, and I do not feel I could answer a question of that sort.

6203. You did not show at St. Louis, did you?—No.

6204. Was it because the distance was so great, and the cost would be so large, that you did not think you would derive sufficient advantage from it?—In addition to the cost, there is the responsibility. We have a responsibility for our goods that does not exist with a great many goods, and you must take that into consideration in addition to the cost. When you are showing a little bit of a thing that we can put into a pill box, but which is worth £5,000, there is a considerable amount of anxiety felt by the management on this side in knowing that it is 20,000 or 30,000 miles away. Your man who has taken charge for you may be as honest and straightforward as possible, and the best man you could have, but you always feel a great amount of anxiety about goods of that character when they are such a long way off, and away from your control. I should have been very glad to go to St. Louis if St. Louis had been accessible in a couple of days or something of that sort.

6205. The distance would be a point then?—It was the distance and the feeling that we had got perhaps £100,000 or £200,000 worth of goods there—£100,000 perhaps, because we should not have sent as much as we should send to Paris, owing to the distance being so great. There is the responsibility of knowing that you have got £100,000 worth of goods there, but you do not know what happens to them; and then they are goods which are easily converted, and goods which can be stolen with the greatest ease.

6206. On the other hand, one would imagine that there is a tremendous purchasing power in America?—True.

6207. I suppose *pro rata* the Americans spend more money in the purchase of jewellery than any other nation in the world?—I should say they do.

6208. They have to get new jewels?—Yes.

6209. In America they have to create their ancestral jewels?—Yes.

6210. And so they are very heavy purchasers?—Yes.

6211. The effect of this was that you did not exhibit at St. Louis; but supposing the suggestion had been made that a great deal of the cost would be eliminated, and that from your standpoint you would be helped so far as regards this £8,000 or £10,000 that you would have had to spend, would that have affected you?—That is a point that would not affect us, because, as I say, beyond the cost, there is a certain further responsibility and anxiety.

6212. The great distance was prohibitory from that standpoint?—Yes.

6213. (*Sir Swire Smith.*) You tell us that you are in favour of international exhibitions?—Certainly.

6214. Do you think that the time has come for the holding of one in this country?—That is rather a pertinent point. It depends how much assistance is going to be given to the Anglo-French Exhibition that is to be held here next year. I am given to under-

stand that it is going to be an exhibition of some size, and that would be a great factor to my mind as to the advisability of holding an international exhibition the next year after.

6215. You recognise the enormous responsibility of starting an exhibition?—Yes, but I quite think it is time that England were represented by a great international exhibition. We have not had one since 1862.

6216. Do you think the educational influence would be very important?—I think so. I think it would be good for the country at large, both educationally and from a business point of view.

6217. You gave us your views with regards to firms exhibiting which rather conveyed the impression to me that you did not favour a collective exhibition in your own industry?—Certainly.

6218. But surely you would favour collective exhibits in some other industries that were not so detailed?—I do not think that is a fair question to put to me, is it?

6219. Take the textiles?—Is that a fair question to put to me? To answer that question, I ought to be in a position to know whether a collective exhibition would be good for the textile makers.

6220. (*Chairman.*) You mean that you cannot answer the question because it is not in your line of business?—It is not my line at all.

6221. (*Sir Swire Smith.*) The object of having a collective exhibit is to get the best possible exhibit of everything the nation produces?—I know nothing about textiles. I should imagine that a collective exhibition would be very good for textiles, but I do not know, and I am quite open to correction on that point. That is a point I really do not know anything about; I have not thought about it.

6222. Referring to the question of cost which Mr. Waring put to you, of course the cost of exhibiting cases of jewels, so far as the space they require and so on, would not be particularly great; and, therefore, the question of the Government bearing the cost of the arrangement is not a very big one, is it?—You must bear in mind that although the cost of conveying them is not great, the insurance of those jewels is a great item.

Mr. A. G. Maginnis.
9 May 1907.

6223. That I can understand, but I want to put this to you: Although you would leave very largely the responsibility of the exhibition of your class of goods to the exhibitors themselves, would you say the same with regard to the large exhibits, such as steam engines for example, that would have to be brought together at a very great cost, when the object was of giving an impression of the country's greatness in that direction?—I do not know. I think even with the steam engines it is a matter of business with the manufacturer. The mere fact of advertising a certain make of steam engine has, I should imagine, in the past conduced to the placing of very large orders from foreign countries in England.

6224. Sometimes?—Individual exhibitors of steam engines would profit thereby.

6225. You would leave it to the individual?—I think so.

6226. (*Mr. Harris.*) You explained just now to Mr. Waring why you did not go to St. Louis; why did not those reasons operate in Chicago and California?—We did not send to either Chicago or California a representative exhibit of jewels anything like that which we had in Paris. We made for Chicago a very large exhibit of mechanical clocks, and things of that sort, and a Columbia shield illustrative of Christopher Columbus or some specimen piece of that kind. We did not make in those exhibitions a display of expensive jewels.

6227. (*Mr. Waring.*) I take it that it was rather a bold policy of yours going to Paris, because Paris is the great centre, possibly the greatest centre in the world, for jewellery—in the Rue de la Paix, and all round there, for instance?—Yes.

6228. Consequently, in going there you were in a certain degree holding up the British flag and demonstrating that jewels could be bought in other places than Paris?—That was our object entirely, not uncrowned with success, fortunately, for we got the Grand Prix.

TWENTIETH DAY.

Thursday, 16*th May* 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Sir Isidore Spielmann.
Mr. U. F. Wintour (*Secretary*).

Mr. Alan S. Cole, C.B., called and examined.

6228* (*Chairman.*) Of course, as we know, you have been for a very long time connected with South Kensington?—Yes.

6229. You have had experience in connection with exhibitions?—Yes.

6229*. Having been engaged in forming special collections of selected examples of work?—Yes.

6230. In your heads of evidence you say, "The Commissioners had ascertained that collections of this particular character would not be formed by groups of manufacturers or otherwise." Whom do you mean by the Commissioners?—The Commissioners of the particular exhibitions. In the case of the Exhibition of 1867 it was a Royal Commission.

6231. That was in Paris?—Yes. That was the beginning of my work. I was younger than I am now, and they gave me a collection of stained glass to look after.

6232. I see you had a curious combination under your charge—you had stained glass and racing plate?—Yes.

Mr. A. S. Cole, C.B.
16 May 1907.

6233. Was the stained glass for churches?—Not entirely. There was a big avenue in that exhibition, the upper part of which had to be decorated; the French were putting up stained glass on one side, and the English Commissioners said they would put up stained glass on the other side. We could not get exhibitors to come forward, and so the Commission said, "We will collect good specimens of modern glass and put them up." So we decorated that side of the main avenue of the exhibition.

6234. Then afterwards, at the series of international exhibitions which were held at South Kensington from 1871 to 1874, you looked after and arranged collections of furniture and general decoration, house decoration, church decoration, and small artistic articles of use, metal work, and textiles?—Yes; they were called collections of Miscellaneous Art.

Mr. A. S. Cole, C.B.

16 May 1907.

6235. You organised in 1872 and 1873 collections of lace and embroidery?—Yes.

6236. Those are subjects in which I think you are especially interested?—Yes.

6237. Then I see you pass on to the Paris Exhibition of 1900; did you not take much part in exhibitions between those times?—No; though I went and saw the intermediate exhibitions at Paris.

6238. In Paris you organised a show of the works done by students at various Schools of Art connected with the Board of Education?—Yes, in 1900. The Board undertook to supply a selection of such works, and I managed its arrangement. Then, at the instance of the Royal Commission of that exhibition, I undertook the arrangement of special collections of new scientific apparatus, of photographs (scientific and pictorial), and of printed books and other forms of literature.

6239. In doing all that work, I suppose you got into touch a good deal with the chief manufacturers of these articles?—Yes; acting on the advice of one or two experts, I got into touch with leading producers.

6240. In fact, you formed rather on your own responsibility a sort of collective exhibit of these things?—Yes, but with the advice of the experts in each particular subject. For instance, in the case of photographs, I had the advice of General Waterhouse, who was president of the Photographic Society. Then there is another society, the Salon, which is managed by a committee, and is purely for pictorial and artistic work, whom I consulted. Sir William Abney also advised on the scientific side, and Mr. Craigie and Mr. Horsley Hinton advised on the pictorial side. We formed the collections with those two kinds of advice.

6241. At St. Louis, in 1904, you went back to the laces, embroideries, velvets, silks, prints, and so on?—Yes. The Commission asked me whether I would serve on a Committee, and when I attended, told me that they wanted to have a show of that kind. I said it could be done if they would find the money, although the time was short. They asked me for an estimate; I gave them an approximate estimate for building a court, collecting, transporting and arranging the exhibits in it, and we worked well within that estimate—I think, on winding up the accounts, we were £200 within the estimate.

6242. For these exhibits you had to apply to the producers of the various articles, did you not?—Yes, very much so. It was a question practically of my picking out what would fit in best with my views of the arrangement, and what would make a pleasant-looking thing.

6243. Did you always have in view the *ensemble* of the exhibit?—Yes, entirely so.

6244. Still you tried to get the best things?—Certainly.

6245. It was not a very large show altogether, was it?—No, it was not a large show. Take, for instance, the silk manufacturers, they would not do much, and they were not interested; however, Mr. ——, who is a leading manufacturer, agreed to help, and he gave number of very good specimens; I told him the space was restricted, and I only wanted to fill up so much space. Then Messrs. ——, of Nottingham, supplied me readily with a very good show indeed of Nottingham lace curtains. Besides Messrs. —— I saw nearly a dozen other manufacturers, and between them they gave me a very good selection of what they call their fancy laces, their dress laces. Then I got from Ireland a number of things, and from other places too.

6246. Now I will take you to our second question, about the effect of exhibitions on the manufacturing and export trades. Do you think that the work which you have done in connection with exhibitions has had a beneficial effect on our manufactures and trade?—That is a big question, and I have not had sufficient experience to reply to it fully. I judge by what I see. I see that there are several new firms cropping up, who show medals, as evidence of what they have done at exhibitions and of their appreciation of what has been given to them. I know that big producing firms have started works abroad, and have opened agencies and shops abroad for their productions. Whether that is wholly due to exhibitions or other causes, of course, I cannot say, but one connects them together in a sort of way.

6247. Do you think in the particular classes you have mentioned to us—Stained Glass, or Laces and Silks, or the Miscellaneous Articles, there has been a greater foreign demand?—I think foreign appreciation has grown enormously for English artistic work. I think you will find that in Germany and in France there is a very strong appreciation of *le goût Anglais*.

6248. You have been rather whipping up these people to do what is their own business, and what they ought to do for their own sakes, ought they not?—I whipped them up because, I suppose, the Commissioners who conducted the exhibition found that the people were not ready in coming forward. I looked at it from the point of view that it was part of a political move—an act of courtesy towards the country holding the exhibition—to make a representation of British goods there, and that we were to do the best we could.

6249. That was the political side of it?—Yes.

6250. But then, of course, you did it also with a view of helping the commercial side?—Yes, I thought of trade as well.

6251. Do you think these exhibitions have helped trade generally?—I should say certainly that the appreciation abroad of our manufactures is much wider than it was, and that that appreciation is largely due to exhibitions.

6252. Though we have not been well represented by the manufacturers themselves?—I think so, though we have not always been well represented by the manufacturers themselves.

6253. On the other side, can you say whether commercial interests have been adversely affected by exhibitions?—There, again, I really do not know, and I could not say.

6254. I suppose from your experience you are inclined to attach importance to the participation of this country in exhibitions?—Yes. Not uniformly, but as occasion arises, I think it is desirable that the country should take part in an exhibition. I do not know whether it is to be looked at from the political or from the commercial point of view, but I should be sorry that at a really big exhibition the country should not be represented. I think at small exhibitions or at special ones it does not perhaps much matter.

6255. Without Government grants, I understand you do not think we could get proper representation?—No; under those circumstances, I think not. I am answering particularly in relation to exhibitions abroad.

6256. And I am meaning exhibitions abroad, as we are not considering directly the holding of international exhibitions in this country; our subject is more the official participation of the Government in international exhibitions abroad. As regards the practical issue of the Government helping in these official exhibits, have you any suggestions to put before the Committee as to how the grant should be made—whether by accommodation facilities, or by helping in the expense of transport, or by organising, or in any other way?—I think that the Government facilities ought to extend to assisting the inlet of the goods into the country concerned. Whether the Government should bear all the expense of carriage I am not so sure about. I think in many cases the carriage might very well be borne by the exhibitor. In some cases—especially in those cases where the Government are going to make a show for the sake of making a show—I think the Government ought to bear expenses of transport and organising the whole exhibit.

6257. Your experience has chiefly been in what are practically collective exhibits, I think?—Yes.

6258. I suppose you and your expert advisers have been the judges as to what should be exhibited or rejected?—Yes, quite so, and our expert advice has been from producers—that is, manufacturers—as well as from outsiders—that is, consumers.

6259. Do you think you have got good advice, as a rule. Have you got reliable experts to help you?—Yes, I think so. There is also the question of how you approach those who are going to exhibit, and I personally have always found that we have done well with them.

6260. Do you think that British methods compare favourably with foreign ones in recent exhibitions?—I think so, on the whole. Do you mean methods for conducting the business of exhibitions?

6261. Yes. We have had evidence that very often the decoration of British courts has been very inferior?—

I think it has been improved at recent exhibitions certainly. In the case of the St. Louis Exhibition I think there was a definite improvement upon the Paris Exhibition of 1900. In the Paris Exhibition of 1889 I do not think it was quite so successful, nor so complete as in 1904, St. Louis.

6262. In 1889 there was not a Royal Commission, I think?—The Government found the money.

6263. (*Mr. Algernon Law.*) Not in 1889; it was a private effort on the part of the Lord Mayor of London?—Sir Henry Wood, who was the secretary of the Society of Arts, managed the Exhibition in 1889 in Paris.

6264. Lord Salisbury refused to participate, although he did not object to its being done by private enterprize, his reason being that it was celebrating the centenary of the French Revolution?—I was not aware of that.

6265. (*Chairman.*) You did not take part in that, did you?—I did not.

6266. Then we need not trouble you about the 1889 Exhibition. As regards the decoration of the courts, do you think that our methods have been inferior to those of, say, France or Germany, or the United States?—I think in many respects they have been inferior to the French methods. In France you have such a different condition of things. There they have a definite standard of taste, and in England we have not.

6267. Have you seen most of the recent exhibitions; for instance, were you at St. Louis in 1904?—No, I could not go to St. Louis.

6268. Were you in Paris in 1900?—Yes, I was; I went over there two or three times.

6269. How did that exhibition strike you in regard to the position of this country as compared with others?—I thought it had a rather mean appearance. It was poor. There was a great deal of animosity against England at that time. I had promises in October from big firms to exhibit musical instruments, which I was looking after for the Commission, and we should have made a very good show indeed, but they all dropped out at the last moment. Messrs. ——, for instance, retired in January, and put us rather into a hole, as we had no exhibitors then to take their place. In the case of books, it was, thanks to having Sir Edward Maunde Thompson and Mr. Frederic Macmillan, who, with the Publishers' Association, worked with us, that we made really a very good representation of printed books. It was a small exhibit, and would almost have gone into this room, but as an object lesson it was infinitely superior to a lot of miscellaneous cases of the same kind of things, duplicating and overlapping one another. As a treatment of fine typography and chosen books it was very good, though comparatively small.

6270. Did you have much experience of the organisation there of the Royal Commission, and of how much exhibitors were helped by them?—I did not.

6271. Were your exhibits taken care of for you?—I arranged that all my collections should be packed and carried over in our vans from South Kensington; the Commissioners paid the expenses, and I was left a free hand to pull the ropes, and we got the things over in good time. I said they should be through at a certain time, and I met the men in charge of them, and the goods were there up to date.

6272. You did not hear of complaints from private exhibitors as to the arrangements, did you?—No; but I can quite imagine that unless somebody was on the spot looking after all these things there might be complaints. For instance, I was kept in Paris two days because the red vans had not been allowed to pass through immediately into the Exhibition grounds, but I soon arranged with the officers of our Commission to get them passed through.

6273. Into the Exhibition, do you mean?—Yes.

6274. Do you think that a Royal Commission is the best method of organising an exhibition, or do you prefer the London Chamber of Commerce, or the Society of Arts, or any body of that sort?—I think that a Royal Commission appointed for each exhibition is the better way. I think it gives a better official standing to the undertaking. Of course, with a Royal Commission you should be able to get money more easily, and money is necessary to push such an undertaking along with proper certainty and expedition.

6275. Do you see any advantage in having a small permanent organisation to continue the traditions and knowledge from exhibition to exhibition?—I think it is doubtful whether it would be an advantage, because important exhibitions cannot very often occur. I should think that the occasional commission would be quite sufficient if it is appointed in time. But when an announcement from a foreign country comes in, and the announcement is delayed, wherever it may be, in the Foreign Office or anywhere else, and then is sent on to somebody for an opinion, and the thing does not get settled, that delay is, I think, very dangerous. When the announcement comes, somebody in authority should be able to say promptly "Yes, *coûte que coûte*, we will exhibit as a country."

6276. But who is to be the authority to say that we ought to take part in any exhibition?—That is a political matter.

6277. There are political reasons, but then, surely, there are also commercial reasons?—Quite so.

6278. It is a question of fact very often—"Is this going to be an important commercial exhibition"?—Yes, it is.

6279. Do you not see an advantage in having some committee or some body to look into the thing and decide at as early a date as possible whether this country should take part?—Do you mean a standing committee?

6280. Either a standing committee or a committee on the French system. Do you know anything about the French Comité?—No.

6281. There is a German committee also which has just started; but apparently you do not know about those systems?—No, I do not. A small committee, of, say, the Board of Trade, the Treasury, and the Foreign Office, could, I should say, at once settle the point. I think time is everything in working these things.

6282. You agree that it is most important that the Government should make up their minds in time as to whether they should take part in an exhibition?—Certainly; and also as soon as they have made up their minds there should not be any unnecessary haggling about money. If the Government make up their minds to take part in an exhibition the money in sufficient quantity should be forthcoming.

6283. Of course, for that the Treasury would want rather a weighty expression of opinion from the departments or from some body?—Or from the Minister, saying that the country is to take part in the exhibition. I think it is as much a political as a commercial movement. If it is to be a commercial movement purely, and on a commercial basis only, then I am very doubtful whether the Government ought to take the lead; all that the Government then should do would be to announce the exhibition, and say, "Now, then, private enterprise, do what you think right."

6284. Would you leave the matter entirely to commercial enterprise, or would you say to our manufacturers, "We will give you the organisation; but if you do not care to take part in this thing, and to pay all the expenses, the Government will not do it"?—No; because then you bring in the political side.

6285. And you think the political side is very important?—I do think so. Take the Paris Exhibition of 1900, where you had a distinct show of feeling against the exhibition on the part of the British manufacturers; the Government nevertheless pushed it through, and Sir Herbert Jekyll got up the St. George's House, for instance, at very considerable expense. Within my experience, nothing of that kind had ever been done before; it was splendidly done, beautifully fitted up, and at a very great expense. But it was, to my mind, purely a political show.

6286. Do you think as regards that pavilion that it was worth the large cost?—I am very doubtful—I think it was a kind of attractive side show: but it was not definite with intention to bear fruit of commercial importance. With great deference, I do not think it was as useful as my little show of lace and embroidery and other textiles at St. Louis. The lace, embroidery, velvet and silk producers were in a way definitely affected by my little show.

6287. Your lace and embroidery were really representative of industries of this country?—Yes, as far as we could do it within the time; but we had only five months to do it in.

6288. It represented Nottingham thoroughly, I suppose?—Yes, within the limits of space Nottingham lace making was as well represented as it has ever been. We got all the best people from Nottingham repre-

sented, notwithstanding that you could have packed up the whole of the exhibit into a big parcel. When spaced out there it represented all the different types of design, the different kinds of textures, and so on, that were current then.

6289. About the arrangement of exhibits, do you favour a national arrangement or a class arrangement? Take your own lace; would you sooner have had the British lace close to the laces of other countries, or would you have the whole of the British exhibits by themselves?—If you could get it by class, I would sooner have it by class; then the object lesson becomes even stronger than before.

6290. (*Sir Isidore Spielmann.*) In forming these collective exhibits, you have usually acted alone, have you not, without the assistance of a committee?—No, I have always had committees.

6291. There has been a committee, but it has been left to you to procure the exhibitors, which you yourself would recommend?—No, the committees, as far as possible, have helped me in getting exhibits. Where a committee has failed me, or where I have had space to fill on account of exhibitors failing at the last moment, and the thing comes to a pinch, I have done the best I can to fill it up; but the basis of the collections rested on the advice of committees. For instance, in the case of the show of the School of Art works in 1900, that was done absolutely under a committee of the highest experts in the land. We had the best people to select these School of Art works—Royal Academicians and other distinguished Artists, Designers, and Craftsmen.

6292. To which exhibition are you alluding?—The Paris Exhibition of 1900.

6293. Are you referring to the Art section?—I am referring to the School of Art exhibit, which was a very important educational exhibit in 1900, and which was done by the Board of Education. I happened to be the executive officer to look after it.

6294. I was referring more particularly to the exhibit of lace which you formed at the St. Louis Exhibition; that was a collective exhibit of lace, embroideries, velvets and silks?—Yes, of artistic textiles generally.

6295. Did you not form that alone?—No. Whether it was more for the show of the thing or not I do not know, but it was done in a horrible hurry, and I was asked whether I could undertake it. I said, "I will do the best I can, if you will find the money." But we formed a committee, and you will find the names of that committee printed in the report of the Commissioners on the Exhibition.

6296. I was under the impression that it was quite a large exhibit of very fine quality, and was a very important court; that you had the entire control of that exhibit, and that you procured those exhibits yourself. Was that not so?—Yes, but with the advice that I could get from a committee of ladies, I think; and others who came in. I derived advice and direction from those whom I believed to be experts, and then did afterwards the best I could.

6297. Did you or the committee procure the exhibitors?—I did, certainly—on their advice.

6298. (*Chairman.*) You called your committee together, I suppose?—Yes; but, as I say, the thing was done in rather a hugger-mugger way, and in a hurry. I think I was invited to serve on the committee about June; I forget who it was, but I think it was Lord Castletown, invited me, and said, "Could we not have a show of lace and could we not have a show of embroidery?" I said, "Of course you can; but the time is short and you will have to pay, and we should build a court for it."

6299. (*Sir Isidore Spielmann.*) What I want you to tell the Committee is, how you go to work in forming a collective exhibit of that kind?—I think the way we went to work for the St. Louis Exhibition of 1904, although it was a success, was not the best way to go to work. The time was too short, and I had far too much thrown on my shoulders; being engaged more in educational than in other work, I disliked it enormously, but I had a dash for it, and I did the best I could. In the case of the Paris Exhibition in 1900, where there was more deliberation and consultation, I was able to organise more deliberately.

6300. But the result at the St. Louis Exhibition was good, was it not?—Yes, the result, thanks to Providence, was good. It was rather a fluke; I did the best I could.

6301. You brought in the best class of exhibitors?—Yes.

6302. And they got the highest awards, I think?—Yes, certainly.

6303. Do you remember the nature of the awards you took?—No. I did not take any interest in the awards at all, and I do not know what the awards were, but I know that almost all the exhibitors were very well satisfied. I think that I personally had a big engraved certificate—I forget what.

6304. (*Chairman.*) Was it a *diplôme d'honneur*?—Perhaps it was, but I do not know. Then I got a kind of little metal shield, but I forget what they called that.

6305. (*Sir Isidore Spielmann.*) Each exhibitor taking part in the collective exhibit received the same award, did he not?—Yes, I know that. For instance, the Irish Convents sent up some extraordinarily fine specimens of Irish lace, and they were very well pleased indeed with the medals they got.

6306. In endeavouring to get exhibitors in did you find that many of them objected to participating in a collective exhibit?—No.

6307. They did not refuse owing to any objection to the new method of exhibiting collectively?—No. The most important people I went to were Messrs ——, of Nottingham, and half a dozen less important producers. They were extremely courteous, and they did everything that I asked them. I said: "All we want is a selection of your best goods; something that I can take away in a portmanteau, if you like, or something that you can send up in a small package — that is really all we want. They assented to it, and provided us with a very excellent representative collection of all branches of Nottingham lace work.

6308. Do the firms in that industry attach great importance to awards?—I do not know. Such a firm as Messrs. —— probably commands the trade of the world in that kind of thing; they might not mind having another *diplôme d'honneur*, but I do not think they would attach much importance to it.

6309. Do they publish the fact as a trade advertisement?—I should doubt it, but I really do not know enough about it to answer. The firm I have in my mind I should say are quite at the top of the whole business; they are like Whitworths and Armstrongs in the munitions of war business. I do not know whether Whitworths and Armstrongs publish their gold medals and their *diplômes d'honneur* and so on, but they are in the same kind of position as the Nottingham firm I am alluding to. I think possibly that ——, of Macclesfield, who helped me with the silk, is not quite so big: still he perhaps was not unpleased to have a medal. Possibly he might publish it; but he is an important man in his trade, and I would not like to say.

6310. Are you personally in favour of collective exhibits from the experience you have had of them?—Certainly, and especially such collective exhibits as one sees organised in the French exhibitions, where you get the grouping together of all sorts of silks, for instance. I do not know whether there is a Chamber of Commerce for silk in France or not; but with the French you do get complete and attractive courts, say, of silk or costumes or furniture, and so on.

6311. (*Mr. Harris.*) I think your view of exhibitions is broadly that they are rather political and educational than anything else; is that so?—I think that is my view.

6312. You have been connected with these exhibitions rather as representing a Government exhibit, have you not?—Yes; as representing the administrative side rather than the commercial side.

6313. Would you, please, to explain the word "administrative"; am I right in thinking that by "administrative" you mean that which is put forward by the Government on behalf of the nation as representing a section of the work of the nation?—That which is put forward by my employers as being desirable.

6314. Your employers being?—The Royal Commission or the Government. The nation, of course, would include producers.

6315. Taking your exhibit at Paris in 1900 of lace and embroidery, which you evidently thought very good ——?—In Paris in 1900 it was not lace and em-

broidery; it was Schools of Art, scientific instruments, photography, books, and those kinds of things.

6316. Typography and so on?—Yes.

6317. Was the lace and embroidery that you spoke of just after referring to the British pavilion at Paris shown at the St. Louis Exhibition?—Yes.

6318. So that you had no exhibit in the British pavilion at Paris?—Not in the British pavilion; but in the British section.

6319. Postulating that the educational effect is what you look to, do you think that you get a better educational effect in your section with your little exhibit of books, and so forth, than we got as a nation from the British pavilion as a whole—I am on Paris now?—I am almost inclined to think that my collection of books, which was educational for the trade—for the consumer and for the producer—was a better business than the pavilion. I understand that in Paris the paintings, ancient and modern, were represented in the Grand Palais or in the Petit Palais. There was a British modern section in the Fine Arts division in the Grand Palais, and I believe in the Petit Palais there was ancient art. So far as the pavilion went, of course, it was a very beautiful thing and a very charming thing; but for educational effect and for the purpose of comparison I should have said that the things in it might possibly—I do not know, perhaps it was not possible—have been placed respectively in the Grand Palais and the Petit Palais. Had it been so, you then would have seen Gainsborough and Reynolds side by side with, say, Hyacinthe Rigaud, Greuze, and other such foreign portrait painters.

6320. You are coming back now to the idea of arrangement by section?—Yes; but do you not see my point here is that the special pavilion was in a way a duplication of what was being done elsewhere.

6321. Did that duplication include your own subjects? I am just now trying to contrast the pavilion with your own particular show?—My own particular show stood alone for England. The pavilion which contained works of ancient and modern art, I should say, rather duplicated what was being done elsewhere for England.

6322. In one of your remarks about your particular show just now I think you said it had more effect upon the producer than on anybody else; now you are leaving, are you not, the educational side?—Yes.

6323. And you are indicating an effect on the commercial side?—Yes.

6324. So that at the back of your mind, I think, you have an idea that the test of its value as an exhibit is the commercial side; or am I wrong?—The test of the value is educational to a very large extent, I think, and the value of the educational test comes out commercially perhaps. But there again, do you not see that if an exhibition rests on a purely commercial basis it is for the people engaged in commerce to do it? In the case of this Paris Exhibition it was because the people engaged in commerce would not do it that the Royal Commission decided to do it; and having done that, I think that our show was as good educationally, industrially, and commercially as it could be under the circumstances.

6325. Now I go back to your attempt to get up a collective exhibit for Nottingham. In a recent answer you indicated to Sir Isidore Spielmann that you got the very best men at Nottingham to help you; but do you think that you covered the whole ground at Nottingham sufficiently? Were there not people who might have said to you, "After all, we ought to have had a chance to go in." You seem to have only gone to the men you know; was that so?—No, I did not know them. I went to the men that I was recommended to go to by two well-known authorities in the lace business. Besides them Lord Henry Bentinck, then member for Nottingham, kindly gave me a letter of introduction to his agent, who took me round. He said, "Now, these are the people that I believe are the biggest people." He is not in the trade. I merely went round, and they were very courteous. They allowed me to go into their sample rooms. I said, "I think *that* kind of thing and *that* will do," and they said, "Yes, but in addition we would like to send *that*." I said, "All right." I went into some rooms, and I thanked them very much, but I said, "This seems to be covered by so-and-so." "Oh, yes, it is, because he supplies us; he is a manufacturer, and we are only middlemen in respect to those goods." Then in the case of still bigger people I said, "I have got fancy work from so-and-so"; they said, "Well, you could not do better." I said, "How about so-and-so"; they said, "We supply him, although he calls himself a manufacturer." You see, it is a question of negotiating the situation.

6326. So that, in fact, you feel you did cover the whole of the trade of Nottingham?—Yes.

6327. (*Chairman.*) Do you think that all the lace you got was Nottingham lace, not continental lace?—It was all Nottingham lace.

6328. It might have been otherwise, for you can see any amount of continental stuff there, as they are merchants as well as manufacturers?—I know.

6329. And occasionally when they get an order they make up parcels with stuff they get from the Germans—Plauen lace, and all the rest of it?—There was no Plauen work there, and no St. Gall.

6330. (*Mr. Harris.*) What I want to get at is whether you felt satisfied that you really got a representative exhibit in that case?—Yes, I did.

6331. That, I take it, is what you aim at always in similar cases?—Yes, in similar circumstances. If I had had much more time—instead of having only four months and being otherwise very much engaged; if I had had a margin of twelve months; I should have set to work in a very different way. I should have gone to Messrs. —— and ——, and I should have tried to have found out the others, and have consulted all, and seen how far they would co-operate amongst themselves to make the show. Then if I found that they would co-operate sufficiently amongst themselves I would not have formed a special collection, but they would. I should always strive for a representative collection rather than for a collection of miscellaneous exhibitors.

6332. Going to the merchants like that, to get up a collective exhibit—if you had said to them, "The Government will give all the facilities, and the Government will look after the matter, but you must pay all the expenses—do you think they would have entered into it, or do you think they would have looked for money help?—I do not quite understand.

6333. If you were to go to these people and say, "Now the Government will arrange this for you, and they will give you the whole benefit of the administration right through"—?—What is the meaning of "administration"?

6334. I mean taking care of exhibits; seeing to the proper packing; then taking them across, we will say, to Paris, and guarding them there, etc., etc. Do you think that then you could get all the expenses paid by the exhibitors?—Do you think that you could confine the expenses of the Government simply to administration, to looking after things, leaving the exhibitor to take the transport and other expenses?—I do not know. I should think in some cases young exhibitors who had never tried exhibitions before would probably be very glad to accept those terms and to pay their own transport expenses, but the old exhibitors who give the lead to the trade would probably say, "No, we do not care to have anything to do with it. On the other hand, if you offer us great facilities we will let you have goods to show."

6335. Still taking the question of Government administration—you indicated to the Chairman that you are doubtful whether you want a permanent nucleus of a Commission; have you not heard that it has been a grumble that when a Royal Commission sets to work they have had great delay in finding books and precedents, and so forth?—I have not heard that, and I am very surprised to hear it. I should have thought there was a sufficient mass of official literature for anybody who has got anything to do with exhibitions to turn to and consult, but I may be quite wrong.

6336. You attach great importance to the matter of time?—Yes.

6237. Have you heard of the complaint, which before this Committee has been very general, that a Royal Commission flounders about and loses a lot of time before it gets to work?—No, I have not heard that.

6238. On the whole, then, you are satisfied that things move fast enough and are pretty well done under the present arrangements?—You get your Commission established, but of course if the head of the Commission goes to sleep and does not take early active steps, the whole thing fails. If you have got a man of brains at the head of it, or as the secretary of it, he has got

Mr. A. S. Cole, C.B.

6 May 1907.

his machine, and it is his object to make it work successfully.

6339. Do you mind explaining what you meant by "haggling over money"—you used that phrase?—I was thinking of difficulties which occurred as long ago as 1867, which may perhaps not recur ever again. I remember my father drew up an estimate for the cost of the English Commission in Paris amounting to £128,000, which was to include a lot of exhibits from different Government offices, and so on. Then there was haggling as to whether each separate Government Department should pay for its own exhibit, although, mind, it all came out of the same purse, or whether the Commission should do it. In the upshot the Treasury said "No, we can only give you £116,000 instead of £128,000." That decision was arrived at in the February of the year of the exhibition. That was rather pinching to anybody who had got a great deal of work to do within limits of time.

6340. Yet you do not think that that would have been obviated by having a permanent body whose business would have been to proportion the grants at once—that is what I am driving at?—I do not think so. As soon as we had undertaken to take part in the exhibition, which we did as early as 1865 I think, if it had then been stated definitely "We are going to take part in this exhibition, and as a grant towards something better, if necessary, we will give you a preliminary £50,000, £70,000, or whatever it might be," things would have been made more easy.

6341. And in the long run that would have helped you to save money?—We might have saved money. The Imperial Commission introduced new views into the organisation of their exhibition, and, for instance, they tried to make English exhibitors pay for their space.

6342. Does that at all alter the opinion you expressed to the Chairman as to a permanent body or not?—No, I do not think so. Perhaps I may take too circumscribed, too red-tapey a view of the thing. Say that an announcement comes in through an Ambassador to the Foreign Office. Some clerk in the Foreign Office gets the dispatch and loses no time in asking Mr. —— of the Board of Trade, and Mr. —— of the Treasury about it; then the three Mr's. —— sit down together, and say, "Here is this dispatch; now what is our recommendation?" If those three gentlemen recommend the Minister—the Foreign Minister, if you like, or the Premier—"We think this is all nonsense; we do not see any life in this at all; we do not think this exhibition ought to take place," and they give their reasons, the Minister may say, "All right, we will knock this on the head, and will not have anything more to do with it." On the other hand, if they say, "This is really a big show, and we ought as a nation to go into it, and we have done the same kind of thing before," then the Minister may say "Yes" or "No," and will be prepared to face Parliament and get the money.

6343. Have you not come down to a nucleus of a sort of standing committee for exhibitions?—Yes, in a way; but I would not keep up a standing organisation to watch for announcements of exhibitions.

6344. Forgive me for pressing you on the point, as I want to bring that out?—I entirely go with you, as you suggest, that there should be some intelligent collection of exhibition literature—reports, files of forms that have been made.

6345. (*Mr. Algernon Law.*) In the case of the Nottingham collective exhibit, did the firms pay any of the expenses?—No, none.

6346. Were the names of individual exhibitors given in the collective exhibit?—Not in the case of the fancy laces of Nottingham. In that case the manufacturers asked me, I think, to keep their names out, because they would prefer it to appear as the Nottingham collective exhibit.

6347. Was that on account of their agents? Did the agents in France object to their giving their names?—I do not know, and I could not say what was the reason for it; but in regard to the fancy laces they did ask me to have the exhibit marked as the Nottingham collective show.

6348. You said, I think, "In my own rather little exhibition. I should say the British makers of various things, textiles," and so on, by which, I suppose, you mean art fabrics?—I meant anything of that kind depending upon decoration.

6349. Not the ordinary cottons and woollens?—No.

6350. How often do you think we should take part in exhibitions?—I should think comparatively rarely.

6351. What term of years would you say? Would five years be too often, or twenty? How long an interval would you suggest, so as to show the progress of the nation and also to meet the convenience of those people who do not want to take part in exhibitions too often, because of the trouble it involves?—I should think ten years is about the time.

6352. While you were over in Paris did you hear any complaints against the British management, as, for instance, that there were not enough people about to look after the exhibits and attend to the wants of the exhibitors?—No. I was only over there on each occasion for two or three days, and I had my own staff to see to what had to be done in the way of unpacking and organising.

6353. You did not hear anything from your own staff about that, did you? I suppose you were rather apart from the ordinary commercial exhibitors?—Yes. I went over and saw Colonel Jekyll or Mr. Lloyd or somebody, and I got the help that I wanted almost at once.

6354. Did you have somebody representing you at St. Louis?—Yes. There the Commission agreed to pay a young man who had had some experience in arranging things, and he carried out all the arrangements as we laid them down here. We plotted out the whole thing on a plan, and he carried that out. I believe it was carried out all right, but I was not over there. They made photographs of the exhibit, and it looks fairly well in the illustrated record of the exhibition.

6355. Apart from the political side, I mean to say apart from pleasing a foreign Government by exhibiting, do you attach importance where there is a great exhibition to there being a fully representative exhibition or participation of all our industries to show what our country is doing? I understand you do?—Yes.

6356. You do not think it is sufficient to show our progress in art?—Take munitions of war. If you get Whitworths and Armstrongs and those kind of people saying "No, we do not show," I should not press them very much to show; but in the case of furniture and in the case of textiles, decorative and undecorative, I should.

6357. What about machinery?—That is a very difficult question. It is very costly to exhibit machinery. If the trade do not care to show their machines, and if they do not want to get them on to the Continent, I do not think that there is much use in pressing them.

6358. Would you say the same if there were foreigners showing who were assisted by their Governments?—In that case I think we ought to do the best we can, certainly.

6359. (*Chairman.*) About lace, did you hear any objection raised by manufacturers to showing the very latest patterns? Were they afraid of their patterns being copied, or of getting on the market and being imitated?—No, I do not think so. I was not able to get one or two specimens that I wanted because they were new, and, of course, that does indicate what you say; but it was very limited indeed.

6360. We have been told as regards textiles that that would be an objection. Take the woollen and worsted dress fabrics of Yorkshire, we have been told that people would not like to show their patterns for the next season—they are always about half a year in advance, you know—for fear of the market being spoilt and of their patterns being imitated?—I can understand that that might be so, but the variation in pattern between one season and another is very slight.

6361. In dress goods?—Yes, in dress goods.

6362. Is it?—It is very slight, I think. If you take a lapse of years—five years, for instance, you can see a change, but it is very difficult, I should say, except for the highest expert, to see a change between six months and six months.

6363. It would be between this spring and last spring, would it not; but you do not consider there would be a good deal of change?—Take this instance: There was a good number of printed crêpes that we got, I think, from Essex or Norfolk for the St. Louis Exhibition; there were two firms that gave the stuffs for them. I think those things to some considerable extent are in fashion now and in demand.

6364. Yes, crêpes would be?—Those things that were exhibited I had not noticed myself in the shops, and when I showed them to my wife and daughters I found they had not noticed them to any extent. They said "Yes, this is rather nice, and it is something rather new." But even now these crêpes are certainly not played out.

6365. Do you not think there is a great change going on in connection with prints; are there not new patterns continually in those?—I do not think there is such a great change. Of course, if you were to check it at intervals of five years or more, you would detect decided changes.

6366. Talking of Nottingham, you never mentioned the Nottingham Chamber of Commerce; were they of any use to you, or did you not apply to them?—I forget now. I think I saw somebody from the Nottingham Chamber of Commerce, but they did not give me any assistance that I can remember.

6367. You seem to have been doing their work a good deal in getting up a Nottingham collective exhibit?—If Chambers of Commerce are to do that kind of work, then I certainly did their work.

6368. Did you ask them for help and not get it, or did you see nothing of them?—I do not remember whether Sir Charles Watson wrote to the Chamber of Commerce or not. I think the Commission had taken all the steps they could before I came in.

6369. (*Sir Isidore Spielmann.*) We have been told by witnesses that agents prevent their manufacturers from exhibiting, as they do not like the manufacturer to come forward as the exhibitor. Have you had any experience in that way? Have any manufacturers told you they are not permitted to exhibit owing to their arrangements with their agents?—I have heard of it, but I cannot recall any particular instance myself. In the case of the Nottingham exhibit, the manufacturers there said "Don't put our names on; make it a collective display from Nottingham."

6370. So that you actually included exhibits without being able to expose the name of the manufacturer?—Yes. It was a collective exhibit from Nottingham. That was in the case of the fancy goods.

6371. How did the manufacturer get the award?—He did not care about it; he was so well off that he did not care about it. He was pleased to take part in the collective show, and he did not get an award. I could have carried the Nottingham lace exhibit under my arm. About eight different manufacturers agreed to give me specimens of lace, and they said, "We do not very much want our names to appear in this," because possibly 24 bits of lace would not represent Messrs. So-and-so according to their estimation, or Messrs. So-and-so; therefore they said, "Put it all together in one lot, and exhibit it as a collection of fancy laces from Nottingham." I said, "All right, that will answer my purpose, and we will do it." In the case of Macclesfield, it was otherwise. In the case of a lot of cotton prints from somewhere near Manchester—I forget now where—the producer's name appeared. In the case of Messrs. ——, who are partly manufacturers and partly middlemen, they gave their name.

6372. Do you know of any cases where the manufacturer supplied the exhibit and where the award went to the agent?—No. In the case of the lace shown by individual exhibitors the prizes went to them direct.

6373. When the manufacturer was known?—Yes, when the manufacturer was known. *Mr. A. S. Cole, C.B.* 16 May 1907

6374. But you said in some cases you had to suppress the name?—It was in the case of the collection of Nottingham laces that I suppressed the names. If you will turn to your illustrated catalogue, you will find that prizes went to individuals, such as workers in villages in Ireland, who were employed by a particular convent or a particular lady patroness from a centre, and so on. The same with the Devonshire lace; you will find workers employed under Miss Trevelyan got prizes, as well as Miss Trevelyan herself, who designed and managed the production of her own exhibits.

6375. (*Mr. Wilson Fox.*) With regard to the British lace exhibit at St. Louis, did you hear at all whether it attracted any attention?—No, I did not hear that. I did not go to St. Louis myself.

6376. I was wanting to learn how far it was worth while sending the lace exhibit out there?—It was in a way worth doing.

6377. I want to know, looking at it from the commercial side, whether it attracted any attention?—I am not sure whether it gave any sort of fillip to crochet work, but I think I heard something about it. You see the tariffs in America are absolutely against anything of that kind.

6378. If people are attracted to a thing like lace, which is fancy work, they are very often ready to pay for it without minding the tariff, are they not?—Yes; only when you have got a tariff of 75 per cent. against you, the ordinary consumer does not care to run to that.

6379. I am now talking ignorantly on this point, but have the Americans got any lace factories, I mean is there a home industry in lace there?—No, I think not.

6380. So they are bound to buy outside?—Yes, they are, and therefore the consumption is limited to the very wealthy.

6381. I was only on the point as to how far the lace exhibit might have been attractive?—Of course, wealthy people will pay anything you like, but the lace exhibit did not necessarily open up the possibilities for big consumption. In the case of lace curtains, for instance, I think a big English firm have started lace-making works over in America so as to avoid the duties, and in the same way they have started lace-making works in Russia because of cheapness of labour, and so on.

6382. You did not find the Nottingham Chamber of Commerce very helpful, I gather?—I never realised what a Chamber of Commerce was, and I do not know anything about it. As I had to get my work through as quickly as I could, I went direct to people who I believed could help at once; but I did meet somebody who was connected with the Chamber of Commerce, and I think they told me they did not think much of the proposal to exhibit, and were not going into it, so I said, "Very well, then, that clears the ground."

6383. And then you had to go to the individuals?—Then I went straight to the individuals.

6385. Of course, that was much more trouble to you?—Yes. It was a nuisance, because I had to squeeze it in between my regular official work.

Mr. Henry Tomson Milward, called and examined.

6385. (*Chairman.*) You are a member of the firm of Henry Milward and Sons, Limited, of Redditch, I believe?—Yes. *Mr. H. T. Milward.*

6386. Your firm has exhibited at a good many international exhibitions, has it not?—Yes; it has exhibited at all the international exhibitions up to the last exhibition in Paris, except the first one or two.

6387. But you were not at St. Louis or Chicago?—No, we were not at those.

6388. You exhibited needles, fish hooks and fishing tackle?—Yes.

6389. But the actual value of the goods has been small, although the cost of your exhibit has been from £400 to £800?—Yes.

6390. Have you had any increase of business with foreign countries that you can attribute to exhibiting your goods in this way?—Not from the later exhibitions, I think; indeed, I am quite sure that the expenditure at the last Paris Exhibition was entirely thrown away.

6391. Would you put that down to there being more competition abroad?—No, not at all. At that exhibition there were hardly any exhibits by other manufacturers. The German makers, who are our greatest competitors, were hardly represented at all. The only foreign manufacturer who was represented was the firm of Bohin. He was the only French needlemaker there, and he had an exhibit on the ground floor with machinery at work. What I attributed the failure of our exhibit to was the fact that we were skied up in a gallery. That was an enormous exhibition, and pro-

Mr. H. T. Milward.

16 May 1907.

bably nine-tenths of the people who visited it did not have time to go round the ground floor, and of course hardly any people had time to go over the gallery, or they could only race through it if they did.

6392. I suppose there is more competition in fishing tackle on the Continent than there was?—Rather more, but not much more.

6393. Is the present competition in fishing tackle in Belgium severe?—There is not any worth mentioning with goods of the qualities we make.

6394. Do you know that? The last time I was in a Belgian prison—that was on behalf of the British Government, some years ago—I found that they were making fishing tackle because it was not made outside in the country, and that they were making it for the purpose of competing with Nottingham tackle and yours?—There is not much competition. There are one or two people, perhaps three or four, who are making fishing tackle of the very cheap kind; that is, what they call the *roseau* fishing rods, reed fishing rods. They make these very largely, and they also tie the hooks on gut and horsehair, but they buy the hooks in one country and the gut in another—Spain. There is none of the more expensive tackle made in that country.

6395. Have you ever experienced any disadvantage from exhibiting from having your goods copied?—No, I cannot say that we have, to my knowledge.

6396. I have no doubt you have had plenty of awards at exhibitions, in the shape of medals, and so on?—Yes.

6397. Do you attach any importance to them?—Not now.

6398. Has there been a change in that respect then?—I think formerly a good deal more importance was attached to awards than there is now. I do not believe people think very much of having so many medals.

6399. Is it that people now trust to themselves more in buying what they think is good?—I think in many cases the names of those manufacturers who have been before the public for a great many years are well known.

6400. They buy from your name, I suppose, now?—Yes, largely.

6401. Have you ever bought goods that have been useful to you because you have seen them at exhibitions, or, in the same way, have you ever bought machinery for use in your manufacture?—The only instance I can recall of that kind is the one that I mention in my heads of evidence.

6402. That was a small mechanic who, you say, proved of considerable service to you for a good many years (until his death) as a designer and maker of some of the delicate machinery you use?—Yes. Our industry is a small one, it is confined to practically one place in the United Kingdom, as far as needles and fishing hooks are concerned, and one does not find that exhibits of general machinery are of much use to the Redditch trade, as a rule. Our difficulty is to find makers who are willing to bother themselves with the smaller machines we want.

6403. You send goods abroad a good deal, do you not?—Yes, a great deal.

6404. Do you send them to America?—Yes.

6405. But you did not think it worth while to exhibit at St. Louis or Chicago?—No; our agents thought it was useless to do so.

6406. You do your business through agents in America, then?—Yes.

6407. I think you have already told us that since the Paris Exhibition of 1900 you have thought it rather a waste of money to exhibit?—Yes.

6408. Is that partly because your goods do not make a big show?—No, but because at that exhibition we were so badly placed, also because in so large an exhibition visitors have no time or inclination to examine an exhibit of needles or fishhooks.

6409. It is because of your experience of Paris then; is that it?—Yes, partly. These large exhibitions seem to have got to such exaggerated dimensions now.

6410. Was it the fault, do you think, of the people who organised the British section and who allotted the space, and so on, that you were skied and put into some out of the way place? Could it have been avoided?—I do not think it could. I think the probability is that our goods being very light were put up in the gallery because the gallery was suitable for them. Of course there must have been a great demand for the floor space for the very heavy exhibits.

6411. Have you ever thought whether you could get over that in any way by collective exhibits?—We had one then. That was a collective exhibit of four Redditch manufacturers.

6412. Yet you were not in a conspicuous place?—No, we were not. It was all right so far as it went; we had plenty of room round us, and we were not in a row with a lot of other exhibits; but then nobody went to the gallery.

6413. Was that arranged nationally—that is to say, among the other British exhibits?—No, I think not, as I believe that the idea of the Paris Exhibition was the classification of goods by classes, not by countries.

6414. Have you ever thought of that? Would you be in favour of having the exhibits of the different countries in the same class put together? Would you like to stand in competition with German needles and fish hooks and fishing tackle?—I do not think we should care. If we made up our minds to exhibit, we should not see any objection personally to that at all.

6415. Do you attach importance to British manufacturers being represented at exhibitions—independently of your own business point of view?—Yes; I think Great Britain ought to make a good show. After all, exhibitions are advertisements, are they not, although we have not personally found them any use to us lately?

6416. In your answer to our ninth question, you speak about the labour of preparing an exhibit, especially when you are very busy. I hope that means that when you did not exhibit you had plenty of work in hand and could not spare the time?—It did not mean only that on those occasions. The reason we did not exhibit at the last exhibitions was because we thought it would be money thrown away to a certain extent; but at the same time it would have been inconvenient. Just now I should be very sorry to have to prepare for an exhibition.

6417. Why?—Because the whole of our trade at Redditch is exceedingly busy.

6418. Is that a good deal due to the prosperity of the textile trades?—It seems to be due to the general prosperity.

6419. Do you have to pay a high duty on needles in America?—No, there is no duty on hand-sewing needles.

6420. No duty at all?—Not now; there used to be a few years ago.

6421. Are you sure?—Yes; the duty was taken off at the last revision, I think.

6422. Are needles supposed to be raw materials?—I do not know. There is no needle industry there, that is to say there is no hand needle making. There is a large business there in making sewing-machine needles. Fishing-tackle pays a duty. But in regard to needles, the cases pay a duty and the needles do not. When we send needle cases over there, we have to send the needles just stuck in paper separately, and the cases separately, so that the needles may pass through the Customs without paying duty, and then they are put into the cases by our friends on the other side.

6423. And you think your freedom from duty in the case of needles is because there is no industry out there that would seek to get a protective duty put on?—That is the reason no doubt.

6424. Is it the case in other foreign countries that your needles are admitted free of duty?—No.

6425. In your principal markets, I mean?—There is no duty on needles in Australia now, but there is of course a considerable duty in Germany.

6426. Because they have a very large needle industry there?—Yes, and there is also a duty in France, where there are two competitors, I think, if not more. There is a small duty in Belgium and in Holland.

6427. I gather that you would like this country to be represented at international exhibitions, though you would not personally wish to take part in them if you were busy, unless you saw your way to make a profit out of it?—That is so. It sounds rather a selfish view, but then of course we have done a good deal in the way of exhibiting in the past. We have exhibited at at least 20 international exhibitions, which is really a good deal, I think

6428. Are there minor firms and younger firms in your trade who exhibit?—There are three or four other firms, and there is the firm of Allcock, makers of fishing tackle, who exhibit pretty steadily at exhibitions; they have exhibited lately, I know.

6429. I should like to have your observations about the organisation of these exhibitions, so far as you have had anything to do with them. The last one you exhibited at was Paris, in 1900; have you anything to say about the British Commission there?—No, I cannot say that I have.

6430. You formed part of a collective exhibit?—Yes.

6431. And you sent somebody over with that?—Yes.

6432. They found the space already allotted to them?—Yes.

6433. And they fixed the exhibit up?—Yes.

6434. This collective exhibit did not take up a great amount of space, I suppose?—No. I should think it occupied a space similar to the square covered by the tables here.

6435. Did you go over there yourself?—Yes, I went over there once.

6436. But you had practically nothing to do with the authorities?—No, nothing whatever. We sent a man over there, and he saw to the erection of it and engaged people to help him. He carried through everything that had to be done, and he was there part of the time. When he left we placed the care of the exhibit in the hands of other agents.

6437. When it came to the juries going round and conferring the awards did you have anybody to represent you and to show your goods to them?—We had this man who was representing us.

6438. Was he an agent?—He acted as agent on that occasion.

6439. He was not one of your own men, was he?—No, but he was a man who had a good deal of connection with our trades.

6440. So he knew something about them?—Yes, he knew a good deal about the goods, although he was not actually in the employ of any of us, except that he did a good deal of the designing of the case.

6441. In your heads of evidence you do not offer to us any observations about the organisation of the British exhibits—that is, whether we should have a Royal Commission or any other body for future exhibitions. I do not know whether you have thought of that at all?—I hardly know what to say about that, because I have had so little to do with Royal Commissions or with the authorities in the past.

6442. Of course you are aware that up to now a separate organisation has been made practically for every exhibition or in view of an exhibition, that body being either a Royal Commission or a committee of the London Chamber of Commerce or the Council of the Society of Arts?—Yes.

6443. Therefore everything has to be done afresh each time. I do not know whether you have formed any opinion as to whether we ought to have some small permanent nucleus, to carry over from exhibition to exhibition the library which has been collected and the methods which have been adopted?—I should think it would be an excellent thing. It would ensure greater continuity, would it not? You would by degrees gather together a great deal of experience in dealing with fresh exhibitions.

6444. Do you belong to a Chamber of Commerce?—I belong to the Birmingham Chamber of Commerce, but I have very little to do with it. We are some little way out of Birmingham, and we do not have very much to do with Birmingham things really.

6445. So perhaps you have not any opinion as to how far Chambers of Commerce are competent to help in arranging collective exhibits?—As far as the Birmingham Chamber is concerned, I should think they would be distinctly competent to help in the matter as a sort of intermediary between the exhibition committee and the manufacturers of the district. They are an active Chamber, and they have a very energetic secretary.

6446. They have different sections, have they not, for hardware, machinery, and so on?—Yes, I believe they have.

6447. (*Mr. Wilson Fox.*) When you have exhibited in the past, who has asked you to exhibit, or have you offered to exhibit?—Very often we have ourselves offered to exhibit, and we have sometimes received printed circulars from the exhibition authorities.

6448. You have made the offer to the authority—the Royal Commission, or whatever it may be—to send your goods to the exhibition?—Yes, in many cases.

6449. Then it has rather come from your own initiative than from theirs?—I could hardly answer that, speaking generally. A great many of those exhibitions took place before my time.

6450. When you have shown, has it been with the object of increasing or of creating an export trade?—Not so much with the object of creating one as of maintaining one, and increasing our strength in the markets. I have a list here of the principal countries in which we have exhibited. I find that we have exhibited in Paris six times and in London three.

6451. When was the first time you exhibited in Paris?—In 1855. Before that we exhibited in New York in 1853, and since we have exhibited in New York, Chicago, Philadelphia, Brussels, Melbourne (twice), Sydney, Vienna, and Antwerp. Those are the markets in which we have a good trade.

6452. Do you attribute any of that good trade to the fact of your having exhibited?—Not lately. I do not think the later exhibitions did much good.

6453. But do you think you have got any of that good trade through the earlier ones?—Yes, I think that might have been the cause to some extent, but I think the efforts of our agents have been more important.

6454. In foreign countries?—Yes, I think they have done more work.

6455. But do you think exhibitions have been some element in your getting that good trade?—Yes, I think under certain conditions, if you can get a good advertisement, and if the side shows at these exhibitions are not too much in evidence—that is to say, if you can get the public to look at the exhibits, that a good deal of good may be done.

6456. Would you put it in this way—that where you have an energetic agent in a foreign country showing at an exhibition there rather follows up the agent's work?—Yes, I would be inclined to say that—at least I would say that it has done so.

6457. Do you remember at all whether you have always shown in places where you have an energetic agent, or where you have some trade interest, or have you shown in a place where you have no interest whatsoever, but were endeavouring to open up a new trade? Can you recollect any foreign country where you had got no sales at all, and had shown with the object of opening up a new trade?—No, I do not think I can.

6458. You have rather sent your agent first as a pioneer?—Yes.

6459. Do tariffs influence you at all with regard to the choice of places in which to exhibit?—No, I do not think they have ever done.

6460. If there were a large exhibition in a foreign country and you had some trade there, would you show no matter how high the tariff might be?—Yes, if it seemed advantageous from other points of view to do so.

6461. I see you did not show at all in St. Louis and Chicago on the last two occasions?—No.

6462. Was that because you have got such a good trade in America?—Yes, to a great extent that is the reason. In regard to those exhibitions we have acted on our agents' advice. They did not wish us to exhibit; they did not care about it, and they did not see any good in it, and we simply concurred in their view. We have very good agents over there, who cover the country very adequately by means of their organisation, and they did not see any necessity for exhibiting.

6463. You showed a great deal from 1855 to 1900, and since then you have not shown so much?—That is so.

6464. Is that because you think you have gained a sufficient reputation, and you can do without showing now to the same extent that you did in the past?—No, it is not that, I think, that enters into it at all. It is simply because most of those large exhibitions have outgrown themselves really.

6465. It is due to the character of the exhibition, then?—Yes.

Mr. H. T. Milward.

16 May 1907.

6466. And because it has not been so useful to you?—Yes.

6467. Your goods are rather lost in a large exhibition, are they not?—Yes.

6468. I see you put the cost of your exhibit at from £400 to £800; a considerable amount of that cost would be in the show cases themselves, would it not?—Yes, and a good deal in the labour of attaching the goods.

6469. The show cases would be expensive things?—Yes.

6470. Show cases to fill so much of this room as you indicated would cost a very considerable amount of money, would they not?—Yes.

6471. Would you say more than half that sum?—Considerably more if of an elaborate character.

6472. Then the cost would be nearly all due to the show cases?—Yes, and to the labour of selecting and attaching the goods.

6473. I suppose your business is chiefly in needles?—Yes

6474. The fish-hooks and fishing tackle is a smaller matter?—Rather, but not very much so.

6475. Are the hooks and tackle for deep-sea fishing?—They are of all kinds—not fishing-nets, but all kinds of hook-fishing. We make all kinds of articles pertaining to hook-fishing.

6476. For the ordinary river fishing, not sea fishing, you would have a larger number of clients in England than abroad, would you not?—But a great number of them are very small, whereas abroad our direct dealings lie more with large houses. I may mention, by the way, that the exhibit at Paris did not include fishing tackle; it was only needles and a few hooks.

6477. Besides exhibitions, do you take any other steps to advertise your business?—Yes, we advertise in this country through the Press to some extent.

6478. Through the trade papers?—A little through the trade papers, but not much. We spend a good deal of money on counter boxes, show cards, and all that sort of thing.

6479. As a matter of business, I suppose you could get that without sending to foreign exhibitions?—I think we could. That has been our view, and we have not sent to them lately.

6480. How often would you care to send to a foreign exhibition? Supposing there were exhibitions held every five years abroad in the capitals, or every seven years, or every ten years, what would be the sort of period that you would wish to elapse before you went to the expense of showing again?—If we had a choice, I should think about every seven years. Of course, there might be good exhibitions very closely following upon one another which one might not care to miss; but I should think once in seven years would be often enough.

6481. Both for business purposes and also having regard to the expense?—Yes, and the trouble.

6482. (*Mr. Algernon Law.*) Do you exhibit at fishery exhibitions?—Yes. We exhibited at the Fisheries Exhibition in 1883.

6483. I think there has just been, or is going to be one at Vienna?—I believe so.

6484. You are not taking part in that?—No.

6485. Is that because you are afraid of your goods being copied there?—No.

6486. Nothing of that sort?—No, I do not think it is of sufficient importance for us, really.

6487. You did not exhibit at Milan, did you?—No.

6488. With regard to your agents in America, are they people who sell for you, or are they a sort of commercial travellers? Do they sell under their own names—that is, do they put their own names on your goods, or do you have your own name on the goods?—We have our own name on the goods; they only act for us for the sale of needles.

6489. So that it is not likely that they dissuaded you from exhibiting at St. Louis because they were afraid of people coming direct to you?—Not in the least.

6490. That was not the reason?—Not in the least.

6491. I was rather wondering, because that is the reason given in some cases?—That would not be so with us.

6492. When you do exhibit, are you prepared to pay your own expenses, or do you expect the Government to assist you?—We are prepared to pay our own expenses.

6493. You were not satisfied with the position of your goods in Paris, but you think that it was more or less inevitable?—Yes.

6494. Had you anything to say in the matter? Were you told that your goods were to be placed up in the gallery, or was that a surprise to you when you saw them?—We knew they would be in a gallery.

6495. (*Mr. Harris.*) Following that up, you did not put in any complaint about the position at Paris, did you?—No, I do not think so. It did not seem any use to do so.

6496. Did that exhibit in the gallery cost you some hundreds of pounds?—Yes; it cost us altogether about £800.

6497. Did you get an award?—Yes.

6498. Then apparently your position in the gallery did not conflict with your being considered for an award?—No; I have not got anything to complain of as regards the award, but I do not think the award was much use when we got it.

6499. Do you know how you got it? Did you take special steps to push your exhibit before the jury, or did they come of their own accord?—The jury came round, and this agent of ours was instructed to meet them and show them the exhibit.

6500. So that as regards the award and such like exhibition purposes, your position in the gallery did not really hurt you very much?—No, I do not think the position in the gallery made the slightest difference to the jury; in fact, I was told, or we were led to understand, that if this had not been a collective exhibit, if we exhibited alone, we might have had a *grand prix*, but as it formed part of a collective exhibit they would not give collective exhibits anything better than a gold medal. It was only a collective gold medal that we got.

6501. I would like to push you further on a question that Mr. Law just now asked you. I have rather gathered from some previous evidence that we have had, that Redditch needles were exhibited under the names of agents at the St. Louis Exhibition; are you quite sure that none of your own were so exhibited?—Of course, I could not speak for any other exhibits of needles, but I am sure that ours were not, unless some American dealers or people of that kind happened to exhibit them.

6502. But are you quite sure, as you told Mr. Law just now, that your agent did not "do" you in the matter, so to speak?—I am quite sure of that. There could not be any "doing" about it. If they had chosen to exhibit at their own expense, we should only have been too delighted, as they would not have done us any harm, because they do not sell under their own name at all; they only sell under our name and one or two other names which belong to us.

6503. Then you are quite sure that you would have got the credit for anything that appeared?—Yes, I am certain.

6504. Did you consider whether you would exhibit at the recent exhibition in New Zealand?—Yes, we did think about that, and we came to the conclusion that we were spending a good deal of money in advertising in other ways, and therefore we should not be justified in spending money in that form of advertisement, in addition.

6505. In other words perhaps, the advantage in the way of trade would not have compensated you for the trouble of sending; is that it?—That is about it—and for the extra cost.

6506. You said something to the Chairman about judgment going by default if Great Britain stood out of international exhibitions altogether; do you mind explaining what you meant by that?—I thought that if people went to exhibitions and saw Germany was represented, and the United States were represented, and other countries too, but Great Britain was conspicuous by its absence or by a poor sort of exhibit, judgment would go against Great Britain.

6507. What is your general impression about the appearance of Great Britain as a whole at Paris in

1900; was it good, or bad, or indifferent?—I thought it was a fair exhibit.

6508. Would it, on the whole, do credit to British industry?—Yes.

6509. You do not think judgment would have gone by default?—No, I should hardly be prepared to say that, but it might have been better. I thought that other countries had arranged and decorated their portions of the exhibition better.

6510. You would not have had Great Britain absent altogether there?—No, I think that would have been a mistake.

6511. (*Sir Isidore Spielmann.*) With reference to your unsatisfactory space, where did you take that space—in London, or was it allotted to you in Paris?—I should think it was taken through the Commission in London.

6512. If you were allotted space in a gallery in London, and you were dissatisfied with it, why did you accept it?—I did not think there was any choice in the matter.

6513. Did you ask for something better?—I cannot remember now whether we did or not, I am afraid.

6514. Your collective exhibit consisted of the products of three other firms and your own?—Yes.

6515. Who promoted that exhibit as a collective exhibit?—We promoted it jointly. The idea was first raised by a member of another firm, William Bartleet and Sons, who are leading manufacturers of the same goods. They consulted us on the matter, we concurred, and we agreed between us to invite two other firms to join us.

6516. Messrs. James and Son and Messrs. Kirby Beard?—Yes.

6517. You were personally responsible with Messrs. Bartleet in forming the collective exhibit?—Yes, primarily.

6518. Who installed it at Paris?—The agent I mentioned just now.

6519. I see in the official report it is referred to as "the most artistically arranged exhibit in the whole of class 65." Did you know it was so referred to in the official report?—I do not remember seeing that before, though I may have done.

6520. This Committee is curious to know who was responsible for such an artistically arranged exhibit, you or the Royal Commission?—Neither of us, strictly speaking. The person who was responsible really, who designed it, was a man named Wheatley, who is a sculptor. He drew out a plan for this exhibit, and the person who made up the designs on which the needles and fish-hooks were attached was this man who acted as agent for us, a Mr. Peel. He is a sort of heraldic stationer—or a man of that description, who knows a good deal about these goods we make in Redditch, because he has had a good deal of experience in preparing for exhibitions before. The things were all put together, and we sent him over to fix them up there, or to get them fixed up. Those two men were really responsible for the actual artistic work, and I believe received an award for the excellence of their work.

6521. I made that quotation to show that the exhibit was attractive in appearance, and it seems a pity that it should have been stuck away in a corner of a gallery when you might perhaps have had a better position in the first instance?—I think it was a pity too that we were placed there. But I cannot say we were stuck away in the corner. I do not know whether you remember that exhibition at all, but there was a very large and wide gallery which meandered about around the building, and we were very well placed in it, with a large open space all round. My complaint is not as regards the amount of space that we were allowed, because we not only had all the space we asked for, but we had this very big sort of gangway around. It was the position I complained about.

Mr. H. T. Milward, 16 May 1907.

6522. You took a gold medal, you say; did each one of the firms exhibiting with you receive a similar award?—We were given one gold medal between us.

6523. But with a diploma to each firm?—Yes, I believe each firm got a diploma for a gold medal.

6524. Did you exhibit in 1897 at Brussels?—Yes.

6525. Do you recollect what the effect of the British section at that exhibition was on your mind?—No, I cannot say I do very well. I was only there a very short time.

6526. I think you said you would have had the *grand prix* if you had exhibited by yourselves at Paris?—So we were told.

6527. So you lost by that?—Yes, but saved a very heavy expense while contributing to a handsome advertisement for Redditch.

6528. (*Mr. Algernon Law.*) Was that because there was a rule that no collective exhibit should receive a *grand prix*?—We were told so.

6529. It was not because your exhibit was watered down by inferior companions?—No, that was not so. We were told by some people who had acted for us before that if we had been by ourselves we should have had the *grand prix*, but they were not giving to collective exhibits anything higher than a gold medal.

6530. (*Chairman.*) Still, you say you do not attach very much importance to such distinctions as the difference between a *grand prix* and a gold medal?—Not so very much. A *grand prix* would have been interesting, because it would have been the first time that a needle exhibit would have received a *grand prix*. The French maker got a *grand prix*, of course, and he was on the ground floor, too, of course.

6531. And you think you deserved it as much, or more, perhaps?—I should think so.

6532. Do you think he got the *grand prix* because he was in his own country?—Yes, decidedly. He exhibited some running machinery certainly, which made it in some respects a more interesting exhibit.

6533. But I suppose the award was made by the quality of the goods, and not only by the name?—You cannot judge of the quality of the goods in an exhibit of needles. You cannot eat them or anything of that sort; you can only look at them as they are sewn on cards under glass; you can only see the polish, and it is impossible to examine the way in which they are made, or anything of that kind.

6534. Your French competitor had his goods shown in process of manufacture?—Yes. I think there are only two needle manufacturers in France, and no doubt the French Government was glad to do something to foster a French industry. The particular man who exhibited had also got social ambitions; he wanted to be Deputy and that kind of thing.

6535. Do you think it would help him in that way?—Yes. He was very keen, and I know he spent a great deal of money with that object.

6536. (*Sir Isidore Spielmann.*) I hope your agent only stated that as his opinion, and not as a rule of the exhibition, because he is quite at fault if he told you that collective exhibits could not get *grands prix*?—He gave us to understand that it was the rule.

TWENTY-FIRST DAY.

Thursday, 30th May 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Isidore Spielmann.
Mr. U. F. Wintour (*Secretary*).

Mr. Henry Birchenough, C.M.G., called and examined.

Mr. H. Birchenough, C.M.G.
30 May 1907.

6537. (*Chairman.*) You are a member, are you not, of the firm of Messrs. John Birchenough and Sons, which is a very old-established firm in the silk manufacturing business?—Yes.

6538. What goods particularly do they manufacture?—They manufacture all classes of silk goods, chiefly for men's wear.

6539. Not piece goods chiefly?—They manufacture piece goods for printing and silk crêpes, but mainly they manufacture goods for men's wear.

6540. Handkerchiefs, for instance?—Yes, handkerchiefs, mufflers, and silk piece goods for cutting up into cravats and ties.

6541. I understand that you have exhibited at several international exhibitions abroad?—Yes, but entirely in Paris.

6542. You exhibited at Paris, I believe, in 1867, 1878, 1889, and 1900?—Yes. We exhibit at Paris because Paris is the chief market on the Continent for the sale of silk goods.

6543. It is also the biggest market, I suppose?—It is the largest market, and it is also the largest distributing centre of the silk goods of all nationalities.

6544. You say the goods you exhibited were manufactured silk stuffs; would they be piece goods only, or would your exhibits include small things like ties and scarves and handkerchiefs?—Our exhibits include all classes of silk goods suitable for men's wear, and also piece goods for women's wear.

6545. Have you had any increase of business with foreign countries which you can attribute directly to the exhibition of your goods and their inspection by visitors at such exhibitions? I understand you think that is not a very easy question to answer?—I do think so, because it is always rather difficult to know whether an increase of business is due to a temporary cause like an exhibition.

6546. Would you say that in your case an increase of business followed your exhibits in 1867 and 1878, and was directly traceable to them?—Yes; that I can say definitely. We had a very considerable increase of business with France and with other foreign countries after those exhibitions. I should say the reason for that was that English goods were less known in those earlier days, and that our exhibits introduced many foreign buyers, especially buyers out of France, to the class of goods which were made by English people.

6547. I suppose on the whole there was a bigger silk manufacturing business in this country then than there is now?—There was a larger silk business then, but I do not think a very large business was done abroad. There certainly was a larger business for home consumption.

6548. Would your goods go generally on the Continent, or only to France?—They would go on the Continent generally—to Austria, Italy, Germany, and other foreign countries.

6549. Then we take the *per contra*. Have you ever experienced any actual disadvantage from exhibiting at such exhibitions, either from having your goods copied by foreign competitors, or in any other manner?—I think that our goods, which were rather specialities, were copied undoubtedly. The English people for a long time have led the fashion in men's dress; and most of the tie materials, for instance, are really of English origin. I think seeing our goods on a large scale in exhibitions enabled foreign manufacturers to copy our articles; but I am not prepared to say it was injurious to us, because I think it created a larger trade in men's goods than existed formerly.

6550. I suppose your designs are not registered—indeed, they could not very well be registered?—That is so. In the earlier days, before 1867, or even before 1860, men chiefly wore plain stuffs for tie materials, for instance, and for their neckwear of all sorts; but the English introduced rather a different style, a more elaboraate style, of cloths with designs upon them, and they popularised a fashion which has since become general.

6551. Do you attach any great value to the awards which you have obtained at exhibitions?—I think in early days a great value was attached to exhibition awards, before exhibitions became so common as they have since become, and I think they were so valued, because they gave you a certain prestige. We exhibited, for instance, in 1867, and got then the highest award of any English silk manufacturer.

6552. In any trade?—In silk manufacture. We were the only ones who got at that time a silver medal—I think gold medals were then given less frequently than they have been given since. It undoubtedly gave us great prestige, the fact that we had succeeded in obtaining from an international jury a silver medal at a great French Exhibition. The same applies to the exhibition of 1878, where we again got a silver medal. I think that was a great advantage to us, and I think it gave us very considerable prestige. It certainly confirmed and increased our French connection. At later exhibitions we got gold medals, without, I think, their having any favourable effect on our business; but exhibitions, meanwhile, had become more frequent and less thought of.

6553. And the prizes had become very numerous, had they not?—The prizes had become much more numerous. They are given now with very great facility, and it seems to be rather a slight not to give a medal to an exhibit now.

6554. Do you think it would be a good thing to reduce the number of medals?—I am quite sure of that.

6555. It would make those that were given worth more?—Yes.

6556. Do you put on your business cards the medals that you have got at these exhibitions?—We used to do so, but we do not now.

6557. Have you ever been induced to buy from British or foreign manufacturers to any considerable extent as the result of having inspected their goods at any exhibition?—Yes. Our opportunities for buying foreign goods are not very large, as they only relate to the machines for our trade; but we certainly have bought machines from seeing them at exhibitions.

6558. And you have made use of those machines?—Yes. We have bought looms, and we have bought more especially the subsidiary appliances of looms, such as shuttles and other small appliances that are used in weaving.

6559. Can you specify any definite points on which you have derived instruction or knowledge from visiting exhibitions, for instance, in methods of manufacture or economy in manufacture, or opportunity to purchase improved machinery, and the like?—In almost every case I have learnt something from the exhibits of the trade in which I am interested—new and more economical methods of manufacture, varieties of design and colouring, and, most of all, ideas for the improvement of old machines as well as suggestions for the purchase of new machines. Nothing is more stimulating than the comparison of other people's methods with one's own; I regard this as the chief value of exhibitions. This reply extends not only to the exhibitions in which we have exhibited, but to the various exhibitions which I have been to see, both in this country and abroad.

6560. That is a point I should like to get from you; you have been, you say, to several exhibitions besides those in Paris?—I have been to many—in Italy, Germany, Switzerland, and here in England.

6561. You have not been, then, to the late big exhibitions in America?—No.

6562. You were not at St. Louis or Chicago, then?—I have never been to America.

6563. Nor was any member of your firm at those exhibitions?—No member of my firm has been to America.

6564. I suppose America is now much the biggest market in the world for silk, is it not?—Not for imported silks.

6565. But is there not a greater consumption of silks in the United States than anywhere else?—Of silk thread, yes, certainly.

6566. If you have refrained from exhibiting your goods at any great international exhibitions in the past, what were the reasons by which you were actuated? In this connection you have told us that you have only exhibited in Paris?—That is so. We have only exhibited in France because we have regarded France as the most expansive market. What has been in our mind in deciding whether to exhibit or not was the question whether it was worth while—naturally, because it is a considerable expense to exhibit and means a good deal of trouble. We always felt that it was worth while exhibiting in France, because there we did get some increase of business, and also having a large connection in France we felt that it was expected of us to exhibit.

6567. I suppose you have very close connections with France?—Yes.

6568. In buying as well as selling?—When I was actively engaged in business I had a large connection in France, and we held a very favourable position there. When the later exhibitions came on, I felt that the fact that one did a large business there was a reason for exhibiting, and I thought my customers would consider it a discourtesy if we did not exhibit. Our main reason was that we thought it worth while to exhibit in France, the market being sufficiently expansive and progressive. In Germany, though we do some business there, we have never exhibited, because we have hardly thought it worth while; we did not think we should get much return for our expenditure. There was a large increase in the duties there which checked our business, and so we thought it was hardly worth while. The same applies to Austria and Italy; they did not seem to afford sufficiently promising markets for us to go to any very considerable expense in order to gain them.

6569. In regard to the United States, have the import duties kept your goods out a great deal?—In the United States the import duties on silk goods are from 50 to 60 per cent. We do a certain amount of business there, but the duties on our particular class of goods are so high that we could not expect a very large increase of business. Then we have considered that we know the most important customers in the United States who are capable of buying our goods.

6570. I suppose in silks, as in several other classes of goods that have come before us, it is only specialities of the very best kinds that pay those high duties in the States, because they are sold to rather a superior class of customer?—Quite so. The demand for imported English goods is limited there. By the time they are landed, practically our price is increased 80 per cent. to 90 per cent., so that the market there is very limited for our particular class of goods.

Mr. H. Birchenough, C.M.G.

30 MAY 1907.

6571. I believe that you have been disinclined lately to exhibit at home or abroad, because you think the value of exhibitions as a means of advertisement is far less than it used to be?—Yes.

6572. I should like you to explain that a little; why is it less?—If I may just go back, 30 or 40 years ago buyers did not know where to find goods, and goods were bought, as you are no doubt aware, largely through intermediaries, that is, through agents, the buyers seldom going to the manufacturers themselves.

6573. By "buyers" do you mean the large shops?—I mean the large wholesale houses. I am referring entirely to foreign countries, and I am not speaking of the home trade. English goods were almost always bought through a buying agent either in the foreign country or in London, and that is still the case to some extent. Indents were sent to these agents and they distributed the orders where they chose, the buyers not being in direct communication with the manufacturers. That is the case, as you know, even today to some extent with the colonial buyers. The exhibitions of the last 30 or 40 years have opened the eyes of all buyers, even comparatively small ones, to the actual place of manufacture and to the individual manufacturers of goods of all sorts, and the origin, the *lieu de provenance*, of goods of all kinds is so well known to buyers now that you really do not need to exhibit in order to show them who you are, and what you are.

6574. Then the agent has been rather squeezed out?—Yes, he has been squeezed out to some extent, or he has found other business.

6575. The big buyer abroad now knows where to go for his most suitable goods, does he?—Yes, he knows that now. Formerly, say in 1867 or even as late as 1878, we showed our goods in Paris in order that the actual buyers of the goods might see where they came from. Those exhibitions brought us a very large number of customers who already, probably, did business with us, but did not know us, and we increased our business very much. But now they know who the manufacturers are, so we do not need to exhibit.

6576. Did you exhibit there under your own name?—Yes.

6577. Did you sell then through an agent?—No. We wished to do business direct, and we succeeded in doing it direct.

6578. You did deal direct then?—Yes, we sold direct. I think the remark I have just made is true of all trades; the origin of the goods now is known all over the world to all buyers, and there has been a great change in business in consequence.

6579. I understand that you are in favour of our being well represented at any large international exhibition?—Yes, I am strongly in favour of that.

6580. Quite apart from your own business point of view?—Yes. I have ceased to be personally interested in the silk business practically, but from the point of view of British trade generally, I am very much in favour of the country being represented.

6581. You are not very much interested in silk now, you say?—Not now; but speaking from the general point of view of British trade, I am, as I say, very much in favour of the country being represented at international exhibitions, provided we are suitably and properly represented.

6582. I suppose that you would sooner that we should not be represented than that we should be represented badly?—Very much. I think the present state of affairs is extremely unsatisfactory. I think British manufacturers generally are rather sceptical about the use of exhibition. They are very unwilling to incur large expense, and the larger ones who have good connections hold aloof; and so it has been the case at recent exhibitions that we have been generally represented by third or fourth-rate manufacturers, who give quite a wrong impression of the state of British production.

6583. In the third and fourth-rate people would you include the younger firms who are keener to make a name and a business than the older ones?—No.

Mr. H. Birchenough, C.M.G.

30 May 1907.

6584. You think the people you refer to are really third or fourth-rate people?—Your question is a very just one. I do not think we ought to be represented only by old-established firms; I think means should be found to encourage the younger firms to exhibit. At present I think it is all so higgledy-piggledy and disorganised that we are not necessarily represented by the younger and pushing firms, but that we are often represented by the second and third-rate firms who have nothing particular to lose and perhaps something to gain.

6585. I think it would be very valuable if you gave us your views on the last Paris Exhibition and our representation there; what do you think of it?—I thought, on the whole, it was very unsatisfactory. Wherever there was any attempt at organisation, as, for instance, in the Fine Art Department, or in the Domestic Furniture Department, or in some of the machinery sections, I think we were on the whole well represented; but, generally speaking, it was on a higgledy-piggledy, unsatisfactory kind of basis. I, personally, was very much ashamed of what I may call the unorganised exhibits of British trade.

6586. Whose fault do you think that was?—I think that it is largely the fault of the British system; but I should like to come to that later, on another question.

6587. We can take that now, if you like?—Perhaps you will forgive me for being rather discursive.

6588. We want you to be rather discursive, because we want the full benefit of your experience?—There are trades which are still in the earlier stages of growth in which our present voluntary system, or what I might call our chaotic system, or our unorganised system, does not show its defects. For instance, there are the furniture trades, which are trades in which Great Britain has taken the lead in late years. These trades are on the rising grade, and they exhibit very efficiently. You get large houses, if I may mention names, like Waring's or Maples'——

6589. They are represented here?—You may take any of those large important firms. They are very anxious to push their business, they realise that they are in a prosperous and progressive condition, and, in my opinion, they make very fine exhibits. I doubt very much whether that particular trade, which is a very growing trade, could be better represented by any other system than the present. But other trades which have, so to speak, reached their apogee, like the machinery trades, and many of our textile trades——

6590. Do you say the machinery trade has reached its apogee?—I mean it has been a successful trade for a long time, that is to say, it is a trade in which people can get orders without going out to seek them very largely. Many of the large houses in those trades do not take the trouble to exhibit; they say, "We are quite well enough known without going about in that way." In trades of that kind, and still more in some of the textile branches, I think you require quite a different system from the present individualist system.

6591. Do you mean that you would compel them to come in, as the Germans do, or the French?—No, not at all. I should not compel them to come in, but I should endeavour to persuade the larger firms to exhibit as a matter of national credit. In the trades where I was of opinion that we would have to depend for exhibits largely on the smaller makers, I should carefully sift all their exhibits.

6592. By having collective exhibits from the different districts?—Yes. Supposing you adhere to the present system of Royal Commissions, then I think the Royal Commission ought to endeavour to secure a committee representative of each of the important trades of the country to work with it, very much, as Mr. Wilson Fox knows, as the Census of Production Committee is endeavouring to secure the co-operation of local committees.

6593. You would suggest that a committee of experts should be consulted then?—Yes, quite so. I think you should, as far as possible, endeavour to get collective exhibits; but I think that would be very difficult, because even for the purposes of direct profit British manufacturers in some trades are very unwilling to act together, as you know. When you try to get a joint exhibition of samples in foreign markets, you cannot get it, even when it appears to be to the obvious advantage of manufacturers, to have a common show in foreign towns. In that case, I think, when once you have got your local committee—and when I say "local," I do not mean local to the locality, I mean a trade committee——.

6594. That is, an expert committee for each trade?—Yes; I think that trade committee should, to some extent, control and sift the exhibits which are offered. I think you might give them, for instance, command of the space which you allocate to their particular trades.

6595. And you would not allow inferior things to be exhibited at all?—No.

6596. By that, I mean things which are inferior in the view of the committee?—Quite so.

6597. Do you not think there are great difficulties in the case of the textile exhibits, especially, say, of Bradford goods, dress goods, and goods of fashion? We have been told by other witnesses that there is a difficulty in getting these exhibits, as the manufacturers do not care to show the goods which they are going to put on the market in three months' time, for the autumn trade or for the winter trade, because they may be copied, and then their market will be spoilt; and, of course, you cannot put old things forward at an exhibition. Do you think that your plan would secure for us a good deal better choice in the textile exhibits?—I think you have touched upon a very serious difficulty, but I think you might overcome it possibly by securing a collective exhibit—if you could do that—though it might be very difficult. If you had a collective exhibit, each manufacturer would contribute so small a number of novelties, that he could probably afford to take his chance of being copied.

6598. He would chance that with just a small number?—Yes. The great difficulty which besets all English trade is, I think, the difficulty of getting manufacturers to act together. Take the case of Bradford, for instance; I do not see why their Chamber of Commerce, or their Manufacturers' Association, or whatever body represents them, should not organise a collective exhibit; and I do not see why the manufacturers there should not be gradually persuaded to make a collective exhibit. If that could be done, then I do not think that the difficulty in the way of showing novelties would arise in anything like so acute a form.

6599. But you consider, I understand, that it is in textiles that we have been especially weak and poor at the late exhibitions?—Certainly, and I think largely for the very reason you indicate, namely, the unwillingness of manufacturers to show their hand. In the last Paris Exhibition (1900) the Crefeld people made a splendid collective exhibit of silk goods.

6600. Of velvets?—Of all classes of silk goods—velvets, tie-stuffs, and of the various articles which are their specialities. They made a very fine exhibit, and I do not think that they felt any ill effects from a joint exhibit. Each manufacturer contributed the article in which he was strong. And that is another point I should like to bring out. The great difficulty with individual exhibits is that a manufacturer very often shows all the articles he makes. He wants to show, not his perfection or his quality, but his variety; and the consequence is that a man who is strong in one thing, but probably weak in something else, shows both his strength and his weakness. I do not know whether you can persuade the manufacturers of a district each to show his own particular specialty, but if you could persuade them to do that, of course, you could get a very fine exhibit.

6601. When a man shows individually, he must show a good many things to make any bulk?—He must certainly fill a case.

6602. He cannot just show his strongest things?—No; he has to fill a case.

6603. You think collective exhibits of the textile trades, at any rate, would lead to a better quality?—I am speaking now from the national point of view; it would lead to an exhibit in which each manufacturer to large extent, but not altogether, showed only the articles in which he was strong, so that the whole collection would be a very fine one.

6604. (*Mr. Wilson Fox.*) Still, if he thought he could sell what might be termed his inferior products by showing them abroad, he would show them, would he not?—Yes, he would.

6605. (*Chairman.*) You would give the trade committees, then, pretty strong powers to stop inferior articles being shown in a collective exhibit, I suppose?—Yes. Of course, it is a delicate question, and one

would have to avoid being too strict, or you would not get the committees to act; but by giving them the control of the space, they might exclude bad exhibits altogether.

6606. You mean that they might keep them out on the ground of want of space?—Yes. I would give the committees the entire control of the space.

6607. Have you followed at all what the Germans did at the Paris Exhibition, and, I believe, have done since? They had a sort of State control of what was sent, having arranged for a sort of competition of their own some years before?—I know they did that, but then, of course, trade in Germany is organised very much more than our trade is.

6608. And it is very much more managed by the Government?—It is very much more managed, partly by the Government and partly by the trade organisations. Through their syndicates and their kartels they have got a much tighter grip than we could hope to have through either a Chamber of Commerce or a manufacturers' association.

6609. You do not contemplate the Chamber of Commerce exercising a direct control, do you?—No, not the Chamber of Commerce. I would rather the manufacturers appointed a committee of their own to consult with the Royal Commission.

6610. As I think you and I agree, the Chambers of Commerce are not all uniformly efficient?—Certainly not.

6611. And you could not always depend upon them to exercise proper control?—Of course. It depends on your point of view. If we want a really efficient representation of the condition of our national industries at an international exhibition, I think we must exercise some control. If you wish that we should be fairly represented in comparison with other nations, I do not think you can allow—supposing you have power to stop it—the present higgledy-piggledy system to continue.

6612. Do you think the manufacturers would come into such a system as you have described?—I think they would on persuasion and by degrees. I think they are sick of the present system; the large manufacturers are tired of it, and do not think it is worth while exhibiting.

6613. We have found from the inquiries we have sent out from here that there is a great deal of indifference as regards exhibiting at all?—Quite so. In that case, you have got to go back to the beginning. I think you would get a certain number of large manufacturers who, out of trade patriotism, would begin to exhibit again if they thought the conditions were favourable.

6614. But they would not want frequent exhibitions, I suppose?—No.

6615. As regards this control, I gather that you think a Royal Commission is about the best means of starting the work of controlling the participation of this country in international exhibitions; or do you think the London Chamber of Commerce or any association of Chambers of Commerce could manage it?—I should be strongly in favour of an independent body of the character of a Royal Commission.

6616. What do you think about having a small permanent nucleus attached either to some Government department or to the Advisory Committee of the Board of Trade, to keep the documents from one exhibition to another, and to be responsible for starting the work?—A sort of small secretariat do you mean?

6617. Yes?—I should view that favourably.

6618. Do you know the French system and their *Comité*, which a great many of the manufacturers seem to belong to?—Yes, and I have friends who belong to it, as a matter of fact. I am very doubtful whether we should get that in England. It it worth trying, but it is rather doubtful.

6619. Do you think that the starting and the control of this work must be through a Royal Commission, and that they must get the best advisory committee to help them that they can?—I do think so. I think that a Royal Commission appointed *ad hoc* would bring a certain freshness to the thing, and I think a permanent body, however small, would give a kind of routine to it, which, I think, would be unattractive to ordinary people.

6620. You do not mean by that that you ought to have all the staff fresh to their work, do you?—Not at all. I think that your idea of a small secretariat would keep up the traditions, and would pass on all the information connected with exhibitions from exhibition to exhibition. I think that idea is excellent. Still, I think that for each large international exhibition the present system of Royal Commissions is a very good one, because then you constantly associate fresh people with it.

6621. Did you have anything to do with the British Royal Commission for the Paris Exhibition of 1900?—No.

6622. Then you cannot give us any experience as to the excellences or defects in management there?—No. I think the tendency always is a little to keep on appointing the same people. That may be quite untrue, and I do not know all the names, but I think there is rather a tendency to put on exhibition commissions the same people.

6623. On the staff, do you mean?—Yes. I think it is always a good thing to renew the *personnel* from exhibition to exhibition.

6624. By the staff do you mean the paid staff or the big manufacturers and merchants who are members of the Commission?—I mean the members of the Commission.

6625. Is it not the case that there are hardly enough to go round, and that it is rather difficult to get men to come forward every time for this work; or do you think there are plenty?—I think you could find men enough to get a change of *personnel* easily.

6626. (*Mr. Harris.*) Your firm has not exhibited at any Colonial exhibition; did you include the Colonies generally amongst the places where it was scarcely worth while to exhibit?—Yes.

6627. Because it would not have paid you?—No, but because the Colonial houses until quite lately, in fact, have bought their goods through their London buying houses—and they do that still very largely.

6628. Looking to the general effect of your evidence, would you be inclined to welcome a proposal to drop out of exhibitions altogether—I mean to drop them out of exhibitions altogether—I mean to drop the idea out of the sphere of trade?—No. I think that if they are not held too frequently they are exceedingly stimulating. They have done a great deal of good, and the comparison of the products of one country with another has been, on the whole, undoubtedly stimulating.

6629. Yet you remarked just now that as a means of advertisement their utility was past?—Yes; and I think very largely that is so; but as a means of intercommunication of ideas and knowledge I think they are very much alive.

6630. May I just refer again to that phrase "as a means of advertisement." It is capable of a double interpretation—an advertisement *qua* the country's industry and an advertisement for the individual; had you both in your mind, or only one?—I think I was speaking purely of the individual, because I think an international exhibition may still be very useful as a national advertisement. Take, for instance, the case of the last Paris Exhibition. I would refer to the exhibition of the Crefeld manufacturers there; that exhibit had an extraordinary effect, and all countries seeing that exhibit realised for the first time what a very important silk manufacturing country Germany had become. I think that had a great effect. I think the same considerations apply to certain exhibits of French machinery. I do not say that the specialists were unaware, but the world generally was unaware of the great progress France had made in the manufacture of fine machinery until the last exhibition. Therefore I think international exhibitions are still a very good means of national advertisement.

6631. And therefore it is purely from a national point of view, I take it, that you would consider it proper for the Government to spend money upon them?—Yes. I think the fact that of late years Great Britain has ceased to be adequately represented has added a good deal to the feeling in the world that England is relatively declining. To many peoples' minds it is one of the small symptoms. They see a splendid German exhibit and a fine Russian exhibit, and so on, and then they see the English section is poor. Of course, well-informed people know that the English have not taken the trouble to exhibit, but there remains the fact that the English exhibit is not so superior as it used to be to the other foreign exhibits, and of course that is taken to mean that the whole country is going back.

Mr. H. Birchenough, C.M.G.

30 May 1907.

6632. May I take you on a point there as regards the Paris Exhibition of 1900. I think it is generally admitted that the British pavilion at Paris, the old Jacobean house, was a great success. Was that your view, or would you say that it had no great general effect upon the prestige of England at that exhibition?—I think it had a great effect. In the exhibition of 1878 the firm which then existed in London of Collinson and Lock exhibited in the Rue des Nations a very beautiful English cottage—I do not know if you remember it. It was charmingly furnished, and as far as I know—and I have known France very intimately for 30 years—that was the first revelation of the beauty of modern English domestic furniture. Subsequent exhibitions confirmed that idea, and I do not think there is any doubt now that in domestic furniture England leads the world.

6633. And you would argue from that—indeed you imply it in what you say—that the pavilion in the Paris Exhibition of 1900 rather crowned that idea?—Yes, I should say so, certainly, with its exhibition of pictures and furniture.

6634. It seems to me that your evidence works up to this perhaps. In the first place, you lean towards a collective exhibit in every trade in future exhibitions, if Great Britain is to do herself justice; is that so?—A collective exhibit in those trades in which the best individual manufacturers show unwillingness to exhibit.

6635. You would not make it universal then?—No.

6636. You would have a certain right of selection?—Yes. I say, for instance, the furniture trade does not need a collective exhibit, because the most prominent firms are still willing to exhibit of their own accord, and I should be inclined to leave them alone, and let them do it. But where the leading members of a trade do not show any anxiety or desire to exhibit properly or efficiently for themselves, I think they might be persuaded to join in a collective exhibit.

6637. Are you not then in this difficulty, that a certain number of firms would go on their own account, and worthily go on their own account, and therefore would not want any support from the Government; whereas there are other firms who want to be stirred up and almost driven into it, and you can hardly drive them into it without giving them a certain amount of Government support, that is, a money grant of some sort?—I suggest that the committee of the trade might be left to deal with that.

6638. I am looking at it from the point of view of the Government—from the point of view of a grant and facilities, and so forth?—Am I to understand you to suggest that a grant of public funds should be made towards these collective exhibits?

6639. What I have in my mind is this. A grant of public funds for international exhibitions has hitherto been usual, and if you are going to force a collective exhibit, the reply will almost necessarily be, "We want certain expenses paid"; but if you have certain firms who, you say, are quite ready and quite worthy to go in by themselves, I do not see why the Government should give them any assistance; and then you get a differentiation, which would be a difficulty. I am working back to my original question. Do you say that collective exhibits should be the general rule, or do you still adhere to your view that in some cases you can have them and in some you cannot?—What I had in my mind was that if possible you should have trade committees, and then those committees will very quickly decide whether it is necessary to have collective exhibits or individual exhibits.

6640. (*Chairman.*) I rather took it, when I asked you those questions about collective exhibits, that it was mainly in the textiles that there was the greatest difficulty in getting exhibits now, and not in furniture, machinery, and so on?—That is so. Where trades will continue to exhibit and to send really representative and worthily representative exhibits, I do not want to have collective exhibits; and I think a trade committee will tell you that too. But I think you might, from the central funds, give grants-in-aid to those trades which are unwilling to send a proper number of individual exhibits.

6641. (*Mr. Harris.*) And you do not think that would be an unfair subsidy?—No, I do not think so. I do not think the furniture trade, or the machinery trade would ask you for a shilling; I think there are a sufficient number of people in those trades who are either anxious or patriotically desirous of making a proper show without any assistance. But I think in some of the other trades you may have to help them a little.

6642. I suppose you put it on the ground that it is in the interests generally of the country to show what you can do in those trades?—Yes. I ought to say that I regard the collective exhibit as having a double advantage—in the first place of making a better exhibit and a more representative exhibit; and in the second place as involving less expense on individual manufacturers. I think manufacturers who would not shrink from sharing in a general exhibit, would shrink from expending a couple of hundred pounds or so on an individual exhibit.

6643. You have it in your mind that the saving of expense would be an inducement in itself, have you?—Yes. I had not in my mind at all any grants.

6644. You told the Chairman there were too many awards, I think?—Yes.

6645. How would you view doing away with them altogether?—I am not sure that I can answer that question. They have become such a farce that possibly I should be in favour of doing away with them, but I do not know how far they influence people. The fact that they now award a gold medal, and you have to buy it yourself, has made it rather a farce; they might just as well give you a card with a gold medal stamped on it. Do you mean to have the whole thing *hors concours*?

6646. It would hardly be *hors concours*, but you would get nothing for it except a certificate, I suppose?—I am not sure whether my individual opinion is worth much on that question.

6647. (*Sir Isidore Spielmann.*) You have visited a large number of exhibitions, I think I heard you say?—Yes, I have.

6648. Can you recall any one where the British section, taken as a whole, made a favourable impression upon your mind, as compared with the French and German sections?—I think, so far as my memory serves, that until, say, 1878, our exhibits were on the whole satisfactory.

6649. Was the exhibition of 1878 a satisfactory one?—I think so.

6650. And the exhibition of 1889?—That was much less so.

6651. Since then have they been dwindling in importance?—I should say so, certainly. There are sections which continue strong and representative, but as far as I can remember, since 1889 our exhibits have been very unsatisfactory.

6652. Can you tell the Committee at which international exhibitions you think we made the worst impression?—I think in most industrial departments our exhibit at Paris, in 1900, was singularly poor.

6653. Have you visited the smaller exhibitions; for instance, the exhibition at Brussels, in 1897, and the Milan Exhibition, of last year?—I saw the Milan Exhibition last year, and I saw the Milan Exhibition of, I suppose, 25 years ago—I do not remember the exact date, perhaps it was 23 or 24 years ago. Our exhibits were poor.

6654. In order to remedy our defects, would you think that if we formed collective exhibits in most of the important sections, we might do better?—Yes, I should think so.

6655. In your evidence you have rightly referred to the art section as a collective exhibit; and I take it you are of opinion that if we can make a strong representative show in art, we ought to be able to do the same thing in many of the industries?—Yes. Of course, in painting, for instance, it is a much easier thing to get a collective exhibit, because in many cases the exhibit, that is, the picture, is not in the hands of the artist, and it is not the artist who exhibits it. You make collections on quite a different plan in exhibitions of works of art, so that I should not like to push that analogy too far; but I think that following similar lines, collective exhibits, in certain trades, would give good results.

6656. And because we have not been successful hitherto in forming collective exhibits in the industrial sections, there is no reason, as far as you can see, why we should not succeed in forming them in the future?—No, I think not. I think you need to use powers

of persuasion with the various trades to get them to co-operate, and I think a Royal Commission might succeed in doing that.

6657. Do you think the fact of assisting financially towards their expenses would be an inducement?—I should be rather loth to introduce that element, unless I was obliged.

6658. Now, referring to the awards, we have had witnesses here who have rather indignantly denied the allegation that awards are given indiscriminately and without much thought; but, as I understand, you are of opinion that they are not always given with judgment?—That is my impression. I do not like to cast any reflections on the juries, who take a great deal of trouble, but I think those awards are scattered rather broadcast.

6659. How would you appoint your committees of experts, may I ask?—I should ask the traders to appoint them.

6660. Would you leave it entirely to the various trades to appoint their own committees?—Yes. I think that the Royal Commission might add a member or two; but certainly you could get all the larger trades to appoint committees.

6661. And the members of those committees would be representative members of firms engaged in the various industries?—Yes.

6662. (*Mr. Malcolm Ramsay.*) I suppose you know that Great Britain has spent considerable sums from time to time on taking part in exhibitions?—Yes.

6663. You know that generally?—I know that sums have been spent, but I do not realise how much has been spent.

6664. I wanted to ask you whether you have examined the accounts, and whether you think we have had value for the money—that is, whether the money has been spent to the greatest advantage?—I have no idea. I always understood that the grants made by our Government were less than the grants made by foreign countries.

6665. I was thinking rather whether we used the money in the most effective way. Have you any experience which would enable you to give us an opinion on that point?—I could not say anything at all on that.

6666. Could you indicate to the Committee the kind of interval at which you think it would be reasonable for this country to go into a big international exhibition from the point of view of the national advertisement?—I should think a minimum of six years. I should have said longer, but so many industries are changing so rapidly and developing so quickly that I should be inclined to shorten the period. Formerly, I think, when things moved more slowly, ten years would have been little enough; but I think now that perhaps ten years is too long.

6667. You would not think a big exhibition would be required more often than once in six years; that would be the minimum which you would fix now?—Yes, I think so.

6668. (*Mr. Algernon Law.*) You appear to think some industries are advancing so rapidly that possibly six years would not be often enough, but you would not have an international exhibition, by which I mean a general exhibition, to meet the case of particular trades, would you? I suppose they would probably look after themselves, like the motor industry, with its special motor exhibitions?—Yes, certainly.

6669. Have you anything to say with regard to the organisation of the British section, so far as you observed it, of the two Paris exhibitions of 1889 and 1900? One was the result of private effort, and in the other case there was a Royal Commission. Could you notice any difference; was one better managed than the other?—I think the British section in 1900 was more complete than the British section in 1889; I mean, you got a very much larger exhibit of outside collections, of non-industrial collections, than you had in the previous one, I believe.

6670. We have had it in evidence that the British section in 1899 was much better managed than in 1900, but you did not observe that?—I really do not remember. My personal connection with it was so small that I can hardly answer your question.

6671. (*Mr. Wilson Fox.*) The textile industries would lend themselves more to collective exhibits than most other trades, would they not?—Yes, I think they would.

6672. To a considerable extent they are not the sort of goods that are likely to be attractive to those who visit an exhibition, except the experts?—On the whole, no.

6673. Jewellery, for instance, would attract holiday-makers at an exhibition, and that might lead to orders; but the textiles would mainly attract only the big buyers and the merchants, would they not?—I quite agree with you.

6674. Supposing Bradford got up a collective exhibit for woollen goods, or supposing Macclesfield got up a collective exhibit for silk goods, how far would the element of the name of the manufacturer be in the minds of those who joined in the collective exhibit; or how far would the gentlemen in Macclesfield feel that they were advertising Macclesfield as a whole, and that their end, broadly speaking, would be gained by advertising Macclesfield and not the individual firms?—I thing people realise much more than they did that it is very important to advertise their locality. They know that if buyers can be tempted to come to the town, they will probably find out the individual manufacturers.

6675. That is what I am thinking of. Certain industries are located in certain centres—the woollen and worsted are in Bradford, the silk are in Macclesfield, and so on; they have got that advantage over certain other trades which, like say the furniture trade, are spread all over the country?—Yes, that is so.

6676. Would it not pay those trades which are localised to have a collective exhibit, in order to advertise their own particular locality, much more than it would pay, say, an industry like the furniture industry, which has no particular headquarters?—I certainly think so.

6677. Therefore, it is much more likely to pay Macclesfield and Bradford and Manchester to have collective exhibits, than the class of industry which I have described which has no particular locality?—That is so undoubtedly. Of course, in the collective exhibits you could have the manufacturers' names displayed, which would meet a certain prejudice.

6678. You would not eliminate those, then?—No.

6679. (*Chairman.*) You would have the names?—You could have them.

6680. (*Mr. Wilson Fox.*) I understood you to say in one of your answers that exhibitions have opened the eyes of buyers to the makers, and therefore I presume from that answer that you do attach great importance to having the makers' names upon the goods?—I do; but in the cases you mention, where the industry is concentrated in a district, it is almost as important that the buyer should learn the district as that he should learn the makers' names, because if he takes the trouble to come down to the town he will very speedily find out the names of the manufacturers. I think people realise that now much more than they did.

6681. You have made up your mind, I think, that a collective exhibit, if formed properly, would be a good thing for the district of Macclesfield?—Yes.

6682. I mean from the business point of view?—Yes, decidedly.

6683. Therefore, however patriotic they may be in Macclesfield, as no doubt they are, in showing a collective exhibit they would still have the feeling that it was going to do them good from the business point of view?—Yes, I think so.

6684. Therefore, on the question of expense which has been raised this afternoon, the manufacturers of that district would no doubt be perfectly ready to pay their own expenses?—I think in most cases they would. I do not think in the case of collective exhibits that the question of expense would arise.

6685. Except conceivably in the case of some collective exhibits where there would be no question of making a profit, or very little question; if, say, Great Britain wished to show a collection of minerals, for instance, there would be nothing to be got out of that?—Except, as you say, where individual interest does not come in.

6686. And the same with purely scientific exhibits?—Yes, certainly.

6687. You said that you considered a very valuable

Mr. H. Birchenough, C.M.G. 30 May 1907.

element in the exhibition of British products was intercommunication; it would not be much use for a large firm to send an exhibit in charge of a caretaker, unless one of the firm went himself to see what was going on?—No, certainly not.

6688. You would not get any intercommunication then, nor any fresh ideas?—No, certainly not.

6689. So that it would entail one of the heads of the firm going?—Yes.

6690. Or their managers?—Yes.

6691. And possibly some of the workmen?—Yes.

6692. In sending to a foreign exhibition, say in Paris, do you think that a manufacturer in the industry with which you are connected sends with the object mainly of getting an export trade, or of maintaining one, or with the object of advertising his goods in this country. Which would be the chief factor in his mind—getting a reputation in this country by obtaining an award abroad, or increasing his export trade in the country in which he was showing?—I think he would have both factors in view, but probable the preponderating one would be to get an export trade.

6693. Then in sending to a foreign exhibition, certainly on the Continent, you would very carefully consider whether you were likely to get an export trade before you went to the expense?—Yes, certainly.

6694. Do you as a rule in the silk trade have agents abroad, or do you have people who travel?—As a rule silk manufacturers have representatives.

6695. That is representatives who have settled in a particular place?—The manufacturers do have travellers sometimes, but they would have their representative in Paris, for instance, or Berlin, who would show their samples and take orders upon them, but who would not be an agent.

6696. Supposing you had got a very active agent who was doing a good business for you in a capital, would you show there, or would you find that a very active agent would be doing all that was necessary for you in that capital?—I think the representative would probably be anxious to show there to advertise himself, or to advertise his wares.

6697. (*Chairman.*) Did you ever send any bodies of workmen to Paris?—We have not sent bodies of workmen, but as a rule we send our managers and head foremen; for instance, we send our loom managers and what are called the tacklers or overlookers to all exhibitions.

6698. And you think it is worth your while to do so?—Yes; they always come back with ideas.

6699. But all the same, I am afraid the silk industry is not an increasing one in this country?—No. Possibly our action has prevented it dying more rapidly than it is doing.

6700. You may have delayed its extinction?—Yes; but it is still alive.

6701. Is there anything that you have not been asked on which you think you could help us?—No, I think not. I think I have said all I have to say.

TWENTY-SECOND DAY.

Thursday, 6th June 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Isidore Spielmann.
Mr. U. F. Wintour (*Secretary*).

Mr. Harry James Powell, called and examined.

Mr. H. J. Powell.

6702. (*Chairman.*) You are a member of the firm of James Powell and Sons, glass manufacturers, I believe?—Yes.

6703. That is an old-established firm, is it not?—Yes.

6704. I understand that you exhibited in Paris in 1867 and 1878, and that a member of your firm acted as a juror for glass in 1889?—Yes, that is so.

6705. You did not exhibit in 1889?—No, we did not. The Paris Exhibition of 1878 was practically the last international exhibition that we exhibited at.

6706. I think you exhibited in connection with the Arts and Crafts Society at Turin and St. Louis?—Yes.

6707. Was it as part of a collective exhibit both at Turin and at St. Louis that you showed?—Yes. It was run practically by the Arts and Crafts Society.

6708. What was the nature of the goods which you exhibited then?—Artistic table glass.

6709. In 1867, that is 40 years ago, you exhibited stained glass, did you not?—Yes.

6710. Did you exhibit goods of much value?—In 1867 we did. But we found that it was absolutely impossible to show stained glass properly at an exhibition. The showing of stained glass is really opposed to the objects of an exhibition, because in an exhibition you want all the light you can get.

6711. And in order to show to the best effect in stained glass, you do not want so much light?—You do not want too much light, so that it is nearly always impossible to exhibit stained glass.

6712. At any rate, your firm has not exhibited since 1878, except at St. Louis and Turin?—That is so.

6713. Have you had, do you think, any increase of business with foreign countries which you can directly attribute to the showing of your goods at exhibitions?—No, I could not say so. I think it right, perhaps, that I should say that our business is rather a peculiar one. We have very small manufacturing power, and for family reasons we have maintained our works in the City, which is almost an impossible place for works. In many cases where we have made new departures with regard to colours and designs we have not been able to obtain full advantage through being unable to turn out a large quantity.

6714. Whereabouts in the City are your works?—In Whitefriars, close to the Temple. They have been there for certainly 200 years.

6715. Is that your only works?—Yes.

6716. Then you have great difficulty, I should suppose, as to space?—There is great difficulty as to space, as you can imagine.

6717. You tell us that you have experienced disadvantage from having your goods copied?—That is so.

6718. Is that in reference to your stained glass?—No, that is with regard to the table glass.

6719. Then I think you do not attach great value to the awards you have had as a means of developing your business?—No.

6720. Have you had good awards?—Yes; we have had several medals.

6721. Did you have any awards at the St. Louis Exhibition?—No.

6722. Were there no awards given to the collective exhibit that you took part in?—I do not know whether there were any. The system of awards is rather opposed to the whole principle of the Arts and Crafts Society. To a certain extent, the goods for the Turin and St. Louis Exhibitions were selected goods before they were sent out.

6723. So that your award was practically the fact of being selected?—Yes; it amounted to that.

6724. Have you ever bought from British or foreign manufacturers to any considerable extent, as the result of having inspected their goods at any exhibition?—No.

6725. I do not think I have yet asked you whether you have been to most of the recent exhibitions?—I have been to all the French exhibitions, I think.

6726. Then you went to the last Paris Exhibition?—Yes.

6727. Can you tell the Committee of any definite points on which you have derived instruction or knowledge from visiting these exhibitions?—I have seen a good many things to avoid.

6728. I suppose that is useful?—It may be useful in a way.

6729. The comment on that would be—why do you continue going?—I go in the hope of learning.

6730. But you have seen there what to avoid more than what you might imitate?—Yes, and it is useful to that extent.

6731. Now can you tell me the reasons why you have not exhibited for the last 30 years?—As I have already said, it is practically impossible to show stained glass. With regard to the table glass, we found that it did not pay—that is, that the sales arising from the exhibition did not pay for the actual expense of exhibiting.

6732. I should have thought that in America there would have been a demand for very high-class table glass like yours?—There is an enormous duty on table glass.

6733. I suppose it is a duty of 60 per cent.?—It is higher than that, I think. We do send a certain amount there, but we could not trace that to the exhibition at all.

6734. Then you say in your Heads of Evidence that the surroundings at exhibitions were unsuitable; do you mean for your artistic table glass?—Yes. I am speaking now of a large international exhibition, like, for instance, the Paris Exhibition of 1878. There our glass was dumped down amongst all sorts of bottles and medical apparatus, which were unsuitable surroundings.

6735. You say the outside shows attract the wrong class of people?—I think that is so.

6736. They collect the crowds, I suppose?—I think the crowds rather deter the better class of people from going to an exhibition.

6737. I suppose you only want the cultured people, more or less, with a certain amount of money?—Those are the people we should like to draw, certainly; I mean those would be the only people who would be of any use to us.

6738. You have been more successful, you say, in your exhibits in connection with the Arts and Crafts Society?—Yes, that is so.

6739. I suppose the name of your firm was given on your exhibit there?—Yes.

6740. If disinclined to exhibit from a business point of view, would you, with the object of ensuring that British manufactures should be creditably represented among the exhibits of other countries, be willing to exhibit at great international exhibitions in future, provided that some permanent organisation were available which would minimise the trouble and cost to individual exhibitors?—We would exhibit on the lines indicated in my Heads of Evidence.

6741. You say yes to that, then?—Yes, but it would be qualified by what I have said there with regard to the place of the exhibit—namely, that we think the artistic crafts should be included and shown with pictures and sculpture, so that British Art should be represented in all its branches. This means organisation by competent artists and craftsmen.

6742. In a word, you want your beautiful glass to be shown with pictures and sculpture?—Yes. That is done at the *Salon* now.

6743. In fact, you want a class where Applied Art should be well represented and kept well apart from the rest of the exhibition?—I think there should be practically what you might call an Arts and Crafts section, and I think it should be run on the lines of the St. Louis Arts and Crafts exhibit—that is, that the exhibits should, to a certain extent, be selected exhibits.

6744. Whom would you get to select them; whom would you be satisfied with?—We were perfectly satisfied with the arrangements at St. Louis. Walter Crane was practically the leader of the Committee.

6745. He is intimately connected with the Arts and Crafts Society, is he not?—Yes.

6746. If that society or those sort of people were well represented on the managing committee or commission, your object would be served?—We should be quite satisfied as long as there were some people who, we felt, were in sympathy with our class of work, and were capable of understanding and appreciating craftsmanship.

6747. Have you found that—I mean, have they been unsympathetic to you in any way that you can tell us?—I judge, to a certain extent, from what happened when I acted as juror. The bulk of an exhibit seemed to be considered its most important feature.

6748. Surely it is, is it not, to secure beautiful things as well?—No; I think that is a secondary feature. They want spacious exhibits, and the awards, as far as I could judge, were almost entirely regulated by the expense of the exhibit.

6749. By the expense of the exhibit?—Yes; of course it was right, to a certain extent, that the people who had laid out a very large sum of money should get some recognition; but, generally speaking, certainly the best things did not get the best awards.

6750. Was that your experience in Paris in 1889, when you were a juror?—Yes.

6751. How would you propose to remedy that?—The only way to remedy it would be that the awards should be given by a strong committee in sympathy with the work judged.

6752. You want to get some people on the management in sympathy with the Applied Arts, in fact?—Yes, exactly. As far as my experience goes, the exhibitions have been run as commercial affairs, and the great thing has been to make a big show—to fill the space, and to make the place look attractive and smart, but sufficient attention has not been given to attracting the very best work.

6753. You would like to make them look pretty, too, would you not?—Yes, but in rather a different way.

6754. You do not find fault with having rather a florid decoration of the court, for instance, do you?—No. What I mean is that too much attention has been given to securing bulky, impressive exhibits, and too little attention to securing a high average of quality.

6755. You would not keep out pyramids of bottles and mustard tins, would you?—No, you cannot do it. What I advocate is that there should be a separate section for artistic crafts.

6756. It comes back to that?—Yes; for instance, if my stand was placed next to a pyramid of bottles or mustard tins, my exhibit would suffer, because you would not expect to find anything artistic in that sort of relationship.

6757. Are there great developments going on very much in your class of manufacture? Have you got fresh creations continually, or do you keep very much to the old models?—We practically exist on fresh creations; we should not exist at all without them.

6758. You are quite an artistic firm?—We try to be. We are perpetually turning out new things, but of course they are always based on the best models, and the best models really are the old ones.

6759. You have to go back to the old ones, more or less?—Of course, you must go back to Rome and Venice and Greece.

6760. How do you bring your fresh creations to the notice of the buying public?—We have a very large connection. Our business is practically a private business, and we do not attempt to sell wholesale at all.

6761. Don't you sell wholesale?—We do not make any point of it.

Mr. H. J. Powell.

6 June 1907.

6762. You sell to shops, do you not?—Very little. People come to us.

6763. How many men have you in your works?—We have about 200 altogether.

6764. And that production you can sell to private consumers only?—Yes, and of course we get better prices.

6765. You do away with the middleman's profits, I suppose, for you take that?—We have nothing to do with middlemen. We cannot give them the discount they ask for.

6766. You could not afford it, I suppose?—We could not afford it. Besides, I do not think we want middlemen. It is very much better to deal direct with the consumers.

6767. Do you do much with your stained glass now?—Yes, a great deal. That is the larger part of our business.

6768. So you have a connection amongst ecclesiastical architects?—Yes.

6769. Do they come to you?—Of course the person who wants a window comes to us in the first instance.

6770. On the whole, would you desire to see international exhibitions about every five years or ten years or less?—It would entirely depend upon how they were run. If they were run simply like the last Paris Exhibition, for instance, I should say, "No."

6771. Do you not think the last Paris Exhibition was creditable to us?—There were very few British exhibits. Even if we went back to 1878, I do not think it was any use.

6772. (*Mr. Algernon Law.*). When you spoke just this moment of the last Paris Exhibition, did you mean the exhibition of 1889 or the exhibition of 1900?—The exhibition of 1900; that was the last one.

6773. (*Chairman.*). Did you see that?—Yes. I do not think that was any use at all.

6774. Not in regard to the articles you are interested in?—No. You would have to go back, I think, to 1851. That is rather before my time, but one has traditions of the exhibition of 1851; of course that was purely and simply an exhibition.

6775. You would probably think that the articles in the exhibition of 1851 were very ugly if you saw them now?—Yes. We have some of ours left. Still, they were the best of their kind then.

6776. (*Sir Isidore Spielmann.*). You have told us in the course of your evidence that stained glass cannot be properly shown at an exhibition. I have been referring to the report of the St. Louis Exhibition, and I there find this observation in it:—"Permission was obtained from the authorities to cut out glazing bars where wanted, and to insert the panels of stained glass in the windows themselves. More examples of stained glass would have been very welcome, since those we fixed had a very decorative effect." Was it not rather a pity that you did not exhibit stained glass at St. Louis?—Not on those lines. The stained glass may have helped to decorate the building, but I do not think the stained glass itself could have been shown to advantage.

6777. But is not the way to show stained glass, to show it as windows? You see at St. Louis they had to remove the windows to put in the stained glass exhibits?—It is a question of lighting; in your exhibition building you want to get a mass of light inside.

6778. The organisation of the Arts and Crafts Section at St. Louis was under the direction of Mr. Longden, who was deputed by Mr. Walter Crane to fix these things, was it not?—Yes.

6779. You could not have had any better conditions than those, could you?—I did not go to St. Louis, and I really do not know what was done with the stained glass there. I am going more on the show in Paris at the two last exhibitions there.

6780. I only mentioned this fact because you told the Chairman that it is impossible to show stained glass at exhibitions?—It is my belief that it is impossible, unless you have rooms specially set apart for it. In the Salon of Paris they have an arrangement under the galleries for showing stained glass; the light is subdued, so you can see the glass fairly well.

6781. The photographs of the Arts and Crafts Section showing the stained glass windows which were sent from St. Louis are certainly most effective in appearance?—I would like to make another point. Another great difficulty is that one stained glass window kills another one; if you have got two stained glass windows of two entirely different styles, the one would absolutely destroy the effect of the other. They may be both admirable specimens, but if you get them side by side, with no division between them, they would be destructive of each other.

6782. But with people who understand installation that would not be likely to occur, would it?—Yes, it would. You do not want to look at the two at the same time. You can see in almost any of our cathedrals how entirely one window may destroy another.

6783. In the early part of your evidence you said you do not care to exhibit because you get your goods copied, and later on you tell us that you approve of exhibiting in the Arts and Crafts section. Does not the same fear occur in both cases, whether you exhibit in the Industrial section or in the Arts and Crafts section?—If you get a large Arts and Crafts section, you attract to that section the people who would be useful, and therefore you get a result which counterbalances your loss by copying; but if you exhibit merely as an item in one mass of commercial exhibits, you do not get that advantage.

6784. At St. Louis, as you know, the Arts and Crafts section was in the Art Palace, with pictures and sculpture?—Yes.

6785. That is the way you would like to exhibit?—I think that is the way our goods should be exhibited.

6786. Did you exhibit at New Zealand?—To a very small extent.

6787. You have sent exhibits there, then?—Yes.

6788. I believe Mr. Walter Crane organised the Arts and Crafts section for it?—Yes. We sent a small exhibit.

6789. Are you a member of the Arts and Crafts Society, may I ask?—Yes.

6790. (*Mr. Harris.*) May we gather, as the result of your evidence, that practically, as a matter of trade and as a matter of business, you do not look upon exhibitions as having very much utility?—I should not like to say that. I think that exhibitions run on the Arts and Crafts lines do have a certain utility.

6791. That is a point I want to get. Run on the Arts and Crafts line have they a value as regards the individual trade as well as a value as regards the general industry of the country?—Yes, I think they have.

6792. So that you, exhibiting as part of an exhibit of the Arts and Crafts Society, feel that you personally are gaining something by it?—Yes. My own feeling is that when working for one of these exhibitions one naturally makes an effort to do something creditable, and I think that it is a very good thing that there should be an incentive of the sort you get when you know that your work is going to be appreciated, as it is appreciated in an exhibition which is set apart for artistic crafts.

6793. Then probably you would not go so far as to say that you would be glad to see exhibitions done away with altogether?—I should not say that, certainly. All I wish to get rid of is this heterogeneous jumble of all sorts of things without any consideration for their artistic merits.

6794. Do you not think that difficulty could be got over by organisation?—I do think so.

6795. Apart now from a special Arts and Crafts exhibit, could not that difficulty have been got over by organisation?—It evidently was got over at St. Louis.

6796. At St. Louis I think there was an Arts and Crafts exhibit?—Yes. We need not call it Arts and Crafts, but the organisation might be on those lines. If you had an organisation on those lines, I think it would practically get over all the objections.

6797. Take the case now where you grumbled at your unsuitable surroundings; was that not at Paris in 1878?—Yes.

6798. Did a firm like Salviati exhibit at that time, as far as you can remember?—Yes; but then they exhibited in the Italian Court.

6799. Were they free from the difficulties which you found yourself faced with?—No; they were under just the same disadvantages. They were dumped down next to maccaroni and those sort of things.

6800. So what you say for yourselves you could say for them?—Yes, quite so. All you really want is more classification.

6801. You spoke to the Chairman about bulk, and we will take an instance from glass generally. Do you suggest that the sort of thing that pays is a great pyramid of port wine bottles, as against a fine exhibit of highly-wrought Venetian or British glass?—Pays whom?

6802. Pays the exhibitor, and attracts attention?—What I meant to say was that it appears to me that what the people who are responsible at exhibitions have courted is rather these bulky pyramids, which take up space and make a show, than the better work.

6803. As a matter of fact, are you not rather overpushing that?—No, I do not think so.

6804. (*Mr. Algernon Law.*) Did you notice any difference in the organisation at the Paris Exhibition of 1889 and at the Paris Exhibition of 1900? At the exhibition of 1889 the British organisation was the result of voluntary effort, started by the Lord Mayor of London, whereas at the Paris Exhibition of 1900 there was a Royal Commission. Did you see any difference between the results of the two?—In 1900 the result was small; very few English manufacturers exhibited.

6805. That is, speaking generally?—Speaking generally, the exhibit was insignificant.

6806. Of course you saw the Royal Pavilion at Paris in 1910?—Yes.

6807. Would that not have been suitable for the exhibition of your glass?—Yes, that would have been very suitable.

6808. Was no suggestion made to you then to send glass to be fitted up in the pavilion?—No, I think not.

6809. Was there any stained glass in the Pavilion?—Yes, there was a little, but not very much. Stained glass in the ordinary sense was not very suitable to the style of the building.

6810. You mean in that particular building?—Yes.

6811. But if it had been a Tudor or a Gothic pavilion, would that have been suitable?—Yes. As a matter of fact, in 1878 we did all the glass in what was called the Prince's Pavilion—both the table glass and the stained glass.

6812. And the effects of lighting and all that were quite satisfactory, then?—Yes.

6813. So your case would really be met if you could be accommodated in the Pavilion?—Yes, because there of course you get the effect of separate rooms, where the light is more or less subdued.

6814. You could not have a Tudor domestic building or a Gothic building without stained glass to make it complete, could you?—By stained glass one usually understands ecclesiastical stained glass. Tudor stained glass would be a very different style; but you could have perfectly suitable stained glass for a Tudor building, and it would look perfectly right. When I was speaking of stained glass. I was referring more to ecclesiastical stained glass.

6815. If there was a baronial hall built, that would almost meet the case as well as an ecclesiastical building, would it not?—Then probably you would have an armoral window, which would look perfectly suitable and exceedingly well.

6816. (*Mr. Malcolm Ramsay.*) I gather that you have not exhibited very often at international exhibitions?—No; we have not exhibited since 1878.

6817. I regret that I was not able to be here at the commencement of your evidence; perhaps you have told the Committee why you have not exhibited more frequently?—Our experience at the Exhibition of 1878 was that the cost was out of all proportion to the results. Of course, it is a very expensive business to make a show at an exhibition.

6818. (*Chairman.*) I do not think you did tell us what the cost was in 1878; I do not know whether you have got it in your memory?—I am afraid I could not tell you offhand, but it was very considerable.

6819. Did it run into thousands of pounds?—No, I do not suppose it did. I do not wish to pin myself down to any amount, but at any rate we certainly did not reap any profit.

6820. (*Mr. Malcolm Ramsay.*) Then your experience has been that as a business investment it is not profitable?—It was not in that case.

6821. And is that mainly why you have given it up?—Yes.

6822. If we had a better organisation in the future, would you be inclined to take part in future international exhibitions?—If the organisation is on the same lines as it was with regard to the St. Louis Exhibition we should be quite willing. There, you see, glass was placed in its proper surroundings, or what were, from my point of view, its proper surroundings.

6823. I take it the question of expense would not deter you in that case, if you thought your exhibit was going to be done justice to as an artistic exhibit?—In that case I merely exhibited as one of a number of other craftsmen. In that way the expense is considerably reduced, and also you secure that the things are properly placed, and are made the best of. One would make a comparatively small exhibit, too, in that case.

6824. It reduces the expense, and increases the effectiveness of the display you make?—Yes; because you are in the right surroundings. You will understand that if you have a general heterogeneous exhibition, and if you want to make a show at all, you must make a very big one, otherwise it is absolutely lost.

6825. Have you formed any opinion as to the frequency with which we might participate in international exhibitions?—I have not considered that. Our Arts and Crafts Exhibitions in London are held every three years, and I think that is almost too frequent; every five, or even ten years would be sufficiently often.

6826. Assuming that your particular lines were included in a proper collective exhibit, would once in ten years be a sufficient interval?—I think once in ten years would be sufficient; I should think once in five years would be a little too often.

6827. Every five years would be too often, in the sense that the public would get tired of frequent exhibitions, and also because it is a great tax upon your time and energy?—Yes.

6828. (*Chairman.*) In your heads of evidence, in answer to our eighth question, you say outside shows attract the wrong class of people; you do not seem to attach any importance to the educative value of exhibitions—that is, to the advantage to even the wrong class of people of seeing your beautiful glass and other beautiful things?—They did not look at them.

6829. Do you think they would not look at them?—I think they all go through to the water-chute and that sort of thing, and that they do not look at the exhibits at all.

6830. Do you not think, speaking generally, that people's taste has improved in the last generation?—I am afraid I cannot say so; I do not think it has.

6831. You are still a pessimist in these things?—I am almost sure it has not really improved. There is a great taste for cheap imitations; but really for genuine good work I do not think the taste has improved. It is very disappointing.

6832. Have you not got a larger number of people who are cultured and know beautiful things and nice things than you had—people who come to your Exhibitions of Arts and Crafts, say?—It is difficult to say. I suppose there would be a larger number; but if you consider the growth of the population it is disappointing.

6833. You do not think it is a large percentage?—No.

6834. Then you do not think that exhibitions have had any effect in improving the public taste from that point of view?—I do not think they have. The influence certainly has not gone very deep.

6835. But it may have had a slight effect?—Yes.

6836. (*Mr. Malcolm Ramsay.*) Is it your opinion that the majority of the visitors go to these big international exhibitions for purposes of amusement rather than for purposes of education or of business?—That is my impression. If, as at Glasgow, there is a very good show of pictures a different class of people is attracted to that particular department and enjoys it; but still the bulk of the people went to the water chute and the side shows.

6837. (*Chairman.*) I was at Glasgow myself?—There was a magnificent show of pictures there, and they drew to that show a large number of quite the people one wants.

Mr. H. J. Powell.
6 June 1907.

6838. You do not infer, do you, that the people up there, the Scots, are superior to us in taste?—I do not mean to imply that, but they certainly succeeded in getting together an exceptionally interesting collection of pictures and sculpture.

6839. (*Sir Isidore Spielmann.*) You sometimes see in the industrial section of an exhibition most artistic exhibits. Referring again to the St. Louis Exhibition, Minton's and Doulton's had very large and very beautiful exhibits; the public went there, and their sales, I believe, were very extensive. Would you object to being in the industrial section in company with two such firms?—I should be unwilling under any conditions, to exhibit in the industrial section.

6840. Your sales were not insignificant either, I fancy, at the St. Louis Exhibition?—In itself the exhibit was very trifling, of course, but considering the amount shown, the result was satisfactory.

6841. The official report states that?—Of course we only showed a very small amount.

6842. It was not a large exhibit, I see; you sent about 70 to 80 pieces, and you sold the majority?—About half.

6843. (*Chairman.*) At good prices, I hope?—Yes, they were fair prices.

6844. (*Mr. Malcolm Ramsay.*) Did you get any business with America as the result of the St. Louis exhibit, or did the duties keep you out?—Indirectly we may have done, but I could not trace it to the exhibition. There is a certain class of Americans who will always have really good table glass, but as a rule I should say the American taste was most lamentable. Of course we are very much shut out in regard to all ordinary table glass by the tariff rates.

6845. (*Chairman.*) We have been told in the case of other high-class goods that the customs duty has not so much effect as it has in the staples which can be got anywhere. The people who buy your goods would be people to whom money is not always an object, would they not?—That is so, but combination of taste with money is exceptional.

Mr. Edward James Crosier, called and examined.

Mr. E. J. Crosier.
6 June 1907.

6846. (*Chairman.*) You are a member of the firm of Messrs. Crosier, Stephens and Co., of Newcastle-on-Tyne, I believe?—Yes.

6847. What exactly is your business?—We are engineers, not manufacturing on our own account, but representing several manufacturing firms; for some we have the sole agency for Great Britain, for others the sole agency for the north of England.

6848. Do you act only for British firms, or do you represent foreign firms?—We represent certain American firms also for things that we cannot get here.

6849. You have taken part in several exhibitions in this country, I believe?—Yes.

6850. But you have not exhibited at any international exhibition abroad?—No; but my principals have, and I have visited the exhibitions, at all events.

6851. Which exhibitions here have you exhibited at?—We have exhibited at several in the north of England—at Newcastle, Sunderland, Middlesbrough, Glasgow, and Manchester.

6852. The Manchester Exhibition of 1887?—Yes.

6853. And the Glasgow Exhibition of 1801?—Yes. Then we have also exhibited in London—last year.

6854. You have exhibited chiefly labour-saving tools and appliances, I think?—Yes.

6855. Each ranging in value from £20 to £500?—Yes.

6856. Have you had any increase of business with foreign countries which you can attribute to exhibiting your goods?—Yes, after a long interval—not always immediately.

6857. Did you exhibit those under your name, or under the name of the makers?—Latterly under our own name.

6858. Then you are allowed to do that by the makers of the goods?—Yes.

6859. So that you have got certain rights and you take the responsibility of that?—Absolutely. Many of our customers do not know but what we are the manufacturers.

6860. Are many of these things made to your order?—What do you mean by that, Sir?

6861. I mean by "your order," whether you have a voice in the scheme of the tool or machine that you are showing; in other words, whether you have anything to do with its design?—Yes. A machine which will be advertised in the engineering papers in about a fortnight in our own name is our own design entirely.

6862. Have you had any disadvantages in having your goods copied by foreign competitors?—Yes; but perhaps we get wrinkles in return. We cannot shut our eyes to what they exhibit.

6863. Have you had awards at exhibitions?—Yes.

6864. Medals?—Yes, gold medals.

6865. Have they been of advantage to you?—I do not think we attribute very much value to them.

6866. Do you put the medals on your business cards?—We sometimes have put them on circulars.

6867. But except the Manchester Exhibition, which was large, and the Glasgow Exhibition, I suppose the exhibitions you have exhibited at have been rather small?—The Newcastle Exhibition in 1887 was fairly large.

6868. Have you ever bought, or been induced to buy, from British or foreign manufacturers as the result of having inspected their goods at any exhibition?—Yes.

6869. In one of your letters I see there is a criticism of an award of a certain prize to Messrs. Lipton?—That is not my criticism, that is from a newspaper, but I endorse it. If I may revert to your question about purchase, we saw a machine at Liège, and have since purchased about 100 of those; at the Gas Exhibition at Olympia two years ago we saw a machine, and have since purchased and sold about 50 of those; and at an engineering exhibition at Newcastle in 1893 we were introduced to a firm from whom we have since purchased goods to the value of £12,000 or £15,000.

6870. Are there any definite points on which you have derived instruction from visiting exhibitions as a manufacturer and so on?—Yes.

6871. Do you go to exhibitions besides the ones you exhibit at?—Yes.

6872. Did you go to the Paris Exhibition in 1900?—I did not get there.

6873. Did you get to St. Louis?—No, I was not there.

6874. Then as to questions 8 and 9, which you propose to take together, I gather from your heads of evidence that one of the great reasons why you have not exhibited at all these great international exhibitions has been the amount of money involved?—Yes.

6875. Because, amongst other things, you would have to have the attendance of an expert to explain the exhibit?—Yes.

6876. Was it the case that you were very busy, and that you could not spare men to attend these exhibitions?—We find, as I have mentioned in one of my letters, that you want a really good man at these stands, and we find that to send a really good man takes him out of his ordinary work and throws things rather out of joint. Perhaps I might just give an illustration of the importance of having a good representative. The present Mayor of Tynemouth and another gentleman and myself were very anxious to see certain machines at Liège. The Mayor of Tynemouth speaks German and his friend speaks French, and we got along very well till we got to the stand where these machines that we were most of all anxious to see were placed. There was a man in charge of the stand, and my friend the Mayor tried him with German and the other man tried him with French, and I tried him, but he could not understand. Then it just happened that a man from Dewsbury was going past, known to the Mayor, and he hailed the man. He said "Can you make this chap understand?" The man in charge

spoke Flemish, I think, and as it happened so could this man from Dewsbury.

6877. The man from Dewsbury could speak Flemish?—Well, at all events he could make the man in charge understand. He said, "What do you want?" I said "If you will just tell this man to operate these machines in turn in dumb show that will tell us all we want." So the operator put the machines through their facings in turn, and that was all we wanted to know. But if that man could have spoken English, it would have been very much better.

6878. That illustrates your point that you have to have a man who is competent in several languages?—Yes.

6879. Is not the expense of transport a great item?—It is very great, especially with heavy stuff.

6880. You get a certain allowance generally on the railways of the foreign country where you exhibit, do you not?—Yes, you do get facilities of that sort.

6881. As you have not had any experience in showing or placing your goods at these large international exhibitions, you cannot tell us of any improvements that we can make in organisation there, I take it?—Yes, I think I can. I think if in the British section they provided lifting tackle and that sort of thing, even supposing they charged the individual exhibitors the actual cost, it would be very much appreciated. I remember the difficulty we had in placing our goods at the last Engineering Exhibition in Newcastle. I should think we could have saved 25 per cent. or 30 per cent. of our labour cost if there had been over the machinery hall a travelling crane. We simply had to get men with all the most primitive appliances, and do the best we could. I am quite satisfied that it would have saved us 30 per cent.

6882. Then the organising Commission, or whatever it is, should always try and arrange to have labour-saving appliances for moving the goods from one part of the exhibition to another?—Yes. You would very likely find some crane-maker would be only too pleased to put a crane over the section at a very low cost, for the sake of the advertisement.

6883. That brings me now to your suggestions for improvement in organisation. You attach importance to showing your machinery in operation, naturally?—Yes. I saw a machine in London yesterday, and at one glance, as soon as they set it in motion, the friend who was with me and myself appreciated the whole thing—on the instant. We could not have done that if it had been still.

6884. I suppose even you, with your technical knowledge, find it is very difficult to appreciate a machine that is not in motion?—Yes, that is so. But we saw it on the instant as soon as ever it was set agoing.

6885. For that purpose you suggest in your heads of evidence something rather outside what we have got to consider; you suggest a floating exhibition?—Yes I thought I would mention that as I had it in my mind.

6886. There have been floating exhibitions, have there not?—I do not know whether this one in London which we were asked to take part in has become an accomplished fact or not. I have not read of it.

6887. You cannot give us your experience of your relations with the governing body of an exhibition, can you?—That is getting on to rather delicate ground. As a matter of fact, I asked my people to turn up the correspondence which I had in mind when I wrote to you, but perhaps it is just as well the letters could not be found. They were very unsatisfactory indeed.

6888. Unsatisfactory?—Yes. It was just as if an office boy had been turned on to it, or a public school boy who knew nothing about business at all. It involved sending a man and a considerable amount of expense, whereas an ordinary business firm getting that same request would have done what we asked.

6889. What was the exhibition at which it occurred?—That was in connection with Liège.

6890. What was it that you wanted?—I forget now exactly what the request I made was. I wanted them to go to a certain stand and ask a question, I think—a very simple thing; but I got a very silly reply.

6891. You did not get a businesslike reply?—No, nothing at all like that.

6892. Was that the only communication you had with them?—No, I wrote a second time, and got no answer at all.

6893. Then you have some suggestions to give us for making exhibitions more successful. To a certain extent it is one of the matters of detail for exhibitors to invite people to come and see their exhibits, and send them tickets of admission; but has that ever been done?—Yes; it is done at all these trade exhibitions.

6894. At an ordinary trade exhibition it is done, would you say?—Yes.

6895. You believe in getting the greatest number of people at an exhibition?—Yes. You never can tell at your stand who the man is. The very best men are most careful to conceal their identity, from this feeling, "Now if I give Crosier, Stephens a card they will be sending their traveller to pester me for an order." So the very best men will conceal their identity, and sometimes we may spend a long time talking to a man who is no use to us whatever, and then another man comes up, equally unknown to us, who may be very useful. A leading man of Armstrong's, for instance, spent a long time at our stand one night, and none of our fellows knew who he was until I went up and shook hands with him. He purposely kept his identity quiet lest we should trouble him. But as a result of that visit we got an order about two months later for a machine. So the maxim is to be courteous to everybody, and take your chance of an after-result.

6896. I see you praise the work of the Canadian section of the Liège Exhibition?—Yes. Just three days ago I had a letter from the Commissioner in Dublin asking me to go over, in which he said that if I would go to Dublin I would find things even better than at Liège.

6897. Was that letter from the Commissioner of the Canadian section?—Yes.

6898. Then you go on in your heads of evidence to say that in 1891 a young firm spent £800 at an exhibition, and seemed to have done very well out of it?—Yes. That was my own firm, when we started, but I did not like to put it in that way.

6899. I rather gathered that it was; at any rate, I hoped it was?—In the case of the second exhibition to which I refer, I had to go away on the Continent for a rest, and when I got back the promoter of the exhibition said it was a very big shame—he put it more strongly than that—that when my back was turned the fellows had not attended to the stand; so that the result from the first was very much better than the result from the second.

6900. I do not know whether you have considered at all the nature of the organisation that we should have. Do you think that a Royal Commission is the best form of organisation for a large exhibition?—How can I express myself without being ungracious?

6901. We do not mind; we want your opinion?—My own opinion seems to be backed up by the various cuttings and quotations which I have sent to you—namely, that business men would have more confidence in a commission if on that commission there were definite business men. But then the difficulty is to give a sufficient inducement to these business men to give the time to it. I certainly should not encourage the spending of national money for the direct helping of exhibitors. I think each exhibitor should bear his own expenses. I should say let the commission of the British section offer all the facilities that they can at cost price, as it were, such as the handling that I speak of. If I am going to exhibit at Boston, or wherever it may be, and I tell the Commissioners there I want so much space, I want labour, I want lodgings for my men, I want printing done, I want my catalogues translated into the language of the country—I think it would be very good if the British Commission would help me to get these things done at a reasonable price.

6902. And you would pay the cost?—I would pay the bare cost.

6903. You would want a very good organisation, in fact?—Yes.

6904. Which, of course, costs money?—Let us stand on our own feet, but you help us to buy in the cheapest market, so to speak. That is all we want.

6905. Do you think you could get a business man as head of the Commission who would be acceptable?—It would be very difficult.

6906. Because a business man who is in active work

Mr. E. J. Crosier.

6 June 1907.

could hardly give his time?—That is just what we say in business—the man you want for a department is not out of a job. I want a man now, but I cannot find just the man I want.

6907. You want to have many good business men on the Commission or Committee, do you not?—Yes. Take Armstrong's, up our way. Supposing they were going to take part in an exhibition, they would want a big stretch of space, and their interest would then become the common interest of all the exhibitors. I should say that a representative of Armstrong's firm could come on to the board or on to the committee—arrange it according to the people who take space.

6908. Put them on if they were given a big space, do you mean?—No. Supposing there were an exhibition organised, and Armstrong's applied for space, they would want a good stretch, and supposing you said to Armstrong's, May we nominate your Mr. Saxon White, or your Mr. Brackenbury, or your Mr. Somebody Else as an honorary member of our committee, or an advisory member of our committee; then you can co-opt him, or bring him on in any way you like.

6909. You do not want exactly honorary members—you want working members?—Yes, you do want working members.

6910. You would not object to rather a different stamp of man as the Commissioner, I take it, as long as you had plenty of good business men, working men, on the Commission?—That is so. I quite see that you would have to have a certain class of man for the Commissioner, and then he would co-opt or in some way secure the assistance of business men.

6911. I suppose you think it would be an advantage to have the staff formed more or less of people who are experienced in exhibitions?—Yes.

6912. (*Mr. Algernon Law.*) Were you invited to exhibit at Paris in 1900?—I had not started business on my own account then.

6913. Were you invited to St. Louis?—Friends of mine were exhibiting at St. Louis, but I did not have an opportunity of going.

6914. I see you say that for the last 34 years you have been associated with leading firms who have had experience of exhibitions?—That is so.

6915. Were these leading firms with whom you were associated invited?—Yes.

6916. Were they manufacturing firms?—Yes.

6917. You say in your heads of evidence that an exhibition under present conditions means a serious disruption of ordinary business routine at headquarters; what conditions do you suggest to overcome that difficulty?—When I mentioned the floating exhibition, I had that in mind. One could then depute a man to practically spend his time continuously at the exhibition.

6918. That is a matter of personal arrangement?—Yes. At the Electrical and Engineering Exhibition at Olympia last year, what I did was to send one of our men down permanently, our London man was there every night, and then other members of the staff took a week in turn. It was open for four weeks.

6919. How do you suggest that this committee or commission should be selected? Who should start it? Should the Government make the initial selections, or should they be left to a chamber of commerce? The London Chamber of Commerce has suggested that they would be a good body to commence an organisation?—The London Chamber of Commerce is very good, and I think I may say that the chambers of commerce seem to be getting much more practical and active every day now. I know that in Newcastle—where we have just lost our president, Sir Charles Palmer—they are very active now, and so is the Sunderland Chamber of Commerce. On those you have very good men, and I do not know any body of men from whom you could get better assistance.

6920. But you would not leave it in the hands of one particular chamber of commerce to organise the body, would you?—No, I do not think we ought to do that. Then I think such a body as the Institution of Mechanical Engineers ought to be represented.

6921. And the Iron and Steel Institute?—Yes.

6922. (*Mr. Harris.*) You have referred especially to exhibiting labour-saving tools and appliances; are we to understand that you have made a sort of special study of them, both in your own business and in those with which you are connected?—Yes, that is so.

6923. You have not merely selected these for exhibition out of a larger quantity of general work?—No. We have specialised for the last 20 years in economising appliances and labour-saving appliances for engineers.

6924. You have referred to buying certain machines abroad, and selling so many of them again; was that of any direct advantage to British trade? Can we say that you at an exhibition picked up a machine which has really helped your business or the business of the British manufacturer? Was it not merely an agency matter?—I am afraid I do not quite catch your point.

6925. In reply to the Chairman, who asked you whether you had ever seen tools or appliances at other exhibitions which had been of use to you, you said, Yes, we have bought machines abroad and have sold several since?—That is so.

6926. Was the buying of those machines any advantage to British trade? Were you not merely acting as agents for a foreign trader?—It has worked out to the advantage of British trade in this way—I will tell you quite frankly. We quite thought we had got the sole agency for Great Britain, but after we had been at work a month or two we found that another firm had also got the sole agency for Great Britain! As we offered these machines from time to time, we were asked for a little variation. We were asked to make the machine so that by putting in packing-pieces it would cut three inches deeper. The reply we got from the makers was, "We are so busy in turning out our standard machines that we cannot make any departure." That meant that for certain purposes—particularly for sending into the engine-rooms of steamers, so that they could do certain repairs afloat, instead of waiting till they got to a repairing shop in port—this machine was no good. Our friends, rough and ready men up North, said "This is no good; but if you can take it three inches deeper we will have it." Following on that we got a letter two or three weeks ago from a firm in Paris, offering this machine—the original machine. So we wrote to the makers again, and they wrote to us, "We cannot help it; we sell the machines, and we cannot say where they go." The outcome of that is that we are having made for us in this country an improved machine which will meet our friends' requirements, and therefore we shall get less and less from abroad and shall supply English tools. We sent the week before last three of these machines to India, I have this morning sold one for New Zealand, and so on. So it works round. We lose one day by the foreigners pirating us, and we learn something from them another day.

6927. You have not apparently had much experience of the international exhibition as opposed to the local exhibition?—In my own capacity, no; but as representing some of the very best engineering firms in the country I am constantly having a chance of chatting and comparing notes with them. I have perhaps a better idea than if I had been all the time just with one firm.

6928. Have you formed an opinion as to the value of an international exhibition as an advertisement of British trade?—Yes.

6929. Will you give it to us?—If I had sufficient capital I should exhibit at every international exhibition which was centrally situated and accessible; that is, on the line of traffic, providing I had something to show which would appeal more to buyers if seen in operation than on paper.

6930. You attach great importance to the machinery being in operation, evidently?—Yes.

6931. I take it that in the case of one of the sections—at Paris, I think it was—where they had dead machinery and live machinery, side by side, you would say that the advantage to the live machinery was tremendous?—Yes, absolutely. The first question with me would be, What have I to show?

6932. Do you mean, Have you a novelty?—If I got a prospectus of an exhibition, and if I were able to exhibit there, I would think, What have I to show that is novel?—novel either actually or novel to that market. Now shall I show it? Then if I decide to show it, I want the best position I can get, I want the machine in motion, and I want the best printed

matter in English and in the language of the country; then I should want the best representative I could have, and if I could spare time I would put in a good deal of time myself.

6933. How came you to have so much knowledge of Liège? You were also there, I gather?—Yes. If I must blow my own trumpet, I am the originator of the Junior Chamber of Commerce up in the North. It is really a commercial debating society, and it was started as a commercial debating society. I was going to give them a lecture on Liège, so besides going there and looking very carefully into things, I got a press-cutting agency, to which I subscribe always, to send me all cuttings about Liège. But I never found time to prepare the lecture, so when your circular came before me what I had prepared for one thing came in handy for the other.

6934. You did not actually exhibit anything at Liège yourself, did you?—No; but we were selling appliances that were exhibited there, for instance, Messrs. Green's fuel economiser. The man they had in charge spoke four languages. Whenever they take part in an exhibition on the Continent this particular man goes, so he is employed continuously on that very work if there are exhibitions, and he gets *au fait* in exhibition work—both in the erection and in the demonstration, and in attending to the stands.

6935. In fact, he appears to be a sort of special traveller charged with exhibition business?—Yes.

6936. And that is quite a part of the ordinary business of the firm?—To some extent.

6937. Could you explain what struck you so much in the Canadian section at the Liège Exhibition?—The personal element.

6938. It was the personal element?—Yes, undoubtedly. In this letter before me the Commissioner has given me information. I remember certain other information he gave me, but it has lain dormant until now. In regard to this particular bit of information in this letter, I told him that I was interested in this thing, and he says, "I have written to So-and-so, of Nova Scotia, asking them to write," and so forth. This letter contrasts very strongly with the letter I had from the British Commissioner at Liège.

6939. Still on the personal element, you referred to having certain paid agents who did not do your work when your back was turned at a particular exhibition which you mentioned to the Chairman?—That was so.

6940. Those were not, I take it, your own men, they were strangers, were they not?—They were my own men. At the last exhibition, a comparatively small exhibition, at Newcastle last year, my two sons were of great help to me. They just did it for the hobby. Incidentally I may say now that all my men are practically partners, as I give them a liberal share of the profits, and so the conditions are altogether different to-day.

6941. That is since this incident?—Yes. We have profit-sharing now, and the conditions are altogether better.

6942. You illustrated an answer of yours to the Chairman by referring to Messrs. Armstrong's man, and you suggested that supposing Armstrongs took a big space they should appoint a man who might be taken on to the Commission?—Yes, I did.

6943. Does it not occur to you that you might have to deal with this difficulty—that Armstrongs' man would be really looking after Armstrongs' interests and not yours?—But would he not have a big stake? The amount that you pay for space at an exhibition means that you are committed to spending a certain amount of money, and supposing their space was costing them £300, he would be looking after the interests of their £300 and also the interests of the other man who is only spending £30, because any facilities that he got for Armstrongs', I suggest, would be equally available for the little man spending only £30 on space. That was the idea I had.

6944. I do not quite follow you. Do you not think that the tendency would be to neglect the little man and to look only at his own work?—That is where we would expect the parents of the thing, the Government nominees, to keep things right.

6945. You do then recognise that you might have to deal with the difficulty of trade jealousy?—Yes. I may tell you that a partner of mine was a partner in an exhibition yeras ago, and I think that we got the best space in that exhibition.

Mr. E. J. Crosier.

6 June 1907.

6946. (*Mr. Malcolm Ramsay.*) I gather that your view—which is not merely your own personal view, but is given as representative of engineering opinion—is that international exhibitions do promote the export trade in this country?—I think so.

6947. You are clear on that point, are you?—Yes.

6848. Do you think that international exhibitions are equally suitable as an advertisement for all our leading trades?—I was thinking about that. Take things like the textiles, where you can carry a sample in a portmanteau and look up your customers: I am not always sure that they gain by international exhibitions. I was talking this morning with a man from New Zealand, and he was very strong on the personal element. "For any soft goods, or light goods, that could be carried round, get a good traveller and send him round with them," was his answer. So that, as I say, it is for things that you cannot carry round in a handbag that I think an exhibition is chiefly useful.

6949. So far as individual business is concerned, a State by participating officially in international exhibtions may give one man the kind of advertisement which is useful to him, whereas his neighbour in a different branch of business can get no advantage from it at all, or very little?—That is so.

6950. The textile trade is one of the biggest in the country, is it not?—Yes. I have my doubts as to the benefit to the textiles.

6951. Speaking from the point of view of the engineer, who has a heavy article to show which requires an ocular advertisement rather than a printed one on paper——?—That is so——

6952. You think an exhibition is a very good thing?—Yes.

6953. How often do you think engineers as a whole would be prepared to support international exhibitions? At what intervals would they be ready to go?—I should think not less than five years.

6954. Would you put it as often as five years?—I am doubtful.

6955. Perhaps ten?—Yes.

6956. Because the cost is very heavy, and therefore to recoup themselves they require to spread it over a period of years?—Yes.

6957. I think you told the Chairman that you would not consider it right that the individual exhibitor at an exhibition should receive any direct subsidy, but that he ought to pay his own expenses?—I think so. I think that a man ought to feel the responsibility of working on his own, and standing on his own feet, but should have all possible general assistance at, say, bare cost price.

6958. That is, the assistance of the State should take the form of the most efficient organisation that can be provided?—Yes.

6959. And should not go any further?—Unless it were this: Supposing a man had assistance from the Commission, for which they would require to send him in a bill for the labour and such like, they might say, "Now, if you will have your stand ready on the opening day, you shall have a discount of 10 per cent. on that."

6960. Do you think that exhibitors generally, so far as your experience goes, would take the same view—I mean, that there is no general feeling among would-be exhibitors that the Government ought to pay their expenses for them?—I have never heard that; but if I may supplement what I said just now, there is this general feeling: "We are not expected to be ready by the opening, and nobody will be ready by the opening; if you only get your stuff inside, that will do."

6961. There is a certain lack of briskness about the organisation?—Yes.

6962. You have heard complaints perhaps from exhibitors who have been to recent foreign exhibitions. Take Paris or St. Louis; have you heard any complaints from them as to the inadequacy of the Government organisation?—No, I have not.

6963. Have you been led to suppose that it might be better?—There is always a certain amount of grumbling, but there is no particular point that comes to my mind at the moment.

Mr. E. J. Crosier.

6 June 1907.

6964. But you think that there is room for improvement, and that it might be more efficient; is that your impression?—I have heard grumbling as to the British Commission not doing enough.

6965. I am talking of the British Commission?—The extracts that I have sent you show you that.

6966. And so far the British Commission might be much more effectively organised?—Yes. I thought at first you were referring to foreign Governments.

6967. (*Chairman.*) For the Liège Exhibition, to which, I think, your extracts refer, there was not a Royal Commission; that was organised by the London Chamber of Commerce?—I could not make that out. In one place I saw it mentioned that £100,000 was being spent upon it.

6968. Upon the exhibition at Liège?—Yes. Both the "Westminster Gazette" and the "Coal and Iron Trade Journal" referred to £100,000 being spent on it; and I marked that with a query.

6969. (*Sir Isidore Spielmann.*) On the British section?—Yes.

6970. (*Mr. Harris.*) Are you sure that it is Liège—Yes.

6971. (*Mr. Malcolm Ramsay.*) The British Government did not participate at all at Liège, and I think no Government grant was made?—That is what I thought was a mistake, and so I marked it with a query.

6972. (*Chairman.*) If it is only Liège that your criticisms refer to, then they do not relate to a British Royal Commission. You are not referring to one of the Paris exhibitions, are you?—No, to the Liège Exhibition.

6973. (*Mr. Malcolm Ramsay.*) Have you heard any complaints about the British Commission either at Paris in 1900 or at St. Louis in 1904?—As far as I can remember the remarks about Paris, they were complimentary.

6974. Now turning to the committee which should manage the British section, would you be in favour of giving that body very strong powers of selection—that is to say, ought they not to have power to reject any exhibit which is not first class?—Yes.

6975. Would manufacturers as a whole be prepared to submit their goods for selection? Would they be jealous of each other on that account?—How could you very well do that? Supposing there was a competitor of mine on the Commission, and my goods were thrown out. This competitor might be quite innocent of it, but I should have my own thoughts about it perhaps. I do not know as long as a man is prepared to pay for space whether you can refuse him.

6976. But after all the space is limited in an exhibition?—Yes, it is.

6977. If the exhibition is a large international one, would you not agree that the exhibit should be truly representative of the best we can produce?—Yes.

6978. And that the exhibit must not only be an advertisement for the individual, but also a collective display for the nation?—Yes.

6979. Consequently the Commission ought to select from the various exhibits which are offered to them only those which are typical and of the highest class?—I never heard that suggested before, but I think it would certainly tend to securing greater credit for British productions.

6980. We have been told by various witnesses that the display of Great Britain at Paris and other international exhibitions has never been really representative, or as effective as those of foreign nations; and therefore I was asking whether it might not be a good thing for this Committee to be rather an independent body with certain judicial powers, as it were, so as to ensure that the collection shall be representative and of the best class: would you agree with that?—Now I grasp your idea I should, certainly.

6981. Otherwise it seems to me you lower the standard so much; if anybody who offers is allowed to exhibit, subject to the space available, it must tend to lower the quality, must it not?—Yes. The effect would be the same as if a fellow gets plucked at an examination; if he is of the right kind, he will try harder the next time and come out top. So a firm who are refused, if they are of the right sort, will try harder and produce something better the next time.

6982. Do you not think that exhibitions may be profitable and advantageous for firms who are growing and have a name to make, and for people who have a novelty to show; and that the firm with an established reputation may not think it so necessary to use that particular form of advertisement?—I do not think so. Competition is so very keen nowadays that no firm can rest on its oars, as it did in a bygone generation, and say "Now I have made my position, and I can go on steadily for the rest of my days." In the case of some of the firms we represent, for whom we have had a good connection, we find it just as necessary to fight hard for them to maintain their trade, because their very success makes them a mark for envious firms to try and get a share of it. So that while the man with a novelty and the man with a business to make has a great deal to gain, the man who has a business to hold has also something to gain.

6983. And a great deal to lose?—Yes.

6984. (*Sir Isidore Spielmann.*) I understand that the Liège Exhibition was the only foreign exhibition at which you have exhibited?—That is so in regard to the machines we are selling.

6985. But you have visited many others?—Yes.

6986. Can you tell us at which of those exhibitions you consider the British section has made the best show in your line of business?—From what I have heard ——

6987. No, from those you have seen ——?—Next to Paris I think Glasgow.

6988. What was the British machinery section like at Liège; was it good?—No, there were only about seven firms there.

6989. Important ones?—Green's, Simpson's, Armstrong's, and I forget the other four.

6990. You exhibited in that section, did you?—Yes, but not in our own name. The machines were exhibited there which we are selling in this country.

6991. Were any awards given to your firm?—No, not at Liège.

6992. Could you tell us, whose names do these machines you sell bear—yours or the manufacturers'?—Green's Economiser of course is sold as Green's Economiser. Some of the machine tools sometimes go out as Richards' tools and our name-plate would be screwed on alongside of Richards'.

6993. As agents, I suppose?—Yes. Then some of the smaller machines are sold absolutely in our name.

6994. And you do not exhibit as agents for those firms?—No; we take a general stand.

6995. Do you put your own name up at all?—At Liège Exhibition we did not, but at London here last year we did, and at Newcastle we did—everything on the stand was in our name.

6996. I think I understood you to say that the firms in your line of business do regard exhibiting at international exhibitions favourably?—If they do not come too frequently.

6997. Taking all the exhibitions that you have seen, which country has organised its exhibits the best in your line of business?—I was not at Düsseldorf, but I do know that a great number of our engineering people were very much impressed with the Düsseldorf Exhibition. I forget how many years ago that is, but I know that at the time our folks up North seemed to be talking about it.

6998. In the machinery section, which country do you consider we would do well to follow?—I do not thing we ought to follow; I think we ought to try to originate.

6999. You stated that our organisation and our installation are not very successful?—Yes.

7000. And that other countries do better?—Yes.

7001. Which would you point to as serving as a model? Take the Paris Exhibition; which machinery section there do you consider was the best arranged and equipped?—I hardly know how to answer that, because the general arrangement of the section from a sightseer's point of view might be excellent, but the details might be in default.

7002. No one country appealed to you exceptionally?—I would say no one.

7003. (*Chairman.*) Do you do mostly a home trade—that is, is the home trade the most important part of your business?—Until two years ago, yes; but in these

last two years we have exported more. Now the two are about equal, I think.

7004. In what you export is the colonial trade as important as the foreign?—Yes, leaving out Japan. I may say that we have very heavy exports to Japan, but taking those out, the Colonial trade is more important than our foreign trade.

7005. The exhibition last year that you referred to was the Electrical Exhibition at Olympia, I suppose?—That is so.

7006. I suppose the number of these special exhibitions render it less necessary that you should have large international exhibitions so often?—Yes, that is so.

7007. I suppose you would always show at local or British exhibitions in your particular line?—No, not always. We are not coming up to Olympia in September, for instance.

7008. What exhibition is that?—It is a repetition of the Engineering Exhibition.

7009. And you are not showing there this year?—No, we are not. We think it is too soon on the heels of the other one.

7010. That would be an interval of less than two years?—Yes.

7011. And that would be too soon even for a special exhibition in this country?—I think so.

7012. (*Mr. Malcolm Ramsay.*) Do you happen to know whether the engineers of your acquaintance make a point of visiting foreign exhibitions?—They go very readily if they can have company. The Institution of Mechanical Engineers went to Liège, and they go to Aberdeen this year. Then the Naval Architects and so on visit these places. If they can have company a whole lot of them go.

Mr. E. J. Crosier.

6 June 1907.

7013. They do not think these exhibitions would be likely to be good enough for them to go over alone?—It is not that; it is for the sake of the company. Then business men find it very difficult to get away for a holiday, and if you can combine a holiday with a little bit of business inspection, if not actual transaction of business, the conscience feels a little bit easier about it.

7014. I suppose they may at a foreign exhibition learn a good deal?—Yes.

7015. They may get a good many hints that are useful; perhaps they may see a new machine?—There is that about it; and there is also this you see —— Supposing the Mechanical Engineers are going to Aberdeen and I go with them, I will meet customers from all over the country, and apart from the exhibition the meeting with kindred spirits is an incitement. That is one of the things that I think the Commission ought to encourage.

7016. Does that consideration apply equally to a foreign exhibition, say one at Paris or Brussels?—Yes.

7017. (*Mr. Harris.*) You mentioned to the Chairman just now that you had had a great accession of business with Japan lately?—Yes.

7018. Can you tell us how your Japanese customers came to you?—Yes. Armstrongs at Newcastle had so much business for the Japanese that the Japanese inspectors—some of whom are now right on the Emperor's personal staff by the way—were located at Newcastle, and for a time their head office was at Newcastle. So we were in close contact with these men, and in that way we got business. Now they have removed their head office back to London. Of course, we have also resident agents in Japan.

Mr. James Gray Mathieson, called and examined.

7019. (*Chairman.*) You are a director of the firm of Messrs. Clarke, Nickolls and Coombs, Ltd., I understand?—That is right.

7020. Where are your works?—At Hackney Wick.

7021. You have been in business for some time, I think?—The firm has been in business for about 35 years.

7022. Has your firm exhibited at the great international exhibitions abroad?—No. We certainly have not exhibited at all at such exhibitions since 1883.

7023. That was an exhibition at Amsterdam, was it not?—Yes.

7024. Then you exhibited confectionery, I suppose?—Yes.

7025. Have you had any increase of business in foreign countries which you could attribute to showing at exhibitions?—No, we cannot directly say that we have.

7026. On the other hand, you have not had any great disadvantage from exhibiting, have you?—No, I cannot say so.

7027. I understand you do not attach any great value to the awards which you got at Amsterdam?—No. We used to make use of them at that time—we used to make a feature of it; but it is very ancient history now, and we do not attribute any further importance to it.

7028. Before Amsterdam did you not exhibit in Paris in 1878?—No. We were at an exhibition in 1877 somewhere in South Africa, I think; but that is getting a little before my time really; it is so far back.

7029. You have been to some exhibitions, I suppose, since?—We have been to exhibitions in this country, but not abroad.

7030. Therefore it is no use asking you whether you have been induced to buy machinery or other things from seeing goods at the big international exhibitions?—No. When there has been an exhibition in this country we have taken care to go and see what there is in the way of foreign exhibits and machinery, or anything of that kind.

7031. Is there not one at the Agricultural Hall generally?—There is a Confectioners' Exhibition there every year.

7032. Do you exhibit there?—We showed in the first few years, but latterly—I do not know for how many years; for five or six years, at any rate—we have given it up. We have found that it was rather a tax on our staff, and really we find our customers are best managed by the travellers who are in the habit of calling on them. Exhibiting took a large number of our men off the ground, and we gave it up for that reason.

Mr. J. G. Mathieson.

6 June 1907.

7033. Is the way you sell your goods, or bring them to the notice of new buyers, by travellers?—Yes, we trust almost entirely to travellers.

7034. Have you travellers abroad as well as in London?—The continental business is done by our continental agent.

7035. Where does he live?—His headquarters are in London, but one or other of his people is nearly always travelling abroad in the countries on the Continent in which business is likely to result. That practically means Holland and Belgium in our case. He occasionally does a little in Constantinople, Egypt, Denmark, Norway and Sweden, but it is mainly in Holland and Belgium that we do trade abroad.

7036. In Turkey and the East there is a tremendous consumption of sweetmeats, is there not?—But it is rather a low class.

7037. Too low a class for your manufacture?—It is rather below our usual class of goods. There is a great trade, I know.

7038. It is almost a food, is it not?—I suppose confectionery is; at any rate, sugar is food. But that business, the Mediterranean trade, is altogether very much cut, and we do not cultivate it.

7039. And you have never tried to cultivate it?—No.

7040. Then I come to your reasons for refraining from exhibiting. In your heads of evidence you speak of the high tariffs as one of the great reasons?—Yes. We are practically shut out of all European countries but Holland and Belgium.

7041. Do you not manufacture a different class of goods, specialities that are not made in those countries that have the high tariffs?—To some extent; but in those high tariff countries sugar is dear, and the tendency there is for the confectionery to be dear also,

Mr. J. G. Mathieson.

6 June 1907.

and the trade to be done by high-class firms catering only for the rich. The English confectionery trade, so far as we do it, is like a good middle sort of trade; our particular branch is the better middling class of goods. There is, of course, a large amount of common English confectionery which my particular firm does not touch; the bulk of the trade that is done by us is the sort of better middling, though we also cultivate a high-class trade.

7042. Does not your trade go down as low as farthings and halfpence—that is, selling by farthing packets in cheap neighbourhoods?—We do a little in that way, but not very much.

7043. Not much?—We do not cultivate it so much.

7044. The bulk of your trade is rather betwixt and between—the middle-class?—Yes, that is right.

7045. Where the sugar duties are high, of course the corresponding duties are even higher?—Yes, the duties are generally double the sugar duty, at least.

7046. Are they at least as much as that?—Yes. In some cases they are not, but in most cases; and as a rule, the more backward the country the more they put on confectionery—I do not know why.

7047. Then their consumption of sugar, and, consequently, the sugar trade, is not anything like so much as it is in this country?—No.

7048. I suppose that even in your time the consumption here has increased very much?—Yes.

7049. A large proportion of your trade is home trade, is it not?—Yes.

7050. About three-fourths, at least?—Fully that.

7051. You do not see any possibility of getting a large trade with foreign countries, do you?—Not with the tariffs as they are at present.

7052. What about the Colonies? Did you exhibit at the New Zealand Exhibition last year?—No. We do a trade, of course, with the Colonies.

7053. There is a considerable trade in sugar and sugar products, is there not, done with the Colonies?—Yes. But then our Colonies are so very peculiar in their ways. They have tariffs, too; they are not as great, but we never know exactly what they are going to be up to in the way of all sorts of impediments to trade. We have had trouble with catalogues, for example.

7054. When sending catalogues?—Yes, and just now there is another thing cropping up in one of the Australian Colonies—I forget which it is. They want the ingredients of certain things of ours to be specified, for example. We do not care to do that on all occasions.

7055. Is that not so at the Cape?—I do not know that we have had any trouble with the Cape.

7056. You think it is one of the Australian Colonies?—Yes, it is one of the Australian Colonies; I think it is Western Australia. I suppose it will apply to the whole of the Commonwealth now.

7057. Surely the Commonwealth tariff is for the whole of Australia, is it not?—Yes. I was thinking of a particular order for one of the Australian Colonies, I forget which. But it would come under the Commonwealth tariff. It was in Queensland that the case arose, but as the question has not been raised with other shipments of the same article to other parts of the Commonwealth, there may be merely some excess of zeal on the part of the local official in the case.

7058. Do you do a large trade with Australia and New Zealand?—We consider it a big trade.

7059. But for doing that trade you send travellers, I suppose, and you do not use exhibitions?—That is so. We have an agent permanently there, and we send a traveller occasionally, who goes round with our newest samples. Our agent has his traveller—he travels for various firms in other lines of business as well, and he is always going round; and every now and then we send our traveller out, who accompanies him on his round and shows the latest things.

7060. Do you have new compositions pretty often?—Novelties?

7061. Yes, novelties in confectionery?—Yes.

7062. Are you always inventing?—Yes.

7063. Chiefly something to look attractive?—Well, you must modify things in some way. I suppose these goods are bought by the appearance mainly.

7064. Do you exhibit them at the Confectionery Exhibition here?—No; we have given that up now for some years. Of late years we have been trying to make a sort of special show of our own. When our customers come up at the time the show is on in London, we try to get them down to our own showroom and let them see the things there. That is more convenient for us.

7065. You are referring to the wholesale buyers, are you not?—Yes.

7066. I suppose that on the whole you have had very little to do with exhibitions?—That is so.

7067. Are you in favour of this country being represented?—As far as our trade is concerned, I do not think it is any good.

7068. You do not think it is any use?—No. Of course, I can only speak for our own particular trade.

7069. Your travellers can carry about your samples, and make them known in any country where there is a chance of establishing trade?—Yes. We reckon that when the traveller goes round he will get the order before any of our opponents see the goods. Our opponents will only see them after we have sold them and they have got into trade. But if we show them at an exhibition, one's opponents see them just as soon as the possible buyers do.

7070. But I suppose more of your possible customers would see them at an exhibition?—I think the travellers as a rule get to know where to find the customers.

7071. Do you think they know all the wholesale people who will be their customers?—Yes; they soon find them out if they are smart.

7072. Then I take it you have not considered whether there are any means of improving our organisation for the management of exhibitions?—No. You see we have no modern experience at all, because we have not exhibited since 1883.

7073. (*Sir Isidore Spielmann.*) Will you tell us, please, what is exactly the nature of your exhibits when you do participate in exhibitions?—At the Agricultural Hall we used to show pretty nearly everything that we make—that is, the general line of confectionery, jams, candied peel, and also Christmas crackers—that sort of thing.

7074. Do you make sweetmeats?—Yes, sugar confectionery.

7075. Chocolates and things of that sort?—That is right.

7076. When you say that exhibiting your goods will simply be to show them to your competitors, do you refer to the competition in foreign countries?—I mean particularly in tariff countries. I suppose the average tariff over the Continent of Europe would be about 100 per cent. *ad valorem*, and so, of course, it is impossible for us to compete if there is anybody in the country who can make the goods.

7077. Have we not also a great deal to learn from the foreigners; in fact, have we not more to learn from the foreigners in the way of confectionery than we can teach them?—I should not like to say that.

7078. Has not France and has not Austria a greater reputation than we have in the way of confectionery?—They have in this country; but if you go to Holland, I think you will find we have as good a reputation there as anybody.

7079. In competition with their goods at exhibitions, do you think we are likely to come out best?—Do you mean if we were showing alongside a French or a German firm?

7080. Apart from jams—where I suppose we take the first place——?—Yes.

7081. Are not foreign countries ahead of us in other confectionery?—It depends altogether on the class of goods. If you take a particular firm's goods there are, I have no doubt, plenty of firms in France and in Germany whose average would be above ours, because we cater for a different class of trade; but if you take two things which are strictly comparable, I have no doubt we could produce as good an article.

7082. In these foreign exhibitions, do you find that English manufacturers hold aloof because they are a little afraid of competing with the foreigner?—No, it is not for that reason; it is because the duty that would be put on is prohibitive. Where the foreigner

can produce for 2s. more, the tariff is very likely 20s. to 40s. or 50s.

7083. Then the fear of competition has not in any way weighed with you in refusing to take part in international exhibitions since 1883? It has been only the matter of the duty, and not because you think you would compare unfavourably?—That is so. It is the matter of the duty. We could not send the stuff in, because the people would not pay the price that would be necessary.

7084. Do you not think that to show confectionery in process of manufacture would be an attractive exhibit in an exhibition?—Yes.

7085. Have you ever done that?—We have not done it abroad, but I have known it to be done. It would be attractive no doubt, but whether it would be effective in inducing business abroad, I do not know. We have repeatedly shown confectionery manufacture in this country.

7086. There is no duty in Holland and Belgium, I think you say?—There is very little.

7087. Have you ever participated in an exhibition in either of those countries?—Not since 1883.

7088. But they have had several—Belgium has had many, and you did not exhibit in Brussels in 1897, did you?—No. For one thing, they are comparatively small countries; and then to do the thing properly we think the expense would be out of proportion in those countries to the results that would be likely to accrue.

7089. So you really have many reasons for not exhibiting at international exhibitions?—Yes.

7090. There is to be one in London next year, the Franco-British Exhibition?—Yes, I know.

7091. Where there will certainly be no duty on your goods; will you participate there?—The question is about international exhibitions abroad, is it not? The thing is rather different in this country. I do not know quite; we have come to no decision, at any rate yet, about the Franco-British Exhibition here. It is possible we may exhibit. But I cannot say I have very much faith in it myself.

7092. You have no faith in exhibitions at all, do you mean?—Very little. I believe much more in commercial travelling, and in getting travellers to take the samples round.

7093. (*Mr. Malcolm Ramsay.*) Do you think that most of the manufacturers in the same line of business as yourself would agree with your view of the value of international exhibitions?—Abroad? Yes, I think most of them would.

7094. Were you invited to go to Paris in 1900?—I expect so; we had the opportunity, I daresay.

7095. You do not know whether your firm thought specially about it at all?—It is rather before my time, but I have no doubt they came to the conclusion that it was not worth going to at that time.

7096. Have you yourself visited foreign exhibitions at all?—No, not abroad.

7097. You have not been there to see what other countries were producing?—No.

7098. Or the stuff that might possibly come into England to compete with your goods?—No; but one of our people was at the last St. Louis Exhibition.

7099. (*Sir Isidore Spielmann.*) What was that for? Was it with Bakers?—No. One of our representatives who happened to be in America at that time—he was going to Canada—went to see the exhibition. Bakers exhibited their machines, and we had the offer to make sweets by their machines there; indeed they wanted us to go.

7100. (*Mr. Malcolm Ramsay.*) I daresay you are aware that the British Government have spent considerable sums of money on taking part in international exhibitions?—Yes.

7101. Would you say that so far as your business is concerned, this money has been of no use at all?—I think that is so.

7102. (*Mr. Harris.*) So that, in fact, the upshot of your evidence is that, from a trade point of view, so far as you are concerned, exhibitions are really no use at all?—That is so in countries where there is tariff on our goods. I daresay if a big country like the United States were to take the tariff off, they would be useful.

7103. Was the tariff the reason why you declined to go and manufacture confectionery for Baker and Co.?—Yes.

7104. (*Mr. Algernon Law.*) You yourself have not visited international exhibitions abroad, I think I understood you to say?—That is so.

7105. So you yourself have no experience of them?—I have no personal experience.

7106. Does the tariff affect goods which are not produced in a foreign country? Jams, like those we produce in England, and marmalade, are not produced in the same way in foreign countries, are they?—They are produced in foreign countries to some extent, and could be produced to any extent. Jam is a thing that we have tried frequently in foreign countries; our agents have tried to get them on to it, but it does not seem to catch on, except to a very limited extent.

7107. Are you aware that in the case of tea, which is not drunk in many foreign countries, and which was not much drunk in the United States, the result of having a stall and selling tea at the exhibition at Chicago was that there was a great demand for it?—That might be so.

7108. Do you not think that if you had a stall at an exhibition producing all your confectioneries you might create and cultivate a taste for those things which you produce which are not produced in foreign countries?—There are very few things that we produce which could not be produced in foreign countries. Jam can be produced in foreign countries, and if the demand got up to any great extent, it would certainly be produced there. It is a thing which they could produce very much cheaper than we could send it, because for one thing packages bear a very great proportion to the cost.

7109. Is not sugar more expensive abroad than it is at home—or was in the past, at any rate?—Yes, and that, of course, checked consumption.

7110. Is it not of assistance to an export trade if your raw material is much cheaper than the raw material in the foreign country?—Yes, that is no doubt the case if the raw material is cheaper; but then the difference between the tariff on sugar and the tariff on jam, for example, is great too, you see.

7111. If there was no jam in the country to protect, and you cultivated a taste for it, would not the people pay the money for that jam, if they wanted jam and they could not get it otherwise?—We would have all the expense of making up a trade for a new thing which is not known, and then when we had established a trade, my feeling is that somebody would start making it in the country. We have had repeated offers made to us to start a factory in Germany, for example; and that is what we would rather do.

7112. Does that not apply to beer, ales and articles of that sort? Bass's ale competes in other countries, though beer is made in the other countries?—I am a teetotaller, and I do not know much about that sort of thing; but I should say that Bass's ales is a totally different thing and a specialty of their own which nobody else could produce.

7113. At any rate, you yourself have had no experience of exhibitions, nor of what an exhibition can do for your trade?—No; it is more a matter of opinion probably than of experience.

7114. It is a matter rather of conjecture than of experience?—Yes; it is, of course, conjecture, but founded on what we think is a pretty sound basis.

7115. You say in your Heads of Evidence, with regard to the Sugar Convention, "absolutely no attention was given on this side to consumers' interests." Is the case of sugar and confectionery quite the same? Have you foreign confectionery sold in this country competing with yours?—We do have that.

7116. At a lower cost of production, owing to any bounty on confectionery *quâ* confectionery?—No. What I referred to there was that I suppose in nearly all foreign countries they used to raise a considerable excise on sugar, and, as a result of that, the sugar consumption was low, and they seem to have thought it was proper therefore to give all the users of sugar in the country as great advantages as possible, so they made all their duties on confectionery, etc., absolutely prohibitive. Now, although owing to the Convention they have been able to reduce their excise on sugar,

Mr. J. G. Mathieson.

6 June 1907

they have frequently left the proportion of the relative protection on sugar goods as great as it was before, although there is absolutely no reason for it. I think that at the time of the Convention, if our people had been properly awake, they might have got that reduced; in fact, I know it was stated in the House of Commons at the time by Mr. Bonar Law that the duty on sugar products would be reduced to a protection of about half-a-crown, I think it was, which was allowed under the Convention. As a matter of fact, they have not been touched in some cases.

7117. But you have not been able to find a case in which the high duty on confectionery worked so as to produce a bounty on the export of confectionery from the foreign country to this country?—No; there was no question of bounties on confectionery.

7118. The object of the Convention was to get rid of bounties, was it not?—That was so.

7119. And there was no bounty on foreign confectionery?—As a matter of fact, it had no practical effect that way, but it might have had such an effect.

7120. So that the case of sugar, and the case of confectionery are rather different; in the one case, there was a bounty on sugar coming into this country, but in the other case, after the Convention, there was no bounty on confectionery coming into this country?—No; and that is not my point in what I say in my Heads of Evidence.

7121. Still, the two cases are not quite the same; and I only wanted to bring that out. Would you in no case be induced to exhibit your confectionery in a foreign country in order to provide a thorough representation of all the British industries?—One could only do it on what one might call patriotic grounds, I suppose.

7122. I suppose it is not a very expensive operation to send an exhibit of confectionery abroad, is it?—The greater expense would be in keeping a man or somebody to look after it. You must send somebody who is well acquainted with the language for one thing, and with the business arrangements and so on.

7123. Your goods would not want any explanation, I take it, so that a man who was looking after other things could attend to yours as well?—They need a great deal of explanation, because the number of different lines that we produce is enormous—we have a tremendous range.

7124. So it would entail a certain amount of expense in that direction?—Yes.

7125. (*Mr. Wilson Fox.*) Assuming that you were induced on patriotic grounds to join in a British exhibit of confectionery in order that Great Britain should be represented in that line, you would insist, I suppose, on having your name on your own exhibit?—That is rather a hypothetical question.

7126. Would you object to sending a collection of confectionery anonymously as part of a British exhibit in Paris?—I think we should, because we would get absolutely nothing for it, would we?

7127. Exactly. Anyhow, your desire would be to have your name identified with your portion of it?—Yes, I think so.

7128. Is there much competition between you manufacturers? Have you got many competitors in your own particular line in this country?—Yes.

7129. Would that fact operate against your desire to join in any collective exhibit with your competitors? Would you rather send an exhibit of your own singly, and in your own name, and show in a stand of your own; or would you have no objection to sending with your competitors an exhibit to make up a collective exhibit of the whole trade? What is your feeling about that?—Personally, I do not think I would have much objection. In that case, of course, the thing would be really anonymous.

7130. No, each person's name would be over his own exhibit; but it would be a collective British exhibit properly arranged, and arranged on a system. To put it plainly, would the fact of your trade rival showing under the same roof and in the same group prevent your desiring to join in such an exhibit as that? Would you be afraid of the rivalry?—It wants some consideration. I do not think so, speaking off-hand; but I do not think such a thing is practicable.

7131. Why not?—You see there is such an immense number of different things, and each manufacturer tries to be a little different from the other man. The way, and the only way, that we can succeed in ousting the other man is to show some advantage over his goods, and we do it really by continual alteration in the style of the packages, and so on.

7132. One advantage of the collective exhibit would be to show the variety of things Great Britain could produce?—Yes.

7133. Notwithstanding that you would have that advantage in a collective exhibit, you would not be in favour of a collective exhibit, I think?—I do not think it would be any good to us.

7134. I rather want to get from you whether if you did show at Paris, say, you would prefer to show by yourself in your own glass cases and apart from everybody else?—Yes, we should decidedly. If the exhibition was undertaken for commercial reasons we should undoubtedly prefer a separate show of our own.

7135. You would not prefer to show in a collective exhibit?—We would prefer to show by ourselves, decidedly.

7136. Do you know whether foreigners show confectionery at international exhibitions?—Take Paris, again, for instance. Do you find that German manufacturers of confectionery or American manufacturers of confectionery show in Paris?—I do not know enough about it to say. I should think comparatively few would show, but there might be a few.

7137. But you do not know?—No, I do not; and I have no experience of it at all.

7138. According to the theory you have advanced, it seems to me there are likely to be no confectionery exhibits in any foreign country if tariffs stop everybody coming; I want to get at that. Does anyone show confectionery in a Paris international exhibition except the French, on account of the tariff there?—That I cannot say. There may be some special things that others may show.

7139. You see it is rather an important point for us to arrive at. If British confectioners do not show in foreign European countries on account of the tariff, how far are other foreigners stopped from showing?—Every now and then, of course, there does arise a case in which we can compete, but it is not often. There is one particular article which we make which we could send to France, and I suppose such cases arise from time to time. It is just possible that some manufacturers may have such cases. As far as the general line of British confectionery, at any rate, is concerned, I do not think we can hope to do any good. There may be specialties, but if we had a speciality of this kind which we could send to a high tariff country we should prefer to sell the secret for a royalty and so avoid the tariff.

7140. You do not know, as a matter of fact, whether there are good confectionery exhibits from the international point of view at international exhibitions?—No. I have never been to them, and so I cannot say.

7141. Therefore you do not know really whether it is worth your while sending to these exhibitions or not?—I have come to the conclusion that it is not.

7142. I know, but that is from another point of view—that is from the business point of view. If the confectionery exhibit at a foreign exhibition was a very bad one, and is not likely to be drawn attention to, it is hardly worth while your sending, is it?—I do not quite understand your point.

7143. Supposing the confectionery exhibit at a foreign exhibition is a very poor affair, and is likely to be put away in a hole-and-corner, and is known to be thought very little of, it is hardly worth while your showing?—No, not in that case.

7144. Your chief trade is in this country, is it?—Yes.

7145. Still even in this country where you have got your trade you would not look upon an exhibition as the best form of advertising your goods, would you?—No.

7146. Or as anything like a good form?—No, we are not enamoured of exhibiting anywhere, but at the same time we do show in this country from time to time. We have to consider all the circumstances of the case.

7147. Is that because your class of goods is one which would be looked at by wholesale buyers, and not very much by the general public?—I do not know that. We have an immense number of customers, and we go

to some extent direct to the retailers. The trade is not done by a small number of people at all.

7148. I should have thought that the people who would have seen your goods, and done business with you afterwards on account of having seen them, would be wholesale buyers?—No. Practically I do not suppose there is a wholesale buyer of importance in the country that we do not call upon regularly.

7149. Is it your view that anybody belonging to the general public who goes to an exhibition would be likely to send an order for your goods if they saw them?—You see we do not do business with individual members of the general public; we would not do direct business with them.

7150. Who would buy your goods on account of having seen them, say at the Franco-British Exhibition?—There are both wholesalers and what we call retailers—that is, shopkeepers—and we would appeal to both. We have separate travellers for our wholesalers and our retailers. One of the difficulties of the exhibition business is that you have got to find out what sort of fish you have hooked, and you have got to have the right man there to deal with him. That means that you have got to keep such a large staff there.

7151. Then it is not a trade which would attract orders from consumers afterwards like, say, the jewellery trade?—No.

7152. Or the furniture trade?—No. We would not deal direct with them; it would upset our other buyers.

7153. You do not know anything about awards, because you have never gone in for them?—The last award we had at an international exhibition abroad was the award we got at the Amsterdam Exhibition.

7154. And that is a little bit out of date?—Yes.

7155. You have got your own views as to the best method of advertising your business, and exhibitions is not one of those methods?—That is so.

7156. (*Mr. Algernon Law.*) You say that you will not exhibit in a country where there is a high tariff wall. Have you considered whether you might not obtain custom from some other country by visitors from that country going to this exhibition in the country where there is a high tariff wall? We have had it in evidence that people have sent exhibits to Chicago and St. Louis which have resulted in great business being done in Canada, for instance. But you have not considered that aspect of an international exhibition, have you?—No.

7157. You might have got from exhibiting at Paris, for instance, business in Brussels, for no doubt a good many Belgian people visited the Paris exhibition?—Of course there would be that possibility. I do not know that we have really considered that point at all, and I hardly think that the amount would be likely to be great in our case.

7158. (*Chairman.*) You think that the demand would not come from the people for any new goods that you have been making, but that it would come from the wholesale buyers? If you can persuade the wholesale people that something new that you have got will go off they will buy it, I suppose, and then the retailers will have to stock it?—I suppose that is how it works. We persuade our wholesalers, and they persuade the retailers.

7159. You do not go in for the democratic point of view that by showing at an exhibition at Earl's Court or elsewhere, people get a taste for a new sweetmeat and demand it, and will not be happy until they get it from the shopkeepers?—No, we do not; but, of course, that is a point.

7160. You agree more with the aristocratic theory, that it should come from above, and that people should be told what they ought to like?—I do not know. We have such a tremendous number of articles, and the business in each one is, after all, so small. If we had a few lines only there might be something in that idea of getting the public to ask for them; but we have never tried to boom a particular article in that way. We could perhaps, by lavishly advertising it, get people on to it; but that has not been our attitude at all.

7161. (*Mr. Malcolm Ramsay.*) I suppose you make many kinds of experimental confectionery, and you develop that one which takes the public fancy most?—That is so. I suppose out of every 20 new lines we would be satisfied if one wins.

7162. You are putting down ground bait?—Yes. We are continually bringing out new things, and it is only a proportion of them that go off.

7163. (*Sir Isidore Spielmann.*) I find that at the last great exhibition, the St. Louis Exhibition, one of the best and most important exhibits in the British section was in your line—that of Messrs. Baker and Sons?—Bakers are machinists, they are not confectioners.

7164. They showed machinery in motion making all kinds of confectionery; I will not specify what they were—they are all in the catalogue here, and they include ice creamery, chocolates, and other things. It seems that all that was sold during the progress of the exhibition, and the public went in very large numbers to buy it. Baker and Sons obtained a *grand prix* for their exhibit, which they advertise very largely, I believe?—Yes, that is so.

7165. That being so, would a similar exhibit on your part not be an advantage to your firm?—Their position is absolutely different to ours. They sold their machines, and I am told they did very well over it; but that would not be an advantage to us. I knew all about this thing beforehand. Bakers were very anxious for us to go and make the sweets for them, but we would be simply pulling the chestnuts out for Bakers. You would really need to go and find out the result to the man who made the sweets for Bakers, and learn whether he got any advantage and whether he sold anything. I do not remember altogether, but I am inclined to think that Bakers could not persuade any English firm to do it for them, and they had actually to get a foreman in America to make the stuff. Of course they could sell it there all right, because they bought the sugar in the country, and they would be exactly in the same position as an American manufacturer. The stuff that was made on the spot was not like imported stuff on which they had to pay duty. It was a totally different thing.

7166. Would you say that taking a high award at an exhibition would be of no particular advantage to you?—I do not know that it would be in this country. Of course there is a certain amount of prestige attaching to these things; but, after all, when you have got this award you have got to advertise it, and to send your man round to tell the buyers that you have got it.

7167. Would that not influence business?—It might, but I do not think it would influence it much. I think they usually form their own conclusion from the samples that they see.

7168. (*Mr. Wilson Fox.*) When firms reach a certain reputation it is not so necessary for them to exhibit, is it?—No. We showed when we were younger than we are now, I suppose.

TWENTY-THIRD DAY.

Thursday, 13th June 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Isidore Spielmann.
Mr. U. F. Wintour (*Secretary*).

Mr. Ivan Levinstein, called and examined.

Mr. I. Levinstein.
13 June 1907.

7169. (*Chairman.*) You are the managing director of the firm of Messrs. Levinstein, Ltd., manufacturers of aniline dyes and chemicals?—Yes.

7170. And also you represent the Manchester Chamber of Commerce here to-day?—I do.

7171. Shall we take first your evidence on behalf of the Manchester Chamber and then your evidence on behalf of your own firm, or have you not separated the two?—I have not done so. As a matter of fact, when the question came before the Chamber, I expressed my views and other people expressed their views, and it was found that the Chamber supports me entirely in my views; so that my evidence in both capacities is really the same.

7172. Then that will not make any difficulty here; but on another Commission we have had difficulty, because witnesses coming from a Chamber of Commerce have said that they do not agree with all that their Chamber puts forward?—In the Manchester Chamber, there is no doubt about it, we agree amongst ourselves absolutely.

7173. You have had a good deal of experience in connection with exhibitions, have you not?—I have had some experience.

7174. I see that you exhibited at Berlin in 1877; at Paris in 1878; at London in 1885; at Liverpool in 1886; at Manchester in 1887; and at St. Louis in 1904?—Yes.

7175. But you did not exhibit at Paris in 1900?—No; we did not exhibit at Paris in 1900; there was not sufficient inducement for us to exhibit there.

7176. The articles that you have exhibited have been coal tar dyes, I think?—Yes; coal tar dyes and their intermediate products. By their intermediate products, I mean such products as are used in the manufacture of coal tar dyes.

7177. I understand that you have not found any direct benefit from exhibiting?—No, we have not. We have our own establishment in America, and we have our own establishment in Italy; and having travellers going round in those countries, it is of very little advantage to us to exhibit there. There is another special feature in our case, and that is that you cannot judge of the quality of aniline dyes by their appearance. They are sold in powders, and nobody can tell whether the powder is a good powder or a bad powder, or whether it is novel or not novel. An aniline dye is not like an engine, where you can have a model before you and can judge by seeing it working.

7178. You cannot show the working of your products at an exhibition?—No, you cannot; in that respect it is not like the engineering trade.

7179. And you certainly cannot show the wearing of a dye?—No, I am sure you cannot, although we tried to do that at St. Louis by showing dyed specimens.

7180. I understand you have suffered no disadvantages from your dyes being copied?—No. There is one point that I do not think I have mentioned in my heads of evidence, and that is the general apathy which exists amongst a large number of manufacturers in regard to exhibiting, especially in those countries where there are high tariffs. They say, and rightly say, if we were to exhibit there, the tariffs would prevent us from exporting to that country, where we might otherwise probably get some benefit in the shape of trade. This opinion prevails very largely amongst a certain class of manufacturers.

7181. It prevails very largely in the textile trades, does it not?—In the textile and in other trades. They feel that even if they exhibited, they could not get any substantial benefit, because the duties would prevent them from exporting.

7182. But they might be able to export into a neighbouring country. Take, for instance, Canada and the United States; by exhibiting in the United States they might show to the Canadian people what could be got from this country?—Yes, that would be so; and that was one of the reasons, perhaps, why we did exhibit at St. Louis. But, on the other hand, Portugal or France or Austria or Germany are largely closed to us.

7183. Do you attach any value to the awards which you have obtained?—We put them on our letter-heads.

7184. You do that still, do you?—Yes, we do that yet. It is a kind of advertisement; because, after all, the customer may probably think if you have been exhibiting in so many countries you must be a larger firm. The Americans, for instance, attach some importance to it.

7185. The Americans do, you say?—Yes. We find, for instance, that the "Grand Prix" which we got at St. Louis was rather useful to us in America. It was a good advertisement there.

7186. Have you ever been induced to buy from what you have seen at exhibitions?—Yes, we have.

7187. You have felt the use of exhibitions in that way, and have bought—machinery, I suppose it is?—Yes. I have bought machinery on several occasions from having seen it at the different exhibitions which I have attended, especially machinery which might be useful in chemical manufacture. For instance, we have bought machinery for making ice, of which we use fair quantities now in our own manufacture. Then we have also bought air-pumps, air-compressors, and such like machines which we thought would be an improvement in our manufacture; in fact, we buy foreign machinery now—filter-presses and such like.

7188. I suppose because it is more economical; or is it altogether something better?—With the development of the chemical industry in Germany *pari-passu* there has been a development of chemical engineering to a much larger extent there than has been the case in this country. Engineering is almost as important as chemistry, in some branches of the chemical industry.

7189. I should like to take you into the chemical industry, as I know you are a great authority upon it, but we have no time this afternoon to go fully into it. Anyhow, you have bought a good deal from having seen new machinery at exhibitions?—Yes.

7190. And would you say that you have derived instruction generally in the same way?—Yes, there is no doubt about it.

7191. I think you told me just now that you have not exhibited at one or two exhibitions on account of the tariffs?—I did not speak so much really on my own

behalf then. I was saying that generally there is an apathy amongst a large number of manufacturers about exhibiting in tariff-ridden countries, because, as I have said, they say, and rightly say, "We cannot derive any benefit from exhibiting, because we are prevented from exporting into those countries on account of the duties." That does not refer so much to me personally; but, speaking generally, I say that I have heard a great many people express that opinion.

7192. Among the reasons that have stopped firms from exhibiting, do you think that the question of the cost of exhibiting and the question of trouble of exhibiting bulk very largely?—Certainly. I combine them all together. There is the duty, the cost of exhibiting, and the trouble of exhibiting—and it is a great trouble—without seeing any adequate reward for taking all this trouble.

7193. You do not see any direct result?—No; and the benefit can only come indirectly. You ought to distinguish between exhibits to some extent. If you have a novelty which is not known to the world, or which has not been brought before buyers by your own travellers, then I think an exhibition is of very great value, because people coming from all quarters of the world, will see your novelty—probably in a working model, if you can show it by a working model, and, in that way, you get an excellent and a very quick advertisement.

7194. As regards Manchester and Manchester goods, is it not the fact that the manufacturers deal chiefly through merchants, and, therefore, are not inclined to exhibit themselves?—Yes, that is quite true.

7195. Speaking generally, would you say that is true of the textile trades?—Yes, that is true of them. Only the wealthy and large manufacturers have their own agents in foreign countries.

7196. Such firms, for instance, as Tootall, Broadhurst, Lee and Co., and one or two others who are merchants as well as manufacturers?—Yes. You may find that some spinners and manufacturers have their agents abroad; but, generally speaking, that the bulk of the manufacturers do not directly deal with foreign buyers, but deal with them through merchants.

7197. Can you tell us whether that tendency on the part of the manufacturers to deal through middlemen is on the increase or decrease?—I should rather think that it is on the decrease. I think some of the larger firms are more and more inclined to do business direct.

7198. I know they are?—Once upon a time, they would scarcely deal direct with any foreigner, because they thought he was not safe, and could not be trusted, and they wanted to have cash down as soon as they delivered their goods or as soon as the goods left their mill. I myself am largely interested in textiles in Austria; in spinning and weaving. I am connected with two large mills in Bohemia and Lower Austria, and I know we are now buying yarns direct from English spinners. There is another point. When trade was not as good as it is now in Germany and in Austria and other countries, merchants acted as bankers to the foreign buyer, and do so yet in many instances. A commission house would give credit to a foreign buyer for three, four, five, or perhaps six months, where the manufacturer himself would never dream of doing it, and often could not do it. That practice is passing away to some extent, and some foreign buyers are ready to pay cash.

7199. I suppose it means a second capital almost for the manufacturer?—Yes.

7200. To that extent they should be more ready to exhibit, should they not, so as to become known to the foreign buyer himself?—Yes, if they have a speciality to show, but a great many have not.

7201. Because they could not exhibit staples, and they have not got new specialties?—Unless they have specialities in design or some special cloth—special novelties in the construction of the patterns or the weaving of the patterns, etc., there is little to exhibit. Some manufacturers are afraid of exhibiting because their patterns or their designs might be copied by the foreigner. But if a foreign manufacturer wants to copy an English manufacturer's design, he can do so by other means and ways without an exhibition.

7202. Is there anything in the fact which we have heard as regards the Yorkshire and Bradford trade, that the fashion goods are not exhibited because they are made only a few months before they come into the market, and even if they were not copied their attraction would be decreased by being shown at an exhibition?—There may be something in it, but the curious thing is that if a Bradford manufacturer has any new patterns, any new colouring, any new designs, he or his agent sends copies of his designs, and so on, to his foreign customers. If the foreigner wants to learn anything about a new design he can get the information in another way. I believe there is a good deal of prejudice about it.

7203. But if these new designs are not exhibited, the foreigner has to take some trouble in getting them?—Yes, but it is not such great trouble.

7204. Now I think I will take you on the general question. As I understand, you are of opinion that the direct commercial results are sufficient to warrant His Majesty's Government in making grants to organise British exhibits?—I think that is the case.

7205. Do you lay more stress upon organisation than upon any direct money help?—Both are important. We have seen that in Paris. As I say in my heads of evidence, in Paris the British chemical manufacturers for example made a very poor show, on account of want of organisation and monetary support.

7206. Are you referring to the last Paris Exhibition?—Yes. We did not exhibit, because I did not think we had sufficient interest in exhibiting.

7207. I suppose that poor show that we made was rather to the advantage of Germany?—Yes. People came there from all parts of the world, and they looked at the German exhibit, and said, "Of course, we can only buy from Germany; England is not in it," and so on.

7208. I do not think Manchester has had any collective exhibit, has it, at foreign exhibitions; such, for instance, as Bradford has had?—No. An attempt was made in that direction at St. Louis, but in Paris they had not any collective exhibit.

7209. Do you think that collective exhibits of Manchester could be possible?—Amongst some branches of manufacturers it would be possible, but amongst others not. There is a good deal of jealousy amongst a certain class of manufacturers, who do not want to make a collective exhibit, because they say, "We are the greatest manufacturers, and we want to make a bigger show than our neighbour." But if pressure could be put upon those manufacturers by the Government, or by some official arrangement, I have no doubt about it that collective exhibits could be arranged in many instances, and that they would be of great value. They are far more instructive than single exhibits.

7210. If you have a collective exhibit there would have to be some sort of choice and control given to the authority which makes up the exhibit?—Distinctly.

7211. So that it could take only the best and could reject?—Certainly.

7212. I suppose that you would be in favour of the authority having that power?—Distinctly so. That ought to be the case in the interests of the exhibition. There ought to be a proper grouping and a proper classification. You ought not, for instance, put a patent medicine or Beecham's pills amongst the silk manufactures.

7213. We have had a good deal of evidence in that direction, and complaints from people who have said that their beautiful goods have been placed against something or other quite common-looking?—I think there is a great deal to be said against that practice, because it spoils an exhibition altogether.

7214. Are you familiar with the German method of organising exhibitions?—I cannot tell you much about it. I know it is done largely through their Chambers of Commerce.

7215. Never mind if you are not able to speak to it, because we have had a certain amount of evidence upon it. If you do not know about it, I will not trouble you?—I do not know much about it; at any rate, I do not know sufficient details to be of any use to you.

7216. Can you tell us anything about the French methods?—I really do not know sufficient of any methods of any foreign Government to be able to give evidence upon.

7217. As regards the St. Louis Exhibition, I think you might tell us a little about that which would be useful. What is your opinion of the organisation of the British section there?—The organisation was very much

Mr. I. Levinstein.

13 June 1907.

better than it has been at any other exhibition I have been to. The faults which one had to find were faults for which our Government was not responsible at all. Everything was very much behindhand at the opening, and consequently the British exhibits were not completed by the time they should have been completed. But the care which was taken of the British exhibits was satisfactory.

7218. Do you mean the care which was taken by the British Commission?—Yes; we had no reason to grumble. The only thing we might do in the future would be to let the men, attendants and officials, have a better knowledge of languages.

7219. Had you much to do with any of the officials of the British Commission?—Yes, I am referring to the special committee appointed of chemical experts.

7220. (*Mr. Malcolm Ramsay.*) Were the German attendants provided by the German Government?—As far as I know they were. They looked very much like Government men in the way they carried themselves and bore themselves; they looked very military. The German Government had done a great deal, and is doing a great deal to encourage a good representation of the industries of the country.

7221. (*Chairman.*) But, of course, we must remember that the German Government also interferes a good deal with private industry. I do not know whether you would like that in Manchester?—I do not mind a little interference, if it is for the benefit of the Exhibition.

7222. You do not mind a little interference, do you say?—No, not as long as it is reasonable.

7223. I am glad to hear it?—I am not talking now about myself; I am only thinking of what would benefit the exhibition. I distinctly do think a little interference very desirable. We derived considerable advantage, for instance, from the advice we got from the London Committee. There was a Chemical Committee, of which I think Sir Boverton Redwood was chairman. I would not have exhibited at St. Louis if it had not been for the support and advice we got from that committee. For example, we sketched our own designs; these we sent up to London, and the committee considerably improved those designs, and helped us in every way possible, so that it was really a pleasure to do the work.

7224. And you think that is the right line to work on?—Yes.

7225. That is, to have a technical expert committee under a Royal Commission?—Yes.

7226. Could the same thing have been done for textiles?—Why not? There is not the slightest reason why you should not have on the Royal Commission men who are representatives of that industry, and who could appoint special committees of experts. If you appointed on such committees representatives of large home trade and shipping houses which are doing trade in all parts of the world, dealing perhaps with 30 or 40 manufacturers, such people would be most useful people for securing a good show of textiles.

7227. Do you think a sufficient number of suitable people in Manchester would give their time to that sort of thing?—I think so. There is yet sufficient patriotism in Manchester. In my opinion a number of suitable men could be found, if the official authority would support them and appeal to them on the ground that our prestige as the greatest commercial and industrial nation is in question. Take Japan, there will be an exhibition in Tokio in 1912; it is of paramount importance that we should prove to the Japanese that we are the greatest commercial country, and we should accordingly make the very best show there that we can.

7228. Do you think in that respect you speak for Manchester—for the Manchester Chamber of Commerce, anyhow?—Yes, I am speaking for the Manchester Chamber of Commerce.

7229. You know a good deal of Manchester; do you think a sufficient number of suitable men there would be induced by motives of patriotism to take an active part in the organisation?—Not only on the ground of patriotism. Those who have really something good to show, I think, would, especially if they knew that the Government was in sympathy with them, and that the Government, or its official representatives, would assist and help them.

7230. I suppose that the older firms, the established firms, would be more likely to say, "We have nothing to gain by exhibiting, as we have already got our trade and our position"?—That is quite true. But there is a different aspect. If you put it to such people, "We want to exhibit, because we think it is for the prestige of the country that you should do so, and we will assist you," I feel quite sure that many of those people would be ready to exhibit who otherwise would not exhibit.

7231. I think you told me that you are in favour of a Royal Commission as the organising body in preference to the London Chamber of Commerce, or any committee assisted by that Chamber?—Yes, a Royal Commission, with special expert committees, would be very much better.

7232. You think it is better that the Government should start the thing?—Very much better, because the London Chamber of Commerce would not have the influence with Manchester, for instance, but a Royal Commission would have considerable power in influencing individual manufacturers to make a show. I certainly would prefer a Royal Commission, but, as I said before, you ought to have on that Royal Commission men who are representative of the different industries of the country, and who are practically acquainted with them.

7233. Do you attach any importance to having a small permanent nucleus between one exhibition and another, so as to get, to a certain degree, the same men at exhibitions each time, and also so as to keep the records?—It would be an advantage, because they would gain a certain experience from exhibition to exhibition.

7234. You had not any experience of the Milan Exhibition, had you?—No, we did not go to Milan.

7235. You did not consider the possibility of exhibiting at Milan?—I did not. I only exhibited in St. Louis because of the manner in which it was put before us.

7236. What happened in connection with that exhibition? Did you receive a circular from the Commission?—What happened was this: Sir Boverton Redwood, who is a friend of mine and a colleague. Mr. Tyrer and one or two more on the sub-committee, approached us directly and said, "You will have to exhibit; you must not stand behind the Germans. We will give you every help." I said at first, "It is no use to us. We cannot benefit by it. We are in America, and we have our own people, and our own house at Philadelphia and at Boston." Well, they pressed us, and they showed us what advantages they could give, and what help they would give us, and then I was induced to exhibit.

7237. Was that by personal communication?—Yes, largely.

7238. It would not have been any use, I suppose, if you had simply got a circular, because you would have put it into the waste-paper basket?—Probably.

7239. The Manchester Chamber of Commerce has no special committee for exhibitions, has it?—No; but we have a number of special sections competent to deal with exhibition matters, such, for example, as the chemical and engineering, iron, yarn, etc.

7240. Do you think in future exhibitions that a good deal of help would be afforded by the Manchester Chamber of Commerce?—I think it not unlikely all will depend on circumstances.

7241. I suppose you do not want to have these exhibitions very frequently?—No, because then they would become too big a nuisance and too costly. In regard to the exhibit at St. Louis, for instance, although the Government was most liberal, still it cost a few hundred pounds—without reckoning our own time—the engineer's time, the draughtsman's time, and the time of our people in the dye-house and elsewhere who were engaged on it.

7242. What did it cost, do you think?—I take it that directly and indirectly it cost us £400, and I should think the Government must have paid at least £200, because they found the case.

7243. What was the case which the Government found?—They found the case for the whole exhibit, and a very beautiful case in design and material.

7244. What else did the Government find for you?—They paid the freight out, and they provided for attendance.

7245. Did you not pay anybody there to represent you?—No.

7246. Was that exhibit in the nature of a collective exhibit?—Scarcely so.

7247. It was a general exhibit in chemistry?—Yes; but it was not what I understand to be a collective exhibit.

7248. You did not have to send your representative out there to look after your goods?—No.

7249. But this excellent sub-committee made arrangements to take care of your goods?—Quite right.

7250. (*Mr. Malcolm Ramsay.*) Were your goods all by themselves in one case, or had you any other firm's goods in the same case?—Our goods were in our own case exclusively, and a very large case, too, it was.

7251. (*Sir Isidore Spielmann.*) With respect to the St. Louis Exhibition, if you had not been offered some financial support by the Government, would you have gone there?—Certainly not.

7252. It was only the offer of that support which tempted you to go?—Certainly, and the appeal of my colleagues that we must exhibit. We are the largest colour manufacturers and aniline dye manufacturers in this country, and they appealed to us personally.

7253. What was the nature of the award that you obtained, do you remember?—The *grand prix*.

7254. And that, I suppose, is useful?—Not in England. In America it is of some use, because in America they pay more attention to it.

7255. In the course of your evidence, you have said that you see no reason why similar collective exhibits could not be made by other industries with the same good results?—That is my opinion.

7256. I take it that that applies to other trades associated with the Manchester Chamber?—Yes, trades with which I am personally acquainted or which come within the knowledge of the Manchester Chamber.

7257. Would you hold out some financial inducement to everyone?—If it is worth while. I certainly would not hold that inducement out to a small man who could not show anything special. I certainly would not offer him such help.

7258. (*Mr. Malcolm Ramsay.*) You were speaking just now of the apathy of manufacturers towards exhibitions; do I understand you to think that the apathy in many cases proceeds from the belief that exhibitions are of no good to their particular trade?—That is my opinion.

7259. And consequently, looking at exhibitions from the purely commercial point of view, they have a very small effect on certain branches of industry?—I would not go so far as to say on certain branches; in certain articles we had better say, because each branch may have a novelty.

7260. Looking at it still from the strictly commercial and individual point of view, may it be said that when the State spends, perhaps, a large sum of money in taking part in an international exhibition, it is spending the taxpayer's money on a form of advertisement which will not suit a good many traders, is it not?—That might be so.

7261. Would you go so far as to say that—speaking of course, from the individual point of view?—Perhaps you are going too far.

7262. I should like to have your opinion on that aspect of it?—As I said before, you will have to look at the general aspect of the question; you will have to look also at the prestige of the country.

7263. Would you say that it would be a bad thing for commerce generally if by international agreement all these exhibitions were discontinued?—It might be a disadvantage.

7264. You think it would?—Yes, and for a good many reasons. As I said before, if you have a novelty in engineering, or if you have a novelty in chemistry, or or if you have a novelty in any other industry which you have brought out perhaps recently, and which you have not yet had time to bring before the world, or before every nation, by your travellers or otherwise, then an exhibition is a most excellent advertisement, and may possibly be the quickest, too. I may give my own experience. I have bought machinery which I should not have bought had I not gone to exhibitions and found machines there which I considered to be better than what I had in my own works.

7265. And you would not have had an opportunity of doing that but for exhibitions?—No, because before I went to the exhibition I was not aware of the existence of that machinery.

7266. You do not seem to have exhibited at Paris in 1900?—No, we did not exhibit there.

7267. Perhaps you have told the Chairman why?—I had no interest in doing so, and nobody approached us.

7268. (*Chairman.*) I do not think you told me that. Were you not approached by the Royal Commission?—As far as I remember, no.

7269. (*Mr. Malcolm Ramsay.*) I suppose if you had been approached it would have been very much like the case of St. Louis over again—you would probably have sent an exhibit?—Probably.

7270. Supposing there was another exhibition five years hence, and they came to you and asked you on patriotic grounds, would you be prepared to do the same that you did at St. Louis?—Yes. If they appealed on patriotic grounds and at the same time promised support, for instance, in connection with the exhibition in Tokio in 1912, then I would be inclined to consider that very seriously.

7271. Could you indicate the sort of interval at which you think it would be reasonable for us to participate in another exhibition?—Ten years I think.

7272. You would not have this country go in for a big international exhibition perhaps as often as once in five years, would you?—No.

7273. Because it would then become expensive?—Yes. I think ten years ought to be the minimum interval between exhibition and exhibition.

7274. Speaking of the financial support which the Government should give the exhibitors, do I rightly understand you to think that it is more important to have an efficient organisation, and that that is the first necessity?—Yes.

7275. Actual financial help is of less importance than the value of the organisation and of the facilities which the Government can give?—The financial support is of importance—there is no doubt about that, and financial support you must give if you want to have the power to interfere, if you want to have the power of accepting or condemning certain exhibits, and if you want to have the power to group and properly classify the exhibits.

7276. Would you give financial support to exhibitors who have a direct interest in exhibiting, and for whom an exhibition is a good advertisement? Would it not be enough if you were to select them, and ought they not to consider it rather a privilege to be selected?—I should think it would not be fair financially to support them. A man whose interest really induced him to exhibit, I think, has no claim for financial support. But my own feeling is that in the case of people who are apathetic, and who have no interest in exhibiting, if the State wants to make a good show abroad or to keep up the commercial prestige of the country, then I say you will have to give financial support.

7277. (*Mr. Harris.*) Did you go to see the Paris Exhibition of 1900?—Yes.

7278. What was the impression that the British section there made on you generally?—It was very poor.

7279. Was that the meaning of your remark to Mr. Ramsay just now, that perhaps you would have been "soft enough" to go to Paris if you had been nicely asked?—If we had been asked in the same way that we were approached in regard to St. Louis, we certainly would have gone to Paris.

7280. When you said you might have been "soft enough" to do it, what had you in your mind?—As far as we were concerned, it was of no advantage to us. I am speaking now specially about myself, and not about the Chamber of Commerce. We have no works in France and we cannot export to France at all; the duties are so high there that we cannot export.

7281. And you see no way of doing business in France?—No; we cannot possibly do it, unless we erect works there. Some of the large German companies, our competitors, have works there, and that is the reason why they made a good effort; but we have no works in France.

Mr. I. Levinstein.

13 June 1907.

7282. You said you have works in Austria, I think?—Yes. I am concerned in works connected with textiles—spinning, weaving and dyeing—but not in our own particular business.

7283. That is, not in your own particular industry of aniline dyes?—No.

7284. Have you exhibited at any of the Colonial exhibitions?—No.

7285. Were you asked to exhibit at New Zealand?—No. Unless the Government would pay all our expenses we should not exhibit there at all, because it would be of no earthly use to us, as there is very little manufacturing going on there. There is a market in New Zealand for such articles as soaps, which we do not make; but for the chemicals, which we do make, there is no market, or very limited indeed.

7286. I rather gathered from your replies to the Chairman that you would wish us to understand that your idea of the best form of an exhibit is a collective exhibit in which the individual names would be mentioned, as in the case of St. Louis?—I do not want you to understand that generally. There are certain branches where it could not be done, but in another industry it would be preferable to have a collective exhibit. You will find it difficult, especially in this country, to get some manufacturers to submit to it, as there is a good deal of jealousy among certain manufacturers.

7287. Would you mind telling me roughly, just in order that I may understand your evidence better, what you did exhibit at St. Louis?—We exhibited, first, aniline colours; then the intermediate products required in the manufacture of aniline colours; then we exhibited silk, woollen, half-woollen and cotton goods dyed with the different specimens. We also showed exhibits of prints—coloured silks, as well as cotton—showing the application of the dyes to the various textiles. We tried to make it as instructive as we could, and we showed not only the aniline dyes, but also the result on the different materials.

7288. (*Mr. Algernon Law.*) You said, I think, that you were not disposed to go in for exhibiting at St. Louis, because you had factories, was it, in Philadelphia and elsewhere in America?—In Philadelphia and in Boston we have not factories, but we have warehouses. We do not manufacture in America, but we have a warehouse in Boston and also in Philadelphia, and we have our travellers there who travel all over the States. I have said that the duties really prevent a good many manufacturers from exhibiting; and you might put the question to me, perhaps, "Well, you have high duties in America?" In spite of that, the production of aniline dyes and fine chemicals is not yet sufficiently advanced in America, and in spite of the duty of 33 per cent., we can export to the United States.

7289. You said that exhibitions were useful for novelties?—Yes, they are.

7290. Because you can then introduce them to the world at large?—Yes.

7291. At the same time, you said people need not fear copying, because if you wanted to copy an article you could always go into the market and buy it. Does that not also apply to novelties? Will not the people who require new things be on the look-out for them?—It depends, you know. Supposing a novelty is brought out to-day—supposing, for instance, there is a new ice machine for using ammonia in place of sulphurous acid—if you were interested in it, you would perhaps have read something about it, but you would never have seen it at work. But you go to an exhibition where that ice machine is exhibited for the first time, and for the first time you see it working. In such an instance the exhibition is an excellent advertisement.

7292. As regards the exhibition at St. Louis you say it was a distinct success, by which I suppose you mean the British section?—Yes.

7293. Was that in all branches, or would you single out any special branch?—I certainly confine my remarks to the chemical exhibits in comparison with similar exhibits at the Paris Exhibition.

7294. In some of the sections you say that the exhibits were very poor?—They were; for instance, in textiles they were very poor.

7295. (*Mr. Wilson Fox.*) Do you think that the British exhibit in Paris was not a good one?—Speaking of our branch, that is so.

7296. At St. Louis you thought that it was good?—The chemical department there was very good.

7297. What is your opinion of the British exhibits generally at St. Louis?—Some of them were poor; the textiles, for instance, and I do not think machinery was represented properly.

7298. Taking St. Louis, and excluding the chemicals, do you think that the British exhibit at St. Louis on the whole was bad?—That was my impression. I would not call it "bad"; it was not comprehensive.

7299. I understand that it was not comprehensive, but how did it compare with other foreign exhibits?—I can only speak of my impression, and my impression was that it was not as good a show as we might have made, and that some of the German departments were certainly better than ours—even some of the Italian departments were.

7300. Would you say, generally speaking, that the British exhibits at St. Louis were not up to the standard of the foreign exhibits?—That is more than I can say. I will not go further than say that in my opinion it might have been still more comprehensive.

7301. Would you say that it did not do complete justice to Great Britain as a representative exhibit?—It did not quite do that.

7302. I gather from what you say that you would not exhibit at a foreign exhibition unless there was business in it?—I would not exhibit at a foreign exhibition as far as my business is concerned.

7303. Unless there was business to come out of it?—No.

7304. Therefore you would probably agree that, as regards the trades where it does not pay them to exhibit from a business point of view, there might be some reason for the Government giving assistance to those trades?—Yes.

7305. On the other hand, you would probably agree that where a trade found it paid them from a business point of view to exhibit, they should show at their own expense?—That is my opinion.

7306. Let me take the textile trades, with which you are so familiar in Manchester. It would not be easy, would it, to get up a large textile exhibit to send to a foreign exhibition?—No, it would be difficult.

7307. Would it?—At present, yes.

7308. The cotton manufacturer in Lancashire has no interest in showing at a foreign exhibition, has he?—"Cotton manufacturer" is such a comprehensive term. The big manufacturers of coloured goods who export, and there are a great many smaller men also who export to all parts, and I should rather think it would be an advantage to them to exhibit.

7309. Would you say that it would be to the advantage of the man who makes cotton piece-goods to exhibit?—In ordinary cloth, no, nor in ordinary yarn either.

7310. And that is, after all, the greater bulk of the manufacture, is it not?—Still, the coloured goods represent about 20 million sovereigns' worth exported.

7311. Do you think it would pay them to exhibit?—I think so.

7312. But, as a matter of fact, do they exhibit at these foreign exhibitions?—I am not prepared to say positively. I have certainly seen coloured goods.

7313. The Lancashire people do not exhibit much, do they?—No, they do not generally exhibit much.

7314. (*Chairman.*) The Calico Printers' Association would exhibit, would they not?—I think they would, and they would make a beautiful show, too.

7315. (*Mr. Wilson Fox.*) But take the cotton piece-goods?—In respect of fancy or figured goods, yes; but then figured goods are quite different to the ordinary plain cloth.

7316. Supposing we wanted them to show ordinary cotton piece-goods, the people in Manchester would have to do that rather from a motive of patriotism?—That is my opinion.

7317. It would not pay them to do it, and therefore the whole thing would mean for them unprofitable out-of-pocket expense?—Quite so.

7318. So that supposing there was a big international exhibition, and the promoters wanted to show staples, the Lancashire people would have to do that out of their own pockets, and they would get no benefit from it?—

I feel sure that if the Government took an interest in it, and there was a big show—take the Tokio Exhibition—and if the Government would take the trouble to approach the Lancashire manufacturers, there would be quite a number who would be induced under those circumstances to exhibit.

7319. But it would be purely on patriotic grounds, would it not?—Well, yes.

7320. Or largely so?—Largely; but, after all, it might be an advantage, you know, especially in Tokio, to show that there is better weaving, say, done in an English mill than can be done by the Japanese or by the Chinese, or by any other nation. To do that might, under certain circumstances, not be altogether patriotism.

7321. Then we get to this, do we not, that although individual makers or manufacturers might not be advertised, Lancashire and Manchester, as a whole, might be advertised, and therefore the exhibition might do the district as a whole good?—Very true.

7322. That is your point, I take it?—Quite true.

7323. As regards your chemicals, do you think that the showing of chemicals has done the British chemical trade good?—Yes, as far as prestige is concerned. In connection with the St. Louis Exhibition, I have had the opportunity of reading a great many of the German chemical papers, and I remember very well an article in one of them where it said, "After all, the British chemical industries are not dead." Then there were four long articles on a good many of the exhibits, and an account of the excellence and taste displayed, etc.; and, without being bragging or arrogant, I think one of ours was specially referred to.

7324. Then, as regards the chemical trade, you think there would be some advantage in certain good firms showing, not only for the purpose of advertising these firms, but for the purpose of advertising the British chemical trades as a whole?—Yes.

Mr. I. Levinstein.

13 June 1907.

7325. That is, you think there would be something in that if they exhibited really first-class goods?—Yes. If you please, you must distinguish here, because when you ask me about chemicals, I am, generally speaking, giving you an opinion with reference to our trade. But there is an enormous difference in the various chemical industries. There are, for instance, so-called heavy chemicals, such as the alkali manufactures, the soap manufactures, the acid manufactures, and so on. Then there are fine chemicals mostly organic, and ours belongs to the latter class.

7326. I will deal with your trade?—I would refer you to soapmaking. It is to their interest to exhibit. If you take people like Crosfield, or Lever with Sunlight soap, it is to their interest to exhibit anywhere.

7327. Because that particular trade is won by advertisement?—Yes. And another thing is that these goods are used everywhere. Soaps are used in New Zealand or anywhere, and it is to their interest to advertise them.

7328. I suppose you can create a sale in an article like soap simply by advertisement?—Yes.

7329. You may perhaps have a second-class sort of soap, and you can create a sale for it if you can put enough money into advertisements?—Yes.

7330. I do not wish to criticise the quality of any soap, but simply to put it to you that it is possible to create certain trades by advertisement?—Quite right; and without having any real speciality, but with ordinary good soap.

Sir ISIDORE SPIELMANN, a member of the Committee; further examined.

Sir I. Spielmann.

7331. (*Chairman.*) I think you have been connected with several exhibitions, have you not?—Yes. I was honorary secretary and delegate of the British Commission, Fine Art Section, Brussels International Exhibition, 1897; director and delegate of the British Fine Art Section, Royal Commission, Paris International Exhibition, 1901; honorary secretary for London, Fine Art Section, Glasgow International Exhibition, 1901; honorary secretary and member, Art Committee, Royal Commission for the St. Louis International Exhibition, 1904; and director for Art, British Government exhibit, New Zealand International Exhibition, 1906-7.

7332. What have you to say as to Art as a centre of attraction at international exhibitions?—Art is invariably regarded as one of the most attractive features at every international exhibition. There can be little question of its educational importance to students of Art as a means of comparison, to say nothing of its great interest to the art-loving public. Other countries eagerly participate in the Art Section at international exhibitions, and Great Britain cannot well afford to abstain. International exhibitions are international competitions, and the success achieved by any country, in Art or in any other section, increases its prestige in the public estimation. Moreover, the names of artists who elect to be represented are kept alive, while those who are not to be found in the catalogue are likely to be forgotten.

7333. What have you to say about the past and present methods of organising Art Sections?—The Art Section is always a "collective exhibit." At the earlier international exhibitions the British Art Sections contained works that were mostly borrowed from private owners, and were termed "Loan Collections." These sections were, as a rule, good in quality, but were not representative of British Art of the time. Commencing with the Brussels Exhibition of 1897, and since then, the tendency has been to make the British Art Section representative of the Art of the time. In recent years very searching selections are made not only of the artists to be represented, but also of the works they send, so that the British school in its various branches may be presented at its best, and by the most representative Art only that can possibly be procured.

7334. Do you mean that there has been a limit of time laid down and that you would not allow us to send early Victorian pictures, as a rule?—As a rule the limit is now fixed at 10 years. I am of opinion that if contests between nations are entered upon the fact should be faced that it is our manifest duty that we should rigidly and fearlessly exercise our power of selecting works for exhibition, however invidious and distasteful that task may be; and that the arrangement of the works in the section, more particularly if the space be limited, should be displayed irrespective of fear or favour, to the very best advantage, with a view to our success in the competition. Unless we continue to act up to this standard I think all competition should be declined as likely to lead to disappointment, if not humiliation, from a national standpoint. At the last four international exhibitions the British Art Section has been all that could be desired. I would like to refer the Committee to some extracts which I have taken from the official reports—they are not very long—because I do not want the Committee to take my word for the statement that these exhibitions were so satisfactory. The four exhibitions I refer to were Brussels, Paris, St. Louis, and New Zealand. At the time of the opening of the Brussels Exhibition, "The Times," of July 29, 1897, said, "If our industrial section is ineffective in comparison with the display made by some other nations, the case is different in the department of fine art. Here a strong committee has worked well, and has devoted much time and boundless energy to make the section a success. The result has surpassed all expectations, and everybody, from the King of the Belgians downwards, has been surprised and delighted with the excellence of the British work. . . . It is pleasant, therefore, to record that the committee have brought together the best collection of modern English pictures and drawings that has ever left the shores of England." Then there is a short statement to the same effect from Mr. James Dredge, who was then the Executive Commissioner, to Lord Salisbury, who was then at the Foreign Office. He says: "In my first report of July, 1896, I referred to the impossibility of arranging for a Fine Art Section under the then existing conditions. Fortunately, these conditions were modified through the exertions of the President of the Royal Academy, by whose representations a supplementary grant of £1,500 was made to the Commission by the Treasury towards paying the expenses of a Fine Art exhibit; and, thanks to the Fine Art Committee, what was probably the finest display of British Art ever seen on the Continent added greatly to the value and completeness of the British Section. Ap-

Sir I. Spielmann

13 June 1907.

pended is a separate report on this subject by Sir Edward Poynter, the Chairman of the Fine Arts Committee, and in this report he fully alludes to this magnificent Fine Arts display." Sir Edward Poynter, in the report referred to, says: "That our section was generally considered to be the best was allowed on all sides, and not in Belgium only were flattering things said of it; the English Press was also unanimous as to its merit. The undoubted success of our Art display at Brussels came as a revelation to all those who were not previously acquainted with our Art, for it was in many respects the most admirable feature of the whole exhibition; not only to Belgium did this come as a revelation, but it was echoed throughout Europe." There is a very short reference to the excellence of the British Art Section at the Paris Exhibition contained in the report of the Commissioners to His Majesty the King (Vol. I., page 20): "Notwithstanding the conditions that prevailed at the time, a collection was made which was universally admitted to be the best of the foreign displays, and was not unworthy of the modern British school." The reference to the St. Louis Exhibition is contained in the report of the Commissioners to His Majesty the King (page 9): "The most important department in the British Section was that of Art. Thanks to the great zeal of the Art Committee. . . . the British collection of works of Art sent to St. Louis was, in the opinion of many capable judges, the best and most important that has ever been sent out of England, and was by common consent admitted to be the best of the foreign sections at the exhibition. It was thoroughly representative of the modern British school." In a letter of our Ambassador's, Sir Mortimer Durand, of November 18, 1904, he says: "The British Art Section was generally regarded as containing the best collection of pictures in the exposition." But more interesting still is a short report written by the Italian Commissioner for Art at the St. Louis Exhibition, Signor A. Apolloni, a very well-known man. Refering to our section, he said: "This section was perhaps the most remarkable of all; in my opinion it was certainly the most remarkable, both on account of the judgment with which it was selected, the value of the collection, and the aristocratic taste with which the pictures were hung. The English wished to exhibit to the public once more the principal works of their great artists, and to display the works of different schools, from the Pre-Raphaelites to the most celebrated portrait painters, from the water-colour painters of the older school to the more modern representation. There was nothing whatever common or commonplace; in this section, Art, in different forms, appeared in its highest manifestation." With reference to New Zealand, "The Times" and "Standard" and other newspapers in this country endorsed the opinion that the "Art Section is one of the best that has ever been sent from our shores. Certainly no Colony of the British Empire has yet received so comprehensive and representative a display of our school as that sent to New Zealand." Then there is an official report by Sir John Gorst, who went to represent Great Britain at the opening ceremony, which is much to the same effect.

7335-6. Now I think you have something to say to us upon the subject of the formation of the Art Committee?—Yes. The Art Committee is usually composed of the Presidents of the Chief Art Societies in Great Britain and Ireland (namely, the Presidents of the Royal Academy, the Royal Scottish Academy, the Royal Institute of British Architects, the Royal Society of Painters in Water-colours, the Royal Hibernian Academy, the Royal Society of Painter-Etchers, the Royal Institute of Painters in Watercolours, the Royal Society of British Artists, and the Royal Society of Oil Painters, the Honorary Secretary of the New English Art Club—they have no President—and the President of the Arts and Crafts Exhibition Society), and a few additional members having special knowledge of exhibition work. The Art Committee has always been given full control of its finance and its own arrangements. The Committee, as a rule, holds numerous meetings, usually from 20 to 30, many of them very protracted sittings of nearly four hours, at which they consider the selection of exhibits.

7337. (*Chairman.*) What do you say as regards the space which has been allotted to Great Britain?—The space allotted to Great Britain for Art at the last four international exhibitions may be described in the following manner: At the Brussels Exhibition, 1897, well situated but insufficient; at the Paris Exhibition, 1900, well situated but insufficient; and at the St. Louis Exhibition, 1904, it was very badly situated and very insufficient.

7338. Why was that?—Because Germany and France had been there in advance, and had secured the best positions and an amount of space quite disproportionate to ours. At the New Zealand Exhibition, 1906-7, the Art Section was well situated and sufficient. I would like now to refer to passages in the two Reports on the Paris Exhibition and the St. Louis Exhibition, which bear on this subject, which really is the most important point in my evidence.

7339. You mean as to your not getting space enough?—Yes. Sir Edward Poynter in his Report on the Art Section to the Royal Commission for the Paris Exhibition said:—"To Great Britain, in the section devoted to painting, drawing, engraving, and architecture, there were allotted 475 lineal feet, as against 900 feet to Russia, 880 feet to Germany, 780 feet to Italy, 600 feet to Belgium, 580 feet to Spain, 490 feet to Switzerland, and 400 feet to Portugal."

7340. Then we had less than Switzerland?—We had even less than Switzerland. Then he goes on again on page 9:—"The space set apart for the foreign fine art sections was not only altogether inadequate for a proper representation and display of their work, as compared with the French, but Great Britain received exceptionally unfavourable treatment in this respect."

7341. (*Mr. Wilson Fox.*) That was probably because we came in last?—Yes.

7342. Was it not, in fact, our own fault?—No.

7343. The Report speaks of "unfavourable treatment," and I want to know whether we applied early enough to have equal chances with the rest and were really given unfavourable treatment, or whether it was our own fault because we came in last?—It was probably owing to the fact that Great Britain had delayed the reply to the invitation of the French Government.

7344. That is what I mean. Do you think that we were the last applicants?—I should say so.

7345. Therefore it was not the fault so much of the people who allotted it as it was our fault in only turning up when there was no cake left to eat?—We must also remember that at many of these exhibitions they do apportion the space originally to certain countries, and only have to await the reply of the various countries to the invitations issued.

7346. (*Mr. Algernon Law.*) Perhaps, too, we required more space in other sections?—No, this refers to the Art Section at the Paris Exhibition, and I am only dealing with that section, of course.

7347. But may not the explanation also be that the space we required in other parts of the Exhibition was so great that to compensate the other countries they gave them more for art than they did to us?—I do not think so.

7348. (*Chairman.*) Do you think we were unfairly treated?—I do, and I want to show how it worked out.

7349. (*Mr. Malcolm Ramsay.*) That statement which you have last read to us is Sir Edward Poynter's, is it not?—It is signed by the Duke of Argyll and Sir Edward Poynter, the president and chairman of the Art Section. In the end, after a great deal of trouble, we succeeded in getting 783 lineal feet, equal to about 22 square feet per exhibitor. In comparison with the 22 square feet per exhibitor in the British section, France had 45 square feet, Austria 24 square feet, Belgium 51 square feet, Denmark 30 square feet, Germany 27 square feet, Holland 31 square feet, Italy 52 square feet, Russia 49 square feet, Spain 57 square feet, and Switzerland 31 square feet. So there you see we were very low down as regards the amount of square feet per exhibitor.

7350. (*Mr. Harris.*) May not that have been due partly to a lingering illusion that the British have no art worth exhibiting?—I do not think so, coming after the Brussels Exhibition of 1897.

7351. Do you not think that perhaps that lesson had not been sufficiently learnt?—They knew perfectly well that if we participated we should make a very strong display.

7352. You think they did know that?—Yes.

7353. (*Mr. Malcolm Ramsay.*) Are the square feet per exhibitor a very trustworthy test?—I think so.

7354. You could have a very high proportion of space per exhibitor if you had very few exhibitors, could you not?—Quite so; but we always state as early as we can the amount of space we shall require and the number of exhibitors we have, and we naturally expect that accommodation for that number will be reserved.

7355. (*Mr. Wilson Fox.*) Then you do send that statement in to the foreign committee or the foreign Government, early?—As early as we possibly can.

7356. That is, you send in a statement of the amount of space you want?—Yes, to the Director of the Fine Art Section.

7357. In this particular case did you have to refuse a large number of exhibitors in consequence of not getting the space?—No. What we had to do was to hang our works very high, and the whole of the effect of the section had to suffer in consequence.

7358. (*Mr. Malcolm Ramsay.*) You had it crowded more or less, and on the sky line?—Yes, we had it crowded. Then as regards the St. Louis Exhibition, not only was the space inadequate, but it was very badly situated. In the official report to the Royal Commission, signed by Sir Edward Poynter, he says:—"To Germany was accorded the best position in the left wing and to France a similar position in the right wing, both having a larger amount of space than was allotted to Great Britain. The space finally allotted to Great Britain, including that gained by blocking various doorways, amounted to 1,455 lineal feet in the Fine Art Section and 269 feet in the Applied Art Section."

7359. (*Mr. Algernon Law.*) Was any remonstrance made?—Yes. "A strong effort was made by the chairman to secure two additional rooms, but with only partial success, although it was understood that these had originally been promised to us."

7360. (*Chairman.*) Was that on account of the lateness of the application?—I should say so, partly. We might have had space situate in a very much better position in the Fine Art Section at Paris if we had made earlier application; still, they must have known perfectly well that Great Britain would participate.

7361. The lesson that you would draw is, I take it, that we must apply earlier?—Yes. To continue with Sir Edward Poynter's report on St. Louis:—"To reach the British Art Section from the Grand Entrance at the north side it was necessary to pass through the German and Dutch galleries. We laboured, too, under the disadvantage of being unable to reach our galleries on the south side, as, owing to their being a considerable height above the ground-level, they were for some time inaccessible to the public. The chairman, with the assistance of our Commissioner-General, made strong representations to the Exhibition authorities in regard to this drawback, and eventually succeeded in inducing them to construct a flight of steps from the lower level to our terrace." This was only done when the exhibition was half over.

7362. What is the course taken in the selection of the artist exhibitors and works?—The usual course is to invite the most eminent artists from very carefully-prepared lists to participate. Special works also are invited from the very best that have been produced during the previous ten years, irrespective of the standing of the artist:—Works in oil, water-colour, sculpture, architecture, and in black and white. The ten years' limit is usually a regulation of the exhibition. This system of selecting special works, though excellent in theory, is very difficult to work in practice. It is invariably determined that no Art Society should be invited to exhibit as a body, but that all works should be invited as the work of individuals, and not as representing any institution.

7363. What is your method of obtaining works of art from owners and artists?—The success of an Art Section largely depends upon the willingness of private owners and of artists to place their works at the disposal of the Art Committee. It is becoming increasingly difficult to borrow works from private owners, especially for exhibitions at a great distance from England. This is partly owing to the frequency with which these exhibitions occur. In 1897 but little difficulty was found in borrowing such works, but it has since then become more and more difficult. Here I should like to hand in a table showing the number of private owners and the number of artists who sent works to the Brussels, Paris, St. Louis, and New Zealand Exhibitions:—

	Brussels 1897.	Paris 1900.	St. Louis 1904.	New Zealand 1906-7.
Number of Artists represented - - -	259	282	501	511
Number of Private Owners who lent works	131	133	135	36
Number of Artists sending their own works	128	149	366	475

7364. Next I think you want to deal with the collecting, packing and transport of the art exhibits?—Yes. Art exhibits have to be collected from all parts of the country, and it is at this stage that injury to them sometimes occurs. When received in London they are packed by fine art packers in zinc-lined cases and forwarded from London to the Art Gallery at the exhibition, each consignment being in charge of a special officer. At the termination of the exhibition, repacking and redistributing the works, and winding up, generally occupy a considerable time. In the event of awards being given, their receipt and their distribution still further delay winding up. The decoration of the section, as well as its installation, the preparation of the catalogue, and the sales of works on behalf of artists, are undertaken by the country participating.

7365. I suppose you have to pay the customs duty when they are sold, in America, say?—Yes. The exhibition being regarded as a bonded warehouse, things sold pay the duty as they leave the exhibition. It is usual that the buyer pays the duty; it has nothing to do with the seller.

7366. Insurance is a considerable item in the cost, is it not?—Yes. Insurance for a very large sum has to be effected at an early stage, and before the insurance market is adversely affected, and this is one of the largest items of expenditure in the cost of the Art Section. The Art exhibits are insured against all risks—fire, marine, theft, damage, or total loss; and this is invariably done free of costs to private owners and artists. We always find it very difficult to insure our sculpture exhibits, as the premium is very high; and as regards works in plaster, we do not send them unless we send them at the sculptor's own risk.

7367. Because they are damaged so easily?—Yes. As a rule very little damage occurs, the chief claims upon the insurance companies being for broken picture glasses and damaged frames.

7368. Can you give us the ordinary picture premium and sculpture premium?—On the works sent to the Brussels Exhibition we commenced at 17s. 6d. per cent. and we went up to about 20s. per cent.

7369. (*Mr. Wilson Fox.*) Would that cover every risk?—Yes. For the Paris Exhibition we commenced at 20s. per cent., for St. Louis we commenced at 30s. per cent. and before we had finished the premium had gone up to very nearly 50s. per cent. owing to the very large amount that was being covered at Lloyd's by other exhibitors. On bronzes we had to pay £3 3s. per cent., and on marble about £5 5s. per cent.

7370. (*Mr. Harris.*) Have you the total there of the expenditure, say, for St. Louis?—Yes, I have some quite elaborate tables relating to every exhibition, which I propose to hand in.

7371. (*Mr. Algernon Law.*) Did you insure each individual picture?—Yes.

7372. Then you do not insure *en bloc* in the sort of way that Cook's, the tourist people, apparently insure luggage; they apparently insure to a large amount, and then, when you insure with them, they give you a certificate?—What we usually do is to take out a policy, say, for £100,000 or £200,000 as the case may be, and then we insure every work separately with our insurance brokers. Whatever we do not take up, whatever we do not cover, is struck off. I have here the statement of expenditure. As regards insurance, at the Paris Exhibition in 1889 the premium was only £1,225, at Chicago in 1893 it was £4,438, at Brussels in 1897 it was £1,200, at Paris in 1900 it was £1,400,

Sir I. Spielmann.

13 June 1907.

and at St. Louis in 1904 it was £2,898. For the New Zealand Exhibition I can only give you the figures partially.

7373. (*Chairman.*) Is that expenditure on the Art Sections at these different exhibitions taken from a table?—Yes.

7374. It would be an interesting table to print, if you could hand it in?—Certainly. I will also hand in a table showing the number of works exhibited.

The witness handed in the annexed Tables. (*See Appendix No. II., pp. 313-314.*)

7375. (*Mr. Malcolm Ramsay.*) Can you tell us what proportion the insurance bears to the total cost?—I could not strike the proportion for New Zealand, because I have not got all the other figures. The insurance for St. Louis was £2,898, and the total expenditure was £12,188. At the Brussels Exhibition the insurance figure is one-third of the total cost.

7376. (*Chairman.*) Now we come to the installation; what have you to say to us about that?—At the Brussels, Paris, St. Louis and Christchurch exhibitions, all the pictures were hung, and everything was complete in every detail on the opening day of the exhibition in the British Art Section; and the only catalogue to be had in the Art Palace on the opening day at each of these exhibitions was that relating to the British Section. For a considerable time after the opening of the St. Louis Exhibition, ours was the only catalogue in the Art Palace. Not even was the American catalogue ready; it appeared only in June or July, I think. For the Christchurch Exhibition the hanging was done in London prior to the works being dispatched, and carefully prepared plans showing the positions which the pictures should occupy on the walls were sent out with our representative, and this arrangement was strictly adhered to; the important work of hanging was thus not left to chance.

7377. Have you any figures that you could put before us in reference to the sales of British Art exhibits?—From experience gained at several international exhibitions, I am of opinion that many of our British artists fix the prices of their works at figures which do not encourage purchasers. Foreign artists of the first rank fix the values of their pictures at these exhibitions at more moderate prices, and consequently their works, as a rule, more readily command sales. At the Brussels Exhibition but few pictures were sold; at Paris hardly any; at St. Louis we sold for over £7,000—an amount that approached the total value of sales in all the other foreign sections, while at New Zealand we have sold for close upon £17,000. This I believe to be by far the largest amount ever taken for modern British works of Art at any international exhibition.

7378. Were the prices fixed by the British artists lower, do you think, in New Zealand; have they learnt their lesson, do you think?—For that exhibition works were selected purposely of moderate size and of moderate price. I do not know whether that has had anything to do with the sales; but the sales have been exceptionally large.

7379. (*Mr. Wilson Fox.*) Some were bought for Australia, were they not?—Yes. I have here the details of those sales, which I can hand in.

7380. (*Chairman.*) Perhaps you can tell us now what the total expenditure of the Art Section was at each of the exhibitions?—I can go back to the London Exhibition of 1862, if that is interesting?

7381. I do not think we need go back so far as that at the moment; we have been taking the last four great exhibitions, which are really the modern sort of exhibition?—At Brussels in 1897 the total expenditure was £3,380, and that was perhaps the best and strongest Art Section of the whole lot. But I ought to say that there I acted as hon. secretary, which reduced the cost of the staff, as they usually have a paid secretary, and that there were no office expenses on that occasion; consequently the cost was exceptionally low.

7382. So that it hardly a fair case, is it?—Hardly.

7383. (*Mr. Malcolm Ramsay.*) Does the figure you have just given us include general expenses?—It includes collecting, packing, transporting and redistributing the exhibits, insurance, decoration of section, and installation, salaries, wages, etc. The salaries and wages (which were for clerks) at Brussels in 1897 only amounted to £400.

7384. (*Mr. Algernon Law.*) Do you see any reason why a commission should not be charged on sales, so as to meet the expenditure incurred by the Government in assisting the Art Section?—Do you mean deducting it from the artists?

7385. Clearly money has been gained through the instrumentality of the exhibition, and I should think the sum of £17,000 would make the Treasury officials' mouths water?—I ought to say that from that £17,000 10 per cent. will be deducted by the exhibition authorities.

7386. (*Mr. Wilson Fox.*) What for?—It is the rule of almost every international exhibition to do that in order to cover their expenses.

7387. (*Chairman.*) And you think it would not be fair to take another slice?—It would be most unusual.

7388. (*Mr. Wilson Fox.*) They tried it on in New Zealand for the income tax, did they not?—They tried to deduct a further sum for the income tax, but that was strongly opposed, and it has been dropped.

7389. (*Chairman.*) Was it the Treasury out there who tried to do that?—Yes.

I would like to say with reference to the Brussels Exhibition, where we made the strongest display that I think we have ever made abroad, that the Chairman, Sir Edward Poynter, on his own account induced the Treasury to give £1,500 towards a special grant, and he and I together collected £1,100 from our personal friends, which left a deficit of £785, which the London Chamber of Commerce gave from the Government grant that they had received.

7390. A Government grant they had for the general purposes of the exhibition?—Yes.

7391. The London Chamber of Commerce managed the exhibition at Brussels, did they not?—Yes.

7392. You consider, do you not, that the cost of the Art Section must be defrayed from a Government grant or from some special fund?—Yes. Considering the great effect produced, Art Sections at exhibitions are neither costly to promote nor expensive to maintain; but inasmuch as the artists never contribute to their promotion in any country, the cost of the Art Section has invariably to be defrayed from a Government grant or from a special fund.

7393. What do you say about the constitution of the juries?—In the constitution of international Art juries, the exhibition regulations usually specify that the country in which the exhibition is held should be represented by an overwhelming majority of jurors. Thus in the Art Section of the Paris Exhibition in 1900, the jurors in Class 7 (Painting) numbered 66 members, of whom 39 were Frenchmen, no other country being represented by more than two jurors, and the majority by only one. Sometimes one juror is appointed for every hundred exhibitors represented, but this is not often the case. It is obvious that when jurors are brought to examine a work, seen by most of them for the first time, it is difficult for a crowd of 60 and more clustered round a picture to judge efficiently the merits of a work of which they can only obtain glimpses.

7394. I should think that is quite true?—Moreover uncertainties are inevitable in international contests of this kind, where the majority of the jurors are probably ignorant of the careers of most of the artists, and have to form an opinion upon the respective merits of the works, or it may be a single work, they see before them.

7395. I think you consider competitions for awards should be optional?—The matter of awards presents some advantages, but also many disadvantages. The younger artists are always eager to obtain them, because they have yet to make their reputations. In the case of other artists whose reputations are already made, who have perhaps received the highest honours which their own and foreign countries can bestow upon them, and who may possibly be contributing works executed at a period of their lives when they cannot be considered as painting at their best, they at least should not be forced to submit works to the international jury. It can hardly be expected that justice is always done at these international exhibitions. Artists of established eminence may very possibly be represented, and frequently are, by works of minor importance executed in the declining years of their fame, which may not justify their claims in the eyes of foreign judges unacquainted most probably with their life's work; whilst, on the other hand, an artist of inferior worth may happen to be represented on the

same occasion by a work of greater effort and attractiveness. At the St. Louis Exhibition, for instance, it was not permissible, by the regulations, to withhold individual works from competition.

7396. I thought in every exhibition you could mark an exhibit *hors concours*?—They could not there, and the result was that we had to withhold the entire section; there was no alternative. France also withheld her section for the same reason. At the St. Louis Exhibition—this is rather an interesting point—a loss to the British Art Section was the absence of the works of many eminent artists, who were prevented from exhibiting with this country by virtue of their American nationality; and many of them actually sent their works to the American section, thereby competing against us. I do not know whether you would like me to give you the names.

7397. One can guess at one or two?—There are about 20 of them.

7398. I do not think we need have the names on the notes?—If we had been competing for the awards, we should have had some of our most eminent artists, including a few Royal Academicians, competing against England. In the matter of awards, it must not be forgotten that awards given in the Art Section have a totally different value to awards given in the industrial sections. Unlike the industrial sections, where every exhibit is almost certain of an award unless it is an absolutely bad exhibit, awards given in the Art Section are but few in number, and are consequently of greater value. The highest ordinary award in the Art Section is the gold medal, but the silver medal is considered a very high and a very important award. Many of the French artists of the highest importance have never received anything more. The *grand prix* is a very exceptional award in the Art Section, and is usually given in consideration of an artist's whole career, and at the supposed period of his highest attainment.

7399. What system of conferring medals is adopted by the International Jury?—International Art Juries employ one of two systems of conferring medals. The one system is not to limit the number conferred; the other system is to limit the number to be awarded. The first course is the fairer, but to my mind the latter course is not only objectionable, but in many cases most unfair. The limitation of awards tells very seriously against an exhibition where there is remarkable uniformity in the average of excellence in the works exhibited, and to allot the few medals at their disposal to a few selected pictures, leaving others of equal merit without awards, merely because there are no more medals to give, is unjust and absurd.

7400. When they limit the number of medals do they award so many to a country, and let that country decide how to place them, in order to do away with any international intrigues for getting medals?—I do not think they award any specific number of medals to any special country. They decide at the start that they will give, say, 20 or 30 gold medals, and then they apportion them by vote among the various countries represented. The system that is followed in many cases of deciding how many medals they will give as the starting point is a very bad one, and, I think, is another reason for withholding the section from competition.

7401. Do you mean that you would like to have no medals given in the British Art Section?—After some experience of international exhibitions and the methods of awarding medals in connection with them, I have great doubt of the advisability of our entering into competition for awards at all, although I have none whatever as to the value of a nation's participation in the exhibition, and I come to the conclusion that we should best consult the dignity of our artists by withholding the entire Art Section from competition. For, although a competition with other nations may be interesting, I hold that it is hardly dignified that artists of world-wide reputation should be competing among themselves for medals. It is not the custom for scientific men and other eminent professional men to compete for awards, and our artists should, in my opinion, follow their more dignified example.

7402. Perhaps we may now turn to what you have to say about the results?—With reference to the results achieved in the Art Section at international exhibitions, I would say that it is impossible to gauge success merely by the value of sales. Its success can only be measured later, if at all. The new reputations made, the new seed that has been sown, and the lessons that have been taught and learnt, have also to be taken into account. There are many reasons why British artists should participate in these international exhibitions, quite apart from the question of the sale of their works or from the question of awards. As a result of international exhibitions, works by British artists have been purchased for the picture galleries of the Luxembourg at Paris, for Berlin, Düsseldorf, Munich, etc., while art galleries of Australasia have sent their representatives to select and purchase works at the recent New Zealand International Exhibition. As the result of exhibiting a portrait in the British Art Section at Brussels, one of our eminent artists received a commission to go over to Brussels to paint the portrait of a distinguished lady, and this commission led to many more, and at English prices. As a result of the British Art display at the St. Louis Exhibition, modern British pictures are now better appreciated in the United States. In proof of this I may quote the following telegram from "The Times" of March 16, 1906: "English Art in New York.—Our New York Correspondent telegraphed last night: 'Sir L. Alma Tadema's *A Sculptor's Studio* was sold at an auction in New York last evening for $23,100 (£4,620). Recent sales here have shown a growing appreciation of modern English pictures.'" That, we think, was the direct outcome of our participation at St. Louis. I think the most important result of all of a successful Art Section is that it frequently helps to score a success for the British Section as a whole—I mean when the Industrial Section is perhaps a little weak. I have some further notes with reference to the results of the New Zealand Exhibition. This is an extract from the "Lyttelton Times" for April 15, 1907, which gives more information of the exhibition than any other paper: "British Arts and Crafts will have a lasting effect in the homes of the people of Canterbury, at any rate. . . . Quite a large number of people have written to the manufacturers in England with the object of obtaining articles such as those displayed at Christchurch. . . . From all points of view the gallery has been a great success. The attendance compares very well with that at the St. Louis Exhibition, and the Colonial public has expressed its admiration for the gallery's treasures in a most practical manner, the sum of £15,362 having been spent in purchasing pictures and other works of Art." This is referring to an earlier date that my own figures go down to.

7403. It is £17,000 I think you said now?—Yes.

7404. What suggestions for improvement have you to make?—With reference to possible improvement in organising British Art Sections at international exhibitions, any change that would prevent the delay in organising an Art Section in its initial stages would greatly assist any Commission or Committee charged with its formation. At present the delay very seriously threatens the prospects of a successful result. To prevent this in future I would suggest that a permanent department should control all the British Sections, including Art, so that the moment the Government decides to participate in an international exhibition, the Art Committee could at once get to work and secure good and ample space. The Chairman of the Art Committee should always be the President of the Royal Academy for the time being, and his committee should have full control of the Art Section and of its financial grant, as heretofore. A special department exists in France for the organisation of Art Sections at international exhibitions. I have references here to that French department which I will put in with your permission (*handing in same*). (*See* Appendix No. III., pp. 315-316.)

7405. Do you want a standing committee or a special committee appointed for every exhibition?—I should not have a standing committee especially for Art.

7406. You mean that you would not have a special permanent committee?—No, not a special committee for Art. I may say that the French Government has a permanent office for Art under the control of the Minister of Fine Arts, but that again is controlled by their department relating to international exhibitions on the Continent

7407. And, I take it, it would be quite outside the *société* or *comité* that we have heard of which contains most of the commercial people and the other sections?—It is quite outside that. The time required to organise an exhibition is considerably greater than it takes the exhibition to run, and the process of wind-

Sir I. Spielmann.

13 June 1907.

ing up is an equally long operation. The time between the closing scenes of the one and the opening scenes of the next is often very short, so that a permanent department, if one were established, would not long remain idle. It might even be utilised for other purposes in between. If it can once for all be decided that it is beneficial to this country to participate, or if we decide that our country cannot afford to be the only one to hold aloof from great international exhibitions, then we should start fair at these exhibitions in competition with other countries. Another possible improvement in organising the British Art Section is one which I tried with success in connection with the New Zealand Exhibition. On that occasion, when I acted alone, I measured the lineal space, and carefully calculated the amount that might fairly be apportioned to each school of painting in the oil and water-colour sections. I then enlisted the assistance of the presidents of each Art Society. The presidents being intimately acquainted with the members of their societies and their best works, were thereby able to offer suggestions with respect to artists or their works.

7408. Was that the way that you got most of your pictures at the last exhibition?—Yes.

7409. You were very successful with the others; how did you get the pictures then, generally speaking?—As a rule, it is the large committee, the Art Committee, which determines who should be invited and which work should be invited. At the New Zealand Exhibition I rather subdivided that work, and I got each president of each society to help me in either nominating the artists or nominating their works; each Art Society formed a sub-committee, as it were.

7410. I suppose you have a number who volunteer and who are not always the best?—Those always come before the committee. They have to be judged, and the great bulk of them of course rejected.

7411. (*Mr. Wilson Fox.*) Following up what you have said about the New Zealand Exhibition, and the way in which you prepared the Art Exhibit, did you not find, as a matter of fact, that when you managed it and practically organised it, the path was rather smoother, because there was less jealousy of a man like yourself who is not an artist taking it up than there would have been if a particular Art Society had endeavoured to run the getting up of the exhibit?—I think that possibly facilitated my work.

7412. You were in a more independent position, and there would not be that jealousy when anybody in your position was acting which there would have been if an Art Society had been acting?—Perhaps.

7413. I put it to you that that might have been so?—I think it might have been so.

7414. Now with reference to the New Zealand Exhibition, which, so far as regards the artists, was so very sucessful, a rather new procedure was adopted; there was no Royal Commission, and you practically had a free hand in getting up the Art Exhibit?—Yes.

7415. You found that work very satisfactorily, did you not, not being hampered by committees—or assisted by them, as the chairman suggests?—That is a little difficult to answer.

7416. There was a sub-committee, but they practically left it entirely to you, and in the end that was found to be very satisfactory?—I found it went very easily, and I may say very quickly. The saving of time in organising this New Zealand Art Section was certainly very great.

7417. And, as a matter of fact, the result was most satisfactory, because you sold more pictures at that exhibition than at the others?—It has been very satisfactory in that way. But I think the most satisfactory point about the whole thing has been that there was no delay at the start, and that the work was all done in as many weeks as it has formerly taken months.

7418. (*Mr. Algernon Law.*) We are here chiefly considering whether Government grants are justified by the commercial results, and, therefore, I should like to know how Art comes into the commercial side. Do you think that an exhibition is made a success by the fact that there are good pictures to be seen at it?—I think so.

7419. You think that they attract more people?—I think the Art Section is the most attractive feature.

7420. Then you think the justification for paying so much towards the Art Section is that it attracts people to the whole exhibition?—I think it is a very attractive feature to a great many who go to exhibitions; but as regards the commercial side, till this last exhibition we have had no commercial result to speak of from the sales in the Art Section.

7421. (*Mr. Harris.*) With reference to that commercial result which you have just mentioned, do you not think that it is questionable how far we have been justified in giving a number of our artists an opportunity of getting a special sale for their pictures at the public expense?—From the commercial standpoint, I think that is an open question, but as it always helps to make an exhibition attractive, and as the artist is not usually a man who can afford to pay much, if anything, towards the installation, I think it is an advantage that cuts both ways, and that it helps the exhibition quite as much as the artist.

7422. It seems to me pretty clear from your evidence that the artist appreciates it, because I notice from the figures that you gave that the artist exhibitors have been rising in number as compared with the loan exhibitors—in New Zealand, for instance, you had some 400, I think?—There we had 475 artists exhibiting and only about 30 private owners. But that may be on account of the very great distance, and because private owners are unwilling to let their things go so far.

7423. Do you not think that probably what influences the artist is that he really feels that he has got exceptional advantages which perhaps he would not get elsewhere?—That may influence him sometimes, but we also have occasionally the greatest difficulty in inducing an important artist to send, and then we have to fall back upon the private owner if we want a representative work of that particular artist.

7424. Has it struck you that in selecting for exhibitions, particularly abroad, you take a considerable risk in this way—that the committee composed of the President of the Royal Academy, and so forth, select what appear to them to be the best things, but that it does not necessarily follow that the pictures rejected will not be the things that really would tell abroad—I mean, tastes differ?—Yes; but then the committee consists of so many members of different views that they are all likely to prevail in some instances, and care is taken now to send representative pictures by members of the New English Art Club, and of the impressionist school.

7425. That brings me to another point that I was going to ask you about. You speak of the difficulty that you had at St. Louis owing to the regulations which compelled every artist to submit his works to the jury, but could not your selection have made it possible beforehand to avoid any difficulty of that sort? Should you not, I mean, have been able to avoid the two difficulties you have mentioned—first of all, taking the works of a man at his worst period, and then, secondly, of taking the works of a man whom you really did not like to put in competition at all?—At an early stage at St. Louis we tried to induce the exhibition authorities to concede that point, that we might be allowed to withhold works of certain artists who would not compete; but they would not give way. Thereupon we said, if that is the case the whole section must be withheld from competition.

7426. Was that before you went out?—Yes; it was even before we invited artists to participate.

7427. So that was quite early?—Yes.

7428. (*Mr. Malcolm Ramsay.*) Is there any charge made for space in the art galleries?—To the artists?

7429. To the section?—No.

7430. I cannot find it mentioned in the accounts?—You would not; it is always given.

7431. There is a charge in the Industrial Section, but in the Art Section you say the space is given by the exhibition authorities?—The space is given free, but the rooms are given in an unfinished state, and we have to decorate them and finish them at our own cost.

7432. Returning to the question of payment, is it not the case that a comparatively small charge to each exhibitor would have made the Art Section practically self-supporting at any of the recent exhibitions?—I do not think you would get the artists to do it.

7433. Perhaps you can tell us what the cost per exhibitor has been at the last four exhibitions we have been particularly considering?—At Brussels, 1897, the cost per exhibitor was £13 1s.; at Paris, 1900, £19 1s. 6d.; and at St. Louis, 1904, £17 5s. 3d. I have not yet the completed expenditure of New Zealand,

so that I cannot give you the figure for that exhibition. I may say that at the Chicago Exhibition, which was held in 1893, the cost per exhibitor was £22 per head.

7434. So, assuming that the State thought it reasonable to make the artist pay something towards his free advertisement—I am putting it in a brutally Philistine way—a sum of £5 or £10 would go a very long way towards paying the cost of the British Art Section?—It would, but it would be an innovation, and I doubt very much whether they would not refuse to participate.

7435. (*Chairman.*) These pictures are not all exhibited by the artists; a lot are exhibited by the owners, are they not?—Quite so.

7436. So if the charge was made all round the owner would have to pay this £17 or whatever it was; or if the artists only paid, it would come to a great deal more than £17?—Yes. We go to work in this way: Before going to the owner at all for a picture, the artist is invariably communicated with first, and he is asked by which work or works he would like to be represented? so that it is really the artist who is the exhibitor, not the owner.

7437. But you have to get the picture from the owner?—We have to get the picture from the owner if the artist wishes it done that way.

7438. And the person that Mr. Ramsay wishes to tax is the artist?—Yes, I see that.

7439. (*Mr. Malcolm Ramsay.*) The charge could only be made in the case of artists who were exhibiting their own works directly for sale. You could not contemplate a charge upon a loaned picture, because that would be impracticable. I only wish to bring out what was the actual average cost, and that you have very kindly given us?—The figures all appear in one of the tables which I have handed in.

7440. (*Mr. Harris.*) You would perhaps be inclined to say that we must not treat the artist too commercially; after all, he is an artist?—He never has been treated in that way. The Art Section, as it is always styled, is quite apart from the industrial or commercial side, and the artist has always been treated unlike an ordinary exhibitor.

7441. In that connection, would you mind telling us whether these 475 artists who sent to New Zealand are any of them quite young or unknown men?—A few of them are practically unknown to the general public. It often happens that if an unknown man, or a comparatively unknown man, has produced a brilliant work, we would go for the work quite irrespective of the standing or the position of the unknown man.

7442. And you would give him his chance?—Yes. But, as a rule, it is not regarded as the right opportunity for a young artist to make his professional *début* at an international exhibition. The space is so limited that we prefer to get in those artists whose reputations are renowned.

7443. Still, if you are trying to make an exhibition of living British Art, is it not rather a great thing to get the men who are just coming up, and who are putting the real life into it at the minute?—Yes, and that is the present method. It was done at St. Louis, and it has also been done at New Zealand.

7444. (*Mr. Malcolm Ramsay.*) I suppose there is always a very large crowd of visitors in the British section?—It is always one of the most crowded sections. It is a section which, I think, is attended by larger numbers of people than any other.

7445. (*Mr. Harris.*) You say it is always one of the most crowded, but you mean that that has been the case comparatively recently, do you not, because it is really almost a creation of your own. Does it not date from the Brussels Exhibition of 1897? Did anyone hear of pictures at an exhibition before Brussels?—Yes. They had good sections at Philadelphia, and also at Chicago, and both of those were before I became associated with this work; but they were not representative of British Art of the time.

7446. (*Chairman.*) I recollect that you offered to give us some figures for the exhibition of 1862, so that your evidence went as far back as that?—Yes. Very often the section has been composed of very fine works, but going back a very long time, and not representative of the Art of the time.

There is a matter I want to refer to, which I ought to have mentioned earlier in my evidence, and that is with reference to the Arts and Crafts exhibits. Both at the St. Louis Exhibition and at New Zealand the Arts and Crafts exhibit were taken in with Fine Art. For the first time, it was done at the St. Louis Exhibition.

7447. I should like to ask you a question on that. Do you approve of Applied Art—and we might almost say that a good deal is Applied Art in the Arts and Crafts exhibits—coming under your section?—I would certainly not mix Applied Art works with pictures and for his reason—they are usually the result of mechanical processes, and that is, as a rule, even against the regulations of the exhibition, according to which nothing may be exhibited in a Fine Art Section which is the result of a process.

7448. Would even hand-painted china be excluded? Painting on any material was eligible at St. Louis in the Art Section?—There they abolished the expression "Fine Art," and called it "Art Section."

7449. So that certain things among the Arts and Crafts exhibits would be eligible?—Yes. Take the man who makes most beautiful glass bottles, which may be very artistic in shape; the shape would be the only thing that would entitle them to come into the Fine Art Section, and the fact of their being manufactured articles makes them ineligible according to the regulations of the exhibition.

7450. Do you think that is right?—I think it is right. That is one reason for excluding photography, which has a much stronger claim to be exhibited with the Fine Art Section. Photography is always excluded, because it is a process.

I do not think I have fully answered the Chairman's question to me whether I think the Art and Crafts exhibits should come into the Fine Art Section. I would say yes, under the same roof, but not mixed up with either pictures or sculpture.

7451. (*Mr. Malcolm Ramsay.*) What about enamels; are they not a process, too? Do they come in the Fine Art Section?—No; they come in with Arts and Crafts.

7452. (*Mr. Wilson Fox.*) You have not been asked this question, I think: How often could you get up a successful exhibit of pictures? How often do you think artists would send their pictures to you? Do you think you could get up one every year or every two years, supposing you had the leisure to do it?—It could be done with great frequency. Artists know that an exhibition is an opportunity to sell their works—that is, if you take them from the studio and do not borrow them from the private owner; and, therefore, they are usually very willing to participate—at least, the great majority of them.

7453. It is quite a different thing to showing the exhibits of traders?—Quite.

7454. And, of course, the artist's pictures are different every year, and he has got a new commodity to show every time?—Yes.

7455. Do you attach importance to the showing of British pictures, from the broader point of view that British Art, as a whole, should be represented in a foreign country, in order to prove that Great Britain is an artistic country, and can produce Art works, just as the French can, say?—Yes, I attach the greatest importance to it.

7456. And in the case of pictures, there is not only the artistic point of view, but they show foreigners in other capitals what English scenery is like and English buildings?—That is so.

7457. So that pictures may be said to demonstrate England?—Yes. Prior to the exhibition at Brussels in 1897, it was often thought that anything was good enough to put into the British Art Section at foreign exhibitions, and it was no uncommon thing to see foreigners ridiculing and laughing at our pictures. But ever since the Brussels Exhibition of 1897, they have the greatest respect for British Art.

TWENTY-FOURTH DAY.

Thursday, 20th June 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Isidore Spielmann.
Mr. S. J. Waring.
Mr. U. F. Wintour (*Secretary*).

Sir Henry Austin Lee, K.C.M.G., C.B., called and Examined.

Sir H. A. Lee, K.C.M.G., C.B. 20 June 1907.

7458. (*Chairman.*) I think you have been Commercial Attaché at Paris for some years now?—Yes, for eleven years.

7459. Even before that you had a considerable experience of Paris, had you not?—Yes. I had practically a good deal to do with the commercial work of the Embassy previous to being appointed Commercial Attaché.

7460. What we specially want you to help us in to-day is to enlarge somewhat the information which you were so good as to send us upon the French system of conducting exhibitions, and of assisting the French exhibitors who exhibit at international exhibitions abroad. You have already been good enough to send us in several documents and a Memorandum on the French participation, The first thing I would like to ask you is, on what principle does the French Government act when an invitation is received asking them to participate officially in an exhibition which is about to be held in a foreign country?—I do not think I can do better than give you a translation of the information given to me by M. Picard, who was the Commissioner-General of the Exhibition of 1900. In reply to the question, How is the *Commissariat-Général* constituted, and what are its functions, he says "In principle the *Commissariat-Général* of the French Government is only appointed if the French Government itself has been invited officially by the country where the exhibition is held; and, consequently, only if that exhibition depends more or less directly upon the Government in question. The decree which was issued at the time of the appointment of the Committee for the Exhibition of St. Louis in 1904 shows the exact way in which the Commissioner-General is appointed, and defines his powers."

7461. Supposing an invitation is received, what is the first step which the French Government takes?—The first step is that information is received by the French representative abroad, who transmits it to the Foreign Office, but the ministry which deals with exhibitions is the Ministry of Commerce, the Foreign Office consult with the Ministry of Commerce as to whether the Government should take part in the exhibition.

7462. Could you tell us what is the actual department which deals with these matters?—It is one of the departments in the Ministry of Commerce.

7463. It would be quite a small department, then?—Yes.

7464. What do they do between times? Do they do anything else but decide about exhibitions?—Questions relating to exhibitions form only a small part of their work.

7465. Can you compare it with any department in the Board of Trade here, or in any other branch of our Government?—It would be like a branch of your Commercial Department at the Board of Trade.

7466. Would it be at all like the Commercial Intelligence Branch?—No. It is not the Commercial Intelligence Branch; that is a separate division altogether.

7467. Anyhow, the Foreign Office consult the Minister of Commerce?—Yes.

7468. Who would consult specially that department which you refer to, and they would determine whether this invitation should be accepted or not?—Yes.

7469. Would they send anybody out to the country in which the exhibition was to be held, or take any other steps to find out whether it was a desirable place to exhibit in—whether, for instance, if they participated, there would be likely to be a demand for French goods?—I think not; I think it is all settled in Paris.

7470. Would it be done partly on political motives and partly on commercial motives?—I should think it would be to a certain extent governed by political reasons and guided a good deal by private political motives in France—that is, by the interest taken in it by senators and deputies.

7471. When they have decided that France should take part in an exhibition, do they then settle what money they shall give?—That is settled afterwards in consultation between the various Departments specially concerned and the Ministry of Finance.

7472. Then we come, I think, to the *Commissariat-Général*, which is very much the same as a Royal Commission here, is it not?—Yes; practically it is a Royal Commission.

7473. What does that do?—The decree relating to the organisation of the French participation in the International Exhibition at St. Louis, practically shows what is done; the same form is followed for all exhibitions.

7474. In taking the decision of which we have spoken, the French Government do not consult the French Committee for Exhibitions Abroad, do they?—That comes later.

7475. When the Foreign Office and the Ministry of Commerce have determined to take part in an exhibition, I gather that they appoint a *Commissariat-Général*, and then, I suppose, leave the matter to them?—As far as the Ministers are concerned, the matter is handed over entirely to the *Commissariat-Général*.

7476. Will you please go on with your statement?—The next question I was asked is, Who exercises entire supervision—whether it is the Minister of Commerce, and, if so, whether it is over details, or whether he is only responsible for the total grant? To that, M. Picard says, "The entire authority rests with the Minister of Commerce, who is charged with the control of the expenses granted in the Budget for the service of the exhibition. He leaves, however, a large initiative to the Commissioner-General, but the Minister of Commerce remains the master, and can exercise his control in the manner in which he thinks best." The whole control of the money practically remains with the Minister of Commerce.

7477. Do they not have to go to the Minister of Finance?—They have to get their vote from the Minister of Finance in the ordinary course.

7478. Who settles whether they will give £100,000 or £50,000?—That is settled by the Minister of Commerce with the Minister of Finance. In the Memorandum which I sent in, all the credits are shown which have been allowed to the various exhibitions from 1886 to 1906.

7479. Our next question was, If there has been no uniform rule, what was the general principle followed? which industries or groups of industries generally receive the largest grants? and is the distribution of the grants fixed by the *Commissariat-Général* or by the *Société Français des Expositions à l'Etranger*?—M. Picard says, "The Government, when it grants subsidies, specifies expressly the object for which they are granted. These subsidies are more particularly devoted to the expenses which interest the official representative of France, and to those of the sections which cannot expect to derive from the exhibition any material benefit, such as education, social economy, etc., as well as to a participation in the expenses of bodies of workmen or of workmen's associations." That shows that those who exhibit pay their own expenses, and that the Government money is devoted chiefly to educational exhibits, to social economic exhibits, and to the visits of workmen.

7480. Does not the Government pay for the decorations?—No; they are paid for out of the money which is contributed by the exhibitors.

7481. Then we come to the question of the constitution of the French Committee for Exhibitions Abroad; what can you tell us upon that?—"The French Committee for Exhibitions Abroad is a society recognised as of public utility, and counting more than 2,000 members."

7482. Any quite respectable society is recognised, is it not?—No; it is not a privilege which is readily given.

7483. The Society of Political Economy, of which I am an honorary member, I know is recognised?—Yes, I am aware that that is recognised as a society of public utility; but still that recognition is not an easy thing to get.

7484. It does not necessarily mean getting a Government grant if it is recognised, does it?—No.

7485. Does it in this case? Does this society get a Government grant?—No; there is no Government grant given to it. Being recognised as a society of public utility does not imply a Government grant. I do not know whether you wish to hear the composition of the Committee.

7486. We know the constitution, so that I do not think you need repeat those details. How will it proceed with its work?—When an exhibition is decided on, the French Society for Exhibitions Abroad acts as the go-between between the exhibitor and the exhibition. The Government has nothing to do with the exhibitors, and it is this society which gets the subscriptions and collects the exhibitors and the exhibits.

7487. Would they invite people to exhibit?—That is exactly what they do—they do invite people to exhibit. "One of the principal factors in the recruiting of the society is the *rôle* which its members play in the committees for the admission of exhibitors and the installation of the exhibits, and also the part which they take in the formation of the juries and the support which they are able to give, if necessary, in the distribution of prizes after the exhibition is closed." There is a point which plays a very important part in French exhibitions, and which does not exist in this country, namely, the decoration of exhibitors with the Legion of Honour in return for the services they render in exhibiting. The number of members of the Legion of Honour is limited, but when an exhibition is over, the Government go to Parliament and ask specially for permission to increase the number.

7488. Is that a permanent increase, or does it end as those people die out?—It is only an increase *ad hoc.*

7489. You consider that that is an important factor?—Yes; the chance of a decoration is no doubt a great inducement to exhibit.

7490. We have heard something like that before, but I am glad to get it straight from you?—I think that it is an important factor.

7491. (*Mr. Algernon Law.*) They also give other honours, such as the Order of the Dragon of Annam, or something of that sort, do they not?—Yes. They also give the decorations of the *Mérite agricole* and the *Instruction publique.*

7492. (*Chairman.*) It is this society which invites the exhibitors?—Yes. M. Picard says, "The French Committee for Exhibitions Abroad recruits the exhibitors by sending circulars which come from the Commissariat, and by personal action on the part of its members. In order to exhibit, it is not necessary to belong to the society, but the members of the Committee of Admission, and of the Committee of Installation are exclusively selected from among the members of the French Committee."

7493. They could not go outside?—Nobody outside the French Committee for Exhibitions Abroad can be a member either of the Committee of Admission or of the Committee of Installation, so it gives them a very important position. M. Picard proceeds "Hitherto the recruiting of the exhibitors has not met, in general, with any great difficulties." As to whether the cost of the pavilion at each exhibition was paid by the Government, I have no information. M. Picard says "I do not know the total amount expended by the French Committee on their pavilions."

7494. Have you any rough sort of idea of what it was?—No, I have not.

7495. We wanted to know, because at recent exhibitions the cost of our pavilions has been so very high, and the amount of money got for them at the end has been so very low?—I fancy it is the same with the French; I think they have spent a large amount of money in that direction.

7496. You cannot remember the cost at St. Louis, can you?—No. I have no information.

7497. Has the French Committee received pecuniary aid from Chambers of Commerce, etc., or merely assistance in organising exhibits?—I believe that the financial assistance of the Chambers of Commerce may be considered as *nil*, or as very unimportant.

7498. Our next question was: "Are exhibits ever refused by the organising committee on the ground of their inferiority, or for similar reasons?"—M. Picard says "Applications for admission can be perfectly well refused, either because the exhibits have no real interest, or because those who ask for admission were persons not worthy of favour, or because the space available is too small. Practically, this eventuality does not often occur, because most of the applications are the result of invitations given by the Committee."

7499. They do not have any sort of preliminary competition, then? Three years before the last Paris Exhibition the Germans were at work, when I was in Berlin, in a sort of competition; you will remember that, I dare say?—Yes. There is nothing of that kind to my knowledge in France.

7500. So they do not often refuse exhibitors?—No, because, as they say, they apply to the exhibitors to fill up the space.

7501. Are French exhibits generally collective exhibits; and which is considered to be preferable—collective or individual exhibits?—M. Picard says: "The exhibits are partly individual in character and partly collective in character. Of these two kinds, the second—that is, the collective character—is more applicable to exhibits which, taken separately, would not be of sufficient importance, such as the works of schools, agricultural produce, etc. The grouping of these various exhibits is made by categories of establishment, and according to districts."

7502. They would be local collective exhibits, then?—Yes.

7503. Now I think we can pass on to the transport arrangements?—Your question is, Were special tariffs granted; if so, what was the rate of reduction, and on whom did the cost of transport finally fall—on the Government or on the exhibitors? M. Picard says: "Reduced tariffs are ordinarily granted for the transport of the objects exhibited. The reduction is in most cases 25 pe rcent. on the dispatch of the goods, and 75 per cent. on their return."

7504. (*Mr. Wilson Fox.*) May I ask whether those reduced tariffs relate to an exhibition in France, or whether they are given when the goods are sent to exhibitions in foreign countries?—This reply refers to foreign exhibitions, but only, of course, to the goods as they pass through France, these being the specially

Sir H. A. Lee, K.C.M.G., C.B. 20 June 1907.

favourable tariffs which are given by the French railways.

7505. (*Chairman.*) It does not refer to the rates on the foreign railways?—No.

7506. Of course, it could not, unless the French Government paid the difference?—That is so. M. Picard proceeds: "In principle, the cost of transport rests with exhibitors."

7507. The next question is, Was the cost of insurance and of storing the cases borne by the Government or by the exhibitors, and was the cost of the installation borne by the Government or by the exhibitors?—The reply is: "The charge for the insurance of exhibits and the storing of cases falls on the exhibitors, but the Government can, as has been done on previous occasions, give subventions for the purpose."

7508. Was any special staff provided by the committee to act as the representatives of exhibitors who were unable to have their own agents in attendance, and were goods sold or orders taken by the staff of the committee on behalf of exhibitors, and, if so, what arrangements were made with exhibitors in regard to this matter?—"The important houses have generally each a representative on the spot. For the others, apart from the action of the French Committee, there is no special representation, or only a collective representation." At Liège there was one representative for 30 or 40 different houses, representing not the same class, but all kinds of goods.

7509. That was by their own arrangement, was it?—Yes. What generally are the rules with regard to repacking, and by whom was the cost borne? "The cost of repacking falls on the exhibitors or on their delegates." In reference to the cost of transport, installation, insurance, etc., as to whether any part of it is ever paid out of the Government grant, and, if not, in what way is the Government grant expended? M. Picard says: "The French producers are, as a rule, tolerably favourable to taking part in foreign exhibitions. They find they are a means of publicity and an opportunity for making commercial friendships. All attach value to the awards which are given, and which bear witness to the merit of their products. The eventuality of honorary distinction does not leave them insensible."

7510. That would be rather in answer to the question that comes after. The question that I thought you were dealing with was about the charges being paid by the authorities. They are not paid by the authorities, I suppose?—No; they are not.

7511. Is no contribution ever made by the Government towards them?—No.

7512. Then how is the Government grant expended?—The Government grant is expended on what is their equivalent to our Royal Commission, and on paying the expenses of the officials who go out to represent the Government.

7513. (*Sir Isidore Spielmann.*) The cost of their pavilion would come out of the Government grant, I suppose?—I do not know whether it would come out of the Government grant.

7514. (*Chairman.*) According to the printed memorandum the Government grant at St. Louis was only about £20,000?—It was £23,000.

7515. That is not very much?—They sent out a large staff there, and they entertained very largely.

7516. (*Mr. Wilson Fox.*) Do they spend a great deal on entertainments?—I believe that the French Representatives are very hospitable.

7517. (*Chairman.*) So far as the decoration, the space, the repacking, and the rest of it are concerned, according to your statement they rather pay for it by decorating the exhibitors?—Possibly.

7518. That completes the special questions we asked you, I think?—Yes.

7519. Have you any criticisms to offer on the British section in the Paris Exhibition of 1900?—I do not think that the exhibitors were satisfied with the results.

7520. Speaking generally on the question of the management of the British section at international exhibitions, have you any criticism to offer?—No; except that I think it would be well if one of the chief officials were a person conversant with manufactures and trade.

7521. (*Mr. Wilson Fox.*) You were telling us about the society in France which invites people to exhibit and practically takes the leading part in arranging for the French participation; is that society composed of such representative men that it is trusted by the French commercial world in general?—Yes, I think so. I have their last report here, and I have looked through it, and, as far as I know, all the firms represented on it are of a high character.

7522. (*Chairman.*) Are you meaning now leading firms in Paris?—Not only in Paris, but all over France.

7523. (*Mr. Wilson Fox.*) If such a society was promoted in England, unless it was really representative, it might be worse than useless, might it not?—Yes. I think the French Committee is certainly representative.

7524. In England, supposing exhibitions were promoted by London manufacturers and London traders, there might be great jealousy in Manchester and Liverpool, and so on, might there not?—To be successful it must be general. I mean to say it cannot be confined to London any more than the French Committee is confined to Paris.

7525. The whole success of such a society would depend upon its being thoroughly representative of the commercial world, would it not?—Yes.

7526. I understood you to say that the exhibitors themselves pay for the decoration of the courts?—Yes.

7527. Do they contribute towards a general scheme of decoration; I mean, is the decoration uniform throughout the French section, and does each exhibitor contribute his share?—That I cannot tell you. I believe that the whole of the money contributed by their subscribers is managed by the society itself.

7528. I suppose the French Committee undertakes the decorations and the individual exhibitors contribute their share?—That is what I understand.

7529. One of the criticisms that have been made against British exhibits is the want of uniformity in decoration; in fact, the entire lack of any attempt at uniformity?—That is avoided in France, because the Committee make one *ensemble*.

7530. I understand that when the money is granted by the Government it is kept under the control of the Government?—It is entirely under the Ministry of Commerce.

7531. You know that in England when the money is granted by the Government it is entirely under the control of a Royal Commission, or of the body that gets up the exhibition?—Yes. In France there is nothing quite like a Royal Commission, because the Commissioner-General is always a functionary of the Ministry of Commerce.

7532. (*Chairman.*) Is he not an outside person of high standing?—He may be, but for that purpose he is a functionary of the Minister of Commerce. You will see in the decree forming the Commission for the St. Louis Exhibition they say, "the duties of the *Commissariat-Général* are quite compatible with public functions."

7533. (*Mr. Wilson Fox.*) In France they appear rather happily to combine commercial representation with a certain amount of Government supervision?—Yes.

7534. And the two work very well together?—They appear to do so.

7535. A question has been raised a good many times before this Committee about the indifferent locality which has been allotted to British exhibits in foreign countries. How is it that the French manage to get so much more space and a better locality for their exhibits than the British Government get?—They are more active.

7536. At the beginning?—Yes, I think so.

7537. Do you happen to know whether it is because they apply for more space, or because they apply for their space early and as soon as the exhibition is suggested?—That I cannot tell you. In 1900 there were complaints about our Commission not applying in time.

7538. Is it the French Committee for Exhibitions abroad that looks after that sort of thing, or the Government?—It is the Committee, not the Government.

7539. They would take the initiative about securing space?—Yes.

7540. We have no one here to do that sort of thing for us?—No, we have not.

7541. Perhaps that is the reason. Do the French Government, apart from the manufacturers, send exhibits themselves, say of minerals or of art or of chemicals—of all that class of exhibits which are much more of a national character and which individual manufacturers would not send?—To my knowledge what they chiefly send are things connected with education and social economy. There are very large exhibits always of things connected with education and with certain forms of statistics. In every French Exhibition I have seen large exhibits of the Government, but I have not seen any as regards Art.

7542. Who gets up the Art exhibit?—There is always a special section for that, and that is always very keenly followed in France.

7543. Do the Government contribute towards the Art exhibit?—Not to my knowledge.

7544. (*Mr. Algernon Law.*) I suppose they always send exhibits of Sèvres china?—Not to my knowledge.

7545. Have you ever heard of any complaints being made with regard to the action of the French Committee in refusing exhibits?—No.

7546. With regard to the reduction of railway rates, of which you have told us, does that apply over the French private railways as well as over the State railways?—Certainly.

7547. The Government have the power to obtain that reduction?—Yes. The State railways are a comparatively small part of the railway system of France.

7548. Were you at the Exhibition of 1889 in Paris?—Yes, but I had no official position in connection with it.

7549. How did our section in the Exhibition of 1889 compare with that of 1900? Was it as good a section?—I should say that it compared favourably with that of 1900.

7550. Though it was, as you know, purely a private effort organised by the Lord Mayor?—Yes. I certainly think, having regard to the money spent, that it did compare favourably.

7551. Do you know of any reason why that was so?—I think there was more enthusiasm about the exhibition of 1889 than there was about the exhibition of 1900.

7552. Was that because the exhibition of 1900 came too soon after 1889?—Possibly.

7553. If you think that there is not the same means in England of forming a good national representation of our industries as there is in France, what conclusion do you arrive at? Do you think that we should stand out of exhibitions altogether?—I think that would be very difficult.

7554. On commercial grounds or on political grounds?—If it were known that we stood out of exhibitions permanently, I think it would be injurious to our interest. I do not think it ought to be impossible to form in England a committee of officials and commercial men who would practically exercise a control and see that the goods which were sent were properly representative of English manufactures.

7555. Do you think from your knowledge of British commercial men that you could induce those whom it did not directly benefit to take part in it?—I think so. I think there would be sufficient patriotism.

7556. Even where the cost is very high, as, for instance, in the exhibiting of locomotives?—That would be rather different. I understood you to be asking with regard to the formation of a committee to make a selection.

7557. No; I am asking whether you think you could induce the manufacturers to come forward and offer their goods for selection?—I should have thought you could have got manufacturers in England who would be willing to do it, if they were approached by the Government; but of course I am not very well qualified to give an opinion on that.

7558. (*Chairman.*) Have you been round the Chambers of Commerce in England much lately? I suppose not; but I know you used to go round to them a great deal?—Unfortunately, I have not been able to do so recently.

Sir H. A. Lee, K.C.M.G., C.B. 20 June 1907.

7559. (*Mr. Harris.*) Would you mind explaining what is meant by persons not being "worthy of the favour" of exhibiting, which is rather a peculiar phrase?—The exact words are *soit par indignité des postulants.* That means, if the applicants are not up to the mark.

7560. You cannot carry it beyond that?—No.

7561. Do you not think it sounds a little as if it meant a short way with objects of trade jealousy, etc.?—No; I think it means, if their products are not supposed to do sufficient credit to French industry and French manufacture; at any rate, that is the meaning I attach to it. This does not often happen, because the committee has generally applied to these persons to send exhibits, and naturally they only apply to those who they are sure will send worthy exhibits.

7562. (*Chairman.*) They select the people to whom they apply in the first place?—Yes.

7563. (*Mr. Malcolm Ramsay.*) Do the French Government receive from their *diplomats* abroad details as to forthcoming exhibitions which the French Government is invited to attend?—I should think there is no doubt about that. They are very well informed in all these matters.

7564. I think that the invitations which we receive—Mr. Law will correct me if I am wrong—are mostly bald circulars issued by the committee which is organising the exhibition, and that we get very little information as to the character or size of an exhibition at the outset?—It depends. As you know, exhibitions are multiplying every day, and some of them are nothing more than bazaars. I can only speak as regards the Embassy in Paris; I think we let the Foreign Office know at once what the character of an exhibition is. Very often the application does not come through the Embassy, but comes direct here, and then is referred to us in Paris for our information. You can take as an instance the Bordeaux Exhibition, which is going on now. That is purely a local exhibition, for which the British Government has granted, I think, a small sum—only £150.

7565. (*Mr. Algernon Law.*) That is to the Consul for his extra work, I think?—Yes.

7566. (*Mr. Malcolm Ramsay.*) Could you tell us exactly how the account of the Government grant for French exhibitions is settled?—I was told at the Ministry of Commerce that it was settled between the Ministry of Commerce and the Ministry of Finance.

7567. Do they consult the French Committee, for instance?—I think not.

7568. Then they have rather to fix the amount of the grant in reference to the status which they think the exhibition will have, and its probable size; that is, they have to go rather on conjectural premises?—Yes.

7569. At what stage is that settled? Is it settled immediately after the Government decides to participate?—I think so.

7570. Do you happen to know how the French Committee originated? Was it due to a spontaneous combination of manufacturers?—I cannot do better than refer you to their report, which gives the whole history of the French Committee for exhibitions abroad.

7571-72. We have that book already, thank you, so that we can refer to it and verify that point for ourselves. When was the French Committee started?—In 1895.

7573. (*Chairman.*) Perhaps you recollect—was it due to Government action, or did the manufacturers combine spontaneously?—I think that the initiative was largely owing to a well known Paris manufacturer, M. Gustave Sandoz.

7574. Then it was due really to private initiative?—The report says that in 1885 a special committee had prepared for the participation of France in the exhibition at Barcelona in 1887. That was the origin of the Committee. In 1895 it was reconstructed on a fresh basis under the name of the French Committee for Exhibitions Abroad.

7575. (*Mr. Malcolm Ramsay.*) Do you happen to know whether under the present system in France they have ever any difficulty in getting a sufficient number of representative exhibitors to come forward?—I do not think they have. As far as I know, the number of

Sir H. A. Lee, K.C.M.G., C.B. 20 June 1907

French representatives at the last international exhibition (St. Louis) was very large.

7576. (*Sir Isidore Spielmann.*) Do you consider that the trade results to the French exhibitors are of great consequence to them; in other words, do they derive great benefit by exhibiting?—I should say not.

7577. If they do not and if the Government has to give decorations to induce them to exhibit, to whose advantage are these exhibitions?—For political and private reasons there is no doubt advantage in taking part in the exhibitions.

7578. As a matter of fact, then, the French manufacturer is not more interested in international exhibitions than the English manufacturer?—No, I do not think he is. I should say he derives very little advantage from it, from an industrial point of view.

7579. As we have no decorations to give our British manufacturers, we cannot be surprised at their not being eager to exhibit, can we?—No.

7580. With reference to the management of the French Art Section at exhibitions, that is altogether distinct from M. Dupont's Committee, is it not?—Yes.

7581. And quite distinct from the Ministry of Commerce?—Yes; it comes under the *Ministère des Beaux Arts.*

7582. And they would get their grant independently under the Ministry of Fine Art, would they not?—Yes.

7583. In reference to Milan, did not M. Dupont on that occasion endeavour to organise the Art Section as well, and was it not stated that he made rather a fiasco of it?—I do not know.

7584. With reference to the Paris Exhibition of 1900, you have referred to the British section as not being very satisfactory, but would you not exempt from that criticism the Royal Pavilion as an exhibit and the Art Section?—I think the most satisfactory part of our exhibition was the Art Section. Of course, there were a certain number who thought too much money was spent on the Art pavilion; but whether that was the case or not, I do not know.

7585. You have referred to collective exhibits, and I think you said that in France they are generally agricultural and educational?—Yes.

7586. Can you tell us anything about textiles? Do not the French invariably include them in collective exhibits?—I think they are included. I was speaking more with reference to the Government grant, and I do not think textiles are specified.

7587. (*Chairman.*) I suppose that the silks among the textiles are a great attraction always at their exhibitions?—The textiles, as far as my experience goes, have always formed the backbone of an exhibition.

7588. And I suppose the textiles from France would be more attractive than they would be even from this country? They would be more attractive than the Manchester prints or the Bradford woollens, would they not?—Perhaps they would.

7589. (*Sir Isidore Spielmann.*) Can you give us any figures of the amounts contributed by the most important firms who are members of the French Committee?—No.

7590. They bear the expense of exhibiting, and they bear a part of the expense of decorating the section. Does their report state what the firms contribute?—No.

7591. Do you happen to know whether it falls heavily on the firms?—I will enquire whether any figures are procurable.

7592. (*Chairman.*) We should be very much obliged if you would kindly take a note of that point?—I will ask him, and let you know.

7593. (*Sir Isidore Spielmann.*) In addition to the report which they issue, do they issue a balance-sheet?—I have never seen one.

7594. I think it would be interesting to this Committee to know how they spend their money?—There is no balance sheet of any kind in the Report issued by the Committee.

7595. (*Chairman.*) We should be very much obliged if you could procure the balance sheet of M. Dupont's Committee for us?—I will try to do so.

7596. (*Sir Isidore Spielmann.*) If we could know how they spend their money, it would be useful to us?—Their receipts must be very considerable.

7597. (*Chairman.*) According to the memorandum which you sent in, the cost of the St. Louis Exhibition was only £23,000, and that seems a very small contribution from the French Government unless it was assisted by a further contribution from the French Committee?—I think the expenses of the official representation were only paid out of it.

7598. (*Mr. Algernon Law.*) Do you think the table in your memorandum is a complete statement of the amounts voted? Does anything come out of the *Beaux Arts* or other sources?—Only for the Art Exhibition.

7599. (*Mr. Wilson Fox.*) Our manufacturers here, when they send to an exhibition, pay their own expenses and the cost of sending their exhibits to the exhibition. I should rather like to find out whether in France the manufacturers not only pay for the cost of their own exhibits, but contribute something over and above that which in this country the British Government pay for. If they contribute anything towards the general funds of the exhibition besides paying for their own exhibit, then the French manufacturers are paying for something which the British Government pay for here. I should really like to get to the bottom of that?—I will try and find that out for you.

7600. (*Mr. Waring.*) Are there any particular points in the organisation of the French system of control which you think might be advantageously employed in any future rearrangement in England?—I think the idea of the French Committee for Exhibitions Abroad is not a bad one.

7601. Possibly a difficulty here, as compared with France, is that in France there is more *esprit de corps.* There is a greater artistic sense in the French race, and I should think you would get a response from a Frenchman which you would not get from an Englishman; there is not the hard-headedness about the Frenchman that you find in the Englishman, and so he can be captured, as you say, by decorations—in point of fact, there is a better artistic sense amongst the the people?—I think the French are far more ready than the English to follow the government lead. In France, if the *mot d'ordre* went round that the Government wishes the manufacturers to take part in an exhibition, the manufacturers would take part in it.

7602. The French people act under orders, and are under the control of the Government to a much greater degree than we are here?—Yes.

7603. Do you think that the money employed in the Royal Commission buildings might not have been more advantageously employed in dealing with the courts, in the Paris Exhibition of 1900?—Do you mean whether the money spent on the buildings might not have been more advantageously spent inside?

7604. Yes?—The art building on the Seine was a great attraction—in fact, I suppose it is the thing which will be most remembered in connection with the English exhibit. But it cost a good deal of money.

7605. What were your impressions as to the practical value of that to the nation? Was there not a general sense of disappointment about our exhibit, and a certain feeling that it was a failure?—It is very difficult in dealing with art to say what the practical value is. There is no doubt it gave the French an opportunity of seeing some fine pictures by British artists, but whether that was of any value to English art or not is doubtful.

7606. Was it your opinion that in that section it was a success, but that generally as regards the court itself—and I mean by the court the inside part of our section—there was a sense of its having been a failure?—I think that was the general impression of the exhibition, and it is what I have always understood. Certainly, it was the impression of the English commercial classes in Paris that the English court was a failure.

7607. (*Chairman.*) I do not think we have asked you anything about Belgium. Belgium used to be in your sphere, did it not?—Yes, and it is nominally still.

7608. Can you tell us anything about the last exhibition at Brussels in 1897?—No, I know nothing about it.

7609. We have got certain written information, but I thought if you had had any personal experience of the Belgian management then, we should be glad to hear it?—I had not; I did not even go there.

7610. Is Switzerland in your district?—Yes, it is.

7611. Should you say that the Swiss are very active in taking part in foreign exhibitions?—My impression is that they are not—in fact, I think the Swiss are decidedly against exhibitions.

7612. Can you remember when there was a big exhibition in Germany? Judging from that, the Swiss might still be desirous of taking part in foreign exhibitions without having them in their own country?—Yes, that is true.

7613. (*Sir Isidore Spielmann.*) Did you see the Paris Exhibition of 1878?—Yes, I did see it; but I do not remember much about it. I was only over there for a few days; I was not in Paris then, and merely went over as a visitor.

7614. Then perhaps you do not remember what sort of show Great Britain made?—I think the exhibits were very well shown, if I remember aright. Each country had a cutting—a block. It was very well arranged, I think, far better than the exhibition of 1889 or the exhibition of 1900.

7615. Really, neither in 1889 nor in 1900 did we make a good show?—That is the general opinion.

7616. (*Mr. Waring.*) You hold strong views on the necessity of Great Britain being represented at international exhibitions, I think?—I think she should be.

7617. You feel that strongly?—I do.

7618. We could not afford to be out of it?—It is one of those things that it is necessary to do. If other nations take part in them, I do not think we should stand aside.

7619. (*Sir Isidore Spielmann.*) What would be the result if England refused to participate in another exhibition in Paris?—I do not think that at the present moment it would be possible for us to refuse if there were another large exhibition in Paris. It may interest the Committee to know that the question of another exhibition has already been on the *tapis*. *Sir H. A. Lee*, K.C.M.G., C.B. 20 June 1907.

7620. (*Chairman.*) We should rather like to hear about that?—They say the question is being studied now. I know the question has been brought forward, but I was told that no decision had been come to. The other exhibitions have been at intervals of eleven years, but it is very doubtful whether there would be an exhibition as early as 1911.

7621. (*Sir Isidore Spielmann.*) From your point of view you would rather see this country hold aloof altogether than make a poor show, I suppose?—I think so. I think if we take part it ought to be properly done. I have no doubt whatever about that.

7622 (*Chairman.*) I think you told us that you think we ought not to abstain?—We ought not to abstain, and I do not see how we can abstain.

7623. (*Mr. Harris.*) I think you said that at present you consider it would be impossible to abstain?—I was talking then with regard to France.

7624. (*Mr. Waring.*) It would be an insult, in point of fact?—If we were invited by the French Government to take part in an exhibition now, I think that we could not decline such an invitation.

7625. (*Chairman.*) I suppose the French are taking a great interest in the exhibition next year at Shepherd's Bush?—Not much has been heard about it in Paris, but it is rather early as yet.

7626. (*Sir Isidore Spielmann.*) That again would be a matter for M. Dupont's Society?—Yes.

Mr. William Kelway called; and Examined.

7627. (*Chairman.*) You are a member of the firm of Messrs. Kelway and Sons, are you not?—Yes.

7628. What is your particular business, nurserymen and seedsmen?—Yes.

7629. Where?—Langport, Somersetshire.

7630. How long have you been in business?—Since I was 12 years of age—over half a century.

7631. I see that you have exhibited in Paris?—Yes.

7632. Was that in 1900?—We have exhibited there two or three times, I think.

7633. Then you exhibited at Chicago in 1893?—Yes.

7634. And at St. Louis in 1904?—Yes.

7635. Then you exhibited at an Italian Exhibition. Where was that?—I really cannot tell you where Varese is. We did not exhibit there personally. They asked us for some seeds and plants, and things of that sort, so we sent them over.

7636. (*Mr. Algernon Law.*) You are not thinking of the Milan Exhibition?—No.

7637. (*Chairman.*) You are sure it was not the Milan Exhibition?—Yes.

7638. You have exhibited dahlias, gladioli, delphiniums, pyrethrums, gaillardias, and other plants?—Those are our specialities.

7639. And the value of the exhibits sent to each place you say is about £500?—Yes.

7640. You think you have had an increase of business in foreign countries which you can attribute to the exhibition of your specialties?—Yes. We depended upon exhibitions of that sort entirely for many years, but for the last few years we have been advertising a good deal.

7641. Are they new varieties that you exhibit; is that the way you get them on the market?—Yes; that is our point.

7642. Then you say that you have never experienced any disadvantage in having your goods copied; I suppose they could not be copied very well?—No, they cannot. They are quite unique. They are originations, and nobody can have them until we put them into commerce.

7643. Do you get your varieties mostly by cross-fertilisation by seed?—It is cross-fertilisation by my own hands principally, from seed. *Mr W. Kelway.*

7644. You have got awards, I gather, at these exhibitions?—I think we have had two or three hundred medals altogether, but I cannot tell you.

7645. Anyhow, you can tell us that you have had more than 100 medals?—Yes, I know that.

7646. These medals are advertisements to show the world where to send for real novelties, I suppose?—Exactly. We use copies of the medals for advertisements.

7647. Have you got a large trade in foreign countries?—Yes; that is a large part of our trade. We send to all parts of the civilised world.

7648. Have you been induced to buy sometimes from British or foreign exhibitors through having seen their exhibits at an exhibition?—We have not done much of that sort, our own productions being originations. We do not buy anything, unless we see anything that we think is worthy of being put into our stock.

7649. Would you say that you have derived benefit and instruction sometimes from visiting exhibitions?—Certainly. We always see something new—new ideas are exhibited.

7650. Apart from your own direct benefit, I understand that you are very much in favour of this country being properly represented at foreign international exhibitions?—Certainly. As far as we are concerned we should like to continue it.

7651. You have not much to tell us about the organisation, have you; or can you give us any hints for the better organisation of exhibitions?—I know nothing at all about it.

7652. In what form do you exhibit your goods; are they all "a-growin' and a-blowin'," as they say?—Yes.

7653. I suppose you have a nice floral display?—Yes. When the exhibition is near at hand we cut the blooms, stand them out in the water, and send them to the exhibition.

7654. Would you send them as far as Paris?—Yes, in jars of water. We have to keep the boxes level.

Mr. W. Kelway. 20 June 1907.

7655. What did you do at St. Louis?—There we sent the seeds and the plants, and grew them there, and cut them there. They had an establishment at Chicago; we sent them the seeds and bulbs previously, and they showed them themselves.

7656. Do you have a special stand?—Certainly.

7657. I suppose you do not do any part of the general decoration with your beautiful flowers?—No, but we have so many square feet allotted to us always.

7658. And you have a bright display in that space?—Yes, as good as anybody in the world can show of those things which are our specialties.

7659. Have you many competitors from this country?—There are some, but there are very few who show cut flowers abroad. They mostly send cases of seeds and models of roots and plants, but very few people show the living thing from this country in another foreign country.

7660. Have you a market in the United States for your goods?—Yes.

7661. I forget whether they are charged a high duty; I think they are?—I think so, too; I think it is about 40 or 50 per cent.

7662. But, still, I suppose you only sell to the richer Americans, who do not mind so much what they pay?—Of course, we do not mind so long as we get the money. It is certainly big orders as a rule that we get from America—very big orders.

7663. Would they be from private people?—Principally, but we supply the trade as well. There are very good firms in the trade in New York, Chicago, Boston, Philadelphia, and other large places, whom we supply.

7664. How are the awards granted to you? Does the jury come round?—Yes. During an international exhibition I think they come round about every fortnight; and, if possible, our exhibits are sent over afresh every fortnight, as a rule. It is a great undertaking, you know, to go across the Channel with cut flowers, but that is what we did at Paris. I do not know that that is to be quite recommended. Of course, the principal thing is to pay attention to your boxes—to send somebody to keep their eye on them, and to see that they are not upset, because if they are upset your exhibits are all spoilt.

7665. (*Mr. Wilson Fox.*) You send over these cut flowers frequently during the exhibition, do you?—We did at Paris, in just the same way as we would send them up to London, only they take a day longer before they are shown.

7666. At the St. Louis Exhibition did you plant any portion of the English garden around the pavilion?—Not for the purpose of decoration, but for the purpose of cutting flowers to show in the building. I do not know that they did not plant round about the decorative grounds; they were had for that purpose, I know.

7667. Exhibiting at these international exhibitions brings you orders, I think you say?—Certainly. In our early trade we depended entirely on exhibitions, until we were in a position to issue a catalogue like our present one. And now, of course, exhibitions help us, and we do not give up exhibiting; although we advertise, we still keep on exhibiting.

7668. With reference to the constitution of the jury, have you been always satisfied that the interests of this country were fairly represented?—I think so. I think they give us fair play. I have been a juryman myself, and I know.

7669. At which exhibition was that?—Not abroad; but I have been a juryman in exhibitions here, at the Royal Horticultural Society and the Royal Botanic Society.

7670. How many do they muster there?—At the Royal Horticultural Society the muster, I think, was about 35.

7671. Do you think a jury of that size can give the individual attention which is necessary?—Yes. It is done by voting.

7672. (*Mr. Harris.*) Do you remember the names of any other seedsmen or florists who exhibited at Paris or at St. Louis, side by side with you?—I do not know that I do quite. I think nearly all the cut flowers at Paris were shown by French people; I think we were the exception with regard to cut flowers.

7673. You were the only English firm then that did it?—I would not say that quite. All the firms—Carter's and Sutton's, and several others—did exhibit there; but I do not remember that they have exhibited cut flowers at any important exhibition.

7674. Do you mean to tell me that your cut flowers were sent on that occasion to the Paris Exhibition?—Yes.

7675. (*Chairman.*) Your flowers, I suppose, are forced mostly, being grown with heat under glass?—No. Our specialties are all grown in the open air.

7676. You would not have gladioli in spring, except they were forced?—I only show gladioli when they are in perfection in the open air here.

7677. So you would not show them until the late summer?—No.

7678. (*Mr. Harris.*) When the exhibition opened in May did you make any show?—There was a house of calceolarias in June, I remember; but I was not there in May. Of course, you cannot alter the seasons for the various flowers, unless they are retarded and kept in a dormant state. For instance, if you want the lily of the valley grown in September, instead of allowing them to come at their natural time in the spring, you would retard the dry roots, and then bring them into growth in August, and get them in perfection in September. But we never do that; we never retard anything at all.

7679. (*Chairman.*) You do all at the natural time?—Yes.

7680. (*Mr. Harris.*) Can you give us any notion of the cost to you of exhibiting? You have told us that the value of your exhibit each time was £500; but do you remember what it cost you to exhibit, say, at Paris or at St. Louis?—Do you mean for carriage, the cost of cut flowers and setting them up, all the labour and that sort of thing?

7681. Exactly?—I dare say it would cost £50 a time.

7682. Have you got any separate account of exhibition expenses, or do you run it in with your general expenses?—It would go into the general expenses, but I dare say we could turn it up and see what we paid this man and that man, and so on, for attending the exhibition, and what we paid for carriage and freight.

7683. Speaking generally, did you spend a good deal of money out of pocket on it?—Yes.

7684. And you found that on the whole it paid?—Certainly it paid.

7685. In your own mind, how do you compare the effect of your exhibiting at Paris, we will say, with an exhibit of yours at the Temple Show?—They are a day older in Paris, and your cut blooms, of course, have to suffer a little.

7686. I mean from the point of view of the business that comes?—I think it is tantamount—it is about the same thing.

7687. Do you mean that you get as much business out of the Temple Show as you get out of showing abroad?—I dare say we should, in the same time—for the same length of an exhibition.

7688. You would not get as much foreign business out of the Temple Show?—No; we should not get as much foreign business at the Temple Show. There are very few foreigners there; but there are Colonists, and so on, that you may get hold of.

7689. Have you had business in the Colonies as the result of showing, do you know?—Yes. There were orders for the Colonies taken at the last Temple Show, I know, by our man there.

7690. You said in answer to the Chairman that there are certain things new to you at exhibitions, of which you get the advantage; what kind of new things did you mean—were they definite points on which you have derived instruction or knowledge; if so, can you indicate any such points?—I do not know that I can tell you exactly a certain thing; but you do meet people there, and they give you ideas of their own which are new to you, and you make use of them. You see their new productions, and if you think they are worth applying, you go for them; and in the same way they would buy yours. If we did not see them at an exhibition, we could not really judge; and the only thing we could do would be to buy them and to try them.

7691. You think as a florist you have got benefit out of it in the way of business?—Certainly.

7692. (*Mr. Algernon Law.*) You seem to have been quite satisfied with the management of the various exhibitions—by the various Commissions, or whatever the British organisation might be?—Yes. I have never seen need to find fault with it at all. There has always been the room and the space allotted; it is always previously arranged.

7693. You have had no difficulties with the exhibition authorities?—No.

7694. And you have not been subject to restrictions owing to the fear of your bringing in any disease with your plants, or anything of that sort?—No.

7695. Then you were not subject to the ordinary restrictions?—There were no restrictions at all.

7696. (*Mr. Wilson Fox.*) In sending your goods to a foreign exhibition do you think that you help your export trade most, or that you helped your trade in this country most, or do you think that you help both equally?—I think the fact of your getting a medal in Paris, would help to sell your things in this country quite as much as a London medal would, or perhaps more. In addition to that, of course, you get French customers and customers from all parts of the world. I think you get more foreign people in Paris than you would here in London; it opens up a trade more in all parts of the world.

7697. It opens up a trade abroad, and your getting these medals also advertises your trade here—through that book of yours, for instance?—Certainly. People are very much gratified to know that their countryman, or a man of their own neighbourhood or their own county, has got a medal in Paris. It is a material advantage.

7698. You regard showing at a foreign exhibition then as a good form of advertisement?—Certainly.

7699. May I ask whether you get direct orders from individuals at an exhibition, or do you rely chiefly on getting orders from the trade at an exhibition?—We get orders at the time at these exhibitions.

7700 From individuals, do you mean?—We have got men who stand at the stall and take what orders they can get.

7701. Do they get those orders direct from the consumer?—From the consumer, and from the trade too. If they cannot get an order, they endeavour to get addresses, and catalogues are sent.

7702. At the foreign exhibitions do you get a large number of orders from individuals and private people at times?—About the same as we would in London, I think.

7703. You would get a certain number?—Yes. You would get about the same percentage if you attended a Paris exhibition as you would in London.

7704. What percentage would that be? Would you get 75 per cent. from private individuals and 25 per cent. from the trade, or what?—I should think you would get 90 per cent. from private people and 10 per cent. perhaps from the trade.

7705. That leads me to this point, that your particular trade is a very favourable one for showing. If you can get 90 per cent. of orders from individuals, you differ very much in the character of your trade from many others, who have to look entirely for custom either to wholesale buyers or to retail buyers in the trade itself, and not to the private consumer; therefore your particular trade lends itself especially to showing at exhibitions?—That is where, as I said, we always got our trade at the beginning. Now we get our trade by advertising, and by the catalogue, because we have got more capital to work with.

7705. By showing at foreign exhibitions you can get in direct touch with the foreign consumer?—Exactly.

7707. (*Sir Isidore Spielmann.*) At St. Louis were you in any way subsidised as regards your expenses; did the Royal Commission assist you?—I do not think so.

7708. You exhibited entirely on your own account and paid all your own expenses then?—I really forget about it now; I forget whether we did have anything or not. I think the Chicago and St. Louis people paid the freight; but I could look it up.

7709. Did you send a representative over to take orders?—No; we did not send a man over to America. We had an agent there.

7710. Who was he in St. Louis, do you know?—I forget his name.

7711. (*Chairman.*) Was he an agent for the exhibition, or have you a permanent agent in the States?—I think he must have been a general agent. He did some good trade for us.

7712. (*Sir Isidore Spielmann.*) Was he an exhibitor's agent?—I think he was.

7713. Was his name Hillman or Day?—I really forget; I could not tell you now.

7714. (*Mr. Harris.*) Did you send your own man to Paris?—Yes.

7715. Did you keep someone there the whole time?—Yes.

7716. Did you keep more than one there?—We had two there the whole time.

7717. (*Sir Isidore Spielmann.*) Do you regard the award you get, if it is a good one, as being an ample return for all the trouble and expense you are put to?—Yes. The announcement that we had been awarded a medal would do just the same, even without getting the medal, because now they award a medal, and if you wish to possess it, you have to pay for it.

7718. Is the value of a medal the same as it used to be, do you consider; or has it, on account of so many being given, become less valuable in the eyes of exhibitors?—I do not think it has become less important. I think the greater the population and the bigger the exhibition, the greater the number of medals awarded.

7719. (*Chairman.*) I suppose there is an increasing demand for new varieties of plants always, is there not?—Yes; that is the life of the florist's trade.

7720. You are not at all content to go on with the same plants?—We could not pay wages with the old things. Unless you could sell delphiniums and such things at a guinea each, you could not keep up an establishment, and you could not send out a catalogue like ours; it would not pay for it.

7721. So I suppose exhibitions are very essential to you in order to show your new stock?—Yes. It gets into the papers as a new thing; and if you have a unique thing which is your own, you command the trade for it.

TWENTY-FIFTH DAY.

Thursday, 27th June 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
The Right Hon. Sir James Kitson, Bart., M.P.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Isidore Spielmann.
Mr. U. F. Wintour (*Secretary*).

Mr. Frank Bowden, called; and Examined.

Mr. F. Bowden. 27 June 1907.

7722. (*Chairman.*) You are the Managing Director of the Raleigh Cycle Company, Limited, are you not?—Yes.

7723. Where are your works?—At Nottingham.

7724. Have you been in business very long?—I founded the company at the end of 1888. I was then Chairman and Managing Director, I am still, and I have been one or the other or both all the time.

7725. That is for nearly 20 years. I believe you exhibited at the Worlds' Fair at Chicago, at the Milan Exhibition, 1894, at the Perugia Exhibition, 1899, at the Coolgardie Exhibition, 1899, and at Cape Town?—Yes.

7726. In what year was the Cape Town Exhibition?—I cannot tell you, for I do not remember what year it was. It was some three or four years ago, I think.

7727. Of those the Chicago Exhibition was much the largest?—Yes. I have also attended a number of other exhibitions as an ordinary visitor.

7728. But you have not exhibited at them?—No.

7729. You have exhibited cycles only, I think?—Yes.

7730. The value of the goods you exhibited at Chicago, which was your largest exhibit, was about £500?—Yes. Ours was about the biggest exhibit there.

7731. Have you had any increase of business with foreign countries which you can directly attribute to the exhibition of your goods, and their inspection at the places you have named?—Nothing worth speaking of, in fact, we cannot really trace anything. I have been asking some of my assistants about that. We think it may have done a little good, but, as I have said in the answers to your written questions, it never anything like paid us, especially that one at Chicago, which cost us £1,000.

7732. I understand that you have not experienced any disadvantages from exhibiting, except at Chicago, but you did get your goods copied there?—Yes; there was a good deal of that. At that time we were taking a very prominent position in cycling. In those days there was a great deal of cycle racing sport; the most famous rider in the world was riding a "Raleigh," and so were most of the others. If anyone here remembers anything about cycling at that time, he will remember Zimmerman, who created quite a furore.

7733. Did you do any business with the United States at that time?—Yes. We were doing many thousands a year. We had finishing works in New York, and we sent over all parts in the rough and finished them and completed the bicycles there.

7734. That has been rather your way, has it not, so as to get under the tariff?—Yes, to a great extent there, but never anywhere else.

7735. The tariff was very high, was it not?—Yes; and has been ever since.

7736. Do you think there is any advantage in getting the awards that are given at exhibitions?—Very little indeed to us.

7737. Have you gained many?—Yes, several. I think we had one at Cape Town, which was given to our agents there, and at Chicago we had a special award for eight of our specialities, in addition to a medal for specific merit. We also received awards and medals at all the other exhibitions at which we have exhibited, either directly or by our agents.

7738. Do you not advertise that on your business cards?—We did years ago, but now we do not consider it of any value, and we do not advertise any of them, although this year we are using small reproductions of both sides of the Chicago medal, as ornaments to the corners of our catalogue, but without any reference to them in the reading matter.

7739. Is that because people trust to their own knowledge more; or are the awards so numerous?—I do not think people value medals very much now, because they see that beer and similar articles get hundreds. Therefore people are not impressed by them as formerly.

7740. What do you consider the most valuable way of telling the public that your goods are the best?—General reputation. If there is any gentleman in this room who is a cyclist, and you were to ask him, I am quite sure he would say at once there is nothing better than the "Raleigh"—at least I fancy so; but of course it might be prejudice on my part.

7741. How do you persuade other people?—We do it; we increase our output every year.

7742. I asked how do you persuade other people that that is so?—By travellers, and advertising in many ways the specialities of our machines and using the unsolicited testimonials that are being sent to us continually by people who have ridden our machines for many years.

7743. In your heads of evidence, you say that a medal from the Touring Club of France is worth more than all those that you have been awarded at international exhibitions?—Yes. They had a mountain climbing contest, two years ago, and my son thought he would like to go over as a bit of sport and enter. He got awarded one of their medals, but he did not get a gold one because——well, there was a great fuss among the French makers, and so four of them had to get the gold medals, and there were not any more to be awarded, and we got the next one, which was a silver medal.

7744. That you consider was of value to you?—Yes, that was of great value, because we were the only foreign firm that got a medal.

7745. I think you said to me just now that you have visited a great many exhibitions; have you ever been induced to buy from British or foreign manufacturers to any extent, from having seen their goods at exhibitions?—We have bought one or two things, but that is all, I find. Really we got more from the exhibition that took place in Glasgow some few years ago, when our technical man went up to see about certain machinery that we wanted.

7746. Do you mean the Glasgow Exhibition of

1902, I think it was?—That is the one. But we have done very little in that way. As a rule, the foreigner does what we do—he sends out travellers. If he has something that suits cycle firms, he sends travellers to see all the firms in England about it. We buy a number of things from abroad, but not through exhibitions; it is done in just the same way that we push our business abroad—by travellers.

7747. But you have seen improved machinery sometimes which has been of interest and advantage to you?—Yes.

7748. You did not exhibit at Paris in 1900?—No, I think not.

7749. Nor at St. Louis in 1904?—No, certainly not at St. Louis. Sometimes our agents exhibit, and do not tell us anything about it; and in that way I believe we have been at one or two exhibitions in Paris—I think at one before the first Automobile Show, but it was not of any great importance, and we were not represented directly.

7750. I suppose the machines would be exhibited under your name, and not under the agent's name?—That is so; they would be always shown as the "Raleigh." They are always proud of that. It is the trade mark, you see, and that is the great point in connection with it.

7751. So your reason for not having exhibited at more exhibitions has not been because your agent objects to your exhibiting yourselves?—No. If there is a local exhibition, the agent is always very keen on having an exhibit by us. We have not thought lately that it paid us to go to the Stanley Show in London; we were not there last year, and I do not know whether we shall go again. Quite a number of other firms have also dropped out, although that is purely a cycle and accessories exhibition, with a few motor vehicles.

7752. So, still less would you exhibit in future at international exhibitions, I suppose you would say?—I think so.

7753. That is, you would not go to the expense. But are you in favour of international exhibitions and of British manufactures being well represented at them?—I think it would be of great benefit to many English manufacturers if they were represented at exhibitions abroad.

7754. Then you would like other people to have the trouble and expense, but you would not care to go into it yourself; is that it?—No, that is not the point. It would not pay us to exhibit cycles, but there are many things made in England, and made wonderfully cheaply, which it hardly pays to imitate abroad; and where things like that are attractive and readily saleable, I think the exhibition of them very often draws the attention of the wholesale foreign and also retail buyers, and leads to very considerable business. I should say, as example, the light steel, brass work and the fancy enamel work at Birmingham would benefit very largely by such exhibitions. There are also many others, of course, and some English goods that would benefit by exhibitions abroad are very costly, but I do not think it will pay to exhibit English cycles where there are high tariffs.

7755. Do you think that the newer firms in the cycle industry would benefit by showing?—No. They could do a great deal better by sending out travellers and showing how very cheap they can supply the stuff. The general idea abroad is, "Never mind the quality; it is the price." This does not refer to rich or well-to-do people, who buy the best wherever they are.

7756. And they put up with a poor quality for a low price?—Yes, that is the great thing. I have just come from a cycle tour in France. At Caen I saw bicycles which were made by Massey and Harris, of Canada, a firm I know well, of exactly the same style of model that was made ten years ago, with no improvements except the free wheel. They were fitted with front-tyre brakes. You could not sell such things in England, because if the front tyre of one of those machines punctured, the bicycle would then be free to run to smash, without any means of stopping it. Yet, that is the kind of stuff they sell over there, because it is exceedingly cheap.

7757. Then your reasons for not exhibiting have nothing to do with the organisation of international exhibitions by the superintending authority here?—I was not satisfied with the way that some I have seen were organised.

7758. Where?—Chicago in particular.

7759. Give us a little of your experience of the British section in Chicago?—I do not think it was very well arranged for us, and I think that the English interests were not looked after as well as, apparently, the French interests were. I did not see what I call a business man on the committee there or among those who were looking after it.

7760. Did you want any help? Did you go to the head office?—Yes. I have forgotten the details now, but I know that we did want some assistance and some direction about one thing and another, and practically gave it up as a bad job. I spent about eight or ten days there.

7761. And you were struck with the want of business men on the organisation?—Yes.

7762. Do you mean by a business man, a man who knows all about the cycle industry?—No, not at all.

7763. You mean then a man with a general business knowledge?—A man who has business knowledge. I do not know the gentlemen, except by repute; but take, say, a man like Sir James Kitson, or a man like Mr. Waring, whom you have on your Committee. I know those gentlemen by repute. Those are the kind of men that you ought to have a fair number of, not bureaucrats so much.

7764. Whom would you have at the head?—A Government official.

7765. You would have a Government official, or some big person at the head?—Yes; one who has had great experience of exhibitions.

7766. And you would have on the exhibition committee a good sprinkling, if not a majority, of business men, if you could get them?—I would have a majority of them, I think; it would be very much better; and I would especially say business men retired from business with all their faculties unimpaired, as if often the case.

7767. Do they retire?—They do not want to go in for making more money.

7768. Do those nice people retire from business with all their faculties unimpaired, when they are still making a lot of money?—I think so, and it shows they have good sense when they do it.

7769. But do you think they have that good sense?—Yes, plenty of them.

7770. Do you not think it is rather difficult to get the best men of business?—No. There is always a considerable amount of honour attached to such a position, and I am sure there are very many who would take it. Just in the same way I have very strong views as regards the British Consuls abroad, because I have been obliged to consult them.

7771. That is a slightly different point, although it is a very interesting one; but I suppose you have not run against the Consuls in connection with exhibitions, have you?—I could hardly say that.

7772. Anything in connection with exhibitions we should like to hear?—I have seen a lot in connection with exhibitions. I was at the Centennial Exhibition in 1876 in Philadelphia. I also saw, I think, the first exhibition in Tokio, and that was, I think, only some three or four years later; but it would be too difficult to hunt up the dates.

7773. We are more interested in the recent ones; for instance, the Paris Exhibitions?—I have been to two of the big Paris International Exhibitions. There was one in 1889, and there was another one in 1900; I was at both of those.

7774. Had you anything to do with the management of those; did you see anything of the management at Paris?—No.

7775. Then you cannot give us any criticism about the Paris Exhibition?—No.

7776. You can only give us your general views about what the management should be?—Yes.

7777. I gather that, generally, you are well disposed to exhibitions, but you do not think that your particular line lends itself much to that form of advertisement?—As regards exhibitions, I think it all depends where they are, and the circumstances connected with them; but it would be very much better if the Government, instead of having perhaps quite so many officials, were to spend some of the money in assisting certain of the exhibitors whose manufactures it considered

Mr. F. Bowden.

27 June 1907.

would be of advantage to England to be represented abroad.

7778. That is, that there should be some selection of the best things to be shown?—Exactly.

7779. Something in the nature of a collective exhibit, suppose?—That is it. They could say to the people: "We propose to exhibit so many of your goods, or so much of your goods, and we will give you so much space. We will look after it for you, and distribute any matter that the Exhibitions Committee may allow to be distributed. You must pay so much for so doing, but there will be the end of your liability in the matter." If that were done, you would get a much more representative exhibit than, I think, you could get in any other way. There are certain things that can be exhibited very well abroad and with great advantage to the makers. There is one firm—I have not asked them about this, although I am intimately acquainted with them—Alfred Herbert and Co., Ltd., of Coventry, who are the finest makers of automatic tools in the world. They beat America, because they have American ingenuity in their head man at the works—Mr. Harmer—and they have British solidity. They have exhibited abroad, and I think you could get some very valuable information from them, but what description it would be I do not know. I only know this, that they are now supplying their tools in every part of the world. We want some automatic machinery from them, and cannot get it for 12 months.

7780. They are so full of orders?—Yes.

7781. As regards these collective exhibits, are you aware that Bradford, I think it was, at one or two exhibitions got up a collective exhibit? Has Nottingham ever done anything of the sort?—I do not know.

7782. Do you not belong to the Nottingham Chamber of Commerce?—No, I resigned.

7783. Do you think the Nottingham Chamber would be of help to us in getting up a collective exhibit of the industries of Nottingham?—I think they could help you.

7784. You ought to join again, ought you not?—They have asked me lately to join again; I do not know whether I will, because formerly my presence there did not seem to be of advantage to anyone, and I am very busy, being also the head of another very important organisation, the Sturmy-Archer 3-speed Gear Syndicate.

7785. (*Sir James Kitson.*) You have given your opinion to the Committee as to the type of business man you think should be on the Royal Commission; but do you not think it would be extremely difficult to induce men with great business experience and at an advanced age to take an active part on those Commissions?—They have induced you; why should they not induce others?

7786. My experience of business men on committees or commissions is that they are not very reliable, and that they do not attend?—I have never heard that they say that about you.

7787. They do not attend, and I have had some experience upon the Paris Exhibition Commissions. You are comparing, I think, the very best business men with the ordinary public servant, instead of comparing the best business men with the best type of public servant, don't you see?—You can very easily govern the matter of the business man remaining a member of the committee or the commission by making it one of the rules that members should attend so many times, etc., and if any member did not do so, and therefore did not comply with that particular rule, he would cease to be a member immediately and without notice; and then you could appoint another one to replace that person.

7788. Your suggestion is offered with the view of forming an efficient commission?—Yes.

7789. You think it should be composed of business men of experience?—Yes, partly of business men and partly of officials.

7790. But I say that you cannot get the business men?—Have you tried?

7791. Yes; and they will not give the time?—It depends upon how much time you want.

7792. The commissions that you have rather complained of in regard to the exhibitions you have mentioned have been perhaps supplied from an inferior grade of public servant, and therefore your comparison, I suggest, is scarcely a fair one?—Several that I met had not what I call a common sense knowledge of the way things should be attended to

7793. I ask you these questions, not so much because they arise out of your remarks, but because there have been several suggestions put before this Committee to the effect that there should be business men on the commission. The organisers of these international exhibitions and the Government administration are always ready to put the best business men on to these commissions, only they cannot get them to give their services?—One question, of course, would be how much time would be required. That is a great thing. Surely there should be no difficulty in getting a number of men to take up a position like that, if it is stated clearly how much time is required. Plenty of good business men are trying to get into Parliament, and to be J.P.'s, and all that sort of thing; why should they not do something in that way, especially if good and useful work be rewarded with honours in the same way that political work is.

7794. You have graduated, and therefore we can accept you as a first-class man of business; but you told the Committee yourself that you have so much to do—that you have this business to manage and that business to manage—that you cannot join the Chamber of Commerce?—No, not that—that I cannot do any valuable work there, in my opinion.

7795. I suppose the same difficulty arises with these commissions?—I do not know; I do not think it follows.

7796. (*Sir Isidore Spielmann.*) I think the last great international exhibition in which you participated was the Chicago one, which was held in 1893, I believe; the others which came after being small?—We have had Milan.

7797. We do not call that a great exhibition; it does not rank with the large exhibitions?—We have been represented at two exhibitions over there, and at one in Turin.

7798. But those were not big exhibitions?—No, they are not big enough to be called that.

7799. Your last great one was in 1893, that is 14 years ago?—Yes.

7800. As you have had no experience of great international exhibitions since then, do you not think your evidence is a little severe? Have you visited the later great exhibitions?—Yes.

7801. Have you seen what other firms in your trade have exhibited there?—Yes; and it has been a mere nothing.

7802. But if I am not mistaken, some firms in your line have spoken rather favourably of exhibiting at exhibitions?—I cannot answer that one way or the other, as I do not know that they have; but I know that there has been practically no exhibiting at any of these big ones.

7803. You speak of the troubles which you had at the Chicago Exhibition; what were they exactly?—We could not get the exhibit arranged in satisfactory form. We were shoved up in a very bad place, and we could not get any attention. There seemed to be nobody there to attend to things, and I wasted hours trying to get hold of the officials, and to get information about different matters. We had people there before my arrival trying to get things right.

7804. Were you dissatisfied with your space?—No, it was not the space; it was the place in which we were put, and the difficulties in connection with it altogether. The real details of the particular troubles, which were very large indeed, and which our own representatives on the spot were unable to overcome, I cannot give you now; it is so long ago.

7805. Do you remember who was in charge. What was the name of the British official who had charge of your section?—I do not remember any of them.

7806. I believe the chairman of the Royal Commission was Lord Alverstone—Sir Richard Webster he was then?—I do not remember.

7807. He was thought to be a good organiser. You cannot account for the difficulties that you have experienced?—No; except that I could not find out that there were what I call any practical business men on the job.

7808. Why did you drop out of the Stanley Show.

You said you exhibited formerly at the Stanley Show, but you have since declined to exhibit?—A number of firms are finding that there is no special benefit now in exhibiting cycles. The public are not attracted, because the changes yearly are few, and not noticeable by the general public, to whom all cycles seem alike, besides the novelty has gone, but very great interest is taken in automobiles. We are not the only ones who have dropped out from the Stanley. Messrs. Rudge-Whitworth, Singer & Co., Centaur Cycle Company, and Swift Cycle Company are among those who did not exhibit last year.

7809. Then you think that confidence, even in the smaller trade exhibitions at home, is subsiding, just as confidence and enthusiasm in the larger international exhibitions is subsiding?—It all depends upon what the exhibition is. Take, for instance, the Healtheries and others, that were held down at South Kensington. They were all immensely interesting, and drew people tremendously, at the time they were started. Whether they paid or not I do not know, but they drew people then much better than they would now. From our point of view, as regards our particular business, certainly it does not draw in the same way as before; but on the other hand, as I say, it does draw in the motor business. The Exhibition of Automobiles is about the most attractive exhibition possible now; and I am sure the coming one will be a greater success than any that has been held before.

7810. Do you say that you would require a very strong inducement to exhibit at a future international exhibition?—Yes.

7811. And you say that you have dropped out of the chief exhibition in your line in this country?—Yes, because it is unattractive here.

7812. Consequently you would not exhibit in a big exhibition?—I do not say that. For instance, if there were an exhibition somewhere abroad, and the Government were prepared to take it in hand on the lines which I suggested just now, we should consider the matter on its merits, and see whether it was not worth while to exhibit there. I think there has been an exhibition in Tokio within the last two or three years. It was rather a large one. Our agents in and for Japan applied to us for certain allowances to enable them to exhibit, and got a little direct business; but I know other firms who make cheap bicycles who have done twenty times the amount of business in Japan without exhibiting—why?—because of the low price of their goods.

7813. Have you derived any benefit from any one of these exhibitions that you have participated in?—It is impossible for me to say positively yes or no. We cannot trace anything directly to it. If you advertise in a certain paper, it is impossible to say whether you get any particular benefit from advertising in that particular paper; but you do get a benefit from advertising all round, most assuredly—it is the life of trade.

7814. In which European capital would you be disposed to exhibit if there were an exhibition?—Amsterdam.

7815. On account of there being no duty?—There is a 5 per cent. duty there, but it is a low duty, and we can compete with anybody there in good machines, of which the Dutch buy largely.

7816. Is it chiefly the duty that keeps you out?—Yes. Of course, you understand that in those countries where they have large duties they can keep us out, and therefore it is very little use sending over there to exhibit, because every time it is a question of price. At my last visit to France, although I was cycling for pleasure, I met some of their biggest agents and talked with them. They said, "We know your mark very well indeed; but the cost for freight and duty is 60 francs apiece to lay down the bicycles here, and people will not pay the price."

7817. (*Chairman.*) You have got your agents there, have you not?—We do a mere nothing in France now.

7818. But you have an agent there?—Yes, we have an agent in Paris.

7819. And in other European countries?—Yes.

7820. Have you one in Italy?—Yes. In Italy we do perhaps something over a thousand pounds a year, and a few years ago, before they put up the tariff, we were doing £12,000 a year. Our business has decreased in every country where they have a big tariff.

7821. (*Sir Isidore Spielmann.*) In the event of your being offered financial assistance towards the cost of exhibiting, would that be a consideration with you?—Yes, in the way I suggested just now; that is, if you say, "There is to be an international exhibition at a certain place, we will give you a certain space at a certain price and look after the exhibit for you on your paying so much"—then we might do it. We should in certain cases.

7822. (*Mr. Malcolm Ramsay.*) So far as your own business is concerned you look upon exhibitions as a means of advertisement, I suppose?—Yes. The greatest inducement to exhibit at the Stanley Show is the fact—mind you, we have lost that, you may say, by coming away from it—that if we exhibit at the Stanley Show we get notices in the newspapers all over the country; but we do not consider the expense of showing, which runs into a matter of £300 or more, pays us for those free advertisements in the dead season.

7823. Do you think that other firms in the cycle trade take the same view of it?—Yes; they are gradually doing so.

7824. I think you mentioned Singer's?—The Singer Company have done the same thing.

7825. Then there are the Humber bicycles?—The Humber people are still exhibiting there, but the Rudge-Whitworth people are not.

7826. Do you think you can afford to stand aside and take your chance of people saying, "The Raleighs are no longer exhibiting; they have gone off"?—There is no doubt we can afford to do it, because everybody knows we do not think it worth while to exhibit there as we have our own depôt on Holborn Viaduct.

7827. If you have got a novelty, would you not gain by exhibiting it. Take your 3-speed gear, for instance?—Yes, and we are exhibiting that.

7828. Does it not pay you to exhibit that?—Yes. The Three-Speed Gear Syndicate is a separate concern, and have been exhibiting their gears for years, and will be at the Stanley Show again this year, most assuredly. Exhibitions are the most valuable of all advertisements for novelties.

7829. A novelty is a thing that may be helped by an exhibition more than an established article may be?—Yes.

7830. May I ask if your total sales are increasing, or are they keeping pretty steady?—They are greater now than ever.

7831. You mentioned just now that your foreign business has fallen off a great deal?—Are you referring to our turnover altogether?

7832. Yes?—Our turnover altogether now is greater than ever, and in the Sturmey-Archer Syndicate it increases about three times each year over the last.

7833. Then you are making up on the home trade what you have lost on the foreign trade?—Yes; and it pays us better to cultivate that trade, because when we have got it we can hold it; whereas abroad we are too much in the hands of our agents there. [I should explain that an "agent" in the cycle trade is simply a wholesale customer, to whom is granted the sole right of sale of a certain mark of cycle (as the "Raleigh") in a certain country, town, or district.]

7834. Supposing there were an exhibition abroad in which the British Government were going to participate, and they wished to get a representative collection of various industries, and the country was one in which you did not expect any particular business, and supposing the Government came to you and said: "We are anxious for the credit of the country that we should have some of our first-class cycles shown"; would you consent to go into that exhibition from patriotic motives?—We sometimes spend a sum of money for that sort of thing, just in the same way as we spend money in providing things for our workpeople that we have no necessity to provide. Very likely we might, if it would only cost a moderate amount.

7835. You would be prepared to consider it if the cost was not very large?—Yes.

7836. (*Mr. Harris.*) What made you go to Milan in spite of your general disbelief in exhibitions?—As a matter of fact, our agent in Italy went to Milan.

7837. You exhibited through him?—Yes. We paid

Mr. F. Bowden.

27 June 1907.

half of the expense, I think, and he paid the other half.

7838. Did you send a large exhibit?—Yes, we sent a thoroughly representative one. He said it would help him with the Italian sub-agents, and would make a lot of talk. There, again, you come to it as an advertisement; that is all it was—especially with the sub-agents, not with the private buyer, you see; and yet the agents, of course, know all about our mark. After all, it is an advertisement pure and simple.

7839. Can you say as yet whether it has paid you?—No, because business has gone down steadily in Italy.

7840. You have not picked it up just lately; you have had no spurt?—We have not been able to say. In most foreign countries now they are not really what we call cyclists; they only mess about on their bicycles, and do not ride them long distances. The consequence is they go in for the very cheapest kind of stuff, and the dealers will tell you candidly, "Look here, I do not care anything about quality; I want a bicycle for a hundred francs"—whether it stands up afterwards or not, I do not care. A firm in Paris candidly said to me as regards a market in South America: "We will buy 2,000 bicycles from you if we can get them at the price"; and they added, "We don't care if they go to pieces in a fortnight; we have nothing to do with that."

7841. Did you exhibit at New Zealand last year?—I believe our agent did exhibit there.

7842. (*Chairman.*) Then the list of exhibitions which you gave us at first is not quite complete, if your goods were exhibited at New Zealand last year?—You see we cannot give you exact particulars. All we know is that we have as our general agents in New Zealand the Adams Star Company; they have our sole agency there, and we cannot sell to anyone else, and it is their business to advertise and do everything in connection with our cycles. We supply them at rock-bottom prices, and they do the rest in New Zealand. I remember that Mr. Adams told me when he was over last time that they had been exhibiting at the exhibition there, or were going to do so, and as a matter of fact, the bicycles were shown; but it did not interest us.

7843. (*Mr. Harris.*) Do you send a good many bicycles to New Zealand?—We send a fair number; I do not know what you would call a good many.

7844. You have a trade that pays you more or less there?—Yes.

7845. You told the Committee that you were a visitor to the last two exhibitions at Paris; were there large exhibits in bicycles and tricycles there?—I really cannot remember seeing them there; I was more interested in other things. I did not go with the idea of seeing such things.

7846. We should like to know what impression those exhibitions made upon you generally. We will confine ourselves to the Paris Exhibition of 1900; what sort of impression did the British show make upon you?—My remembrance is that it was a very good one, but then I was attracted by art, not manufactures.

7847. I am asking you about manufacturers?—I did not go there to inspect them, having no time to spare.

7848. I think the general effect of your evidence may be put down as that an exhibition of bicycles and tricycles at the present time does not draw?—That is so.

7849. It is past the time when exhibiting them has an effect, is that it?—Yes, at all events in this country and in France.

7850. I am speaking of abroad now?—Abroad I do not think it draws much. But it is a sort of thing that England may well be proud of, because there is nothing connected with the cycle trade of any importance that has not been invented in England. I do not know that any of you can mention a single thing. There is only one thing that is used here now that was not invented in England, and that is the wood rim. They still use a lot of wood rims on racing bicycles, but not on others; I introduced the wood rim into England from America.

7851. In saying that, do you mean to suggest that in an exhibition of British industry you would like to see a large representative collective exhibit of cycles?—No, but I would like to see a small representative exhibit, because there is nothing in the world that can equal the English bicycle in its completeness. We are far ahead of France in the matter of variable gears, the latest great improvement in cycles. Take, for instance, the cycling tour I have had lately, which has done me a world of good; I could not have stood it if I had not had a variable gear for riding over hilly roads against the awful winds of the last three weeks; but with a good variable gear one does not mind them. They have variable gears in France, but not the kind we use in England. There are many kinds of variable gears, and the French use what they call a retro-pedalage, a thing by which you pedal backwards—a very ridiculous thing in English expert opinion. It is heavy and cumbersome, and it is not mechanically correct; but the French use it. If they were to send an exhibit of their cycles to England so fitted, they would be received with derision; but if we were to send bicycles from each of the big firms in England and exhibit them in France, the exhibit would draw a lot of favourable attention.

7852. When you talk like that do you still mean that this would not pay as a matter of business, but would simply be a sort of national pride; is that your view?—Yes, that is what I mean.

7853. You do not think that if you were to push it business might result from it, do you?—It is possible that it might result, especially if the Government did it. If the Government were to make a little collection of cycles, no bigger than this room, and set them out nicely, I believe it would have twenty times the effect resulting from the firms exhibiting by themselves. This would be the idea: Let there be an exhibit of British bicycles, and say, "That is a Rudge-Whitworth, that is a Humber, that is a Singer, that is a Centaur, that is something else," and on each one you could have some of the specialities of the firm, and you could state what they were. That would attract a great deal of attention.

7854. You would put up the names of the firms, then?—You are bound to put the names on and show them, because foreigners go by the trade marks very greatly in bicycles, and they would not otherwise recognise them. But it should be a representative exhibit of the principal firms in the trade, showing specialities particularly; and then I think it would have an excellent effect, because the British cycle industry is something to be proud of. In connection with that I may mention that some of us who are not making motor-cars—and my firm is not doing it, we have got our hands full with other things—are proud of the fact that the leading men in the motor trade are ex-cycle men, and that the two great races that have been run lately have been won by cycle firms, not by motor men, who think they know everything, and who do not.

7855. There is only one more question I will trouble you with arising out of your evidence. How did you first push the Raleigh?—By advertising in the English papers and by interviewing cycle agents.

7856. Simply by that means—no exhibition came in?—No, foreign exhibitions, but we exhibited every year at the English cycle exhibitions down to 1905. I was a Director of the National Cycle Show from its start till its last exhibition at the Crystal Palace, a period of about 12 years.

7857. (*Mr. Algernon Law.*) In order to test the activity of the three last organisations we had for Paris, St. Louis, and Milan, were you asked to send an exhibit to any one of those three?—To all of them.

7858. You were?—I remember distinctly St. Louis coming in.

7859. By letter or by post?—I do not know. I can remember the St. Louis application coming in by letter, but whether anyone came round as well I forget. I have an indistinct remembrance that someone did call about one of them, and it was probably about St. Louis.

7860. Would it have more effect in inducing you to exhibit if it was explained to you?—No, because everything, whether our secretary or one of the other directors sees it, finally comes before me, and I deal with everything as carefully as a man can. I do not put anything into the wastepaper basket without looking at it. I always find time enough for that.

7861. I suppose your agents in a foreign country would know more about the pushing of your cycles in that particular country than you would yourself?—Certainly.

7862. Then in the case of where your agent has exhibited, or has requested you to exhibit, it may be

assumed that in that case, and probably in similar cases, your business does gain by exhibiting?—As it has gone down very largely abroad, taking it generally, and with most of the other firms it is just the same, you see we cannot say that it has benefited us very much—and even the agent would not say that.

7863. But your agents think it worth while to exhibit?—They have not thought it worth very much. Take, for instance, Cape Town; they exhibited there, and the agents have been complaining ever since.

7864. (*Chairman.*) But there have been bad times out there I think, have there not?—Yes, and it is getting worse and worse apparently.

7865. That may have had something to do with it?—I have a very large experience of the different places myself, because I have been seven times round the world. I have lived in China and France and the United States, and I have visited all the Australian Colonies, New Zealand and Tasmania. So I know the ground pretty well. I have also been in most European countries.

7866. (*Mr. Algernon Law.*) Would you feel inclined to modify a statement which you make at the end of your proof with regard to employing practical men—I suppose you mean in subordinate positions—and "Not the well-connected ignoramuses whom the writer has met, who were evidently appointed simply to provide them with well-paid employment." I think you have referred chiefly to Chicago; in that case the person who had the chief management, and apparently had largely the responsibility of selecting these people, would have been the present Lord Chief Justice, then Sir Richard Webster. Do you suppose he selected people in order to provide them with well-paid employment, and not on their merits?—Lord Alverstone is one of our best clients. He is honest and straightforward and thorough in everything, but, notwithstanding his high position, I do not think that he was the best possible judge of the men to select for such a business as that.

7867. But he would not select them in order to give them highly-paid employment?—No.

7868. So you would modify that?—No. The people would be put before him, and he would be solicited by one and the other, etc.

7869. I suppose it is difficult to pick up good men for a six months' or a year's job?—Yes, but as regards some men who have retired from business, I am sure that you could get good ones to assist in a matter like that, and you could put them on the committee.

Mr. F. Bowden.

27 June 1907.

7870. On the committee, but not as being paid as subordinates?—No, I do not mean that, because they would not have it.

7871. (*Chairman.*) Have you any suggestions as regards the paid subordinates? How would you be most likely to get efficient men? The best men, as you were rather indicating just now, would probably be in employment?—I have had no practical experience of the working of an exhibition, and therefore I do not think I am in a position to advise from experience on that matter. But if I had to engage the subordinates I should advertise for them, stating the duties required. Some of our best men and men holding high positions have been obtained by us in that way, and Government appointments, whether for long or short periods, have a great attraction for able people in all countries.

7872. I take it that you want to have a good figurehead, a man of some position, as the head of the commission?—Certainly; that is very important.

7873. And as many good business men as you can get?—Yes.

7874. Do you think you can get a good many?—Yes. Whenever it is abroad, most assuredly I think it is of the greatest importance that the head of affairs shall have a considerable knowledge of the language of that country.

7875. You mean the men at the head of affairs?—Yes.

7876. (*Sir Isidore Spielmann.*) In the event of a Royal Commission inviting half a dozen or twelve firms to contribute a dozen cycles apiece towards a collective exhibit, do you think there would be any difficulty in getting such a collective exhibit together?—You will not want as many as twelve in order to get a representative exhibit. Really, if you had three you would get all the varieties necessary.

7877. Would they be willing to do it, do you think?—Do you mean to supply the cycles?

7878. To lend the cycles to a Royal Commission, leaving to the Royal Commission the installation of the exhibit?—I am sure they would.

7879. Would you?—Yes, we would lend a representative exhibit with great pleasure.

TWENTY-SIXTH DAY.

Thursday, 18th July 1907.

PRESENT:

Sir Alfred E. Bateman, K.C.M.G. (*Chairman*).
Mr. A. Wilson Fox, C.B.
Mr. C. A. Harris, C.B., C.M.G.
Mr. Algernon Law.
Mr. Malcolm Ramsay, C.B.
Sir Swire Smith.
Sir Isidore Spielmann.
Mr. S. J. Waring.

Mr. U. F. Wintour (*Secretary*).

Captain Percy H. Atkin, called; and Examined.

7880. (*Chairman.*) You have had some experience in connection with international exhibitions, I think?—I was British representative for Education and Social Economy at St. Louis, 1904, and I was British Commissioner for the New Zealand Exhibition, 1906-7.

Captain Percy H. Atkin.

18 July 1907.

7881. You were out there, I suppose, all the time?—I was out in St. Louis all the time the exhibition was open. I was in New Zealand the whole time, from about three weeks before the exhibition opened to about the same period after the close.

7882. What opinion have you formed as to the effect of exhibitions, say, on the manufacturing and exporting trades of this country?—I am afraid that on that particular point I have no data on which to form an opinion; but in regard to art, art undoubtedly benefited at the last exhibition.

7883. You mean in New Zealand?—Yes. I can speak quite definitely about that, from the fact that we sold £17,000 worth of pictures.

7884. Have you formed any opinion as to the effect

Captain Percy H. Atkin.

18 July 1907.

of exhibitions on the general commercial relations between the countries concerned?—That is a point I cannot speak on in regard to New Zealand, because what trade exhibits were there, were not under me. There were some British trade exhibits, but they were under Mr. Day, the exhibitors' representative.

7885. The general commercial relations between the countries concerned would be, in this case, between New Zealand and the mother country; I suppose you did not form any particular views as to that?—I had no opportunity of doing so.

7886. Then I will not examine you on that. You seem to be in favour of collective trade exhibits?—I am in favour of collective trade exhibits, on the ground that from what I can gather from the St. Louis report, it was very difficult to induce traders to come into the exhibition. Therefore, it seemed to me that collective exhibits would be the first scheme which one might elaborate in order to try and get some representation better than we have succeeded in doing before.

7887. Do you think that if you saved the costs of the exhibitor, you would get more exhibits?—If trade exhibits were collected by personal conference, and if offers were made to take the goods from the factory, convey and insure them, give them free space, and then return the exhibits to the owners, or sell them, it is hard to believe that it would be entirely a failure. The makers would bear the cost of production and of packing up the object ready for conveyance, but the State should pay the rest, in my opinion, if the British Section is to succeed.

7888. Would you let the State decide what is worth exhibiting, or not?—Of course, the great difficulty of a collective exhibit is what you may take and what you may leave; but when the State is going to pay the cost, that does give a greater freedom of choice than if the exhibitor pays anything.

7889. At the New Zealand Exhibition, did you think much of the trade exhibit from this country? There was not very much there, was there?—There was not very much, but what was there, was very nicely set out, and it was attractive. For instance, Boosey's instruments, Sutton's seeds, and Price's candles had booths; then there was a very fine exhibit by Hardy of Alnwick of fishing rods, which was a very suitable exhibit for New Zealand.

7890. But it did not at all represent the industries of this country?—No, certainly not.

7891. As regards St. Louis, you were there all the time, so you must have seen a good deal of the exhibits; were you satisfied with the British exhibit?—With the manufacturers' exhibit—no; it was poor.

7892. Was the chemical exhibit good?—The chemical exhibit was very fine. That was on a different plane altogether; that was collective.

7893. I suppose it was partly on that account that you are in favour of collective trade exhibits?—Yes. I felt that that had been done by people who understood how to collect a collective exhibit, and that they had done it extremely well.

7894. You say in your heads of evidence that exhibitions should be run with clearly understood ideas and not on chance; could you explain that to me a little?—I am not at all sure that the organisers of British sections have always had a clear idea before them of the object they had in view; and I think that it is hardly reasonable to expect it, when you ask a gentleman to manage an exhibition who has probably never had any chance of knowing anything about such matters. There, I come upon the question of organisation, which I was proposing to deal with later.

7895. Very well. Then you say the first efforts should be concentrated upon the propagation of trade, but that art, economy, and education should have full prominence?—Yes. I think that the original object of exhibitions was for the benefit of trade, and I do not think that it should be lost sight of in any way. I think that is the real reason for an exhibition. But the other subjects of art, economy, and education, which have been such great successes in our recent exhibitions should certainly find a place of considerable prominence.

7896. You would not make them less, but you would make the other more?—That is what I would do certainly; that is exactly the way.

7897. You say we shall always have exhibitions, so that we should treat them as serious propositions, and be ready to deal with such proposals with energy and interest?—That is so.

7898. I suppose there again you are leading up to your proposal for a more continuous policy?—That is the gist of everything I have to say. I think it is difficult to conceive that Great Britain can abstain from participation in international exhibitions. She cannot hold aloof; she cannot be the only Power to stand out from them. She must play her part, even though our chance ways of doing so are somewhat inapplicable to the serious business involved. Whether it be beneficial or not to the trade of this country, it is unthinkable that we can ever point-blank refuse to participate. Such a refusal could not fail to have an exceedingly bad effect on our international relations, and might even be regarded as an affront to the inviting Government. There is a feeling that manufacturers do not get full advantage from exhibitions. I hope that further investigation may prove that they do get an advantage; but a point which one cannot disregard is, that participation is as much to be desired on the ground of international comity as for any known trade advantages whether they may eventually accrue or not.

7899. I suppose you would be ready to agree that there ought not to be very frequent exhibitions?—Yes. I quite agree with that.

7900. Once in five years or so, would you say?—In different parts of the world they are probably going on almost every year. For instance, this year you have an exhibition of some prominence at Jamestown in America, and you have just closed the New Zealand Exhibition; then you are getting ready for the Franco-British Exhibition.

7901. But that is not being supported by public money here?—I do not know anything about the arrangements for it.

7902. You do not think that the British Government should take an active part and spend a lot of money on exhibitions every year, or several times in the year, do you?—I would rather have some fixed amount which is applicable to exhibitions promoted under State auspices, and really experiment and see how that goes.

7903. You would have an annual sum in the Budget for exhibitions, would you?—I almost think a good way would be to have an annual sum, and not have it surrendered at the end of the financial year, so that it really would accumulate a fund for exhibitions.

7904. What did you spend in New Zealand?—Up to the present day I have spent about £3,000.

7905. (*Mr. Wilson Fox.*) That is only the amount spent out there, is it not?—That is the amount which I was responsible for spending, and which is, as you say, the cost out there of running the exhibition.

7906. (*Chairman.*) Including the home expenses?—No; it does not include the cost of the office here. It only includes what I am responsible for.

7907. Of course, that is a small sum compared with the expenditure at most of the exhibitions?—Yes, it is; and I know that the total will be less than the sum which was voted.

7908. As regards a part of the usual cost of exhibitions, you say that you think the pavilions, as at present erected, are a waste of money?—Yes. My feeling is that the pavilion is erected on an unduly substantial scale. It is used for the office of the Commission for about six months, and then it is no good to the Government or anybody else. We had a very good instance of that in St. Louis, where the pavilion cost considerably over £30,000, and at the end—of course, you know this—the Government got £200 for it, which, to my mind, was monstrous from every point of view. We ought to have got the credit of making a gift, and had the advantage of having made a gift, to the university, rather than have had this £200 to bring into our accounts.

7909. What was the exact use of that pavilion? It was used for banquets, I suppose?—It was the office of the Commissioner-General and his staff. It had also a very fine series of rooms—about five rooms—four of them well furnished by, I think, Messrs. Waring or Messrs. Trollope, but I am not quite sure about that. They furnished the rooms very beautifully as their own exhibit. The big room was used for receptions and parties, of which there were some

half dozen in the whole time. That was the only use made of the building.

7910. Could there have been some sort of sham pavilion which would have cost much less, and still would have exhibited that furniture and made some sort of a show?—I think undoubtedly there might have been a much cheaper building to show the furniture.

7911. Do you think that entertaining is necessary?—I do not see how you can have a representation in any foreign place, or even in a colony, without a reasonable amount of entertainment. I am speaking with full knowledge there of my experience in New Zealand, because I found it was absolutely impossible for me to be there without entertaining. I, of course, did not give big parties, as I had no money to do it; but what I did give were small dinner parties, and I found that they were very successful. The people and the press of the Colony thoroughly appreciated my efforts, whatever they were, in that direction. It was not an expensive entertainment.

7912. Did you not spend any part of this £3,000 in those entertainments?—There was no head for entertainments allowed for New Zealand.

7913. But at St. Louis surely, and in those other places you have been acquainted with, there have been large sums spent out of the Government allowance for entertainments?—I believe at St. Louis about £2,000 or £3,000 was expected to be spent and about £1,400 was actually spent.

7914. Partly because everyone else does it, I suppose?—That is one reason. I must say I have a great belief in mixing people together. There is nothing like social intercourse for bringing them together and making friendships—you never know how beneficial they may be—and this is best done by having entertainments of some kind.

7915. You think that transient Commissioners-General—that is, somebody appointed who is new to the office—will be more prodigal—I suppose in these entertainments or in other ways?—No, I mean prodigal right through, and not in entertainments only. For the actual management and organisation of an exhibition as a business department it is unreasonable to expect that it should be otherwise.

7916. Now we come to what you call the handicap that Great Britain is under. First, you say it has had no permanent organisation to deal with the subject, hence delay, bad sites, etc.?—I think you will find probably that there has been a general complaint about our always starting late because we have no organisation. We have neither a department nor an individual who can deal with these things; the other leading countries, like Japan, Germany and France, come in first, because they have organisations of more permanence than we have.

7917. Then you say that when the organisation is set up, it can have no strength in its work because of its immaturity; does that mean that the people that you get on your establishment have not had experience of exhibitions before?—It is a new thing; it is just set up; therefore it cannot in its very nature have any strength.

7918. Are there not a certain number who have had experience? For instance, at St. Louis there were several people, Mr. Lloyd, and so on, who had been employed at exhibitions before?—They had been employed, but I would not exactly call them experts; I would regard them as clerks pure and simple. I never saw or heard anything from any one who had been engaged in that capacity at an exhibition which gave me the impression of their being directing heads. I think there is nothing in the accounts to give one the impression that there is any economy or continuity of administration or progress in organisation in consequence of these temporary appointments.

7919. There have been a certain number of people who have been appointed at exhibition after exhibition. Anyhow, you think that the organisation might be improved, and that you might have a better plan?—I do think so.

7920. Then you say that "the exhibition should be a living reality and should be explained and discussed on the spot with vigour and enthusiasm; the attendants' daily dusting is not enough." Does that mean that you must have experts to show the exhibits?—I would not quite say experts, but you want men who are interested, and who understand the exhibit, to draw the attention of the public to it. There, again, I may refer to my own personal experience in the matter. At New Zealand I found that people wanted the exhibits explained to them, and I used to give lectures there nearly every day, and I trained my staff to give explanatory lectures upon the different sides of the exhibition. The result of it was that we attracted every day numbers of schools who used to come in classes, having fixed a day or two beforehand when they were to come, and they were taken round very much as if it was a museum. That made it a living reality to the New Zealander who had never seen these things. That is what I had in my mind when I said it is not sufficient to set up your exhibit and walk away.

Captain Percy H. Atkin.

18 July 1907

7921. (*Mr. Wilson Fox.*) This is New Zealand you are now speaking of?—Yes, and it was the same with St. Louis; I was constantly taking the people round my small exhibit there.

7922. (*Chairman.*) The wise exhibitor would usually have some attendant of his own who would explain his machinery, or whatever it was he was exhibiting; would he not do that for his own sake?—It would be rather expensive for everyone to send out someone with each exhibit. The exhibitor would have to do that through an exhibitor's agent of the type of Mr. Day, of whom I was speaking.

7923. Then you say there is no economy in starving the exhibition in order to show a surplus in the vote. I suppose you allude to a certain sum being granted, and not being all spent?—That is so. You generally find in the report of an exhibition that there is a strong point made—I am speaking of the last two reports I have read—about the great saving, and this is rather held out as showing and as proving what a great success the administration of the exhibition must have been, because so many thousand pounds has been saved.

7924. That is due to the Commissioner. Whatever the Treasury have done, it is not their fault at all, is it?—No.

7925. They have not told the Commissioner that he is to pay so much back?—No; and I do not suggest that. That observation is no reflection on the Treasury. But the great aim in running an exhibition seems to be to have a surplus.

7926. I suppose they must not have a deficit?—That is quite right. I think that what the surplus shows is not any wonderful skill in administration, which has led to the saving of £20,000 or £30,000, but a very unbusinesslike and irresponsible way of fixing the estimate. I think what we ought to try to get at is some way of fixing an estimate which more closely approximates to what is to be the expenditure.

7927. You think it is now fixed in a very unbusinesslike way?—I think it is fixed haphazard. The first thing said is: "What did the last cost?" "The last cost £125,000." "It is more expensive to live in America; we will give £150,000 here." That is the slapdash way in which it is put down. I do not think it is calculated how much space we are to have or what is to be the cost of the galleries. I do not think anyone has looked into the cost of the freight, or anything of that kind. I do not think it is estimated in the way that a public department would estimate for its own expenditure for the forthcoming year. It is as easy as possible to have a surplus at the end of it. You will simply say, "We find we are spending so much, and if one wants to have a little extra in connection with his particular section he cannot have it, because we have promised not to exceed the estimate."

7928. They cannot exceed the estimate?—Then you see, the endeavour not to exceed, results in the St. Louis case in a saving of something like £20,000, I think it was. I cannot quite follow the figures for the St. Louis Exhibition, because the report says that the cost is £122,000 up to a certain date, and that date was, I think, July 31st, 1905; but I know that the St. Louis Commission was running when I left this country. I do not know how long it ran after I left, but I think it closed in March, 1907, so there must have been some expenditure between July, 1905, and March, 1907, which has not been published—probably £10,000 or more

7929. Really, what you say hinges a good deal on the efficiency of the Royal Commission, does it not, and the managers of the exhibition?—If we have got to that point about Royal Commissions, I may say that I think they are essential. I think they are

Captain Percy H. Atkin.

18 July 1907.

most beneficial and desirable, especially from the international point of view. The fact that a member of the Royal House accepts the presidency, and that many people of world-wide distinction are included in the Commission, gives a prestige to the British participation which has an undoubted value, and is regarded by other States as a high compliment. In these respects the utility and value of the Royal Commission are great.

7930. I suppose you would have business men on the Commission and on the management as much as possible?—I cannot help feeling that the actual organisation and management and administration of an exhibition should be in the hands of a permanent expert officer, who would be the Secretary of all Royal Commissions to be appointed, and who would be Commissioner-General for all exhibitions. I believe we can improve our own methods of participating in international exhibitions if the situation is carefully studied. We can get valuable ideas from other countries, but we must work out our own salvation. Germany has permanent machinery for beginning to work on exhibitions directly the invitation is accepted. We have not, and it is here that the essential improvement must be made. One need not go through how the invitation is received, because I have no doubt it is within the cognisance of the Committee exactly how these things go; but it seems to me that what is wanted is a department which is strictly under the control of the Treasury, and an expert officer who should be able to deal with an invitation directly it comes, no matter to whom it is addressed. As a rule, these invitations go to the Foreign Office, but occasionally, of course, when they come from the Colonies, they go to the Colonial Office. He should be able to weigh and analyse the merits of an invitation, ascertain what the proposal really is, how it is being supported, discuss it fully, and thereupon make his recommendation to the Foreign Office, with some rough estimate of what an ordinary participation of so much extent might cost.

7931. Then you would leave out the Board of Trade altogether, because at present they give advice on these subjects?—I do not think it specially affects the Board of Trade. I think it is the Foreign Office which makes the first move. Sometimes they consult the Board of Trade; sometimes they consult the Board of Education.

7932. As regards trade, surely they would consult the Board of Trade, which is more in touch with trade than any other Department?—Certainly, I think they should be consulted; but the Board of Trade would not have the ultimate say as to whether the participation was to take place.

7933. The ultimate say must always be with the Treasury, which has got to pay the money?—I think probably the Foreign Office would say: "It is very desirable we should participate," for some reason or other; and they would communicate with the Treasury as to the necessity for participation.

7934. That would be for political reasons?—Yes, for political reasons; and I understood the St. Louis Exhibition was participated in more for political than for commercial reasons.

7935. (*Mr. Waring.*) What are your views generally with regard to exhibitions from the dual standpoint, political and commercial? You seem to attach a rather high degree of importance to its political aspect?—I am speaking within my own knowledge, and that is of St. Louis and New Zealand. Those are the only two exhibitions that I have been concerned with. With regard to St. Louis, I was more than once told that our being represented there had more to do with the political aspect than any commercial advantage which would accrue.

7936. That is what you were told; but what is your own personal view on the matter? What is your idea, for example, with regard to an international exhibition? Is it primarily of political importance, or is it the commercial aspect that you think most important?—I should like to say it was the commercial aspect.

7937. That is your own view?—You are asking for my own personal view, and I am not saying what I think is taking place, but that I should like to think that the main reason for international exhibitions is for the purposes of trade.

7938. What do you really think?—I think that they really are run largely for political reasons.

73939. They have been largely?—I believe so.

7940. (*Sir Isidore Spielmann.*) Was the New Zealand Exhibition really international?—No, not from the point of having official international representatives. It was international in so far that it had trade exhibits from other nations besides the British nation, but there were no foreign Commissioners there; there was no German Commissioner, and there was no French Commissioner.

7941. Who were the other Commissioners besides yourself?—The other Commissioners besides myself were all Colonial—*e.g.*, the Canadian, the South Australian, the Fijian, the Victorian, the West Australian, and the New South Wales Commissioners.

7942. May I ask, had you, as Commissioner, a very difficult time, or was it an agreeable time?—I think I may say that the exhibition was a pronounced success from our own point of view.

7943. When you went out there as Commissioner did you form any programme as to what you intended to do; had you any aim?—When I looked over my programme on the way out I said, "Now what we must set about doing is to put up a big sort of Imperial object-lesson." I could not do anything with trade, but we had excellent material to enable us to give really good Imperial object-lessons. I wish I had with me the newspaper reports which would tell you—they are within the cognisance of Mr. Wilson Fox—what they themselves thought of that. It was quite a success from the point of view of showing Young New Zealand more than they ever knew about the Old Country, and what we are doing at home. No previous chance in their lives had ever shown them so much.

7944. Do you consider that the relations between New Zealand and the Mother Country have been affected by our participation in that exhibition?—There is no doubt they are very much improved by our participation, but I must say that the New Zealander is a most loyal and patriotic Englishman, so that it is rather like preaching to the converted. But we did them a great deal of good, and they all saw that, and the papers fully dealt with that in their leading articles both during the Fair and when I left the country.

7945. They appreciated it?—Most fully. Perhaps I might give you a few extracts I copied out from some of the New Zealand newspapers: "Well-arranged court." "Stimulating influence of British court from the Imperial and patriotic points of view. Its high educational value to the young New Zealander." "Arranged so that every object may be carefully, intelligently, and profitably studied." "Range and completeness of the British court." "It covers an immense area of information." "It is impossible to visit the court without being impressed with the nation's progress." "Arranged the court admirably." "British court with its wealth of instruction." "British court, with its valuable and interesting exhibits, is a perfect mine of information . . . . opens a new world to many visitors." "Quality, rarity, and variety have been kept in view . . . . well-ordered collection." "Great Britain and Ireland will certainly be the favourite hunting grounds." "The display is an enthusiastic effort." I think I may say that the object I had in view I succeeded in accomplishing.

7946. Do you happen to know—apart from the Art Section, which you and I know about—whether any of the British commercial firms represented by Mr. Day did any business?—I am afraid I know nothing of that. I do not know anything about what Mr. Day did in any way. Mr. Day was quite apart from me, and I had no official connection with him. I can speak of one firm, Messrs. Smith and Son, jewellers, of the Strand. They had an exhibit there, and Mr. Smith himself told me they did very well indeed. He was in some difficulty with regard to the Customs. He came to me one night at my hotel and told me he was in a difficulty; could I help him? I had absolutely nothing to do with him, but I went to the Prime Minister and explained my position and his, and he got what he wanted—that is, he got his goods in without having to deposit a large amount of Customs dues.

7947. Did they appreciate the Education Section?—Immensely.

7948. You yourself organised the Education Section.

I think?—I did that entirely on the lines I had done at St. Louis.

7949. Will you tell us how you formed the Education Section?—I got a list of all the universities, technical colleges, secondary and other schools, and sorted them out in order to make a short list, on which I wrote personal letters to each of the authorities, suggesting to them that I should come down and see them and talk this matter over. In most cases they agreed to my going. I went round to all the schools, and most of the universities, and a great number of other authorities, and told them exactly what was wanted. When they offered something that we already had I told them that we did not want it, and in no case did any unpleasantness arise about rejections. For instance, I went to Oxford and discussed the matter with the Vice-Chancellor, I went to Rugby and discussed the matter with Dr. James, and I went to Manchester and discussed the technological part of the matter with Dr. Reynolds. They were all most interested, and I never had a single instance of anyone saying, "You will not have anything unless you take this."

7950. Were all the universities and colleges and public schools represented?—Not all, but as many as we required to illustrate types. We could not take them all.

7951. With reference to the estimates for running an exhibition, have you anything in your mind as to what the grant ought to be for a large International Exhibition?—For the last eight years I think we have voted £295,000, so that would be on an average about £37,000 a year.

7952. (*Mr. Wilson Fox.*) Is that irrespective of whether there were exhibitions or not?—I have taken the grants for specific exhibitions. The grant for Paris was £125,000; for St. Louis, £150,000; for New Zealand, £10,000; and for Milan, £10,000.

7953. (*Sir Isidore Spielmann.*) Can you tell the Committee what you think should be about the amount given to a large exhibition. If there were another one at Paris, say, do you consider that £100,000 or £150,000 is about the right sum, or should it be considerably more?—What I did at St. Louis—I am afraid I must be egotistical here——

7954. (*Chairman.*) Do not mind that; that is what you have come for?—I like to speak of what I know.

7955. We prefer that; we do not want you to speak of what you do not know?—At St. Louis the Education exhibit cost under £4,000; and in New Zealand Mr. Wilson Fox tells us the British exhibit will cost probably £8,000. Honestly, I do not know what you do with £150,000.

7956. You do not know about the other things—how much the organisation costs, and the assistance given to the different exhibitors in freight, and so on?—I have gone into the St. Louis accounts and seen that.

7957. But you have had nothing to do with it personally?—No, I have not.

7958. (*Sir Isidore Spielmann.* You expressed your opinion pretty strongly as to the pavilion, so I thought possibly you had worked out the cost?—As the Chairman put it, I have really no personal knowledge of how these things were done, but it seems to me that you could get a magnificent exhibit for £150,000. Knowing what a long way £1,000 goes, when you are spending it with care, 150 of them seems an enormous sum.

7959. On the whole you think we did well in New Zealand?—I am quite sure the country did well, and the Government did well, and the New Zealanders were absolutely delighted—there was no question about that.

7960. (*Mr. Malcolm Ramsay.*) Could you tell us, if you have not already done so, what staff you had for New Zealand? Did you keep a staff of assistants or had you occasion to employ any?—I had two young clerks and I had one packer; in addition to those there was one assistant for Art, also with a packer. They were all engaged and sent out from here.

7961. Then you had nobody else—no secretary, for instance; and you did all the general organisation yourself?—I did all that myself and kept the accounts myself.

7962. So practically you ran the whole thing single-handed, as far as the executive decisions went, with only clerical assistance?—Absolutely. The only other assistants I had there were the cleaners, the men who swept the floors and acted as guards; and they were provided by the exhibition authorities.

7963. Did you try to get trade exhibits from English manufacturers before you started?—No. I was never asked to do so. I was told by the organising authority in London that trade was specially excluded from the Government exhibit. There was some reason for it; we did not try to get trade exhibits, because we were particularly asked not to do so.

7964. Then I take it you did not make any effort to get exhibitors among British manufacturers?—No, I was told that the High Commissioner was doing that himself.

7965. Turning to the question of organisation, you hold very strongly, I think, that there should be a permanent secretary appointed who should go on from one exhibition to the other?—I do.

7966. By that, I take it, you mean that person is to be the head of the whole staff; the person who has the final decision; is that so?—Yes.

7967. What salary do you think you would have to pay in order to secure a suitable man of that kind?—You have been paying the Commissioners-General for the last six years £1,200 a year.

7968. Do you contemplate a permanent official with a salary approximating to that?—I should think you would have to give him certainly four figures; I think that seems reasonable. If you get the right man you would certainly save his salary over and over again.

7969. Do you think that a man of that kind would be permanently employed, or would he have rather spasmodic work—very busy for two years, and pretty idle for the next eighteen months?—I think that he would have his work in rushes, but I do not see that he would be really unemployed any part of his time. To organise an exhibition properly you should start early. I will give you an instance: Canada is now starting to organise for Japan in 1912—they told me that themselves. Of course that is exceptional, and it is almost too much the other way—it is five years ahead. Then when an exhibition is over it takes some little time to wind it up, if it is a large exhibition with many awards. New Zealand was a small exhibition, and I am expecting to wind it up by the end of next month, when my connexion with it will just have been running for thirteen months.

7970. Objection has been raised to the appointment of a permanent Commissioner-General or Secretary of the type you describe, on the ground that after a few years he might get slack?—That is the case if you appoint the head of any public department; you might use the same argument.

7971. In the case of an exhibition a man has nothing to gain after he has made his name over one; he has got a comfortable berth and there is nothing to keep him energetic, as there is nothing more for him to look forward to, unless his appointment is purely temporary?—I must say that I think there is something to be said for the view that it applies to all permanent appointments in the Civil Service.

7972. Do you not think it may apply more to a particular appointment, a specialised appointment of that kind?—I really do not quite see it.

7973. That man has reached an isolated position and he cannot go further in the particular office to which he is attached, so he has nothing that he can look forward to; whereas many permanent officials might hope eventually to rise to higher things?—He might be such a great man that he might get a higher public appointment if he turned out to be a very capable administrator and skilful organiser. I do not think you should say that if a man gets an appointment of this kind he is actually in a back water; I do not think, either, that he should think that he is or that anyone else should think that he is.

7974. I was putting that to you, and I want to know what your idea of it is?—I do not think that the type of man you should put there should be a man who is content to settle down there for the rest of his life. I would like to see a man who is ambitious and who wants to get something better. That will always keep him alive.

7975. The difficulty seems to me, how you are going to supply the spur of ambition in that particular place unless the holder hopes to be tempted out into the outside market?—I do not see that there is any greater

Captain Percy H. Atkin.

18 July 1907.

difficulty there than there is in any other public position you put a man into. You may put a man into a great position in the public service here, and he will probably rise to something higher; on the other hand, he may be quite content and say, "I do not want more than £1,000 a year; here I am, I am not going to do any more."

7976. Do you think the qualifications which would make a successful permanent British Commissioner for exhibitions are pretty much the same as would make a successful head of a department or assistant secretary?—A good many of the requirements are the same. I think that the object and aim of the permanent man should be to be able to forecast the outline of an exhibit and the estimated cost. When the exhibit is decided upon he should be able to arrange for the management, transport, insurance, installation, and return of all exhibits. He should organise all sections of the exhibit, relying upon honorary or paid experts in such circumstances as it was felt would lead to more reputable, advantageous, and well-balanced representation. He should train up a staff of disciplined, pensionable officers, who would in time become practical officials of settled position, and who would be competent to assist both in the office and in the galleries. He should endeavour to make his section a living reality by having explanations and discussions on the subject. He should arrange for jurors where needed. He should study the question of entertainments. He should see that all useful exhibition literature was collected for the public benefit. He should wind up the exhibit; should store all the apparatus, flags, etc., specially obtained at great cost; and he should keep these flags and apparatus for decorating any subsequent exhibitions. He should be under the control of the Treasury, and would be rather in the position of an adviser to Government Departments who wanted help about exhibitions, whether it be the scheme of an exhibition, for the loan of apparatus, or for other purposes.

7977. That leads me to the next point. You contemplate that he should have a permanent staff of some sort under him, do you not?—I think he should have quite a small staff that could be augmented, and I have a suggestion whereby this staff might be augmented partly by borrowing juniors from other departments, as I did in the case of the New Zealand exhibit. It was proposed to the Treasury that two young clerks should be borrowed, and the Treasury at once agreed to it.

7978. Two War Office clerks?—No; two from the Scottish Education Office. Their places were supplied by two temporary men during their absence. The plan gives you an influence over them, and you have a real disciplined staff, full of keen interest.

7979. You were speaking about the difficulty, or the inaccuracy, of the estimates; in a large exhibition, where there is a very considerable commercial element, is it not very difficult to make any estimate at all?—It is most difficult, but I think it should be tackled.

7980. Do you think it is possible?—I do.

7981. In spite of the difficulty of getting a given number of exhibitors? Is not the real difficulty of making estimates that you first plan out your scheme on the assumption that you are going to have so many commercial exhibitors; then when you have sent out your invitations you find perhaps only 50 per cent. are accepted; six months have gone, and you have got to replace expected exhibitors who have declined; if you cannot do that, the money that you have allocated perhaps to 100 commercial exhibits can only be spent upon 50?—I would rather base my estimate on the space to be filled, because I do not propose that any voted money should be used for the preparation of trade exhibits.

7982. You were speaking about the office where the Commissioner-General would be, and I understood you to think he ought to act in a general advisory capacity in respect of all invitations?—I believe that is what we are in want of in this country.

7983. Would you tack him on to any existing office—that I did not quite gather?—I should rather think that he should be under the Treasury itself. He is useful for all the public offices, and he could be attached directly to the Treasury in the same way, you might say, that you have the Parliamentary Counsel's Office, which is an office which is available for all the Departments, though I believe it is really directly under the Treasury, and is not under the Attorney-General. That is rather what I would have.

7984. A sub-department of the Treasury, and yet possessing a very wide independence, except as regards financial control?—Only for the advice, and not for the spending.

7985. Have you ever heard it urged as an objection to participating in exhibitions, that in many cases exhibitions are promoted at the instance of hotel-keepers and railway companies?—I have never heard that, but probably the exhibitions which I have been concerned with are not such that could possibly have that said about them. That would apply more to flower and agricultural shows.

7986. I have heard it urged as a serious objection; however, you have had no experience of that?—No, none whatever.

7987. I presume you have spoken already at the beginning of your evidence about Art?—I have just mentioned that that was the only case where we had evidence that a clear benefit had accrued.

7988. By the amount of the sales?—Yes. We sold £17,000 worth of pictures in New Zealand, and we know that as an actual fact—it is not what may happen; it is what actually has happened.

7989. And that is a direct benefit to the artists?—It is a direct benefit to British artists.

7990. Do you think it has been any benefit to Art as Art?—It has been of enormous benefit to Art as Art. It has raised the standard of Art in New Zealand to a point which they had never known before. The local artists themselves have told me so.

7991. There, you are considering it from the educational point of view of the country in which the exhibition was held?—Yes.

7992. (*Mr. Algernon Law.*) What is the most important and the chief reason in your mind why we should take part in these exhibitions?—The real reason is that I do not see on what ground we can keep out of them.

7993. What are the reasons why we should not keep out of them?—I think it would be very difficult to do so. Supposing they had an exhibition in Paris, and we were officially invited. I do not see on what ground or for what reason we could say we were not coming.

7994. We did refuse in 1889?—That was rather for a special political reason—because of the object of the exhibition.

7995. If it is a great inconvenience to exhibit, and we do not care for exhibiting, and it is not a thing that we care to go into at all, why should we make a concession to a foreign Government in a matter of that sort, which is purely within our own province? Could we not ask for something in exchange—for instance, that they should reduce the duties on our goods or pay some compliment to us?—I think even if we spent £120,000 over an exhibition it is not very much for us to spend over an international courtesy, but we cannot expect them to overturn their fiscal system for that.

7996. They need not overturn their fiscal system, but they might give a reduction on a limited number of articles?—They give some concessions in the way of Customs dues on exhibits.

7997. That is because they ask you to come in, and they wish to facilitate your coming in?—There is no doubt they do it to attract you.

7998. You lay great stress on the political reasons why we should take part in exhibitions?—I do. I think that is the reason why we have gone into them. Whether we have commercial advantages or not, I thing the political reasons oblige us.

7999. What do you suppose would have happened in the United States, or with the Government of the United States, if we had refused to take part in the St. Louis Exhibition?—I really could not say.

8000. Do you think that would have produced a serious state of affairs between the countries?—I would rather not answer.

8001. Do you think the United States, if we had some scheme on hand, would make a point of coming into it?—I am sure they would.

8002. Why do you think the Foreign Office should have anything specially to do with this?—Because, as I understand it, all invitations come through the Foreign Office.

8003. They are communicated by the Foreign Office

to the various departments?—Yes. They may probably go to one or the other—I do not know where they go; but there is always a great delay.

8004. I do not think that; as soon as they are received they are sent on?—There is no delay at the Foreign Office, and I did not mean to suggest that. What I meant was that there was some delay happening in the communications to the different departments which, rightly or wrongly, are concerned. It was to avoid that I suggest you should have some central authority, so that directly you get your invitation at the Foreign Office you simply send it off at once, and say, "Now, give us a report on this. Is this a thing that we might go into? We do not say we are going in on your report, but we want to have it criticised, analysed, and examined. You give us some idea as to what it is going to cost, if eventually we think it is a good thing to go in for it."

8005. It is for the Treasury to decide, of course?—The Treasury would decide whether they are prepared to put down £20,000, or how much.

8006. You do not suggest that the Foreign Office should estimate what the various branches of the exhibition would cost?—The Foreign Office would deal with the political aspect. I think that the political question comes in so strongly in all exhibitions that when the Foreign Office decides, and says: "Under any circumstances we must go into this exhibition——"

8007. We cannot say that; we must wait for the Treasury?—The Foreign Office perhaps would not instantly decide it; but it might say in its inner chambers, "Well, we cannot let this go by."

8008. (*Mr. Wilson Fox.*) On the question of the delay after the Foreign Office communicates with the other Departments, would not the man that you suggest should be appointed have to make just as long a delay as the present Public Departments when they are invited to form an opinion?—I do not think that the present Public Departments have ever seriously organised any section of their work to deal with an invitation.

8009. No; but there are two or three points connected with the reply; first of all, whether we should go in for it at all?—That is so.

8010. And, secondly, the expense. Then there is another point which we do not lose sight of, and which it seems to me the man who is appointed cannot lose sight of; that is, whether the traders of this country are likely to show in any considerable numbers at such an exhibition?—Yes.

8011. When such a matter comes before us that is the main point to which we immediately address our attention. Before we should write to the Foreign Office, or to the Treasury, we should ascertain, perhaps roughly, whether among certain large trades of the country there is likely to be some response. So far as we are concerned it is not a question that we can answer offhand without consulting some of the commercial men of the country who are good enough to advise us about these things?—Quite so.

8012. Would not the man whom you suggest should be appointed have to make the same sort of inquiries?—He would, but would it not be just as well for him to make them rather than to leave it as part of the work of a Department which has already got plenty on its hands?

8013. I do not deal with that for the moment; I am only explaining that a great many inquiries have to be made before any Public Department, or any official, can advise the Government?—Quite so. That is no doubt what causes the delay I refer to.

8014. You think collective exhibits should be tried more; have you formed any idea in your mind of particular trades which you think would combine together to form collective exhibits more than other trades?—I am thinking of one very good collective exhibit which we had at St. Louis, and that was in ceramics. We had a very good collection there. That was organised by Mr. Cartlidge.

8015. You would agree that some trades are more suitable to show in collective exhibits than others?—Certainly.

8016. You mentioned that at New Zealand the commercial exhibit was not a representative one, and that it did not represent the commerce of this country really?—That is so; it was too small.

8017. Was that largely owing to the fact that New Zealand is such a tremendous distance off; would that be the main reason?—I do not think the distance would count for much in that respect.

8018. We have had witnesses here who have been asked whether they showed at New Zealand, and some of them have said in this room, "No, New Zealand was so far off"?—New Zealand is a long way off, and, of course, it has only about 900,000 people.

8019. Therefore there is not a very large new market there to be worked up?—On the other hand, there is a widespread desire to have British-made goods. On more than one occasion, when I have had commercial men dining with me, they have all said the same thing, namely, that they would at any time rather give 5 per cent. more for something made in Great Britain than have to get a foreign article.

8020. I was rather looking for the reason which the traders had on this side of the water for not sending exhibits to New Zealand. Was it the distance, or was it because they thought the population so small, and that they were not likely to get a large market there?—I think both because of the distance, and of the population it was not very attractive to send a large number of trade exhibits to New Zealand.

8021. (*Mr. Waring.*) Did you go to the Paris Exhibition?—No, I was out in the South African war then, and so I never saw it.

8022. Then your experience of St. Louis is your only experience of a big exhibition?—That and New Zealand.

APPENDIX I.

Extract from the Report of His Majesty's Commissioners for the Paris International Exhibition, 1900

Handed in by Sir *Isidore Spielmann*.

"In conclusion, we feel it our duty to submit to Your Majesty the following observations resulting from our experience in connection with the Exhibition.

"Taken as a whole, it cannot be said that the British industrial section presented a fair reflection of the industry of the country seen at its best. With some notable exceptions, comparatively few of the highest class of British manufacturers took part in the Exhibition. Many of them, when approached, pleaded that if they exhibited at all they would have to do so on a scale which would put them to great trouble and expense; while they had no inducement to seek to extend their connections, since their businesses are so large already that they can hardly execute their orders. The result was that some industries were represented by firms of minor importance. Their displays were often creditable, but they could not be taken as representing the best productions of the country, nor did their exhibits compare as favourably as could be desired with those of other countries. This is partly owing to the somewhat different view of exhibitions taken by Your Majesty's Government and the Governments of other countries. The latter appear to regard them as a valuable means of promoting their commercial interests. They spend large sums of money, and assist and encourage their manufacturers in such a way that they are able to select the best examples in every department of industry, and to present them in the most attractive form. We, on the other hand, have to rely exclusively on the voluntary efforts of our manufacturers, and our exhibitors have to bear the whole of the expenses which participation in an exhibition involves. We are inclined to doubt whether British industry as a whole derives any benefit from exhibitions in which British exhibitors enter at such a manifest disadvantage. Our system has remained unchanged for half a century, but the conditions are no longer the same. When exhibitions had the charm of novelty, the great manufacturers took a pride in showing their best productions to the world. There was comparatively little competition, and they had nothing to fear from the rivalry of foreign countries. Now, exhibitions have become so common that manufacturers no longer take the same interest in them, and only exhibit if they see a distinct prospect of advantage to be gained by doing so. At the same time, foreign industries have made gigantic strides, and in many branches of manufacture have become formidable rivals to our own in the markets of the world. The industrial interests of the country, as a whole, gain nothing from an exhibition unless they are represented upon equal terms with foreign industries. There is no apparent advantage in showing inferior British productions side by side with the best productions of foreign countries. Yet this is to a large extent the effect of the system which has hitherto prevailed. We are of opinion that the voluntary system can no longer be relied upon to secure an adequate representation of British industry, and that in any future international exhibition in which it may be decided to take part it will be necessary to have recourse to the principle of selection, which has been largely adopted by foreign Powers. This principle, which involves the payment of some of the expenses hitherto borne by exhibitors, would necessitate larger grants than it has been customary to give; but we think that unless some approximation can be made to the expenditure of foreign Powers, no good purpose would be served by entering into further competition with them.

"The arrangement of the British section gave occasion for comment and criticism, and in some of the groups compared unfavourably with the arrangement of foreign sections. In the latter, as a rule, the spaces were utilised to form courts of symmetrical design. Showcases of a uniform and more or less decorative character were provided, often at the public expense, and the goods were procured by selection. By this means the sections presented a harmonious appearance, and the goods, which were all of the best, were displayed in the most attractive way. In the British section, on the other hand, every exhibitor used his space in accordance with his own fancy, and showed what he pleased. He provided his own show-case, and, within the limits of his space, was free to indulge his own taste, subject only to the limitations of height and other conditions imposed by the regulations. The result was anything but happy, and the contrast between the orderly, symmetrical appearance of the foreign spaces in certain groups—notably in Group XIV.—with the undignified collection of show cases of different sizes and designs which filled the British space was little less than painful. The cause of this conspicuous defect is twofold. It arises, first, from the difference of system to which allusion has just been made; and, secondly, from the extreme unwillingness of British exhibitors to enter into any form of combination, or to submit to any restriction of their independence. As a rule, a British manufacturer will only exhibit if he can select his own goods, and display them in his own way and in his own show case. He is impatient of advice; he will not submit to dictation; he will not share a show case with others; nor will he join with others to adopt a uniform plan of arrangement. In many instances he regards his exhibit as of much more importance as an advertisement and a competition with rivals at home than as a comparison of his productions with those of other countries. For these reasons it is exceedingly difficult to organise collective exhibits. We were strongly impressed from the beginning with the advantages which such exhibits possess. They save space; they avoid the duplication of similar objects, and in the case of many industries they ensure a higher level of excellence than any single firm can hope to attain. We endeavoured to persuade exhibitors to adopt the principle, but our efforts met with so little success that we had to abandon the attempt. In the few instances in which our recommendations were accepted—notably by the Bradford and Huddersfield Chambers of Commerce, the Alkali Manufacturers' Association, the Redditch manufacturers of needles and fish hooks, and others—the result amply justified our expectations; but, with few exceptions, the objection to combination, arising out of trade rivalry, proved too strong, and the experiment was tried on too limited a scale to have an appreciable effect on the section as a whole. We are none the less convinced that the best hope for the future lies in this direction, and that well-organised collective exhibits formed, perhaps, under the auspices of local municipalities or chambers of commerce, coupled with symmetrical arrangement, would afford the best means of displaying British industries in their true proportion. It is, however, essential that the preparation of such exhibits should be begun in ample time."

A.—STATEMENT OF EXPENDITURE OF BRITISH ART SECTION.

Exhibition.	Collecting, Packing, Transport and Redistributing.	Insurance.	Decoration of Section and Installation.	Salaries, Wages, etc.	Total.	Number of Exhibitors.	Cost per Exhibitor.

APPENDIX III.

COMMISSARIAT DES EXPOSITIONS DE BEAUX-ARTS EN FRANCE ET DE L'ETRANGER.

Le Commissariat des Expositions de Beaux-Arts est un des nombreux services de la Direction des Beaux-Arts érigée dernièrement en Sous-Secrétariat d'Etat, dépendant lui-même du Ministère de l'Instruction Publique, des Beaux-Arts et des Cultes.

Dans l'esprit de la loi le Commissariat des Beaux-Arts fonctionnait pour assurer le service des Expositions d'Etat, tant en France qu'à l'étranger alors que s'organisait annuellement à un moment et plus tard tous les deux ans un Salon des artistes français dit Salon d'Etat où n'exposaient que les artistes choisis par un Jury composé de peintres, Jury nommé par l'Etat et toute l'organisation de ce Salon était confiée au Commissaire des Beaux-Arts.

Depuis 1880 l'Etat a abandonné cette prérogative qui a donné lieu à la création des deux Salons annuels (Sociétés particulières), l'un dit la Société des Artistes Français, l'autre dit la Société Nationale des Beaux-Arts, cette dernière fondée en 1890 représentant le groupement des Artistes dissidents de la première Société. La création récente du Salon d'Automne étant le résultat d'une autre scission, il n'est pas improbable de prévoir que d'autres scissions pourront se produire dans l'avenir et alors il est possible d'envisager devant l'affluence de ces Salons divers que l'Etat reprendra en main l'initiative d'un Salon annuel, biennal ou triennal. Le Commissaire des Beaux-Arts de l'Etat serait alors appelé à reprendre la direction et l'organisation de ce Salon.

L'Etat actuellement ne reprend ses droits que pour les Expositions Universelles en France et pour toutes les Expositions auxquelles il croirait bon de donner son patronage officiel, tant en France qu'à l'étranger.

Le Commissariat des Expositions de Beaux-Arts tel qu'il fonctionne est le service spécial qui le met à même de mener à bien cette tâche.

En ce qui concerne les Expositions à l'Etranger alors que le Parlement a voté un budget spécial pour assurer une représentation des Beaux-Arts Français à une Exposition Universelle Internationale, c'est toujours le Commissariat qui est chargé d'administrer entièrement le budget voté dans la circonstance et d'assurer l'organisation de la Section de Beaux-Arts au nom du Sous-Secrétaire d'Etat et du Ministre responsables devant le Parlement.

Soit dit en passant, le Commissaire est chargé de l'Administration des Fonds du Budget, réunion des œuvres, transport, organisation, placement des œuvres à sa guise, le choix seul des œuvres à exposer lui échappe.

L'élaboration du règlement de chaque Exposition est faite par le Commissaire des Expositions sous la signature du Ministre, il fixe le nombre d'œuvres à recevoir dans chaque catégorie, selon les espaces dont il dispose.

La sélection des ouvrages à exposer est en effet confiée à un Jury nommé par arrêté ministériel, Jury composé en partie des peintres membres de l'Institut, d'autres peintres ayant une situation importante ordinairement pris dans les membres des Bureaux des deux Salons dont il a été parlé plus haut, d'hommes de lettres, journalistes critiques d'art, mécènes, etc., et de toute personne qualifiée par sa situation pour présenter les qualités demandées aux membres de ce Jury.

FONCTIONNEMENT DU COMMISSARIAT DES EXPOSITIONS.

Le Commissariat des Expositions est composé comme suit :

Un Commissaire.

Un Sous-Commissaire.

Un attaché expéditionnaire.

Quatre gardiens.

La composition du Commissariat sur ces bases à titre permanent s'explique par le fait que le Commissaire des Expositions se trouve être le conservateur des œuvres d'art tant sculptures que tableaux, dessins, gravures, objets d'art achetés chaque année par l'état, tant à Paris qu'en Province. Le maniement régulier de ces pièces, la garde des dépôts et l'entretien des œuvres jusqu'à leur départ nécessite l'emploi d'un personnel sûr et compétent dans le maniement délicat des œuvres d'art. C'est ce personnel qui fournit ordinairement les chefs gardiens emmenés à l'Etranger dans les différentes expositions et appelés à diriger les hommes enrôlés à titre exceptionnel. Le budget annuel afférant au Commissariat ne dépasse pas pour le traitement du personnel, frais de bureau, chauffage la somme de 15,000 frs. En cas de participation officielle du Gouvernement, à un Exposition à l'Etranger, un budget spécial est voté pour faire face à cette dépense. A titre spécial le Commissariat des Expositions dispose d'une somme annuelle de 12,000 frs., dépensée à encourager les expositions de Province organisées annuellement dans les principales villes de France par des Sociétés particulières portant pour la plupart le titre de "Société des Amis des Arts." De petites sommes variant entre 300 et 500 frs. sont allouées à ces Sociétés en raison de leur importance quand elles en font la demande.

C'est au Commissariat des Expositions que les artistes trouvent tous les renseignements concernant ces expositions ; le Commissariat se trouve être ainsi un bureau d'informations précieuses pour tous les artistes.

Les renseignements qui précédent résument le rôle officiel du Commissariat des Expositions. Cependant son action officieuse se manifeste sous d'autres formes non moins utiles aux artistes.

Le Commissaire des Expositions se trouve être tout naturellement le correspondant attitré de toutes les Sociétés artistiques étrangères, soit désireuses de former des groupements à Paris, soit désireuses de voir des artistes français prendre part à leurs expositions temporaires. Le Commissaire des Expositions se trouve mieux placé que tout autre pour dresser une liste des invitations à faire et c'est dans ses bureaux qu'on trouve tous les règlements de Sociétés étrangères importantes telles que celles de Munich, Vienne, Venise, etc.

Le Commissaire se charge toujours gratuitement de la réunion des œuvres d'une exposition alors qu'on lui en adresse la demande.

Enfin le Commissaire des Expositions peut susciter des expositions temporaires soit en France, soit à

l'Etranger s'il trouve auprès de personnes désireuses d'en couvrir les frais, les fonds nécessaires à ces expositions.

Il obtient toujours la permission du Sous-Secrétaire d'Etat de s'occuper d'expositions de ce genre, soit qu'il choisisse lui-même les artistes exposants, soit comme le demandent quelquefois bien à tort les personnes à la tête de ces expositions, que ce choix soit fait par un Jury spécialement constitué à cet effet.

En résumé quelques soient les fortunes diverses qu'ait subies le Commissariat des Expositions selon les dispositions d'esprit des dirigeants politiques, cette organisation permanente rend les plus grands services, c'est dans ses bureaux que se font touts les projets et travaux spécieux touchant aux expositions de tout genre, très rapidement, avec tout les éléments nécessaires aux conclusions les plus pratiques et les plus économiques.

I N D E X.

All Exhibitions are entered directly under the name of the City in which the Exhibition is held, and not under the name of the Country.

Vienna, International Exhibition at, *see* Vienna Exhibition.

Awards:

ABOLITION:

Advocated, *Sir H. Jekyll, Sir H. T. Wood, W. F. Reid, E. H. Lloyd, L. Serraillier, W. Birch* - 52, 110, 132, 639, 1928, 2350-3, 3258-9, 4059

Effect on number of exhibitors:

Decrease anticipated, *Lord Alverstone* - 2103

no Decrease anticipated, *E. H. Lloyd* - 3260

Government exhibit would result from, *Sir H. Jekyll* - 136

Impossible unless universal, *Sir H. T. Wood* - 669-70

Question *re*, *W. Burton, H. Birchenough*, 1734, 6644-46

ADJUDGMENT:

Difficulty of, *Lord Justice Fletcher Moulton, Sir A. K. Rollit* - 2452-7, 5046-7

Experts should be retained on Organising Committees for, *F. T. Ford.* - 4211-2

Fairness:

Belief in, *Lord Justice Fletcher Moulton, R. J. Gibson, J. H. Cundall, W. Kelway*, 2476-8, 2600-4, 2923-5, 7668

Impossibility of, *Sir H. T. Wood* - 648

International jealousy no serious danger, and corrected by Courts of Appeal, *Sir B. Redwood* - 869

Question *re*, *A. Bornemann, G. C. Levey* - 3341-2, 4431

Question *re* neglect of new firms, *F. T. Ford* - 4205-6

by Reputation rather by merit:

Allegations *re*, *W. F. Reid, S. Sparkes, A. Heal, F. S. Edge*, 2008, 2024, 2030-1, 3085-8, 3852-5, 5355

Best manner, *Sir H. T. Wood* - 649

Doubted, *R. J. Gibson* - 2601-3

Smaller firms handicapped by, *S. Sparkes* 3088, 3901

Systems:

Explanation of, *W. F. Reid* 2006-12, 2024-34

Present:

not Advocated, *E. Powell* - 5293-5

Alternative suggested, *A. Maskell* - 917-23

Question *re*, *I. Kiralfy, E. Powell* 1161-76, 5399-400

Rules different at each exhibition, *Sir I. Spielmann, W. F. Reid* 453, 2033

Satisfactory, *Lord Justice Fletcher Moulton, G. Jennings* - 2452, 5551-2

Unsatisfactory, *W. Burton, Lord Alverstone* - 1733, 2102-3

Unfairness:

Allegations *re*, *E. H. Lloyd* - 3250-7

not Deliberate, but essential to system, *Sir H. Jekyll* - 130-1

Advantageous in country exhibiting, *E. Powell* - 5296-301

AGENTS' EFFECT IN OBTAINING:

Payment by result practised, *C. L. Levey, W. H. Feltham* 4437-42, 4494-500

Question *re*, *F. T. Ford* - 4204-5

TO ART EXHIBITS:

Advantages and disadvantages, *Sir I. Spielmann* - 7395-401

Necessity, question *re*, *Sir I. Spielmann* 464

Non-competition recommended, *Sir I. Spielmann* - 7400-7401

System of conferring, *Sir I. Spielmann* - 7399-400

Value greater than with industrial exhibits, *Sir I. Spielmann* - 7398

to Collaborators, method of allotting, *Sir C. Watson* - 165

TO COLLECTIVE EXHIBITS:

Given to individual makers, *Sir C. Watson* - 281-3

Young firms receive equal chances with older, *S. F. Edge* - 5356

Awards—*cont.*

Could be made valuable, *I. Kiralfy* - 1176

Determined by other things besides excellence, *W. F. Reid* - 1933

EFFECT ON EXHIBITORS:

Deterrent, from fear of injustice or rival receiving, *Sir H. T. Wood, L. Serraillier* - 656, 2398-2400

Inducement, *Sir H, Jekyll, Sir B. Redwood, W. F. Reid, J. T. Williams* 133-5, 828, 1926-7, 5753

a Farce, but may influence people, *H. Birchenough* - 6645

Given too freely, *A. Serena, Lord Alverstone, J. H. Cundall, H. Birchenough*, 1099, 2103, 2923-5, 6551-3, 6658

no Guarantee of quality, but show trader is up-to-date, *J. H. Hillman* - 2821-2

an Indication of excellence, *Lord Justice Fletcher Moulton, Sir A. K. Rollit* 2438, 4959-62

Indispensable, *Sir C. Watson* - 343

Lavish distribution no deterrent to best firms, which aim only for *grand prix*, *Sir I. Spielmann* - 454-8

for Machinery exhibits, practical test the only criterion, but lengthy and expensive, *S. Sparkes* - 3089-98

MEDALS AND DIPLOMAS, SYSTEMS OF:

Actual medals presented in earlier exhibitions, *Sir H. T. Wood* - 647

Bronze medals changed into gold by paying at Paris Exhibition, 1900, *R. J. Gibson* - 2537-9

Certificates given and medals bought by recipient in recent exhibitions, *Sir H. T. Wood* - 641, 645

Gold medals formerly given less frequently, *H. Birchenough* - 6552

Threefold, *Sir H. T. Wood* - 644-7

Unsatisfactory and remarks *re*, *A. Maskell* - 915

Necessary, *R. J. Gibson* - 2537

Opposed to whole principle of the Arts and Crafts Society, *H. J. Powell* - 6722

Position maintained, *M. W. Zambra, J. Moncrieff* - 5792, 5896-900

Result of good organisation, *Sir C. Watson* 397

Retention advocated, *Sir B. Redwood, Lord Alverstone, G. C. Levey* - 829, 2103, 4433

SCRAMBLE FOR:

by Commissioners, *Sir H. T. Wood* - 651-2

by Jurors:

Admitted, *Sir I. Spielmann* - 520

Disputed, *Sir A. K. Rollit* - 4960-1

VALUE:

Attached, *Sir C. Watson, Sir H. T. Wood, Sir W. H. Preece, T. Cope, W Burton, W. F. Reid, A. W. Down, R. J. Gibson, I. H. Hillman, S. Sparkes, A. Bornemann, W. Birch, F. T. Ford, P. Baker, G. C. Levey, P. Howard, F. A. Darton, G. Jennings, A. G. Maginnis, E. J. Crosier, I. Levinstein, W. Kelway*, 343, 398, 652-5, 680-2, 1345, 1563-4, 1735, 1948-52, 2496, 2533, 2811-3, 3046, 3438, 3444, 3906-7, 4115-7, 4191-201, 4266-9, 4431, 4624-5, 4699, 4752-3, 4790, 4862-3, 5488-9, 6033-4, 6866, 7184, 7646, 7717

Deterioration in, *W. F. Reid, A. Heal, J. T. Williams, H. T. Milward* 1926, 3886-90, 5705-7, 6397-9

no Deterioration in, *W. Kelway* - 7718

Lessened to firms already possessing, *W. F. Reid, J. T. Williams* 1928, 2028-9, 5701-2

Question *re*, *F. Hooper, A. Heal, A. S. Cole* - 3549-50, 3860-71, 6308-9

Small or none, *A. Maskell, A. Serena, S. Sparkes, A. Heal, C. Charleton, J. Moncrieff, H. J. Powell, E. J. Crosier, J. G. Mathieson, F. Bowden*, 931-2, 1015, 3090, 3751-4, 5619, 5896, 6719, 6865, 7166-7, 7736, 7738-9

Variable, *Lord Brassey* - 5636

Executive Commissioner, *see* Dredge, James.

Financially successful, *B. H. Brough* - - - - - 1527-1530

Guarantee fund raised to protect grant, *Sir I. Spielmann, Sir A. K. Rollit* - - 499, 526-7, 4906-6*

Inartistic and inferior to French and German, *Sir I. Spielmann* - 517-18

Private enterprise eminently successful, *B. H. Brough* - - 1443

Promoted by London Chamber of Commerce, *Sir I. Spielmann, T. Cope, Lord Alverstone* 499-501, 1666, 2133, 7389-91

State aid, amount, and surplus returned to Treasury, *A. Serena, Sir I. Spielmann, Sir A. K. Rollit* 499-501, 976, 4906

Success apart from Art, question *re W. Burton, Sir A. K. Rollit* 1748-9, 4984-6

Successful, but not an ideal British section, *T. Cope* 1671-5, 1687-93, 1695

Unworthy of Great Britain, *A. Greenwood* - - - - 5198, 5201

Well to front, *Sir A. K. Rollit* - 4958

French section, more artistic than British, *Sir I. Spielmann* - - - 517

German section, more artistic and attractive than British, *Sir I. Spielmann* - - - - - - 517-18

Management good, *F. A. Darton* - - 4786-8

Quotation from *The Times re, T. Cope* - 1673

1910, under consideration of Exhibitions Committee of London Chamber of Commerce, *Sir A. K. Rollit* - - 4980-4981, 5029

Buda-Pest Exhibition (Austria-Hungary):

Exhibits, no Hungarian mining or metallurgical product omitted, and result, *B. H. Brough* - - - - - - (c) 1440

Outcome of intense patriotism, *B. H. Brough* 1507

Buffalo Exhibition, no Royal Commission for, *Lord Alverstone* - - - - - - - 2136

Building Trade, sales effected by Nuremberg Exhibition, *B. H. Brough* - - - - - - 1440

Bulgaria, excellence of exhibit at St. Louis Exhibition, *Sir C. Watson* - - - - - - 299

Burge, Dr., consulted *re* Education Section at New Zealand Exhibition, *Capt. P. Atkin* - 7949

Calcutta Exhibition, 1884 (India); no attempt at combination in British Section, *D. Howard* 4677

Canada:

Exhibits:

Mineral, invariably striking and effective, *B. H. Brough* - - - (c) 1440

at Paris Exhibition, 1900 - - - 124

Sales in, as result of exhibiting at Chicago and St. Louis, *F. A. Darton* - - - 4831

Trade resulting from exhibits in U.S.A. possible, *A. Maskell, I. Levinstein* - 913, 7182

Cape Town, *see under* South Africa.

Carriage Makers:

Benefit from International Exhibitions, *Sir H. T. Wood* - - - - - - - 784

Temporary increase of business from Paris Exhibition, 1878, *Sir H. T. Wood* - - 563

Cartlidge, Mr., organiser of St. Louis Ceramics Collective Exhibit, *Capt. P. Atkin* - - 8014

Ceramics, *see* Pottery.

Chamberlain, Right Hon. J. Austen, P.C., interviews with, *re* grant to Milan Exhibition, *Sir A. K. Rollit* - - - - - - - - 4907

Chambers of Commerce

Basis of permanent Committee should be commercial through, *Sir A. K. Rollit* 5014, 5073, 5099-120
Chairmen, willingness to act on organising Committee, opinion, *Sir I. Spielmann* 432-433
Collaboration at St. Louis Exhibition not secured, *Sir C. Watson* 152-4, 215-7, 243, 266-9

Collective Exhibits:
Could be effectively organised by, *J. Hooper* - - - - - - -3684-7
Selection by, not advocated, *H. Birchenough* - - - - - - 6609-10
Commercial Committee, formation by, advantageous, *F. T. Ford* - - 4145, 4147-8
Commission organised by, preferred to Royal Commission, *I. H. Hillman, Sir A. K. Rollit* - - - - - -2792, 4924, 5086
Co-operation desirable, *T. Cope* - - - 1669
Efficiency variable, *H. Birchenough* - - 6610
Election of proposed permanent body by, advocated, *Sir A. K. Rollit* - - - -5078-9
Exhibitors, question *re* procuring, *Sir A. K. Rollit* - - - - - - - -4967-8

Formation of Exhibits by:
Least expensive method of experiment, *Sir H. Jekyll* - - - - - - 66-67
would Produce uniform results, avoid duplication, and be least expensive, *Sir H. Jekyll* - - - - - - 65-67
French, connection with Government, *Lord Brassey* - - - - - - - - - 5641
Good organisation in past chiefly owing to co-operation, *Sir A. K. Rollit* - - - 4919
to be Included in proposed Joint Committee, *W. F. Reid* - - - - - - 1912, 2043
Names of possible exhibitors could be suggested by, to the organising Committee, *L. Serrailier* - - - - - - - - 2341
North country, alleged jealousy of London Chamber, unfounded, *C. Charleton* - - 5603

Organisation by:
Inefficient, *J. H. Cundall* - - - -2894-6
Non-deterrent to exhibitors, *C. Charleton* - - - - - - - -5600-1
Royal Commission better than, *I. Levinstein* - - - - - - - -7231-2
Unsuitable, *A. Bornemann, Lord Justice Fletcher Moulton, H. Birchenough* 2462-3, 3481, 6611

Permanent office proposed should keep in touch with, *Sir C. Watson* - - - 214
Provincial, assistance to London Chamber in procuring exhibitors, *C. Charleton* - -5604-6
Should be represented on Committee of organisation of exhibitors, *I. Kiralfy, Lord Brassey* - - - - - - 1225-6, 5633
Unlikely to bear exhibitors' expenses, *Sir H. Jekyll* - - - - - - - - 129
see also under names of cities.

CHARLETON, CHARLES, Chairman of Council of London Chamber of Commerce: 5377-693

Awards, little value attached - - - 5619

Chambers of Commerce:
Provincial, question *re* value of assistance in securing exhibitors - - 5604-6
Relations between London and North Country, excellent - - - 5600, 5603
Chicago Exhibition, beneficial to British industrial reputation - - - - - - 5583
Collective exhibits, subsidising advised when necessary - - - - - - - 5587-91
Evidence given from general standpoint rather than from individual trader's - 5646

Exhibitors:
British, position compared with foreign 5681-2
Individual, should not be relieved of all expenses - - - - - - 5589-91
Motives - - - - - - - - - 5618
Experience of exhibitions - - - - - 5579
Franco-British Exhibition, 1908, Yorkshire manufacturers' refusal to exhibit - - 5593-4

of Economic minerals, *B. H. Brough* 1448
Failure and reasons, *Sir H. T. Wood, Sir W. H. Preece* - 575-7, 586, 793-4, 1380

Exhibitors' expenses and value of exhibit, *Sir H. T. Wood* - - - 631
Exhibitors' smoking concert to Colonial Commissioners, *F. A. Darton* - - 4786

Exhibits:
Difficulty in getting, after exhibition, *F. A. Darton* - - - 4802-8
Official, few, *Sir H. T. Wood* - - 800
Scientific instruments:
Arrangement badly managed, *F. A. Darton* - - - 4775-8
not a Collective exhibit, *F. A. Darton* - - - - - - 4774

Hampered by inferior grant in decoration, *Sir H. T. Wood* - - - 627
Inartistically decorated, *F. A. Darton* - 4900
Inferior to other nations, *R. J. Gibson* 2588-94

Organisation:
Compared with that of Paris, *R. J. Gibson* - - - - - - - 2522-6
Illustration from, *F. T. Ford* - 4188-9
Royal Commission:
Category, *A. Serena* - - - 976
Formed of Council of Society of Arts, *Lord Justice Fletcher Moulton* - - - - - 2432-3
Grant, *A. Serena, Lord Alverstone* - - - - - 976, 2090
Head of, *F. A. Darton* - - 4780
Indispensable, *Lord Alverstone* 2136
Separate body, *Lord Alverstone* - 2081
by Society of Arts, *Lord Justice Fletcher Moulton, G. C. Levey* - 2442, 4381-2
Unsatisfactory, *F. Bowden* - - - 7803-7, 7757-62, 7866-8

Pavilions:
Americans pleased by, *Sir W. H. Preece* - - - - - - - 1346-8
Amount of sale, question *re*, *Lord Alverstone* - - - - - - 2132
Complaint *re*, *Lord Alverstone* - 2169
Expenditure on:
Judicious, *Lord Justice Fletcher Moulton* - - - - - 2450
Question *re*, *Lord Alverstone* - 2131-2
Question *re*, *E. H. Lloyd* 3263, 3266-7
too Substantial and costly, *Sir I. Spielmann* - - - - - - 562-3

Quality, *G. C. Levey* - - - - 4402

State Aid:
Amount, *Lord Alverstone* - - 2090
Inferiority to German grant, *Sir H. T. Wood* - - - - - - 623-6

Chicago Exhibition, 1893 (U.S.A.)—*cont.*

Woollen and worsted trades, changes in fashion slight from year to year, and copying of new patterns not to be feared - - - - - - - 6360-5
South Kensington Exhibitions, 1872 and 1873, collective exhibits of lace and embroidery organised by - - - 6235-6
Special exhibitions, no great necessity for British participation - - - 6254
Special interest taken by, in lace and embroidery - - - - - - 6236
State Aid:
Necessity, and extent desirable - 6255-6
Sufficient amount should be given once participation is decided - 6282
SIR HENRY:
South Kensington Exhibitions, 1871-4, organised by, *Sir H. T. Wood* 549, 555
References, *Sir H. T. Wood* - 592, 615, 687

Collective Exhibits:
Adoption of system in England possible, *Sir B. Redwood* - - - - - - 857
Advantage, *Sir H. T. Wood, H. Birchenough* - - - - - - - 720, 6642-3
Advocated, *Sir H. Jekyll, Sir C. Watson, Sir B. Redwood, I. Kiralfy, B. H. Brough, Sir W. H. Preece, Lord Alverstone, L. Serrailier, E. H. Lloyd, G. C. Levey, W. H. Feltham, D. Howard, Sir A. K. Rollit, A. Greenwood, J. Moncrieff, A. S. Cole, H. Birchenough, F. Bowden* 110, 164, 278, 826-7, 1221-2, 1338-9, 1447, 2076, 2097, 2314-5, 3370, 4404, 4508-10, 4634, 4973, 5094, 5182, 5931, 6310, 6591-2, 6639, 6655, 7778-9; p. 312
ARRANGEMENT:
Individuality should not be merged, *Lord Alverstone* - - - - - 2077-8
Longitudinally in nations and transversely in classes suggested, *G. C. Levey* - - - - - - - - 4407
Art, *see that title.*
Awards to, *see under* Awards.
Burden of unpaying exhibits thrown on Government, *A. W. Down* - - - 2291
Certain industries more suited to than others, *A. W. Down, J. Hooper, I. Levinstein, Capt. P. Atkin* - 2291-4, 3680, 7286, 8014-5
Chemicals, *see under* Chemicals.
Collaboration of manufacturers hard to secure, *Sir H. Jekyll, E. H. Lloyd* - 95, 3368-9
Combined system of decoration impossible without, *Lord Alverstone* - 2156-7, 2160, 2162
Comparative value to individual of sharing in, or advertising on ordinary lines, question *re, Sir B. Redwood* - - - - - 852-5
Conducive to good representation, *G. C. Levey, Capt. P. Atkin* - - - 4470, 7886
Confectionery, *see that title.*

Collective Exhibits—*cont.*
Cutlery trade suited to, *G. C. Levey* - - 4405
Cycles, *see that title.*
Defects remedied by, *H. Birchenough* - - 6654
Desirable in decorative furniture trade, *A. Heal* - - - - - - - 3789-91
Difficulties, *Sir C. Watson, Sir H. T. Wood, B. H. Brough, W. Burton, E. H. Lloyd, H. Birchenough* 172-3, 319-20, 575, 1446, 1836, 3368-9, 6593, 6598; p. 312
Easier to form in some trades than others, *H. Birchenough* - - - - - - 6655
should be Encouraged but not made compulsory, *Lord Justice Fletcher Moulton* - 2459
should not Exclude individual, *Sir H. T. Wood* - - - - - - - - 757-8
Feasible, *W. F. Reid* - - - - - 1956-7
Foreign, question *re* method, *A. Maskell* - 896
FORMATION:
by Chambers of Commerce or Manufacturers' Associations suggested, *Sir H. Jeykll* - - - - - - - 65-67
Circularising useless, *Sir B. Redwood* - 835
by Co-operation among manufacturers themselves best, *A. S. Cole* - - - 6331
Easier in future, *Sir H. T. Wood* - 795
by Local Chambers of Commerce better than by London central body, *J. Hooper* - - - - - - - 3684-7
Localised, possible in certain industries, *Sir H. Jeykll* - - - - - 68-72
Methods, *Sir H. T. Wood, A. S. Cole* 754, 6290-99
Possible, *G. C. Levey, H. Birchenough, I. Levinstein* - 4405, 6656, 7255-6
FRENCH:
Generally educational and agricultural, *Sir H. A. Lee* - - - - - - 7585
System followed, *Sir C. Watson* - - 278
Textiles, question *re, Sir H. A. Lee* - 7586-8
Future success probable, *Sir W. H. Preece* - 1380
Germany, system of selection, *H. Birchenough* - - - - - - - - 6607-8
Glassware suited for, *G. C. Levey* - - - 4405
Gold and silver trade, co-operation and success impracticable, *A. G. Maginnis* 6127-31, 6156-7
Importance attached to, *Sir I. Spielman* - 424
in Important sections would remedy defects, *H. Birchenough* - - - - - - 6654
Inadvisable for specialities, *A. W. Down* 2204-10
v. Individual exhibits, *T. Cope, W. Burton* 1658-62, 1754
Inducement to exhibit by part payment of expenses, *M. W. Zambra* - - - - 5806
Inducement to manufacturers of textiles to exhibit, *J. Hooper* - - - - - - 3669
Industrial, general formation possible, and selection by expert Committee advocated, *Sir I. Spielmann* - - - - - 422, 481-5
Insufficient trouble taken to induce manufacturers to join, *Sir I. Spielmann* - 495
Insufficiently tried, and extended trial necessary, *Sir I. Spielmann* - - - - - 473-6
International Exhibitions' Committee of London Chamber of Commerce advocate and attempt, *Sir A. K. Rollit* - - - 5095-8
Lace and embroidery manufacturers, no objection shown by, *A. S. Cole* - - - 6306-7
Lack of attempts of manufacturers to appreciate, *Sir I. Spielmann* - - - - - 496
Localised industries more advantaged by, *H. Birchenough* - - - - - - 6674-7
Military, from Woolwich, made by Government at certain Exhibitions, *Lord Alverstone* - - - - - - - - - 2992
Motor Cars, *see under* Motor Cars.
Object to obtain best products of each industry, *Sir C. Watson* - - - - - 287
Objected to, *R. J. Gibson, M. W. Zambra* 2619-21, 5797-9, 5810
OBJECTIONS:
Others profit by one's exertions, *A. W. Down* - - - - - - - - 2294
Smaller firms excluded, *J. Hooper* - 3730-1

Collective Exhibits - *cont.*

Official organisation necessary, *Lord Alverstone* - - - - - 2076, 2078-9, 2127
Organised by Government, illustrations, *Lord Alverstone* - - - - - - 2092
Personal explanation and Government invitation of exhibits needed to popularise, *Sir I. Spielmann* - - - - - 476-9
Pottery, *see under* Pottery.
Principle not approved, *J. T. Williams* - 5732-3
Private organisation *v.* official, *Lord Alverstone* - - - - - - - - - 2087
Properly organised and State-aided would induce manufacturers to exhibit, *Sir H. T. Wood* - - - - - - - - - 663
Provision of facilities without direct State aid, question *re* inducement, *A. S. Cole* - 6333-4
Question of expense would only arise where individual interest is absent, *H. Birchenough* - - - - - - - 6684-86
Reasons for difference of British view from German *re*, *Sir H. T. Wood* - - - 582-3
Relief from heavy expense secured by, *Sir C. Watson* - - - - - - - - 172-3
Representative collection aimed at, rather than collection of miscellaneous exhibitors, *A. S. Cole* - - - - - - - 6331
Scientific, question of expense might arise, owing to lack of profit from, *H. Birchenough* - - - - - - - - - 6686

Selecting Committee:
Central Committee suggested, *Sir C. Watson* - - - - - - - 285
Constitution and methods proposed, *Sir C. Watson* - - - - - - - 280-84
Control of space should be given to effect exclusion of undesirables, *H. Birchenough* - - - - - - 6605-6
Inadvisable, as practically prejudging exhibits, *J. Moncrieff* - - - 5932-9
Local Chamber of Commerce might act as, *Sir H. T. Wood* - - - - - 760-1
Needed, *Sir H. T. Wood* - - - 755-8
Producer's name must be known by, *Sir C. Watson* - - - - - - - 288
for Suppression of undesirable exhibitors, question *re*, *A. G. Maginnis* - 6146-7

Selection:
Chambers of Commerce not recommended, *H. Birchenough* - - 6609-10
Difficulty, question *re*, *Sir C. Watson* - 319
Invidiousness in choice of manufacturers unavoidable, *Sir C. Watson* - 286
Local competition among producers to avoid difficulty in, question *re*, *Sir C. Watson* - - - - - - - 288
Manufacturers would submit to, *Sir I. Spielmann*, *C. Charleton*, *H. Birchenough* - - - 428, 5656, 6612-3
by Manufacturers' Committee, suggested, *H. Birchenough* - - - 6609
Recommended, *Sir C. Watson*, *W. Birch*, *J. Moncrieff*, *I. Levinstein* 279-80, 284, 4056, 5938-9, 7210-12

State Aid:
Advocated, *Lord Justice Fletcher Moulton*, *C. Charleton* - 2460, 5587-8
would Facilitate obtaining exhibits, *F. Hooper*, *A. G. Maginnis* - 5663, 6164

Success of British participation dependent on, *Sir B. Redwood* - - - - 856; p. 312
Success of country helped by, rather than individual, *S. F. Edge* - - - - 5359
Sum needed for adequate representation, question *re*, *Sir C. Watson* - - - 249
Superior display would attract foreigners, who would easily find out best individual makers, *Sir H. Jekyll* - - 112, 114-116
Superiority of foreign sections due to adoption of, *Sir H. Jekyll* - - - - 19

Suppression of Individual Names:
Desirable, *Sir H. Jekyll*, *H. Birchenough* - 110, 112, 114, 143-4, 6677-9
Goods become more prominent, and advertising element eliminated, *Sir H. Jekyll* - - - - - - 111, 113
Undesirable, *Sir C. Watson*, *G. C. Levey*, *Sir I. Spielmann* 160-2, 467-8, 4471

Collective Exhibits—*cont.*

Surgical instrument trade unsuitable for - 2292-4
Surplus from grants and saving from too costly pavilions should be devoted to, *Sir I. Spielmann* - - - - - - - - 503
Textile industries, *see that title.*
in Trades where manufacturers are unwilling to exhibit, advocated, *H. Birchenough* 6634-6
Transport, *Lord Alverstone* - - - - 2092
see also under names of particular exhibitions.

Colonial and Indian Exhibition, South Kensington:
Amateur rather than commercial, *Sir H. T. Wood* - - - - - - - - 688
Buildings, rent, rates and taxes, *Sir H. T. Wood* - - - - - - - - 688-9
Separate organising body, *Lord Alverstone* - 2081
not State aided, *Sir H. T. Wood* - - 687-9
Successful, *Sir H. T. Wood* - - - - 557

no Disadvantage from, *S. Sparkes, A. Bornemann, W. H. Feltham, M. W. Zambra, H. T. Milward, H. Birchenough* 3040, 3431, 4496, 5791, 6395, 6549-50
of Dress goods, question *re*, *A. S. Cole* - 6360
Effect of fear of, on manufacturers, *see under* Manufacturers.
can be Effected otherwise than from exhibits, *Sir I. Spielmann, A. Serena, I. Levinstein* - - - 530-1, 1031-2, 7201-3
Evasion of Patent Laws possible, *Sir H. T. Wood* - - - - - - - - 564-6
Experienced, *S. Sparkes, A. Heal, G. Jennings, H. Birchenough, H. J. Powell, E. J. Crosier* 3040, 3748-50, 5485-6, 6549-50, 6717-8, 6862
not Experienced, *F. T. Ford, D. Howard, J. Moncrieff, I. Levinstein, W. Kelway* 4112-4, 4622, 6005-7, 7180, 7642-3
Facilities offered, *Sir H. Jekyll, Sir I. Spielmann* - - - - - - 41-6, 530-1
Fear much exaggerated, *Sir I. Spielmann, Sir B. Redwood, I. Levinstein* - 399, 841, 7201
Gain balances loss, *Sir I. Spielmann, W. F. Reid, S. Sparkes, A. Bornemann, J. T. Williams, E. J. Crosier* - - - - 399, 2033-41, 3140-3, 3576-8, 5718-21, 6862, 6992-5
Lace trade, few objections raised, *A. S. Cole* - - - - - - - - - 6359
Little or no disadvantage, *R. J. Gibson, P. Baker, J. T. Williams* 2494-5, 4261-5, 5700
MACHINERY:
Opportunity afforded for deciding what to copy, but not for successfully copying, *Sir B. Redwood* - - - - 859-61
Question *re*, *Sir W. H. Preece* - - 1317-8
Minimised by having a good representative, *A. W. Down* - - - - - - 2268-72
of Novelties and patents, question *re*, *A. Serena, I. Levinstein* - - - - 972, 7291
Patent Laws a protection, *L. Serraillier* 2389-90
Question *re*, *I. Kiralfy, W. Burton, Lord Justice Fletcher Moulton, C. Charleton* 1294, 1854, 2439, 5586
of Silk exhibits, alleged, *F. Hooper* - - 3613-7
Unavoidable, but need not deter exhibiting, *A. W. Down* - - - - 2268-72, 2276-8

Cotton Trade:
American goods better than Lancashire, *W. H. Feltham* - - - - - - - 4561
Bags, trust and tariff restrictions, *W. H. Feltham* - - - - - - 4493-5, 4556

Cotton Trade—*cont.*
EXHIBITS:
Made at Milan Exhibition, *A. Serena* - 1021
Ordinary goods, less paying than coloured - - - - - - - 7308-13
Results might not pay individuals - 7316
Manufacturers, more direct trade done than by woollen, *J. Hooper* - - - - - 3718

Crane, Walter:
Designs for Pilkington's shown at Turin Exhibition, *W. Burton* - - - - - 1860
Intimately connected with Arts and Crafts Society, *H. J. Powell* - - - - 6744-5
Medal obtained at Paris, 1900, for work done for Pilkington's Tile and Pottery Co., Ltd., *W. Burton* - - - - - 1774
Organised Arts and Crafts section for New Zealand Exhibition, *H. J. Powell* - - 6788
Reference, *H. J. Powell* - - - - - 6778

Cuba, *see under* West Indies.

CUNDALL, JOSEPH HENRY: - - 2877-3031
Awards, system satisfactory and allotment generally fair - - - - - - - 2923-5
Bordeaux Exhibition, question *re* organisation of British exhibits - - - 2909-10
Chambers of Commerce, inefficient organisers of exhibitions - - - - - - 2894-6
in Charge of British section at Milan Exhibition, *A. Serena, Sir A. K. Rollit* - - 1097, 5061, 5063
Collective exhibits, organising of, under certain conditions would improve British sections - - - - - - - - 2915
Experience of exhibitions - - - - 2878-80
EXHIBITORS:
Complaints made more by agents than by - - - - - - - - 2918-21
Few complaints *re* position - - 3020-23
INTERNATIONAL EXHIBITIONS:
Advantageous to national trade - - - 2995
British participation should be confined to larger - - - - - - - 3002-10
British Sections:
Better representation secured by organising collective exhibits 2911-15
Comparison of exhibits with those of foreign sections - - 2948-50
Failure due to apathy of manufacturers - - - - - - - 2911-3
Foreign, effect on trade - - 2881-5
Industries unequally benefited - - 2996-7
Manufacturers' reluctance to participate caused by agency system, disruption of ordinary business, and expense incurred in obtaining advertisement no longer needed - - 2929-46, 2962-5
Organisation, *see that title below.*
Small, unbeneficial - - - - - - 3001
Space allotment, methods of procedure 3012-25
State Aid, *see that title below.*
Liège Exhibition, British section, unfavourable opinion *re* - - - - - - - 3030
London Chamber of Commerce, Milan Commission appointed by- - - - - 2988-9
MILAN EXHIBITION, 1906:
British Section:
Commission:
Appointment by London Chamber of Commerce - 2893, 2988-9
Inexperience of exhibitions - 2990-1
Exhibits:
Agricultural machinery, sales effected - - - - - 2970
by Firms coerced by Italian Government - - - - - 2972
Steel and shipping, shown - 2972
Textile machinery, direct orders obtained by - - 2967-8

CUNDALL, JOSEPH HENRY—*cont*

Education, due prominence in exhibitions recommended, *Capt. P. Atkin* - - - - - 7895
Education Office, Science and Art Department, organisation of exhibitions formerly under, *Sir H. Jekyll* - - - - - - - - - 29
Electrical Exhibitions, usefulness, *Sir H. T. Wood* - - - - - - - - - 659
Electrical industry, field open in, by Paris Electrical Exhibition, 1881, *Sir W. H. Preece* 1309-10
Enamels, exclusion from Art Sections as being process, recommended, *Sir I. Spielmann* - 7451

Engineering Trade:
Adverse effect of exhibitions on, *Sir H. T. Wood* - - - - - - - 563, 660, 730-4
Armament makers, exhibits made to keep themselves before Governments, *Sir H. Jekyll* - - - - - - - - - - 84-87
Exhibitions beneficial to, *Lord Alverstone* - 2069

EXHIBITS:
no Fear of copying, *Sir W. H. Preece* - 1427-8
Once in ten years suitable, *E. J. Crosier* 6953-6
for Orders solely, *Sir W. H. Preece* 1424-6, 1427-8
Unprofitable, *Sir H. T. Wood* - - - 660

Locomotive engines exhibit at Paris Exhibition, 1900, question *re* motive, *Sir H. Jekyll* 88-90
Marine engines, reluctance of makers to exhibit, and exceptions, *Sir H. Jekyll* - 83-87
'Engineers' visits to exhibitions, *A. Bornemann, E. J. Crosier* - - - - - - 3431-2, 7012-6

England:
Disadvantage in introducing novelties, *D. Howard* - - - - - - - - 4662-4
Earl's Court Exhibitions, *see that title.*
Equipment for exhibiting compared with that of foreign countries, *Lord Alverstone* 2125-6

INTERNATIONAL EXHIBITION IN:
Advantageous if held on an adequate scale, *W. Burton* - - - - - 1845-6
Advocated, *Sir W. H. Preece, Lord Alverstone, W. Birch* - 1362-4, 2124, 3918-20
Elimination of side-shows advised, *Sir W. H. Preece* - - - - - - - 1385
Selection of judges, suggestion *re*, *W. Birch* - - - - - - - - - 3974-5
Unprofitable, *Sir H. Jekyll, Sir H. T. Wood* - - - - - - - 145-6, 657-8

South Kensington Exhibitions, *see that title.*
see also particular places.

Exhibitions:
Floating, *see that title.*
International, *see that title.*
Local industrial, preferred to large international, *Sir H. Jekyll* - - - - - 146-7

MINOR:
in England, few foreign exhibitors show, *Sir H. T. Wood* - - - - - - 762
Holding in London possible, *Sir H. T. Wood* - - - - - - - - - 658
Non-participation of Great Britain recommended, *Sir H. T. Wood, J. H. Cundall, A. G. Maginnis* 550, 3001, 3010, 6149-50
Permanent organisation should watch and help, *Sir H. T. Wood* - - - 752-4
Trade unbenefited by, *J. H. Cundall* - 3001

PROVINCIAL:
Advocated, with Government assistance, *W. F. Reid* - - - - - - - 1944-7
Permanent department for exhibitions would advise on participation, *Sir H. T. Wood* - - - - - - - 612-3

SPECIAL:
Advantageous, *Sir H. T. Wood* - - - 659
Attractions to public fewer, *F. A. Darton* - - - - - - - - 4891-5
British Participation:
Advocated, *L. Serraillier* - - - 2429
Unimportant, *A. S. Cole* - - - 6254
Machinery bought at, *F. T. Ford* - - 4118-21
Neglected by Britain, *Sir H. T. Wood, A. Maskell* - - - - - 550, 880
Organisation:
Adequate, more needed than money, *Sir H. T. Wood* - - - - - 684-5
by British Commissioner recommended, *Sir H. T. Wood* - - - 685
by Private enterprise possible, *A. Maskell, Sir W. H. Preece* 888, 1354-7
Participation and State aid might be extended to some, but discrimination necessary, *Sir B. Redwood* - - - - 871
Preferable to International, from commercial standpoint, *W. F. Reid, L. Serraillier, S. Sparkes* - - - 1915, 1942, 2329-30, 2332, 2429, 3067
more Representative than International Exhibitions, *L. Serraillier* - - 2333
Requirement of particular trades for frequent exhibits met by, *H. Birchenough, E. J. Crosier* - - - - 6668, 7006
Small grants to, recommended, *Sir H. T. Wood* - - - - - - - - 684-6
Supplanting International, *B. H. Brough* - - - - - - - 1552
Value in promoting trade and illustration, *Sir H. T. Wood* - - - - 550-552
see also Trade Exhibitions.

Exhibitors:
Bearing of expense by, question *re*, *Sir W. H. Preece* - 1392-4
British, *see* British Exhibitors.
Complaints of copying justified in case of machinery but not of ornamental goods, *Sir H. T. Wood* - 563-6
Complaints made more by agents than by, *J. H. Cundall* - 2918-2921
Complaints *re* Position:
Common, *J. H. Cundall* - 3022
not Experienced, *R. J. Gibson* - 2611-4
Cost of exhibits should be borne by, *A. G. Maginnis* - 6222-25
Direct grants to, not favoured, *Lord Alverstone, F. Hooper, P. Baker, D. Howard, E. Powell, E. J. Crosier*, 2161-5, 3708-12, 4337, 4340, 4359, 4694-5, 5454, 6901-4, 6957
Discrimination among, *re* subsidies, advocated, *T. Cope, I. Levinstein* - 1654-7, 7276
Entire relief from expenses not advocated, *Sir I. Spielmann, A. Serena, Lord Justice Fletcher Moulton, R. J. Gibson* 426, 1073-80, 2466, 2578-9
Expense of organising industrial committees payable by, *L. Serraillier* - 2342
"Fakers," no experience of, *I. H. Hillman* 2872-5
Free space should be allotted, and cheaper representation, *G. C. Levey* - 4434
Freight should be borne by, *Sir H. Jekyll* - 51
French, *see under* France.
Large firms prefer to pay own expenses, *J. T. Williams* - 5746-50
Motives, *Sir H. Jekyll, R. J. Gibson, I. H. Hillman, Lord Justice Fletcher Moulton, W. F. Ford, C. Charleton, J. T. Williams, M. W. Zambra, H. Birchenough, E. J. Crosier* 63-64, 2467, 2595-6, 4218-21, 5618, 5752-3, 5787, 5856-9, 6692-4, 6982-3
Relations with Organising Bodies:
no Friction, except *re* securing conformity with regulations, *E. H. Lloyd* 3377-88
Good, up to 1878, *G. C. Levey* - p. 179
Opportunity for friction slight, *Sir H. Jekyll* - 17-8
Relief from all costs but production and packing advocated, *Capt. P. Atkin* - 7887
Rule requiring, to be manufacturers of exhibits, object and reasonableness, *Sir C. Watson* - 220
Tendency to complain, *J. H. Cundall* - 3022-3
Want of system among, part cause of failure of British sections, *G. C. Levey* - p. 180

Exhibitors' Agents:
Bribery of subordinate officials alleged, *E. H. Lloyd* - 3392, 3415-16
Care should be exercised in employing, *F. A. Darton* - 4854
Difficulties with, at exhibitions, *E. H. Lloyd, G. C. Levey* - 3389-94, 4434-42
Duties of, details *re*, *I. H. Hillman* - 2780-90
Inefficient, British failure largely due to, *Sir I. Spielmann, Sir B. Redwood* 395, 817 (10)
a Necessary evil, *E. H. Lloyd* - 3390
Payment of, according to results of awards practised, *G. C. Levey, W. H. Feltham* 4437-42, 4494-500
Useless for exhibits of scientific instruments, *M. W. Zambra* - 5820-3

Exhibits:
Agents' Refusal to Permit:
not Experienced, *Sir I. Spielmann* - 407
Suggestion unfounded, and an excuse for non-participation, *Sir B. Redwood* 840
Agricultural machinery, *see under* Agriculture.
Arrangement:
Artistic crafts should be shown with pictures and sculpture, *H. J. Powell* 6741-2, 6785
Classes *v.* nations, *A. Maskell, I. Kiralfy* 897-901, 1155-60

Institution of Naval Engineers, representation on proposed Standing Committee advocated, *Lord Brassey* – – – – – – – – 5633

Institution of Telegraph Engineers, *see* Institution of Electrical Engineers.

Instruction publique, decoration given to French exhibitors, *Sir H. A. Lee* – – – – 7491

International Congresses:
Holding in connection with exhibitions advocated, *B. H. Brough* – – – – 1440
at Paris Exhibition, 1878, Postal Union outcome of, *B. H. Brough* – – – – 1440

International Conventions and Agreements, useless to prevent copying, *Sir H. Jekyll* – – 7

International Exhibitions:
ABOLITION:
Disadvantageous to commerce, *J. Moncrieff, I. Levenstein* – – 5962, 7264
International agreement for, advocated, *A. Greenwood* – – – – 5238–40
Question *re*, *W. F. Reid* – – – 2017
not Welcomed, *H. Birchenough* – – 6628
Accessible to general body of traders, advocated, *Sir A. K. Rollit* – – – 5006
ADVANTAGES:
to Arts, *Sir B. Redwood, B. H. Brough, W. F. Reid, Lord Alverstone, G. C. Levey, Capt. P. Atkin* 817 (2b) 1439–40, 1878, 2119, p. 179, 7882–3, 7990–1
Class reached that would not be reached by advertisements, *W. F. Reid* – – 1997
Doubtful, but attract visitors to district, *Sir H. Jekyll* – – – – – 147
Educational, *Sir H. T. Wood, Sir B. Redwood, Sir W. H. Preece, B. H. Brough, W. Burton, W. F. Reid, R. J. Gibson, S. Sparkes, W. Birch, A. Bornemann, A. Heal, F. T. Ford, D. Howard, F. A. Darton, J. T. Williams, J. Moncrieff, A. G. Maginnis, A. S. Cole, H. Birchenough, E. J. Crosier, I. Levinstein, W. Kelway* 785, 862–4, 1307–8, 1407, 1429–31, 1435, 1440, 1457, 1847–50, 1855, 1934, 1934–8, 1940, 2015–6, 2035–7, 2498, 3052, 3909–11, 3431–2, 3757, 4099, 4122, 4629–31, 4755, 4925, 5704, 6041–2, 6311, 6559, 6697–8, 6870, 7190, 7649, 7690–1
to Foreign countries, proved by extent of participation, *C. Charleton* – – 5620
Illustrations, *Sir A. K. Rollit* – 4920–1, 4942–5
Improvements brought about by, in Telegraph department of Post Office, *Sir W. H. Preece* – – – – 1314
Interchangeable, *B. H. Brough, A. Greenwood* – – – – 1458, 5180–1
Intercommunication and fresh ideas, *H. Birchenough* – – – 6687–91
Local, *Sir W. H. Preece* – – –1410–3
Political, *A. S. Cole* – – – – 6311
Tendency to promote uniformity of mechanical practice and standardisation, *Sir W. H. Preece* – – – 1311
to Trade, *see under* Trade.
Two-fold, *W. Burton* – – – – 1793
Universal approval by governments a proof, *Lord Brassey* – – – – 5631
AMUSEMENTS:
Advantages, *I. Kiralfy* – – –1181–5
too Evident, *Sir W. H. Preece* – –1326–7
Grown more important than exhibits, *Sir H. T. Wood* – – – – 555
Should be part of the attraction of an exhibition, *I. Kiralfy* – – 1196–1200
Side shows unimportant commercially, *L. Serraillier* – – – – – 2334
Appeal more to general public than specialised exhibitions, *F. A. Darton* – – –4891–4
Art Sections, *see under* Art, and *under* Particular Exhibitions.
Attraction does not grow stale by repetition, *Lord Justice Fletcher Moulton* – – – 2473
Awards, *see that title.*
BRITISH PARTICIPATION:
Abolition advocated, *T. Cope* – – 1592
Abstention, *see* Non-participation of Great Britain, *below.*
Adequate, essential, *Sir I. Spielmann, Sir H. T. Wood, Sir B. Redwood, B. H. Brough, Lord Alverstone, A. W. Down, R. J. Gibson, A. Heal, F. T. Ford, P. Baker, Sir A. K. Rollit, C. Charleton, M. W. Zambra, A. G. Maginnis, H. Birchenough, W. Kelway, Captain P. Atkin*, 497, 786, (5) 817, 1526, 2145–6, 2212, 2461, 3778–9, 4249–51, 4306, 4978, 5092, 5596, 5597, 5643, 5824, 6150, 6579–82, 6582, 7650, 7898

International Exhibitions—*cont.*
British Participation—*cont.*
Advantages nationally under improved conditions, *Sir H. Jekyll, H. J. Powell* 102–3, 6790–3
Advisable politically, *Sir H. Jekyll, Sir C. Watson, Sir H. T. Wood, Sir W. H. Preece, A. S. Cole* 98–100, 384, 698–700, 1328, 6248–50, 6283–5
Advocated, *Sir H. Jekyll, Sir I. Spielmann, Sir H. T. Wood, Sir B. Redwood, A. Serena, B. H. Brough, W. Burton, W. F. Reid, Lord Alverstone, A. W. Down, R. J. Gibson, A. Bornemann, W. Birch, F. Hooper, P. Baker, W. H. Feltham, Sir A. K. Rollit, A. Greenwood, E. Powell, F. S. Edge, C. Charleton, J. F. Williams, J. Moncrieff, A. G. Maginnis, A. S. Cole, H. T. Milward, Sir H. A. Lee* – 37, 511, 572–3, 750–2, (3) 817, 1025–6, 1028, 1030, 1061–7, 1071, 1081–6, 1442, 1459, 1461–5, 1512, 1782–4, 1803–4, 1851, 2017, 2070–2, 2144, 2211, 2531–2, 3463, 3512, 3594–6, 3621, 3726, 4304–6, 4511, 4904, 4957, 4977, 5146, 5173, 5178–9, 5439, 5613, 5661–2, 5717, 5919, 6055, 6058, 6248, 6254, 6507, 7553–4, 7616–8, 7622
Approved by Government and public opinion, *Lord Brassey* – – – 5631
in Art sections, importance for national reputation, *Sir I. Spielmann* – 7455–7
Committee of Investigation suggested *re, I. Kiralfy* – – – – – 1252
Conditional on obtaining good space, &c., advocated, *Lord Alverstone* – – 2137
Decision might rest with Foreign Office, Board of Trade and Treasury, *A. S. Cole* – – – – – – 6281, 6342
Decision rests with Treasury, *Sir I. Spielmann* – – – – – 532
Delay in signifying, causes and results, *Sir I. Spielmann, Captain P. Atkin* 7343–5, 7360–1, 8008–11
Desirability, doubtful under old system, *Sir H. Jekyll* – – – – – 36–37
Difficult to define where Great Britain should participate and where not, *I. Kiralfy* – – – – – 1288
Direct commercial results warrant, *I. H. Hillman, I. Levinstein* – – 2687, 7204
at Foreign exhibitions advocated, *F. Bowden* – – – – – – 7753–4

Frequency:
At all first-class and large, *J. H. Cundall, F. T. Ford, G. C. Levey* 3002–9, 4249–51, 4478–9
Government should decide, *Lord Justice Fletcher Moulton* – – 2472
Question *re, Capt. P. Atkin* – 7899–903

Government pressure *re*, question *re, A. Maskell* – – – – – – 892–5
Greater magnificence advocated, *A. Bornemann* – – – – – 3496–7
Importance of early decision, *A. S. Cole* 6275–9, 6281–2
Industrial, *see under* Trade and Industries.
Invitations addressed to Foreign or Colonial Office, *Capt. P. Atkin* – – 7930
Less urgent because of established reputation, *Sir C. Watson* – – – 299

Official:
Abstention better than inadequacy, *Sir Chas. Watson* – – – 207
the Best, *R. J. Gibson* – – 2626–7
Desirable under certain circumstances, *A. S. Cole* – – 6283–5
Essential, *Sir H. T. Wood, B. H. Brough* – – – – 616, 1442
Government participation in all, not advocated, *Sir A. K. Rollit* 4988–9
Grant of public money not necessarily involved, *Sir A. K. Rollit* 4991–3
Greater formerly, and results, *G. C. Levey* – – – – p. 383, 4379
as Guarantee desirable, *A. G. Maginnis* – – – – – 6178

International Exhibitions—*cont.*
British Participation—*cont.*
Official—*cont*
Importance attached to, but not indispensable, *S. Sparkes, A. G. Maginnis* – – 3114–5, 3126–28, 6110
an Inducement to exhibit, *F. T. Ford, E. Powell, M. W. Zambra, A. G. Maginnis* – 4174, 5411, 5861–2, 6138–40
unless Manufacturers first show inclination undesirable, *L. Serraillier* 2401–4
Necessary in large exhibitions, *Sir C. Watson* – – – – – 207
Question *re, E. Powell* – – – 5412
Undesirable without adequate grant, *Sir C. Watson* – – – – 338
Unnecessary, *L. Serraillier, E. Jennings* – – – 5554–6, 2309

Unavoidable, *Sir C. Watson, Capt. P. Atkin* – – – – – 230, 7992–8

British Sections:
Absence of method not a result of Royal Commissions, *Lord Alverstone* – – 2150
should Aim at French standard, *C. Charleton* – – – – – – 5664–5

Arrangement:
Compares unfavourably with foreign, *J. H. Cundall, F. A. Darton, Sir A. K. Rollit* – 2947, 4896–900, 4964
Show cases must of necessity be different, but scheme should be uniform, *A. G. Maginnis* – 6151, 6152
Systematic, impossible owing to size of modern, *G. C. Levey* – – 4409
Unattractive owing to lack of organisation, *I. Kiralfy, I. Levinstein* – – – – – 1301, 7213

Art, education, and social economy should be given due prominence, *Capt. P. Atkin* – – – – – 7894–5

Comparison with foreign, unfavourable as to quantity, not quality, *P. Baker* 4350–3

Decoration:
Combined system impossible without collective exhibits, *Lord Alverstone* – – – – 2156–7, 2160
Committee should carry out, *I. H. Hillman, A. G. Maginnis* 2718–20, 6155
Expenditure on, excessive, *A. W. Down* – – – – – – 2223
Greater showiness, question *re* desirability, *Sir H. T. Wood* – – 743–5
Inferiority to French, *A. S. Cole* – 6266
Need not necessarily be according to methods of German or American sections, *A. G. Maginnis* – – 6153
Uniform lines better, *R. J. Gibson, A. G. Maginnis* – – 2651–3, 6190–1

Failure, and reasons, *Sir I. Spielmann, A. Serena, I. Kiralfy, T. Cope, Lord Alverstone, J. H. Cundall, E. H. Lloyd, A. Bornemann, G. C. Levey*, 528, 992, 1271, 1585–91, 2100, 2911–3, 3341, 3544–51, 3574, 4472–3
Future success dependent on spontaneous desire of British manufacturers to show, *B. H. Brough* – – – – 1469
Handicapped by delay over agreeing to exhibit, and inadequate grants and lack of organisation, *Sir B. Redwood, Sir A. K. Rollit, Capt. P. Atkin*, 817 (12), 4965, 7916–9
Industries should be fully represented, *A. S. Cole* – – – – 6355–8
Inferiority, *Sir I. Spielmann, I. Kiralfy, Lord Alverstone, A. Bornemann, F. T. Ford, H. Birchenough* 420, 515–8, 1295–6, 2155, 3573–4, 3601–2,4140–1, 6631
Official to be in charge of, in foreign capital, question *re, Sir A. K. Rollit* 5061–8

International Exhibitions—*cont.*

British Sections—*cont.*

Pavilions:

Expenditure:

Excessive, *Sir I. Spielmann* – 502
Necessary, but should be reasonable, *L. Serraillier* – 2348–9
Question *re*, *Sir W. H. Preece*, *Lord Alverstone* – 1382–3, 2130–2

a Form of advertisement, but unnecessary, *A. Serena* – – 1092
Important, *W. Burton* – – 1756–9
Other nations must be kept pace with, *Sir B. Redwood* – – – 832
Unduly substantial, and illustration from St. Louis, *Capt. P. Atkin* 7908–10
Use, *Sir C. Watson*, *Sir I. Spielmann* – – – 223, 504–7, 2169
Value, question *re*, *Sir W. H. Preece*, *Lord Justice Fletcher Moulton*, *I. H. Hillman* – 1346–50, 2450, 2717

Select national exhibit and more general exhibit would meet all requirements, *A. Heal* – – – – – – – 3884

Space

Government should secure available, *A. Greenwood* – – – 5188
Inadequacy in recent, a reason for reluctance to exhibit, *Sir I. Spielmann* – – – – – – 450
Inferior, often allotted and illustration, *Sir I. Spielmann* – – 402–4

Starved to procure surplus from grant, and remarks *re*, *Capt. P. Atkin* – 7923–8
Success in past, *Lord Alverstone*, *Sir A. K. Rollit* – – – – – – 2100, 4962
Understaffing, complaints *re*, question respecting, *Sir A. K. Rollit* – 5069–70
Unrepresentative, *Sir H. T. Wood*, *T. Cope*, *E. H. Lloyd*, *A. Bornemann* – 661, 1583–5, 3344–6, 3544–6
Weakened as foreign strengthened, and reason, *G. C. Levey* – – – 4448, 4469
see also under names of particular exhibitions.

Combination among manufacturers necessary for success, *T. Cope*, *D. Howard* – 1634–6, 4634–4693

Competition between Governments:

in Display rather than in merit of exhibits regretted, *Sir H. T. Wood* – 628
Excess limited by space conditions, *Sir H. Jekyll* – – – – – – – 54
Ideal exhibition would be produced by, *Sir H. Jekyll* – – – – – – 52, 56
Selection of exhibits necessary, *Sir H. Jekyll* – – – – – – – 57

Definition of word "international" as applied to, *A. Maskell* – – – – 962

Earlier:

more Beneficial to Britain, *Lord Alverstone* – – – – 2069, 2105
Better Government participation and organisation, *G. C. Levey* – – 4448–9
British sections satisfactory, *H. Birchenough* – – – – – 6648
Exhibits sole attraction, *Sir H. T. Wood* 554
not Open in Evenings, *Sir H. T. Wood* 637
Organisation always by Royal Commission, *G. C. Levey* – – – – 4380

Educational effects lessened for students by foundation of Technical Societies, but general public still reached, *Lord Alverstone* 2109

in England, *see under* England.

Entertaining:

Importance, *Sir C. Watson*, *Sir H. T. Wood* – – 183–4, 188, 373, 618–20
might be Left largely to private initiative, *Sir H. T. Wood* – – – – 620–1
Necessary within limits, *Lord Alverstone*, *R. J. Gibson*, *Capt. P. Atkin* 2169, 2171–2 2588, 7911–4

International Exhibitions—*cont.*

Entertaining—*cont.*

Pace must be kept with other nations, *Sir B. Redwood* – – – – – 832
Smallness of grant generally allotted to, *Sir H. T. Wood* – – – – 622

Evening Opening:

Attractive to visitors, *Sir H. T. Wood*, *Sir W. H. Preece* – – – 638, 1386
Question *re*, *Sir W. H. Preece* – 1388–9
Uncustomary in earlier exhibitions, *Sir H. T. Wood* – – – – – – 637

Exhibitors, *see that title.*
Exhibits, *see that title.*
Extravagance in past, *Sir W. H. Preece* – 1352
Financial balance, suggestions *re* providing, *Sir A. K. Rollit* – – – – – 5089

Foreign:

British Exhibits:

Examination of tariffs to ascertain most advantageous sometimes made by London Chamber of Commerce, *A. Serena* – – 1045
Most advantageous for sale should be selected where possible, *C. Charleton* – – – – – 5623
National reputation must be maintained by representative, where tariffs are prohibitive of sales, *C. Charleton* – – – – – 5623

British participation necessary, though foreigners derive more benefit, *Sir H. T. Wood*, *Lord Brassey* – 677, 5632
Class to be supported by British Government, question *re*, *W. Burton* – 1859–71
English manufacturers of confectionery hold aloof because of tariffs, *J. G. Mathieser* – – – – – – 7082
Government auspices an inducement, *A. G. Maginnis* – – – 6121–2
Motor-Car Exhibitions, *see under* Motor Cars.
Non-success of Great Britain, and reasons, *A. Maskell* – – – – 925–7
Two classes of manufacturers gaining benefit from, *W. Burton* – – 1856–9

Foreign participation, question *re* motives, *Sir H. Jekyll* – – – – – – – 47

Foreign Sections:

Showiness, and value in attracting business, *Sir H. T. Wood* – – – 742–4
Superiority lies in organisation and adoption of collectivity, *Sir H. Jekyll* 19, 117

Forthcoming:

Information *re*, given by printed communications from managers, *R. J. Gibson* – – – – – – 2623–5
Method of intimation, *F. T. Ford* – – 4249

French Participation:

Commissariat-Général appointed only on official invitation, *Sir H. A. Lee* – 7460
Foreign Office consult with Ministry of Commerce *re*, *Sir H. A. Lee* 7461, 7467–70

French Sections:

Artistic decoration, *F. A. Darton* – – 4900

Decorations:

Government does not pay for, *Sir H. A. Lee* – – – – – – 7480
by Société Française des Expositions à l'Etranger, and contributions by individual exhibitors, *Sir H. A. Lee* – – – – – 7526–9
Superior to British owing to taste, *A. S. Cole* – – – – – 6266

Indirect Government support by official exhibits given, *Sir H. T. Wood* – 796

Pavilions:

Expenditure, question *re*, *Sir H. A. Lee* – – – – – 7493–6
Question *re* bearing of cost by Government, *Sir H. A. Lee* – – 7513

International Exhibitions—*cont.*

French Sections—*cont.*

Success owing to attractive arrangement of exhibits, *A. Serena* – – – 109
Superior to British in general arrangement and organisation, *Lord Alverstone, C. Charleton* – – – 2155, 5666

Frequency:
Changes in fashion of goods should determine, *W. Birch* – – 4070–1, 4084–5
Difficulties *re, Sir A. K. Rollit* – 5035–45
Excess checked by serious effort involved, *Lord Justice Fletcher Moulton* – – 2475
Interval that should elapse:
3 years—*W. Birch, W. H. Feltham, M. W. Zambra* – 4069, 4078, 4604, 5863
5 years—*L. Serraillier, R. J. Gibson, C. Charleton, Lord Brassey, J. Moncrieff, A. G. Maginnis* – 2363–8, 2382, 2580–2, 5652, 5956, 6098–103
5 to 10 years—*A. Greenwood, G. Jennings* – – – 5209–11, 5569
6 years—*H. Birchenough* – 6666–7
7 years—*H. T. Milward* – 6480–1
10 years—*A. Bornemann, A. Heal, D. Howard, F. A. Darton, E. Powell, J. T. Williams, A. S. Cole, H. J. Powell, E. J. Crosier, I. Levinstein* – 3590–2, 3872–4, 4688, 4798, 4889–90, 5321, 5734, 6351, 6826, 6955, 7271–3
Question *re Sir H. T. Wood, F. T. Ford, Sir A. K. Rollit* – 707–9, 4248–51, 4987, 4990.

Not too frequent at present, *Lord Justice Fletcher Moulton* – – – – 2474
Number of special exhibitions render frequent holding less necessary, *E. J. Crosier* – – – – – 7006
Overdone and consequent reluctance of manufacturers to exhibit, *B. H. Brough* – – – – – 1466–7
Over frequency detrimental, *F. A. Darton, Sir A. K. Rollitt, A. G. Maginnis* – – 4809–11, 4974, 6104–5
Tendency to increase, *Lord Alverstone, Sir H. A. Lee* – – – 2142, 7564

German Participation:
in Foreign exhibitions, but non-formation at home, *Sir I. Spielmann* – – 413
Possibly unprofitable, *Sir C. Watson* – 302

German Sections:
more Effective than English, *Lord Alverstone* – – – – – – 2155
Lavish expenditure, question *re* results, *Sir H. T. Wood* – – – – 790
Reason for excellence, *Lord Justice Fletcher Moulton* – – – – 2447

International Congresses should be held in connection with, *B. H. Brough* – – – 1440
in London, *see under* London
Jury, *see that title.*
Less advantageous than specialised exhibitions, *W. F. Reid* – – – – 1915, 1942

Modern:
Enormous size increases cost, *Sir H. T. Wood* – – – – – – – 632
Grouping according to trades always followed, *J. H. Cundall* – – 3015
Side-shows grown more attractive than exhibits, *Sir H. T. Wood* – – 554–5
Tend to become unwieldy, *F. A. Darton* 4894–5

Non-participation of Great Britain:
Advised, because of ill-treatment in the past, *W. Birch* – – – 3920–22
Advocated, unless collectivity is adopted, *Sir C. Watson, Sir I. Spielmann, Sir B. Redwood* – – – 248, 425, 850–1
Detrimental results would follow, *B. H. Brough* – – – – – – – 1442
Except in those really first class, recommended, *T. Cope, A. G. Maginnis* 1592, 6148
because Makers in country threatened to raise duties unjustified, *W. Burton* – 1851
Political effect lessened if made universal rule, *Sir C. Watson* – – – – 230
Question *re, B. H. Brough* – – – 1461–5

International Exhibitions—*cont*

Objections:
Copying, *see that title.*
Difficulty of making effective and representative exhibits, *Sir H. Jekyll* – 146–7
Expense, *Sir C. Watson, L. Serraillier, R. J. Gibson* – – 298, 2318–9, 2500–1
Waste of public money where side shows and not industries are chief attraction, *Sir Chas. Watson* – – – – 325–6

Objects:
National as well as commercial, *A. Heal* 3846–9
Political but should be commercial, *Capt. P. Atkin* – – 7894–5, 7935–9
Primarily commercial, *Sir H. T. Wood, Capt. P. Atkin* – 609 764–70, 7894–5
Question *re, Sir C. Watson* – 197, 383–5
to Show best of every industry, *W. Burton* – – – – – 1834

Organisation, *see that title.*
in Paris, *see under* Paris
Periodic exhibitions of more value than, *G. Jennings* – – – – – – – 5509
Principle believed in, *A. G. Maginnis* – – 6171
Promoters, question *re, B. H. Brough* – –1470–6
Promotion at instance of hotel-keepers and railway companies not experienced, *Capt. P. Atkin* – – – – – 7985–6
Records, difficulty in obtaining experienced, *Sir C. Watson, Lord Alverstone, E. H. Lloyd, A. S. Cole* 201, 2085–6, 3268–77, 6335–6
Second-rate articles sold at, deprecated, *A. Serena* – – – – – 969–72
Sections foreign to country exhibiting, tend to select decorative exhibits, *Sir H. T. Wood* – – – – – – – 721–6

Social Aspect:
Importance, *Sir C. Watson* – – – 358–9
Little importance attached to, *I. H. Hillman* – – – – – 2736–7

Space:
Allocated to each country when participation is promised, *Sir I. Spielmann* – 442–3
Charges should be included in, *Sir C. Watson* – – – – – – 317
"Ear-marked," option of filling, *Sir I. Spielmann* – – – – – 448–9
Payment for, question *re* bearer, *J. H. Hillman* – – – – – – 2732
Usually charged for, *Sir C. Watson* – 316
Specialised exhibitions supplanting, and question *re, B. H. Brough* – – –1522–3

Agreements sometimes made among leading firms not to show, *I. H. Hillman* - - 2870-1
American agents, position *re* exhibits, and illustration, *Sir C. Watson* - - - 273-7

ATTITUDE TOWARDS EXHIBITIONS:

Ascertaining of, before Government decides to participate, recommended, *L. Serraillier* - - - - - - 2401-4
Compared with that of French, *G. C. Levey* - - - - - - - - - 4371
Gain thought incommensurate with expense, *W. F. Reid* - - - - 1995-6
Inferior firms anxious to exhibit, *Sir H. Jekyll* - - - - - - 4, 8, 60-1
Insufficiently valued, *G. C. Levey* 4371, 4424
Leading firms less inclined to show, *L. Serraillier* - - - - - - - 2362

Participation:

Inducible by improved organisation and greater State aid, *W. Burton, A. Bornemann, P. Baker* 1863, 3574, 4354
Strong inducements necessary, *Sir H. Jekyll, C. Charleton* - 51, 5595

Reluctance to exhibit, *Sir H. Jekyll, Sir C. Watson, Sir I. Spielmann, Sir B. Redwood, A. Serena, Sir W. H. Preece, B. H. Brough, T. Cope, W. Burton, L. Serraillier, Lord Justice Fletcher Moulton, J. H. Cundall, S. Sparkes, E. H. Lloyd, A. Borneman, P. Baker, G. C. Levey, W. H. Feltham, Sir A. K. Rollit, A. Greenwood, C. Charleton, H. T. Millward, H. Birchenough, I. Levinstein, Sir H. A. Lee* - 4-8, 60-1, 83, 169, 335, 346, 380, 450, 817, 865, 1034-42, 1409, 1416-8, 1466-7, 1488-9, 1495-8, 1642-53, 1788-9, 2359-61, 2479, 2912-3, 2929-46, 2962-5, 3131-6, 3310-3, 3546-51, 3475, 4371, 4538-46, 4554-5, 4563-4, 5006, 5191, 5214-5, 5593-4, 5600-1, 5613-7, 5650, 6416, 6582, 7180-2, 7191-2, 7258, 7557, 7579

Cheap market, attitude to, *W. H. Feltham* - 4554-5
Circular invitations to exhibit sent to, *B. H. Brough* - - - - - - - - 1445
Combination necessary for success of international exhibitions, *T. Cope* - - - 1634-6
a Committee of, and merchants would be effective organising body, *I. H. Hillman* 2733
Co-operation *re* exhibits, possible to obtain, *I. H. Hillman, G. C. Levey* - 2765-7, 4456-7

Manufacturers—*cont.*

Complaint *re* lack of publicity of exhibitions, *A. Maskell* - - - - - - - - 902-4
Divergent opinions *re* American tariffs, *Sir C. Watson* - - - - - - - - - 305
Educational effect of exhibitions, *Sir H. T. Wood, W. Burton, G. C. Levey* 785, 1847-50, 4474-7
should be Encouraged to exhibit, *A. Maskell, H. Birchenough* - - - - - - 941, 6584
Fear of copying, *Sir H. Jekyll, Lord Alverstone, A. Bornemann, I. Levinstein* 41-2, 2069, 3576-8, 7201
Foreign, reluctance to exhibit, question *re*, *Sir H. Jekyll, Sir H. T. Wood* - - 123, 727
Future success of British exhibits at exhibitions depends on a spontaneous desire on part of, to show, *B. H. Brough* - - - 1469
Government control, possibly resented by, *Sir H. Jekyll, Sir C. Watson* 16, 117-8, 298
Inadequately represented in past, *F. T. Ford, A. S. Cole, H. Birchenough* 4129, 6252, 6582
Induced frequently to exhibit by agent, *I. H. Hillman* - - - - - - - 2802-3
Jealousy among, greater than among American or foreign, *Lord Brassey* - 5632
Less enterprising and less alive to their interests than foreign, *G. C. Levey* - 4459-62
London Chamber of Commerce too uninfluential to induce important, to participate in exhibitions, *T. Cope* - - - 1667-9, 1678
Most, belong to some commercial or technical body, *W. F. Reid* - - - - - 1911
Motives for exhibits, *R. J. Gibson, H. Birchenough* - - - - - 2595-6, 6693-4
Non-participation at New Zealand caused by distance and lack of market, *Capt. P. Atkins* - - - - - - - - 8016-20
Non-success at foreign exhibitions, *A. Maskell* - - - - - - - - - 925-7
North Country, allegations *re* jealousy of London Chamber of Commerce unfounded, *C. Charleton* - - - - - - - - 5603
Opposition to a departmental controlling body not anticipated, *Sir I. Spielmann* - 541
Organisation on German system, question *re* attitude towards, *Sir C. Watson* - - 247
Organising Committees should be formed by each trade, *L. Serraillier* - - - 2340-6
Prevention of exhibit by agent, opinions *re*, *Sir C. Watson, Sir I. Spielmann, S. B. Redwood, W. F. Reid, E. H. Lloyd, J. Hooper, A. S. Cole* 337, 407, 469-72, 840, 1975-7, 3310-12, 3673-8, 6360
Proposed representative manufacturers' committee, question *re* attitude towards, *I. H. Hillman* - - - - - - 2850-53
Second and third rate, question *re* effect of participation in exhibitions, *W. Burton* - 1796
of Sections of trade where Art is an important factor should exhibit, *W. Burton* - 1746

SELECTION OF EXHIBITS:

not Resented if they had preponderating voice on standing committee, *C. Charleton* - - - - - - 5656
no Serious objection anticipated, *A. Heal* - - - - - - - - 3836-40

South American freights more favourable to, than to American, *S. Sparkes* - - - - 3081
Superiority of goods to foreign, *Sir C. Watson* - - - - - - - - - 300
Support not forthcoming to international exhibition in London, *Sir H. T. Wood* - 657-8
Treaty of commerce for introduction into Spain not taken advantage of, *B. H. Brough* - - - - - - - - (*d*) 1440
Two classes gaining from exhibiting abroad, *W. Burton* - - - - - - - - - 1856-7

Manufacturers' Associations, experimental formation of exhibits by, suggested, *Sir H. Jekyll* - - - - - - - - - - 65

Marine Engine Makers, *see under* Engineering Trade.

MASKELL, ALFRED, F.S.A.: - - - 877-962

American International Exhibitions excluded from possibility of conferring benefit on British manufacturers 911-4, 942-5

AWARDS:

Alternative to present system suggested 917-23
of Little value - - - - - 931-2
Unsatisfactory, and remarks *re* - - 915

Brussels Exhibition, 1880, international - 957-8
Collective exhibits approved - - - 896
Colonial exhibitions, exhibiting possibly beneficial - - - - - - - - 912-3

EXHIBITS:

British:

a Failure - - - - - 947-9
Improvement necessary - - - 950
Sale abroad prevented by high tariffs - - - - - 910-11

National preferred to classified - 897-901

Experience of exhibitions - - - - 878-9
Foreign exhibitions, non-success of Great Britain and reasons - - - - - 925-7

Sweden, Stockholm, International Exhibitions at, *see under* Stockholm.

Switzerland:
Objections to exhibitions, *Sir H. A. Lee* - 7611-2
Organisation followed, *A. Serena* - - 991

Sydney Exhibition, British Section:
Exhibits good, but disproportionately small, *G. C. Levey* - - - - - - - - 4395
State aid insufficient, *G. C. Levey* p. 179, 4391

Technical Education:
Definition, *Sir W. H. Preece* - - - 1375
Great Britain to front in, *Sir W. H. Preece* 1319-20
Technical journals, help of great value in exhibitions, *B. H. Brough* - - - - - 1445

Technical Societies:
to Constitute proposed Joint Committee of organisation, *W. F. Reid* - - - - 1908
Details and particulars *re* processes suppressed in papers read before, *W. F. Reid* 1934-6
Educational value of papers read before, compared with that of exhibitions, *W. F. Reid* - - - - - - - - - 1934-8
to be Included in proposed Joint Committee, *W. F. Reid* - - - - - - - - 2042
Most manufacturers members of, *W. F. Reid* - - - - - - - - - 1911
Place of exhibitions not taken by, except from a student's point of view, *Lord Alverstone* - - - - - - - - - - 2109

Textiles:
Benefit from exhibitions doubted, *E. J. Crosier* - - - - - - 6948-50
COLLECTIVE EXHIBITS:
Advocated, *G. C. Levey* - - - - 4405
French, question *re*, *Sir H. A. Lee* - 7586-8
Inducement to exhibiting, *F. Hooper* - 3669
Question *re*, *A. G. Maginnis* - 6218-21
Readily formed in, *F. Hooper, H. Birchenough* - - - - 3680-3, 6671
Results better than individual, *H. Birchenough* - - - - - 6599-6603
State aid would induce participation, *F. Hooper* - - - - - - - 3667
Copying, danger applicable only to ephemeral patterns, *G. C. Levey* - - - - 4425
Different system from present individualist required, *H. Birchenough* - - - - 6590-1
Disinclination of makers to exhibit, and reasons, *F. Hooper* - - - - 3536-44
EXHIBITS:
Affected by agency system, *Sir I. Spielmann, I. Levinstein* - - 469-72, 7194-6
Educational, *Lord Alverstone* - - 2121
Improved organisation required for, *H. Birchenough* - - - - - 6589-90
at Milan, in connection with other industries, *A. Serena* - - 1018, 1019
Organisation by technical expert committee under Royal Commission possible, *I. Levinstein* - - - - 7226
Poorness of show, cause, *H. Birchenough* 6599
Possibility small without specialities, *I. Levinstein* - - - - - - 7201
Prevented by high tariffs, *I. Levinstein* - - - - - - - - 7181-2
Suggested subsidising, opinion, *C. Charleton* - - - - - - - - 5650
MACHINERY:
Barcelona Exhibition, 1888, exhibit advantageous owing to there being large textile industries there, *Sir H. T. Wood* - - - - - - - - 551-3
Effect of Exhibitions on:
Advantageous, *Lord Alverstone, A. Bornemann* - - 2120, 3537-9
Adverse, or doubtful, *Sir H. T. Wood* - - - - 563, 567
Manchester, committees of experts in might be formed, *I. Levinstein* - - - - 7227-9

Textiles—*cont.*

Results, *F. Hooper* - - - - - 3618-21
St. Louis Exhibition, British section poor in, *I. Levinstein* - - - - - - 7297
Sales effected by Nuremberg Exhibition, *B. H. Brough* - - - - - - - - 1440
Trade through agents preventive of exhibits, *I. Levinstein* - - - - 7194-6

see also Woollen, Cotton, and Silk Trades.

The Times, quotations from, *T. Cope, Sir I. Spielmann* - - - - - 1673, 7334, 7402
Tokio Exhibition, 1912, Great Britain's adequate representation recommended, *I. Levinstein* - - - - - - - - - 7227
Toronto Medical Exhibition, American exhibitors strongly represented, *A. W. Down* - 2194
Touring Club of France, medal from, more valuable than those from International Exhibitions, *F. Bowden* - - - - - 7743-4

Sum required for adequate representation, question *re* - 249-51
Difficulty in obtaining records of exhibitions experienced, and suggestion for avoiding - 232-4

EXHIBITS:
Collective, *see that title above.*
Industrial, unattractive to majority - 294-5
Prevention by agents experienced - 337

INTERNATIONAL EXHIBITIONS:
Advantages:
in Ascertaining requirements of countries - 378-9
Prestige maintained - 270
British Participation:
Inadvisable without collective system - 248
Necessary in large, but must be adequate - 207
Non-industrial, unsatisfactory, but perhaps unavoidable - 324
Official, undesirable without adequate grant - 338
Politically advisable - 230, 384
Commercial benefit doubted - 271, 384
Entertaining, important and valuable - 183-4, 188, 373
German expenditure perhaps unprofitable - 302
Industrial success of a country not measurable by amount spent - 303
Objects, question *re* - 197, 383-5
Organisation, *see that title below.*
Particular industries benefited, question *re* - 189
Smaller rising States possibly more benefited - 299
Social aspect important - 358-9
Space usually charged for - 316
State Aid, *see that title below.*
Undue importance of side-shows objected to - 325-6

MANUFACTURERS:
Apathy *re* exhibiting due to disbelief in value, prevalence of agency system and expense incurred 169-71, 271, 296-7, 301, 380
Dislike of Government control - 298
Excuses given for reluctance to exhibit 335
Free to exhibit by private enterprise even under adoption of collective system - 289

WATSON, COLONEL SIR CHARLES—*cont*
ORGANISATION:
Library of exhibitions suggested - - 232-4
Organising staff for appeals suggested, and question *re* cost - - - 260, 262-5
Permanent Office:
Advantages - - - - - 328-334
Keeping in touch with Chambers of Commerce advocated - - - 214
Suggested, to retain exhibition records and advise *re* participation - - - - 201-6, 254-6
Royal Commission:
or Equivalent required - - - 211
Satisfactory - - - - - - 200
PARIS EXHIBITION, 1900:
Papers, trouble in obtaining, experienced - - - - - - - - 231-2
Space not charged for - - - - 316
ST. LOUIS EXHIBITION:
Awards:
Allotment in collective exhibits, explanation - - - - - - - 344-5
Question *re* proportion of British exhibitors to foreign obtaining - 221
British Royal Commission:
Commissioners, numbers, and work performed by - - - 200, 341-2
Date of appointment - - - 150-1
Methods of obtaining exhibits - 152
British Section:
Art exhibit, cost - - - - - 339
Charges in accounts explained 174-183
Chemical Exhibit:
Arrangement, excellence and importance - - - - - 160
Cost and question *re* sales 160, 219, 339
Collective Exhibits:
Awards obtained and given to makers - - - - - 282
Best goods obtained by - - 164
Jury's opinion *re* merit - - 165-8
Organisation - - - - 243-6
Reason for adoption and proportion to number of individual - - - - - - 155-9
Commercial effect, question *re* - 355-7
Economy exercised in - - - 186-7
Expenditure, amount and comparison with that of Paris, 1900 178-82, 251-3
Fine and applied art stronger features than industries - - 326
Flooring and screens not provided - 318
Industrial exhibits:
Comparative importance - - 198-9
Omission possible - - - 323
Proportionate cost to other goods - - - - - 291-3
Unrepresentative - - - 321-2
Non-participation, reasons alleged for - - - - - 304-5, 346-54
Number of exhibitors - - - 168
Organising staff, functions, salaries, and numbers - - - 257-9, 261
Pavilion:
Necessary, but question *re* commercial value - - - 369-72
Use as Commission offices and reception hall - - - 223-8
Sales effected - - - - - 191-4
State aid:
Comparison with German - 208-9
Expenditure on buildings, salaries and social parts - 360-8
Freight, insurance and installation paid, not packing nor preparation of exhibit - - 307-11
WATSON, COLONEL SIR CHARLES—*cont.*
St. Louis Exhibition—*cont.*
British Section—*cont.*
State aid—*cont.*
Grant for entertaining not all spent - - - - - - 340
Reason for ability to return part - - - - - - 339
Certain smaller States made great effort to show - - - - - - - 299
Entertaining:
Class of people entertained - - 290
Comparison with French and Japanese - - - - - - 210
Expenditure necessary - - - 184-8
German Section:
Excellence due to collectivity - 386-90
Practical return for outlay, question *re* - - - - - - - - 238-9
Japanese Section, excellence due to collectivity - - - - - - - 386-90
Jurors' reports on comparative merits of British and foreign exhibits quoted 377
Particular industries benefited and list 189-190
Regulation requiring maker's name to be given, object and reasonableness 162, 220
Space given free - - - - - - 314-5
STATE AID:
Small grants to private enterprise inadvisable - - - - - - - 211
Space should be covered by - - - 317-8
Watts, Sir Philip, success of British section at Bordeaux Exhibition due at, *Lord Brassey* - 5657
West Indies, Cuba, anxiety to exhibit at St. Louis and excellence of show, *Sir C. Watson* - 299
Westminster Gazette, reference to expenditure on Liège Exhibition, *E. J. Crosier* - - - 6968
Wightman, Mr., on Chemical Committee, St. Louis, *Sir C. Watson* - - - - - - 285

William II., German Emperor:
Interest taken in selection of exhibits by, *Sir I. Spielmann* - - - - - - - 410
Intervention *re* German exhibits at Paris Exhibition, 1900, *A. Maskell* - - - 921
Wolverhampton Exhibition, 1902, manager, *see* Lloyd, E.H. - - - - - - - 3183-3418
Wood, sales effected by Nuremberg Exhibition, *B. H. Brough* - - - - - - - - - 1440

WOOD, SIR HENRY TRUEMAN, Secretary of the Society of Arts and Secretary of Royal Commission for Chicago Exhibition, etc.: 548-804
APPLIED ART CLASSES:
Definition - - - - - - - 560
Sales effected at exhibitions and value in extending trade - - - - 559-63
ART EXHIBITS:
Change in nature and commercial value, question *re* - - - - - - 773-9
Important, but not commercially - 764, 770-6
"Unprofitable expenditure," but should be retained - - - - - - 666
AWARDS:
Abolition recommended - 639-640, 656
Advertising value attached, but deteriorated - - - - 652-3, 655, 680-2
Allotment by reputation perhaps best method - - - - - - - - 649
Certificates entitling to medal now generally given, formerly actual medals - - - - - - 641-7
Disliked by British exhibitors, but not dispensed with unless universal rule 640, 656, 669-70
Scrambled for among countries, irrespective of merit - - - - - 651-2

WOOD, SIR HENRY TRUEMAN—*cont.*

BOARD OF EDUCATION :
- Exhibitions formerly managed by - 606, 608
- Unsuited for control of organisation - 608

BOARD OF TRADE :
- Organisation should be connected with 605, 608
- Question *re* former conduct of exhibitions by - - - - - - - - 607

CHICAGO EXHIBITION :
- Awards :
  - Medals given, but single not different classes - - - - - 642-3
  - Single-judge system bad - - - 650
- British Section :
  - Collective exhibits unsuccessfully attempted, and reasons - 576, 586, 793-4
  - Exhibitors' expenses and value of exhibit - - - - - - 631
  - Government exhibits few - - 800
  - South American markets opened as result - - - - - - - 589
  - State aid, amount and insufficiency 623-4
- Entertaining in French and German Sections small - - - - - - 668
- Foreign Sections :
  - Amount spent on, difficult to ascertain - - - - - - - 629-30
  - Total State aid - - - - 630
- French Section :
  - Collectivity - - - - - - 578
  - Installation and decoration paid by Commission - - - - - 588
- German Section :
  - Collectivity - - - - 528-9, 581
  - lavish Expenditure - - - 624-6
  - Goods delivered to a central organisation, then sent out - - - 578-9
  - Installation and decoration paid by Commission - - - - - 588
  - Selection of exhibits, question *re* method - - - - - 580-1
- Increased expenditure required by large size - - - - - - - 632

COLLECTIVE EXHIBITS :
- Advantages - - - - - - 719-720
- British feeling against, caused by independence and inexperience of Government organisation - - - - - 582-3
- Committee of Selection necessary, and suggestions *re* forming - - - 755-61
- Conducive to participation if properly organised and aided - - - - 663
- Difficulty in forming at Chicago and Paris, 1889, and reasons - - 549, 586
- Future formation easier, and suggestions for - - - - - - - 754-5
- German attitude towards, compared with British - - - - - 582-3
- no Personal experience of - - - 580

COPYING :
- Evidence hard to obtain - - - 747-9
- of Machinery, probable, of ornamental things unlikely - - - - - 563
- Patent Laws, evasion possible - - 564-6

Decorations, expenditure considerable - 631

ENTERTAINING :
- Equality with other nations advocated 620-1
- Importance - - - - - - - 618-19

Electrical exhibitions, valuable - - - 659

EXHIBITION IN LONDON :
- International, impossible, and would entail loss - - - - - - -- 657
- Minor, profitable - - - - - - 658

EXHIBITORS :
- British :
  - Adversely affected by undue importance attached to decoration - 678-9
  - Handicapped by foreign tariffs, question *re* - - - - - 762

WOOD, SIR HENRY TRUEMAN—*cont.*

Exhibitors—*cont.*
- Comparative cost of sharing in collective exhibits or exhibiting individually - - - - - - - 588
- Individual, inclusion in collective display permitted - - - - - 757-8
- Sufficient steps taken to procure - - 801-4

EXHIBITS :
- as Advertisement to district, manufacturers' view *re* - - - - - - 719-20
- of Certain industries, advisable in some places, not in others - - - - 552-3
- Classification :
  - Advantageous to country exhibiting 633
  - Cost greatly increased - - - 633
  - Started by French in 1867 - - 636
  - Suitable for machinery - - - 633
- Engineering and machinery, probably detrimental - - - - 563, 660-1
- Government, desirable as showing Government support - - - - 796-7
- National arrangement preferred, but not always possible - - - - - 633
- Pottery, beneficial - - - - 560, 562-3
- Tendency to decrease number of manufacturing, engineering, and scientific, and increase decorative and ornamental - - - - - - - 721-2

FISHERIES, HEALTH, INVENTIONS AND COLONIAL EXHIBITIONS (South Kensington) :
- Account of - - - - - - - 687-9
- Organisation and success - - - 557

INTERNATIONAL EXHIBITIONS :
- Advantages :
  - Advertisement greater than obtainable in other ways - - 571, 692-4
  - Applicable to certain trades only - 695-7, 716-8
  - to Foreign nations, question *re* - 701-4
  - Instruction derived by manufacturers, question *re* - - - - 785
- Beneficial chiefly to country exhibiting, but non-participation in foreign exhibitions not justified- - - 676, 701-4
- British Participation :
  - Advocated, and must be adequate - 750-2, 698-700, 786-7
  - Essential to retain prestige - - 511
  - Government authority and support essential - - - - - 616
  - Political necessity, and commercial results less important 571-3, 677, 698-700
- British Sections :
  - Improved decoration beneficial - 743-4
  - Less ornamental and striking than foreign - - - - - - 627-8
  - Omission of industrial exhibits, question *re* - - - - - - 661
- Change in nature - - - - - - 554-7
- Evening opening :
  - Advantageous in attracting visitors 637-8
  - Uncustomary in earlier exhibitions 637
- German participation, policy and question *re* results - - - - - - 788-92
- German sections more attractive than British - - - - - - - - 740-3
- Objects industrial, not artistic - - 609
- Organisation, *see that title below.*
- Presentation rather than merits of exhibits as chief object regretted 627-8, 678-9
- State Aid, *see that title below.*

WOOD, SIR HENRY TRUEMAN—*cont.*

International Exhibitions—*cont.*

Trade results from:
- Balance of loss in certain trades - 730-5, 763
- Beneficial on the whole 708-10, 728-9, 736
- Foreign countries more benefited 568, 677
- Greater in applied art sections than in industrial - - - - 558-67
- no Inquiry made into - - - 780-1
- New markets opened - - - 701-4
- Partial to certain industries 558-67, 570, 690-1, 728-9, 782-4
- Textile industries, question *re* - 567

LONDON INTERNATIONAL EXHIBITION, 1851:
- Advantage to trade doubtful - - - 730-5
- Extensive foreign copying started at - 563

MANUFACTURERS:
- British, desire to exhibit at Paris Exhibition, 1889 - - - - - 573-4
- Foreign, reluctance to exhibit, question *re* - - - - - - - - 727

MINOR EXHIBITIONS:
- Assistance by Organising Body suggested - - - - - - - 752-3
- Foreign exhibitors few - - - - 762
- Holding in London suggested - - 659
- Neglected by Britain - - - - 550

ORGANISATION:

Commissioner:
- Head of proposed Permanent Department suggested - - - 601
- Permanence and suitable salary suggested - - - - 601, 603-4

Commissions, composition and methods in earlier exhibitions - - - - 593-5

Foreign, Commissioner, appointment and status - - - - 597, 598-600

Managed sometimes by Education Department - - - - - - - 606

Permanent Department:
- Advocated, with advisory functions *re* participation and grants - 595, 610, 612-3, 713-5
- Assignment to Board of Trade suggested - - - - 603-4, 608, 609
- Desirable for storing records and collecting information - - - 610-11
- Officials accustomed to exhibition work provided - - - - 664

Present system, satisfactory - - - 614-5
Private Enterprise, provision should be made for - - - - - - - 758-9
Royal Commission unfitted for executive work, but confidence inspired by 592, 594-5
Superior to foreign - - 614-5, 738-9

PARIS EXHIBITIONS:
- 1855, Commission an ideal one - - 593
- 1878, reports on British section edited - 549
- 1889:
  - Awards allotted by reputation and actual medals given - - 645-6, 648
  - British participation unofficial and attended with difficulties - - 616-7
  - British Section:
    - Carriage-makers' exhibits large, and followed by trade - - 563
    - Collective exhibits unsuccessfully attempted - - - 586
    - no Entertaining except by individuals - - - - 617
  - Collective exhibits formed on a large scale in French and German sections - - - - - - 578
  - Exhibits, cost of French collective, differed little from English individual - - - - - - - 571-2

WOOD, SIR HENRY TRUEMAN—*cont.*

Paris Exhibitions—*cont.*
- 1889—*cont.*
  - French section:
    - Exhibitors, complaints *re* expenses - - - - - - 674
    - Organisation faulty - - - 673
  - South American markets opened as result - - - - - - - 589
- Philadelphia Exhibition, British exhibitors' expenses and value of exhibits - - - 631
- Provincial Exhibitions, permanent department would advise *re* participation - - 612-3

ST. LOUIS EXHIBITION:
- Collectivity successfully practised in British section - - - - - - 585
- no Practical experience of - - - 585

Society of Arts, exhibition literature preserved by - - - - - - - - - 611
South America, comparison of British and American trade - - - - - - - 590-1

SOUTH KENSINGTON EXHIBITIONS:
- Amateur rather than commercial, but profitable - - - - - - - 688
- Earlier, subsidised by 1851 Commissioners, who paid deficit - - - 689
- Fisheries, Health, Inventions, and Colonial Exhibitions, *see that title above.*
- Held in buildings lent by 1851 Commissioners, but rent, rates, and taxes paid - - - - - - - - - 689
- International only in name - - - 556-7
- Lack of entertainments, cause of premature stopping - - - - - - 555
- Organisation and nature - - - 555-7
- not State-aided - - - - - - 687

South Kensington Museum, exhibition reports preserved at - - - - - - 611

SPECIAL EXHIBITIONS:
- Ignored by Britain, but important opportunities offered by - - - 550
- Organisation needed for, but little expenditure - - - - - - 684-685
- Value in promoting trade and illustration - - - - - - - 550-2, 659

STATE AID:
- Amount required - - - - 705-6, 787
- Conditions not attachable - - - 667
- Increase advised - - - - - 705-6

Textile industries, effect of Exhibitions on, question *re* - - - - - - - - 567
Vienna Exhibition, 1873, growth of Doulton ware trade traceable to - - - - 562-3

Royal Commission.

Whitehall, August 22, 1906.

The KING has been pleased to issue a Commission under His Majesty's Royal Sign Manual to the following effect :—

EDWARD R. and I.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas King, Defender of the Faith, to

Our right trusty and well-beloved Councillor Gerald William Balfour ; and

Our trusty and well-beloved :—

Sir Frank Forbes Adam, Knight, Companion of Our Most Eminent Order of the Indian Empire ;

Ivor John Caradoc Herbert, Esquire, Companion of our Most Honourable Order of the Bath, Companion of Our Most Distinguished Order of Saint Michael and Saint George, Colonel in Our Army ;

William Hannam Henderson, Esquire, Vice-Admiral in Our Royal Navy ; and

Michael Andrew Ennis, Esquire ; Greeting !

Whereas We have deemed it expedient that a Commission should forthwith issue to inquire into the existing system of management of the Lights, Buoys, and Beacons on the coast of the United Kingdom by the three General Lighthouse Authorities, and as to the constitution and working of these Authorities, and to report what changes, if any, are desirable in the present arrangements :

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorised and appointed, and do by these Presents authorize and appoint you, the said Gerald William Balfour (Chairman) ; Sir Frank Forbes Adam ; Ivor John Caradoc Herbert ; William Hannam Henderson ; and Michael Andrew Ennis, to be our Commissioners for the purposes of the said inquiry :

And for the better effecting the purposes of this Our Commission, We do by these Presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission ; and also to call for, have access to and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever :

And We do by these Presents authorize and empower you, or any three or more of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid :

345. 2500.—Wt. T.L. 275. 2/08.—Wy. & S.

And We do by these Presents will and ordain that this Our Commission shall continue in full force and virtue, and that you, Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment :

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us, under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

And for the purpose of aiding you in your inquiries We hereby appoint Our trusty and well-beloved Charles Clive Bigham, Esquire, Companion of Our Most Distinguished Order of Saint Michael and Saint George, Captain in Our Army, to be Secretary to this Our Commission.

Given at Our Court at St. James's the twenty-first day of August, one thousand nine hundred and six, in the sixth year of Our Reign.

By His Majesty's Command,

H. J. GLADSTONE.

Note.—The King was subsequently pleased to create Colonel Herbert a Baronet.

SUMMARY - - - - - - - - - - - - - 28

Reservations by Mr. M. A. Ennis - - - - - - - 29

ROYAL COMMISSION ON LIGHTHOUSE ADMINISTRATION.

REPORT.

TO THE KING'S MOST EXCELLENT MAJESTY,

MAY IT PLEASE YOUR MAJESTY,

We now humbly beg to lay before Your Majesty our Report on the matters remitted to us.

1. The Terms of Reference to us were "To inquire into the existing system of management of the Lights, Buoys and Beacons on the coast of the United Kingdom by the three General Lighthouse Authorities, and as to the constitution and working of these Authorities, and to report what changes, if any, are desirable in the present arrangements."

2. In carrying out the task entrusted to us we have held 22 meetings, and have examined orally 29 witnesses.

In regard to the examination of the latter, the procedure which appeared to us the most satisfactory, and which we followed, was, first to obtain from representatives of the Board of Trade and of the three General Lighthouse Authorities an account of the existing system of administration, and of the past history and present constitution of the bodies charged with carrying it out; next to hear the views of the Admiralty and of such associations of Shipowners, Underwriters, Shipmasters, and Harbour Authorities as were concerned with the questions before us; and finally again to examine the Lighthouse Authorities on the evidence we had already received, and with which we had caused them to be furnished, and to hear their considered replies upon it.

3. In addition we called for a number of Returns and Statements of Account both from the Board of Trade and from the three General Lighthouse Authorities, some of which are set out in the Appendices to this Report. We would take this opportunity of bearing testimony to the readiness with which all these papers, often involving considerable labour, were supplied to us, and the care and thoroughness exhibited in their preparation.

4. Further, we have been furnished by the India, Colonial, and Foreign Offices respectively with information on the methods of Lighthouse Administration obtaining in India, the Dominion of Canada, the Commonwealth of Australia, and New Zealand, as well as in France, the German Empire, Italy, and the United States of America.

5. Some of our number have visited personally the establishments of the three General Lighthouse Authorities, and we have also inspected their minute and log books, as well as their quarterly and yearly financial accounts and those of the General Lighthouse Fund.

6. In the framing of our Report on the subjects referred to us it will be convenient, in the first place, to give a short history of the General Lighthouse Authorities and of recent inquiries and legislation affecting them; next to describe in detail their constitution and powers and the general system of administration; then to consider the working of that system more especially with regard to the faults alleged against it and the remedies suggested for them; and finally to formulate our conclusions and present our recommendations.

(I.) SHORT HISTORY OF THE GENERAL LIGHTHOUSE AUTHORITIES AND OF RECENT LEGISLATION WITH RESPECT TO THEM.

History of the General Lighthouse Authorities.

7. In the early days of British maritime expansion the few seamarks existing appear to have been erected for the most part by private individuals or associations, who levied dues on passing ships under patents from the Crown. But as mercantile sea traffic increased, the need of uniformity in the methods of lighting the coasts and harbours was recognised, and there gradually arose more or less official bodies which undertook the regulation of all such matters, and these Authorities were, in process of time, invested by Parliament with administrative and financial powers.

At the present time the lighting of the coasts and harbours of the three Kingdoms is managed by three General Lighthouse Authorities, namely, the Trinity House for England and Wales, the Commissioners of Northern Lighthouses for Scotland, and the Commissioners of Irish Lights for Ireland, and by a number of Local Lighting Authorities.

8. Of the three General Lighthouse Authorities the Trinity House has the precedence, both in antiquity and in respect of the powers which it exercises. Originally, in the days of King Henry VII., an Association for Piloting Ships, it received its first charter as a Corporation in 1514, and at the time of the Restoration was already able to devote a portion of its funds to charitable purposes. In 1680 the first lighthouse under its management was erected, and from that date onwards it gradually became the recognised official Lighting Authority of the English and Welsh coasts, deriving its revenue from a number of fees, such as Pilotage, Lastage, Loadmanage, Ballastage, etc., which were paid by mariners in return for its expert services. By the commencement of the nineteenth century these fees had become in great part merged into their present form of Light Dues, and this position was regulated by Act of Parliament in 1822.

In 1854 the Trinity House was constituted the General Lighthouse Authority for England and Wales, the financial control of the Lighthouse Administration being at the same time transferred to the Board of Trade. In 1871 by a supplemental charter the number of its members was somewhat reduced. Apart from this change its constitution remains as defined by the charter granted by King James II. in 1685.

The composition and the powers of the Trinity House will be described in detail in due course, but it may be as well here to mention that, in addition to its duties as Lighthouse Authority for England and Wales (which extend also to the Channel Islands and Gibraltar), it has certain special powers of inspection and control over the two junior General Lighthouse Authorities of the United Kingdom. Its members, unlike those of the Scottish and Irish Boards, are always nautical experts, and are paid for their services.

9. The Northern Lighthouse Commissioners, who direct the lighting of the coasts and islands of Scotland and of the Isle of Man, are a much more modern creation than the Trinity House. First constituted by Act of Parliament in 1786, they were incorporated 12 years later, and after sundry extensions of powers and modifications of constitution were finally established in their present form in 1894. A description of their composition and duties and of those of the Irish Board is given later.

10. The Commissioners of Irish Lights date *eo nomine*, from the year 1867, but the Corporation now known by that name derives its constitution from an Act passed in 1786, entitled "An Act for promoting the Trade of Dublin by rendering its Port and Harbour more commodious." The body incorporated by that Act, and successively described as the Corporation for preserving and improving the Port of Dublin, and the Port of Dublin Corporation, was invested with lighting powers of a general character for the first time in 1810. In 1854 these powers were extended and defined by the Merchant Shipping Act, but it was not until 1867, when the Corporation received its present title of Commissioners of Irish Lights, that it was relieved of its local duties in connection with the Port of Dublin, and confined to its functions of General Lighthouse Authority for Ireland.

Inquiries and Legislation relating to Lighthouse matters within recent years.

11. The principal Government inquiries and legislative measures in connection with the Lighthouse Administration of the United Kingdom during the last hundred years have been as follows :—

In 1822 a Select Committee on Foreign Trade recommended the purchase of interests in private or leased lights, the introduction of a tonnage rate system of Light Dues, and a central administrative control of Lighthouses. In the same year an Act of Parliament gave the Trinity House powers to acquire seamarks from public bodies or private individuals, to fix rates approved by the King in Council, and also to draw on the annual funds of the Corporation up to £7,000 for the payment of the Elder Brethren in lieu of the remuneration they had received theretofore, commonly called "Elder Turns."

In 1834 a second, and in 1845 a third, Committee endorsed to some extent these recommendations, suggesting the Trinity House, with an added Admiralty or other official element, as the Central Authority.

In 1854 the Merchant Shipping Act became law. This Act inaugurated the Mercantile Marine Fund and constituted the three General Lighthouse Authorities, giving to the Board of Trade the financial control over them.

In 1858 the Royal Commission on Lights, Buoys and Beacons (Admiral Hamilton's) was appointed. Its Report in 1861 advocated, *inter alia*, a specially constituted Central Board to be represented in Parliament by the Admiralty or the Board of Trade.

In 1871, by an arrangement between the Board of Trade and the Trinity House the number of Acting Elder Brethren was reduced from 20 to 13, a supplemental charter being granted to enable this course to be taken.

In 1894 the second Merchant Shipping Act was passed, which, so far as it concerns Lighthouse Administration, was to a large extent merely a repetition of the 1854 Act.

In the same year the Board of Trade appointed a Departmental Committee, of which Lord Courtney was Chairman, to consider the question of Light Dues. This reported in 1896, its principal recommendations being the creation of a separate fund for defraying the expenses of the General Lighthouse Authorities—these expenses having been hitherto met out of the Mercantile Marine Fund—and the substitution of a tonnage and voyage scale of Light Dues in place of the previously existing system of tolls. These recommendations were adopted by the Merchant Shipping (Mercantile Marine Fund) Act of 1898, which altered the basis and scale of the Light Dues and created the General Lighthouse Fund.

In addition to the above, several minor Acts have been passed for modifying the position of the Scottish and Irish Lighthouse Boards. These have already been alluded to, but they are of no general importance.

(II.) DESCRIPTION OF THE CONSTITUTION AND POWERS OF THE THREE GENERAL LIGHTHOUSE AUTHORITIES AND OF THE SYSTEM OF ADMINISTRATION.

Constitution of the General Lighthouse Authorities.

Trinity House.

12. The Trinity House of Deptford Strond consists of 24 Elder and an unlimited number of Younger Brethren. The Brethren hold their offices for life. The Master is generally a Royal Prince, the present Master being H.R.H. the Prince of Wales. The Elder Brethren are divided into 11 Honorary Members, who are usually Royal Personages or distinguished men of affairs, and who receive no remuneration, and 13 Acting Members, who have all had some sea service, and are retired officers either of the Royal Navy or of the Mercantile Marine. The Acting Members alone are concerned with the Lighthouse Administration. Their salaries are paid from the sum of £7,000 allotted for this purpose by the Act of 1822, and amount, according to present arrangements, to £1,000 for the Deputy Master, and £500 for each of the remaining Acting Members. In addition they become entitled to other fees in connection with attending the Pilotage Committee and the Thames Conservancy Board, and for sitting as Assessors in the Court of Admiralty; these latter fees, which do not come from the General Lighthouse Fund, amount to an aggregate of about £1,500 a year. Members who do not attend the meetings of the Board or of Committees are fined for each non-attendance on a scale which may reduce their annual income by about £100.

The Elder Brethren are co-opted at meetings of the Corporation, but it is not usual for the Honorary Members to take part in the election of Acting Members. The Acting Elder Brethren are elected from among the Younger Brethren, and must have attained the rank of Commander and have had command of a ship of war at sea for at least three years, if in the Royal Navy, or must have served in command at sea on foreign voyages for four years if in the Merchant Service.

The Younger Brethren, of whom there are usually some 200, are nominated by any two Elder Brethren. No special qualification is necessary, but in practice only persons connected with the Navy or the Merchant Service, or who hold a Master's certificate are ever chosen. The Younger Brethren, who are usually men in the active exercise of their profession, have no duties in connection with the Trinity House, and receive no remuneration.

In the performance of the services of its Lighthouse administration the Trinity House employs a large paid establishment of secretaries, clerks, engineers, superintendents, lighthouse-keepers and mechanics, which will be described later on.

Commissioners of Northern Lighthouses.

13. The Commissioners of Northern Lighthouses form a Board of 25 members constituted at present as follows:—

(*a*) The two Scottish Law Officers.

(*b*) The Lord Provosts of Edinburgh, Glasgow, Aberdeen and Dundee, and the Provosts of Inverness, Campbeltown, Greenock and Leith.

(*c*) The eldest Bailies of Edinburgh and Glasgow.

(*d*) The Sheriffs of the counties of the Lothians and Peebles; Lanark; Renfrew and Bute; Argyle; Inverness, Elgin and Nairn; Ross, Cromarty and Sutherland; Caithness, Orkney and Shetland; Aberdeen, Kincardine and Banff; Ayr; Fife and Kinross; Forfar; Dumfries and Galloway; Roxburgh, Berwick and Selkirk.

The Commissioners have power to elect the provost or chief magistrate of any royal or parliamentary burgh on or near any part of the coasts of Scotland and the sheriff of any county bordering on those coasts to be a member of their body; but so far as the sheriffs are concerned this power is now exhausted.

These gentlemen, all of them Scottish judicial or administrative functionaries, hold their position *virtute officii*, and give their services gratuitously. Like the Trinity House, they have a paid establishment for the performance of their Lighthouse duties.

Commissioners of Irish Lights.

14. The Commissioners of Irish Lights consist of five *ex officio* members, namely, the Lord Mayor, the High Sheriff, and three Aldermen of the City of Dublin, and 17 others who are co-opted, subject to the veto of the Lord Lieutenant in Council, all the members taking part in the election when a vacancy occurs. No special qualification is required in the case of the co-opted members, and their period of office is only terminated by death or by resignation. The services of these Commissioners, like those of the Scottish Board, are gratuitous, and they also have a paid establishment for their Lighthouse duties.

Local Lighthouse Authorities.

15. In addition to the three General Lighthouse Authorities there are, as has already been mentioned, a number of Local Lighthouse Authorities in the United Kingdom. These Authorities, which number some 425, may be either Harbour Commissioners, Conservancy Bodies or private owners of harbours, and the lighting of most of the harbours and estuaries on our coasts is in their charge.

In some cases, however, as in that of the Thames, the General Lighthouse Authority is responsible for the lighting of the whole port, while in others, of which the Mersey is the chief example, the harbour authority not only lights the river but also a large extent of sea forming the approach to the harbour.

The General Lighthouse Authorities have certain powers of inspection and control over the Local Lighthouse Authorities, which are noticed later, but they are otherwise excluded from any jurisdiction where Local Lighthouse Authorities exist.

The constitution and administration of the Local Lighthouse Authorities are outside the Terms of Reference to this Commission, but it is necessary to allude to them in order clearly to explain the general arrangement.

Powers of the General Lighthouse Authorities.

Duties and Powers common to all three Authorities.

16. The three General Lighthouse Authorities are charged with the superintendence and maintenance of the lights, buoys and beacons in their respective portions of the United Kingdom. Subject in the case of the Scottish and Irish Boards to certain limitations, to be mentioned presently, they may erect new seamarks and alter or remove existing ones. In no case, however, can they incur expenditure to be paid out of the General Lighthouse Fund until an estimate of it has been approved by the Board of Trade, and they are further bound to furnish the Board of Trade with any Returns or information asked for.

17. The three General Lighthouse Authorities are also empowered to levy and collect Light Dues on ships engaged in voyages to and from ports in the United Kingdom, the monies collected to be paid over to the Paymaster-General, and accounted for to the Board of Trade. By Departmental arrangement, however :—

(1) The Dues are collected by the officers of Customs only.

(2) The power of levying them in Scotland and Ireland has been delegated to the Trinity House.

(3) The collectors of Customs account to the Trinity House for the Light Dues collected, but remit the amounts received direct to the Paymaster-General, as instructed by the Board of Trade, and

(4) The Board of Trade remit to the General Lighthouse Authorities the amounts required for carrying on the Lighthouse Service.

18. The three General Lighthouse Authorities are further charged with the duty of inspecting all seamarks of the Local Lighthouse Authorities within their respective areas, and reporting on them to the Board of Trade; and in certain cases they may issue instructions to Local Lighthouse Authorities. They have special powers as to acquiring necessary land for Lighthouse purposes; and it is part of their functions to remove wrecks within their jurisdiction which may be a danger or an obstruction to navigation.

Special Powers of the Trinity House.

19. The Trinity House, in addition to its position as the General Lighthouse Authority for England and Wales, has also certain powers affecting the other two General Lighthouse Authorities. These relate (*a*) to inspection; (*b*) to construction of New Works.

(*a*) The Trinity House may at any time inspect any lighthouses in the United Kingdom.

(*b*) When the Scottish or Irish Boards wish to exercise any of their Lighthouse powers (*i.e.*, to erect, add to, alter, remove, or vary the character of any lighthouse, or to erect, alter, or remove any buoy or beacon), they must first of all submit to the Trinity House a scheme showing what they wish to do, and in what manner and for what reasons. The Trinity House consider and report on this scheme to the Commissioners submitting it, and finally forward it, together with their report and any correspondence that has passed, for consideration by the Board of Trade, with whom the ultimate decision rests.

20. Further, the Trinity House may, with the sanction of the Board of Trade, direct either of the other General Lighthouse Authorities to erect, continue, add to, alter, or remove any lighthouse, buoy, or beacon, or to vary the character of any lighthouse. It is doubtful whether this power has ever been exercised.

21. The Trinity House is also invested with powers relating to certain Colonial Lighthouses, but inquiry into these is not within the Terms of our Reference.

Powers of the Board of Trade.

22. The powers of the Board of Trade have already been indicated to some extent. The direct financial control over the expenditure of the three General Lighthouse Authorities is in their hands, and with it the ultimate decision respecting any proposals for New Works. In the case of proposals for New Works put forward by the Scottish or Irish Authorities, the sanction of the Board of Trade is expressly required by statute in addition to that of Trinity House, and should the latter withhold sanction from any such proposal an appeal stands to the Board of Trade. The Board of Trade have inspecting powers over all the General Lighthouse Authorities, and they may at any time call for any Returns from those Authorities, and may inspect alike their books and their seamarks. They also require the General Lighthouse Authorities to submit for their approval all contracts for works, stores, and other supplies. They have, however, no statutory authority to initiate expenditure or make proposals for New Works. That belongs to the functions of the Lighthouse Authorities, on whom also devolves the entire ordinary work of administration.

For the consideration of Lighthouse questions and other similar purposes the Board of Trade have the assistance of:—

(*a*) an expert Nautical Adviser, usually a Captain in the Royal Navy;

(*b*) of the Trinity House, to whom they refer any Lighthouse matters they may judge expedient; and

(*c*) of the Advisory Committee described below.

Advisory Committee representing Shipping Interests in the United Kingdom.

23. The history of the Advisory Committee is as follows:—In 1899, after the Report of Lord Courtney's Committee already mentioned, the Chamber of Shipping of the United Kingdom, the Shipping Federation, and the Associated Chambers of Commerce approached the Board of Trade, of which the late Lord Ritchie was then President, with a request that representation should be given to shipowners and shipmasters on the three General Lighthouse Authorities, and that these Authorities should be reconstructed. While unable to agree to this the Board of Trade offered, if the Chambers of Commerce and the Chamber of Shipping would nominate a Representative Committee, that they should be annually consulted with regard to the erection, position and cost of New Works. This offer was accepted, and a

Committee was accordingly constituted, though of course with no legal status, consisting of—

4 shipowners representing England,

2 shipowners representing Scotland

2 shipowners representing Ireland,

2 merchants, and

2 underwriters,

selected respectively by the Executive Council of the Chamber of Shipping, the Council of the Associated Chambers of Commerce, and the Committee of Lloyd's.

Since 1900 this Advisory Committee has been furnished with the proposals of the three General Lighthouse Authorities as to New Works, and has subsequently met representatives of these Authorities and of the Board of Trade at an Annual Conference, where the arguments for and against any proposal can be put forward and discussed before the different estimates are finally approved. In urgent cases of New Works which involve large expenditure and the consideration of which cannot be delayed, the opinions of the Advisory Committee are asked by letter.

General Lighthouse Fund.

24. By the Merchant Shipping (Mercantile Marine Fund) Act 1898, all the Light Dues received by the General Lighthouse Authorities and all expenditure incurred by them, whether for establishments or for New Works, are credited or debited to the General Lighthouse Fund which took the place, for Lighthouse services, of the Mercantile Marine Fund. The method of collection of the Light Dues and the system of disbursement has already been explained.

The receipts and expenditure of this Fund for the last three years respectively are :—

	Receipts.	Expenditure.
1903–4 - - - - -	£525,910	£555,127
1904–5 - - - - -	£510,729	£521,930
1905–6 - - - - -	£518,719	£521,381

There is also an accumulated surplus from which in the years above-mentioned, the excess of expenditure has been met. This surplus amounted at the beginning of the financial year 1905–6 to £81,551 in cash, and £274,365 in investments, of which a certain proportion belonged to the Basses Lights Fund.

The Fund is under the control of the Board of Trade, who, when they have checked the accounts of the three General Lighthouse Authorities and compared them with the estimates sanctioned, forward them to the Audit Office, by whom they are yearly laid before Parliament.

System of Administration.

General Financial System.

25. As regards their financial relations with the Board of Trade, all three Authorities follow the same procedure, of which it will be as well to give some short account.

As has been already stated, the three General Lighthouse Authorities can incur no expenditure until an estimate has been approved by the Board of Trade. Estimates, accordingly, are yearly submitted by each of the three Authorities in the month of October or November for the expenditure of the next financial year, and when the New Works and other increases proposed have been considered by the Board, a Conference is held in December between them and the Representatives of the three Authorities. Following on this a further Conference is held in January or February, at which the Advisory Committee, who have been previously furnished

with copies of the provisional estimates for New Works, are also present, and the estimates, with any modifications that may have been adopted, are then finally approved by the Board of Trade.

The Establishment expenses amount to over three-fifths of the total expenditure, and are comparatively constant. The rates of pay are fixed by Order in Council, with the exception of some temporary salaries which can be approved directly by the Board of Trade. This also applies generally to pensions, which must be sanctioned by the Board of Trade, and which are regulated on the same scale as those under the Civil Service Superannuation Act.

The principal item of expenditure on which action has to be taken is therefore New Works. Once sanctioned, these are proceeded with, either directly by the Lighthouse Authority concerned, or by contract after tender, according to the estimate approved.

The financial procedure above described is followed in the case of each of the three General Lighthouse Authorities, but as in other respects their methods of administration are somewhat dissimilar, it will be well to consider them separately.

Trinity House.

26. The full Board meets once a week, and is principally concerned with the consideration of any special questions which may be referred to it by the three Committees into which it is subdivided for Lighthouse purposes. These Committees are :—

(1) *The Wardens' Committee,* which deals with matters of finance and accounts, questions of Light Dues, tenders and contracts, and with special matters.

(2) *The Lights' Committee,* which is the executive committee for administering the lighthouse, lightvessel, steamvessel, buoy, and beacon services, and deals as well with the maintenance and repair of stations, the store department, the carrying out of experiments, and questions connected with the personnel. This Committee also attends to the Removal of Wrecks.

(3) *The Examining Committee,* which periodically visits the whole coast line, and checks or alters as required the position of seamarks, advises as to new lights, issues Notices to Mariners, and reports on all Local Lights, and on proposals of the other two General Lighthouse Authorities. This Committee also acts as the Pilotage Committee.

Although these Committees only sit on two days a week, the majority of the Elder Brethren are occupied daily with the work of the office, unless they are afloat on duty round the coast as special Visiting Committees (which are appointed as required) or otherwise.

The headquarters establishment of the Trinity House comprises the Secretary's Department, which consists of two principals, 14 clerks and some boy clerks, and deals with the routine work of the service; and the Engineer's Department, with a staff of some 10 assistants and draughtsmen, which is concerned with the technical engineering work. There is also a Scientific Adviser.

For the purposes of administration the coast line is divided into seven districts, each under a local superintendent, who, in addition to his other duties, inspects and visits all stations in his district every quarter. Under these superintendents are 237 lightkeepers employed at 82 stations. There are also 558 seamen on 52 lightvessels, and 41 men at district depôts.

In addition the Trinity House maintains the Blackwall Workshops, furnished with a power plant, storehouses, etc., and employing 160 mechanics and workmen. There are also 11 steam vessels with crews of 202 men for carrying stores, visiting the coasts, etc. The total number of men employed is 1,250, and the average annual cost of the Service during the seven years from 1900 to 1906 amounted to £271,102.

Commissioners of Northern Lighthouses.

27. In the case of the Northern Lighthouse Commissioners the ordinary work of administration is in a large measure left to the Secretary, whose duties practically include those of General Manager as well. The Board itself meets fortnightly. There are also two standing Committees, one on Finance and one on New Works. These Committees together meet on an average rather less than once a week. An Inspection Committee is also appointed once a year for the purpose of visiting the coasts.

The Secretary has a staff of six clerks, a superintendent, and assistant superintendent, whose duty it is to visit and inspect the various stations, and three district superintendents, who are really mechanical engineers, charged with the execution of all ordinary repairs.

The position of the Engineer is a peculiar one. He is not a salaried official, but a member of a private firm, paid partly by fees calculated on the amount of time devoted to the service of the Commissioners, partly by a percentage on the cost of works designed by him and carried out under his superintendence. In addition to his regular duties as Engineer, he acts as Scientific Adviser to the Board, and is also consulted as to the necessity or otherwise of new seamarks, and the position and character most suitable for them.

The number of lightkeepers, etc., employed at the 91 stations under the Scottish Board is 290, and there are four steamers and tugs for visiting purposes, as well as one lightvessel, with crews of 105 men. The total number of men employed is 410, and the average annual cost of the Service during the seven years from 1900 to 1906 amounted to £92,642.

Commissioners of Irish Lights.

28. The Commissioners of Irish Lights meet as a Board once weekly, and are also sub-divided into five Committees—the Finance, Inspecting, Office (salaries and appointments), Removal (personnel), and Stores and Steamers Committees. Of these the first alone is a standing Committee and meets weekly, the others being only summoned when required. The Inspecting Committee goes round the coast once yearly.

The routine administration is carried on principally by the Secretary, though with perhaps more limitations than is the case in Scotland. His staff consists of seven clerks, an inspector, an assistant inspector, and a surveyor of shipping, and that of the Engineer of three assistant clerks, one permanent and several temporary draughtsmen, a foreman mechanic, and a certain number of workmen in permanent employment. The Irish Board, like the Trinity House, retains the services of a special Scientific Adviser.

The regular visiting of the various stations is performed by the inspector and his assistant, while in most cases mechanics from the Kingstown Works do the necessary engineering repairs at the different lighthouses.

The number of lightkeepers employed is 180 at 74 stations, and there are 11 lightvessels and three steamers with crews of 205 men. There is also a store depot and a small engineering establishment at Kingstown, with 25 permanent employés, men coming in from lightvessels being also made use of temporarily at these workshops. The total number of men employed by the Irish Lights Commissioners is 434, and the average annual cost of the Service during the seven years from 1900 to 1906 amounted to £117,389.

Differences in Methods of Administration.

29. This short account of the administration of the three General Lighthouse Authorities is sufficient to indicate some of the more important points in respect to which their methods vary. The paid Board of experts, the Trinity House, identify themselves much more closely and much more continuously with the daily details of the Lighthouse service, both ashore and afloat, than do the other two Authorities, whose members are unpaid and are seldom experts. Moreover, on the Scottish

and Irish Boards only a relatively small proportion of the whole number of Commissioners can be said to take a continuously active share in the work. The regular attendants at Board and Committee meetings are all residents in the immediate neighbourhood of Edinburgh or Dublin. It belongs to the very nature of the case that the position of the Scottish and Irish Commissioners is practically that of a Board of Directors which entrusts the whole of the routine work of administration to a General Manager, reserving to itself only a financial supervision, the decision on matters of policy, and an ultimate general control. Such a system may be highly efficient. It certainly has proved efficient in the case of the Scottish Board, most of whose active members form a homogeneous body of trained professional men, occupying important posts under the Crown. But its success must depend in very large measure on the character and competence of the chief officials of the Board, in particular of the Secretary, on whom the duties of General Manager devolve.

30. Apart from the broad contrast thus presented between the Elder Brethren on the one side and the Scottish and Irish Commissioners on the other, attention may be drawn to some other points of difference in the administrative methods of the three Authorities.

The peculiar position occupied by the Engineer to the Scottish Board has already been noticed. It may be in part a consequence of this position that, whereas the Trinity House and the Irish Board maintain regular engineering establishments, the one on a considerable, the other on a small scale, for carrying out repairs and other work, the Commissioners of Northern Lighthouses have no workshops of their own, all repairs which cannot be carried out on the spot by the "district superintendents" on the head office establishment with the aid of hired mechanics, being executed by contract. Similarly with regard to New Works: if the Trinity House and the Commissioners of Irish Lights arrive at the conclusion, on the report of their engineers, that a given New Work can be wholly or partly carried out by themselves more cheaply than by contract, they proceed so to carry it out, of course, with the sanction of the Board of Trade. This course has been followed in some important cases within recent years. For instance, the new Lighthouse at Beachy Head and the two stations at Lundy Island were constructed by the Trinity House direct, and the Fastnet Lighthouse by the Commissioners of Irish Lights. Indeed, the Engineer of the Irish Board estimated that more works were carried out by himself and his staff than by contract. The Scottish Board, on the other hand, give all New Works out to contract.

With regard to reliefs the Trinity House relieve their lightvessels once, the Northern Lighthouse Commissioners twice, and the Irish Lights Commissioners three times a month, a divergence in system which necessarily carries with it a difference in cost.

The point of greatest difference in the work of the three Boards is that the Trinity House have to maintain 52 lightvessels in position, whereas the Irish Board have only 11 and the Scottish Board one. It follows that the Trinity House have to maintain a much larger number of steam tenders than the other Boards, and this in its turn reacts on the arrangements necessary for relief, for the distribution of stores, and for the supply of gas to beacons and buoys; and, as the cost of the work done by these vessels in discharging their multifarious duties cannot be apportioned between the different services, it has to be charged under the heading "Maintenance of Steamvessels."

The fact that similar items of expenditure are not always, and in some cases cannot be shown under the same headings, affords one illustration out of a number which might be given of the difficulty of instituting any satisfactory comparison of expenditure as between the three General Lighthouse Authorities. Notwithstanding that their accounts are all drawn up on the same general model, real uniformity is unattainable, because their administrative methods are not identical. To this difficulty we shall presently have occasion to return. In the meantime it is only right to point out that such varieties of practice as have been mentioned are not necessarily arbitrary or accidental, but arise, in some cases at least, from the different conditions with which the several Authorities have to deal. It has never been the policy of the Board of Trade to fetter the discretion of the Lighthouse Boards or diminish their responsibility for the sake of securing artificial uniformity of system.

(III.) CONSIDERATION OF THE WORKING OF THE PRESENT SYSTEM OF LIGHTHOUSE ADMINISTRATION, WITH ITS ALLEGED FAULTS AND THE REMEDIES SUGGESTED.

31. The preceding pages will have given some general idea of the lines on which the present administration of the Lighthouse Service of the United Kingdom is conducted. It will now be convenient to examine into the criticisms passed on the existing system, and on the Authorities who administer it, and also to consider any explanations or justifications put forward by those Authorities in reply.

For the sake of clearness we may distinguish between (*a*) *administrative* criticisms, directed against the manner in which the Lighthouse Authorities perform their work; and (*b*) *constitutional* criticisms, reflecting on the composition of the Authorities and on the general system of which they form the most important factors.

(*a*) *Administrative Criticisms.*

Charges of Extravagance.

32. The principal charge made against the administrative work of the Lighthouse Authorities is that of extravagance. A very general impression undoubtedly exists among shipowners, and seems to be to some extent shared by Associations of officers of the Mercantile Marine, that the administration of the Lighthouse Boards is wasteful and uneconomical. But when this general impression comes to be translated into more specific allegations, we have found it for the most part very weakly supported. The witnesses who most strongly urged the charge of extravagance were Mr. Norman Hill, who spoke on behalf of the Liverpool Steamship Owners' Association, the members of which own more than 21 per cent. of the total British steam tonnage afloat, and Captain Wade, a retired shipmaster, representing the Mercantile Marine Service Association.

33. Mr. Hill's contention rests chiefly on a comparison of the average annual expenditure of the three Lighthouse Boards during the six years ending the 31st March, 1899, with the average annual expenditure during the subsequent period of six years. His reason for comparing the expenditure since the 31st March, 1899, with the expenditure prior to that date he explained to be that with the coming into operation of the Merchant Shipping (Mercantile Marine Fund) Act of 1898 Treasury control over Lighthouse expenditure ceased, and with it the only effective check upon uneconomical management. This is a misapprehension on Mr. Hill's part. There never was any Treasury control over Lighthouse expenditure, and the control by the Board of Trade was the same after 1899 as before. Relying, however, on his figures of average annual expenditure, Mr. Hill points to an increase amounting to 18·2 per cent. as between the two periods, or, deducting increases due to New Works, to 12·8 per cent. Mr. Hill informed us that he knew of no reason for this increase of 12·8 per cent. He had apparently omitted to consider the inevitable increase in ordinary administrative expenses consequent upon the new seamarks added during the years in question. On this point, therefore, the Lighthouse Authorities had an easy reply. The figures put before us by the Secretary to the Scottish Board in this connection are especially striking. He prepared a statement of the number of new seamarks established by the Commissioners in the second of Mr. Norman Hill's periods, or at the very end of the first period, the charges for whose maintenance actually fell in the second period. According to this statement the percentages of increase are:—lighthouses 9·8 per cent.; fog-signals over 50 per cent.; minor lights 200 per cent.; regular lightkeepers 11·5 per cent.; minor light attendants 200 per cent.; gas beacons 100 per cent.; gas buoys nearly 100 per cent.; gas works 50 per cent.; steamers 33·3 per cent.; storehouses 100 per cent. 5483.

We are inclined to think that at least in the case of the Commissioners of Northern Lighthouses, and perhaps in the case of the other two Boards, the increase in the number of seamarks with which they have to deal is of itself quite sufficient to account for the increased cost of maintenance in Mr. Norman Hill's second period as compared with the first. Of course it does not necessarily follow that there was not uneconomical management during both periods.

34. With regard to expenditure under the separate headings Mr. Hill founds his conclusions avowedly upon totals, which he considers extravagantly high. In the case of most of these totals, his evidence did not go beyond a mere declaration of opinion unsupported by anything in the shape of argument, and hardly calls for further notice here. Only as respects the amount spent on New Works was any ground of objection offered, and on this subject a few words may be added. Mr. Norman Hill takes as the established standard for the annual expenditure proper to be incurred on New Works an estimate given by the Lighthouse Authorities to Lord Courtney's Committee in the year 1896. The representatives of the Trinity House, the Northern Lighthouse Commissioners, and the Irish Lights Commissioners at that time expressed the opinion that £25,000, £10,000, and £15,000 expended annually by the three Boards respectively on New Works, or £50,000 in all, would be fairly satisfactory. As a matter of fact, in no subsequent year has the expenditure on New Works fallen so low as £50,000, and the annual average has been very much higher. On this ground it is condemned by Mr. Norman Hill as excessive. We are unable to attach to this figure of £50,000 the sanctity which appears to be ascribed to it in certain quarters; and we think the safer inference to be drawn from the experience of the last ten years is that the estimate then put forward was too low rather than that the expenditure subsequently incurred on New Works was too high. The Commissioners of Northern Lighthouses indeed in a later communication to Lord Courtney's Committee expressly demurred to the estimate accepted by their spokesman for the time being, and witnesses for the Trinity
4974. House and the Irish Lights Commissioners have emphatically assured us that they
5710. never regarded the amounts mentioned on their behalf as thoroughly considered estimates by which they were willing to be bound. We think it would be very unwise to limit the amount of expenditure on New Works to any hard and fast sum, either generally or for each individual Board, because it is impossible accurately to foresee the demands that may arise in consequence of changes in the character of our Mercantile Marine, the introduction of new inventions, or the necessity of reconstructing or replacing existing works. All these causes have probably co-operated with an increasing revenue from the Light Dues to make the last ten years a period of higher expenditure than usual on New Works, but on the evidence before us, which we regret does not include evidence from the Advisory Committee, we are not prepared to say that the expenditure has been excessive.

35. Captain Wade, like Mr. Norman Hill, regarded the Mercantile Marine Act of 1898 as marking the beginning of a period of more lavish expenditure on
3681–2. New Works; but, far from condemning the change, he welcomed it as tending to
3692–6. increased efficiency. Nevertheless, he, too, criticises the Lighthouse Authorities for extravagance, basing his charge on what he considers the unnecessarily high cost of individual items. In particular he cited the case of the new lighthouse at Beachy Head, the lighthouses on Lundy Island, certain lighthouse-keepers' dwellings on the coast of Kerry, and the cost of lightvessels generally. In all these cases the Lighthouse Authorities concerned were, in our judgment, able to furnish a satisfactory reply to the charge.

36. On the whole, as regards the question of administrative extravagance, it cannot be said that the professed critics of the Lighthouse Authorities have given us much assistance in arriving at a conclusion. Their failure to establish their charges cannot, however, be held in itself to justify a favourable verdict on the general count, though, perhaps, it may fairly be taken as pointing to the absence of any gross and flagrant abuses in expenditure. We have certainly not come across any such abuses in the course of our investigation.

37. In examining the question whether reasonable regard is given to economy in the existing system, several possible lines of inquiry present themselves. We might compare the cost of the Lighthouse Service in the United Kingdom with that in other countries; we might compare the expenditure of each of the three Lighthouse Authorities with that of the other two; or, lastly, we might review the various items in the Lighthouse Accounts on their merits, and consider whether the expenditure upon them was justified.

38. It is not practicable, we think, to arrive at any definite results by means of a comparison between the respective costs of the Lighthouse Services at home and abroad. The circumstances are too diverse, and our information as to Lighthouse Administration in other countries is not sufficiently detailed.

39. Even as between the three Lighthouse Authorities of the United Kingdom the difficulty of making fruitful comparisons of expenditure is much greater than might at first sight appear. Sir Thomas Blomefield, the Assistant Secretary of the Finance Department of the Board of Trade, assured us that after doing his utmost to arrive at some basis of comparison, he had been forced to the conclusion that no general comparison was possible. The only way, he thought, to get a fair comparison, say, of the expenditure on Maintenance of Lighthouses or of Lightvessels, was to take single lighthouses or groups of lighthouses of the same type, and compare these, and similarly with lightvessels. He had prepared and put in five tables (which we print in the Appendix) showing the annual expenditure and percentage of cost of the three General Lighthouse Authorities for the last seven years under each of the heads appearing in the Annual Accounts of the General Lighthouse Fund, and also particulars of the number and character of the lighthouses, etc., maintained by the three Boards. But he gave us clear warning that comparisons based on the totals shown in these tables would, in his opinion, be useless and misleading; and after careful examination we feel constrained to agree with him. 3376, 3435. App. A. V.-IX. 3228. 3311–20. 3375–6.

We still hope that it may be found practicable to devise forms of accounts which would render trustworthy comparison easier, and we are certainly of opinion that some attempt in that direction should be made. But the difficulty is too deep seated to be altogether got rid of by any rearrangement of figures. It has its main sources partly in the different methods of administration adopted by the three Boards, and the consequent assignment (already noticed) of the cost of similar services to different headings; partly in the varying geographical features of the coast line of the three Kingdoms, and differences in the number, character, situation, and importance of the seamarks required; partly in the very different intervals at which special repairs may become necessary, whether for seamarks or for steamers. We have acted on Sir T. Blomefield's suggestion, and obtained from the several Lighthouse Authorities statements of the cost of approximately similar and similarly situated lighthouses and lightvessels, and also of individual steamships. This eliminates some of the obstacles to accurate comparison above mentioned, though not all. The figures thus obtained do not point to any marked distinction between the three Boards so far as economy is concerned.* The large expenditure on the Trinity House steam yacht "Irene" during the last few years is, however, worth noting. Much of this was explained by Captain Clarke as being due to specially heavy repairs recently executed; but even apart from these exceptional items, she is admittedly a costly vessel to maintain. 4975–83.

Head Office Expenses might be thought to present an easier field for strict comparison than the other headings. But here also difficulties arise from the different methods practised by the three Boards; moreover, the remuneration assigned to the Elder Brethren by Act of Parliament is a disturbing element requiring quite special consideration. It might fairly be anticipated that, the total expenditure of the Trinity House being much greater than that of either of the other Boards, its Head Office Expenses would amount to a somewhat smaller percentage of the whole. The actual percentages given in Sir T. Blomefield's Table are 8 for the Trinity House, 7·4 for the Scottish, and 6·6 for the Irish Board. If, however, the Elder Brethren gave their services for nothing, like the Scottish and Irish Commissioners, the percentage for Trinity House would be reduced to 5·6. But neither the first of these figures nor the last could safely be used as a basis of comparison between the Trinity House and the other two Boards without further qualification. For instance, the Elder Brethren include in their duties much direct superintendence which under the Scottish and Irish systems is left to paid subordinates; and again the so-called "district superintendents" of the Scottish Board, whose business it is to carry out ordinary repairs, are counted as belonging to the Head Office Establishment, although their work is of a kind which would be charged to other headings in the accounts of the Trinity House or of the Commissioners of Irish Lights. No comparison would be of value which failed to take such differences into account; and, on the other hand, the difficulty of assigning its proper weight to each factor is apt to make even the most careful comparison inconclusive. App. A. VI.

40. There remains the third line of inquiry, that which consists in taking the items of expenditure in the Lighthouse Accounts on their merits, and considering whether the money has been spent to the best advantage.

To the question in the form thus given to it we cannot pretend to offer more than an incomplete answer. No doubt, with respect to some very important elements

* As regards "Maintenance of Lighthouses," however, see footnote to Paragraph 41.

in the expenditure, there is no great difficulty in forming a definite judgment. The salaries and wages of the personnel in the Lighthouse Service are fixed either by Order in Council, on the advice of the Board of Trade, or by the Board of Trade direct. We are clearly of opinion that the rates of pay are not unduly high for the services rendered.

Pensions are payable in accordance with the ordinary Civil Service Regulations. The Irish Lights Commissioners usually exercise the option of retiring their lighthouse keepers at 60 instead of 65. This practice may possibly be questioned; but apart from it no saving is to be expected in the expenditure on pensions.

As regards New Works, stores, and other supplies, the Lighthouse Authorities are in general obliged to invite tenders, all reasonable precautions seem to be taken, and general control is exercised by the Board of Trade. Given that the New Works are suitably designed, and are required for the effective lighting of the coast, and that the stores and other supplies are not excessive, we have no reason to suppose that there is much room for further economy in these directions.

The above considerations appear to dispose of the charge of extravagance in connection with the greater part of the expenditure on the Lighthouse Service. On the other hand, when we ask whether it might not be possible by better organisation to reduce the personnel, and whether the different methods adopted by the different Authorities for the carrying out of repairs, for the relief of lighthouses and lightvessels, for the distribution of stores, and for the inspection and supervision of the seamarks under their charge, are really the best and most economical that can be devised to meet the circumstance of each case, we come to questions of much greater difficulty—respecting which even experts with full knowledge of the facts will doubtless differ. Sir T. Blomefield, on behalf of the Board of Trade, expressed
334-52. the opinion that there was no undue extravagance on the part of the Lighthouse
345 Authorities, and although it may be said that the Board of Trade could hardly support such a charge without accusing themselves of defective control, yet, on the other hand, it must be remembered that they bring wide financial experience to bear on the question, and should have better opportunities than anyone else of forming a correct judgment upon it.

41. On the whole the conclusion we have come to is that the kind of criticisms to which the Lighthouse Authorities may be open on the score of defective economy in administration are such as would probably apply to any public body undertaking similar duties. There was certainly no clear evidence of any specific extravagance which was either material or continuous; and we are disposed to believe that the three Boards are alive to the importance of economy, and sincerely anxious to study it in every way, though in some cases long established custom and routine may constitute an obstacle and danger to rigid economy. If any distinction is to be made between the different Authorities in this matter we think the superiority lies with the Commissioners of Northern Lighthouses. The Trinity House with a double, and sometimes even a treble, line of dangers to guard are no doubt confronted with administrative problems of special difficulty; but it is open to question whether from the point of view of economy their methods and organisation are as perfect as they might be. The besetting sin of all public institutions—especially if they have a long history and tradition behind them—which carry on their work sheltered from the stress of competition and relieved of the necessity of showing a profit, is to acquiesce in an existing order simply because it exists and because to change it would require thought and trouble and perhaps involve unpleasantness. It is certain that if this danger is to be adequately counteracted both the Trinity House and the other Lighthouse Authorities must not be content to practise economy in details, but must make it their duty from time to time to review, and if need be to revise, the more general lines upon which their administrative systems are framed.*

Complaints of Inefficiency.

3474–5. 42. We are glad to be able to record a fairly general agreement among the
3496–8. witnesses who appeared before us that the coasts of the United Kingdom are well

* An exhaustive analysis, prepared by Admiral Henderson and appended to this Report, of the detailed particulars furnished by each General Lighthouse Authority respecting the lighthouses under its charge yields results which certainly appear to require the most serious examination alike by the Trinity House and the Commissioners of Irish Lights of their administrative system, services and appliances. (See App. C. III.)

and efficiently lighted—at least as well and efficiently lighted as those of any other country. We believe this praise is deserved, subject, however, to a qualifying remark in which we have no doubt the Lighthouse Authorities themselves would readily concur. When a service is spoken of as efficient, a standard is implied by which the efficiency is measured. Now, in the case of the Lighthouse service the standard must be regarded as essentially progressive and this in various ways. For instance, the gradual displacement of sailing-vessels by steamers, and the increasing speed of the latter, has rendered more powerful lights necessary where less powerful ones were formerly adequate. Then again, new inventions and improved methods for marking the dangers of the coast are continually being introduced, and a lighthouse service would soon cease to be efficient which neglected to take count of them. Lastly, the most frequented trade routes must naturally be the first to engage the attention of the Lighthouse Authorities, but as the needs of these are provided for, it becomes incumbent upon them to extend their activities to the less frequented parts also. When, therefore, we say that the coasts of the United Kingdom are efficiently lighted, we do not mean that there is not ample room for further advance, but we recognise that the advance must be gradual, and in the meanwhile credit the Lighthouse Authorities with being reasonably abreast of the times. 3572. 3867. 4189–91.

43. A few complaints of inefficient or insufficient lighting have been brought before us, but most of these either referred to deficiencies in the past which have since been made good, or to proposals for New Works which are now actually under consideration by the Lighthouse Authorities. We may refer in this connection to the case of the fog-signal on Mizen Head which has been the subject of acute differences between the Irish Lights Commissioners and the Advisory Committee. The Irish Lights Commissioners had always maintained that it was a mistake to put a siren fog-signal at Mizen Head, an opinion which they still hold. The Elder Brethren originally supported the Irish Board, but the shipowners pressed for the fog-signal so much that first of all the Trinity House gave way, and, the influence of the Board of Trade having been exercised in the same direction, the Irish Board ultimately yielded. They urged, however, that if a signal was erected at Mizen Head a powerful light should accompany it, but this was not sanctioned, and a fog-signal alone is now under construction. This incident has been made the subject of severe attack on the Irish Lights Commissioners by more than one witness; but we are unable to see in it anything more than one of those cases of difference of opinion which will inevitably arise from time to time even among persons well qualified to form a judgment on some particular matter in dispute. 3014–7. 4202–6. 5207–8.

Our attention was also called to the alleged backwardness of the Trinity House in experimenting with or adopting the new system of submarine signalling now in partial use in Canada and the United States of America. The evidence, however, which we received on this subject, as well as the correspondence relating to it, went to show that the Trinity House were fully aware of the possibilities of this invention and had asked to be allowed to fit several of their lightvessels with submarine bells at an estimated cost of £1,000. The proposal to expend money for this purpose was objected to by the Advisory Committee and ultimately withdrawn. If the Trinity House are open to criticism in this connection, it would seem to be for not pressing their proposal more strongly in face of the opposition offered to it. We understand that the proposal has since been brought forward again and sanctioned. 5039.

While dealing with the general question of efficiency we must not omit to mention that in their relations with the Board of Trade the Irish Lights Commissioners seem to have been distinctly less fortunate than either the Trinity House or the Commissioners of Northern Lighthouses. A paper was put in by Mr. Pelham drawing attention to a number of specific instances in the last three years of what may perhaps best be described as unbusinesslike methods on the part of the Irish Board. These instances, taken separately, do not appear to be of a very serious character, but the explanations of the Commissioners were not in every case as clear as they might have been, and we are inclined to the opinion that the work of the Irish Board has occasionally shown signs of being less systematic, though perhaps in important matters not less efficient, than that of the two other Authorities. The Board of Trade also complain that they cannot induce the Irish Lights Commissioners to send in an Annual Report respecting the Local Lights under their jurisdiction, as is done by the other Boards. Instead of an Annual Report they send in a separate Report on each occasion when a local inspection happens to be made, which certainly App. A IV. 194.

appears a less practical and business-like procedure We are confident that the Commissioners of Irish Lights and their new Secretary, now that attention has been prominently called to these matters, will make every endeavour to meet the wishes of the Board of Trade, and to avoid all reasonable ground of complaint in future.

44. We have now passed in review the more important of the shortcomings alleged against the administrative work of the Lighthouse Authorities, and at this point it may be convenient to add a few words upon certain representations of a miscellaneous character that have been offered more by way of suggestion than of criticism, in order that we may dispense with the necessity of dealing with them later on.

Miscellaneous Suggestions.

Notices to Mariners.

3477. 45. Captain Tizard, Assistant Hydrographer to the Royal Navy, who spoke on behalf of the Admiralty, expressed the opinion that the issue of Notices to Mariners by the three General Lighthouse Authorities might with advantage cease.

In some cases there was not sufficient information in them to make them as useful to mariners as they should be, and as the Admiralty itself issued similar notices, as well as the Board of Trade, an unnecessary duplication of functions would thus be avoided.

We may observe with regard to this question (the whole history of which is given at Q. 5415) :—

5415. 5417. 3479. (*a*) That there was a Departmental Committee specially appointed to consider it in 1887, which recommended the introduction of the methods now existing.

(*b*) That according to Captain Tizard's own admission the notices issued by the General Lighthouse Authorities are received earlier by the mariners concerned than are those issued by the Admiralty.

46. It is clear that in the issue of such notices a recognised system, clearly defined responsibility, and quick service are matters of the first importance, and we think it would be advisable that the various Authorities concerned should confer with a view to an improvement and consolidation in the existing practice.

Captain Tizard also suggests that fuller and earlier information might be sent by the Lighthouse Authorities to the Admiralty ; but the Admiralty do not appear to have made any representations to that effect to the Lighthouse Authorities themselves.

Lloyd's Signal Stations.

47. At the present time, as the result of a joint arrangement between the Committee of Lloyd's and the General Lighthouse Authorities, signals for Lloyd's are taken in by the lightkeepers at certain lighthouses and are then transmitted 3574. to Lloyd's. In view, however, of the increasing necessity for more distant signal stations, for which in many cases outlying lighthouses and lightvessels would afford the only available positions, the Committee are anxious that privileges which they now receive *ex gratiâ* from the Lighthouse Authorities should be more definitely secured to them by means of legislation or otherwise. What they have in view is that the lightkeepers, etc., should be bound to perform certain specific duties, secondary, of course, to their lighthouse duties, with regard to the transmission of signals.

48. We have carefully considered this question, and though we fully recognise the importance of Lloyd's system of intelligence, which is of the greatest value to the whole commercial world, we hesitate to recommend any immediate action in view of the facts :—

3525 *et seq.* (*a*) that the Admiralty are by no means clear that the use of lighthouses as signal-stations might not lead to difficulties in time of war.

3581–2. (*b*) that the existing arrangements appear to work fairly satisfactorily.

(*c*) that the imposition by statute of duties not connected with the lighting of the coast on the staff paid from the General Lighthouse Fund does not appear advisable.

Blackwall Works.

49. Some suggestions have been made as to the advantage of removing the Blackwall Works to another locality. The question must of necessity be mainly one for experts, and we were informed by Trinity House that they went into it 2446. in considerable detail some years ago and came to the conclusion that no economy would be effected by such a move. We understand, however, that the Board of Trade are themselves prepared to examine into the matter afresh, and, if it appears desirable, to authorise the measures necessary.

Lights of Local Utility outside the Jurisdiction of any Local Lighting Authority.

50. The Lighthouse powers of the General Lighthouse Authorities clearly extend to all areas and coast lines round the United Kingdom, except such as are included within the limits of jurisdiction of any Local Lighthouse Authority. Some doubt, however, seems to exist whether the General Lighthouse Authorities are justified in spending money on the erection of seamarks which, however advantageous locally, would be of little or no benefit to "passing trade." Different views have prevailed on this subject at different times, but we agree with the opinion expressed by the Board of Trade, and concurred in both by the Trinity House and by the 54. Commissioners of Northern Lighthouses, that there is nothing in the Merchant 4993–4. Shipping Acts to confine the General Lighthouse Authorities to expenditure for 5507–12. the benefit of passing trade, or to prevent them from erecting lights mainly, or even exclusively, of local utility. On the other hand, it is not disputed that the interests of general navigation may properly claim precedence over local interests.

The question has been complicated by the change made in 1898 in the system of levying Light Dues, in consequence of which the dues are no longer levied in respect of the particular lights passed, but are calculated on the number of voyages completed within the year by the vessel paying the dues. One of the results of this change has been that lights of local utility maintained by a General Lighthouse Authority, while remaining a charge upon the General Lighthouse Fund, have ceased to bring in any compensating revenue.

51. We think that as regards proposals for new lights intended primarily to meet the needs of particular localities or interests, it would be reasonable and fair to make their erection conditional on a contribution from the localities or interests concerned. This has been done in the case of the Strumble Head Light. The light was asked for by the Great Western Railway Company, in connection with their 5829. harbour at Fishguard, though it was shown that passing trade also would benefit by it. The Railway Company were invited to contribute, which they eventually consented to do, to the extent of £2,000, out of an estimate of £12,000. In areas under the Congested Districts Board for Scotland the same principle has been carried still further, for there are a good many small lights in these parts, erected 1455. and maintained wholly at the Board's expense, but served by the Commissioners of Northern Lighthouses. It has been suggested to us that fishing vessels, which are at present exempt from the payment of Light Dues, should be brought under contribution, especially the steam fishing vessels now in use. As regards the latter, the suggestion is put forward on grounds that scarcely come within the scope of our Inquiry, but if hereafter proposals should be entertained for the erection, 5515. by a General Lighthouse Authority, of lights in the interests of local fisheries, a contribution to be levied in this form may be thought worthy of consideration.

The Port of London.

52. Our attention has been directed to the favoured position in which the new mode of levying Light Dues has placed certain ports which, not possessing any Local Lighthouse Authority of their own, continue to be lighted by a General Lighthouse Authority at the expense of the General Lighthouse Fund. By far the most important of these is the Port of London, at present lighted by the Trinity House, at an estimated cost of over £40,000 annually. There is no essential 1945. distinction between the case of these ports and that of the class of local lights mentioned in the last paragraph, the principal difference (apart from the magnitude of the public interests involved) consisting in the absence of any *prima facie* reason why the ports in question should not be placed, like the vast majority of ports of any consequence in the United Kingdom, under Local Port Authorities, and lighted out of funds raised by means of local dues.

53. There certainly seems to be an inequality in the present arrangement. It is not, however, an inequality which could be altered by any administrative action of the Lighthouse Authorities, and since the question, as it affects the General Lighthouse Fund, is of no great practical importance except as regards the Port of London, and a new Bill for the creation of a Port Authority for London is now under consideration, this brief reference to it may perhaps be deemed sufficient.

(b) Constitutional Criticisms.

54. We next proceed to consider what we have called *constitutional* criticisms, under which general description we include not only criticisms directed against the constitution of the Lighthouse Authorities themselves, but also criticisms bearing on the relations of Trinity House to the Scottish and Irish Boards, and of the Board of Trade and the Advisory Committee to all three Authorities.

Constitution of the Lighthouse Authorities.

55. Each Lighthouse Authority has its own peculiar constitution, and the points to which criticism has been applied vary to some extent accordingly.

In the case of Trinity House it has been objected that the Elder Brethren are a self-electing body, and that no provision is made, or under the existing charter can be made, to pension off those of them who are of advanced age.

Against the constitution of the Scottish Board it is urged that a body consisting of sheriffs and municipal representatives may be, and probably will be, wholly without expert nautical knowledge, and is unsuited to deal with nautical matters. It is also objected that its numbers are unduly large, and that the majority of members habitually fail to attend.

The Commissioners of Irish Lights share with the Trinity House the criticism that they are, for practical purposes, a self-electing body, and with the Scottish Board the criticism that save by accident they may be wholly destitute of any expert element. Complaint is also made, as in the case of the Scottish Board, that they are too numerous, and that many of them attend but seldom. Objection was further taken to the five *ex officio* members being all Dublin men, and it was suggested that Harbour Authorities in other parts of Ireland ought to be provided with representatives.

Finally, the absence of any provision for the representation of shipowners was a common ground of criticism against all three Boards.

56. If the problem before us were the construction for the first time of a system of Lighthouse Administration for the United Kingdom, it certainly would not occur to anyone to propose the creation of administrative bodies on the lines of the Trinity House, the Commissioners of Northern Lighthouses, or the Commissioners of Irish Lights. So much will be generally admitted, and is indeed not denied by the existing Authorities themselves. If therefore the discharge by those Authorities of the functions committed to them had been seriously defective or inefficient, it would be impossible to resist the conclusion that a drastic reform of the whole system was called for. It would probably be our duty to recommend that the Scottish and Irish Boards should be dissolved, that the Trinity House should be deprived of its Lighthouse powers, and that the lighting of our coasts should be entrusted to an Authority of a wholly different nature.

It will have been seen, however, from what has preceded, that in our judgment the existing Authorities have, on the whole, done their work well; and though the process of evolution has not produced perfect administrative machinery, and consequently the work of the Lighthouse Authorities is liable to criticism for defects appertaining to their historical constitution, we should hesitate to advise the sweeping away of a system which, however anomalous according to modern ideas, has yet answered its purpose satisfactorily, unless it could be shown that some distinct practical advantage was likely to ensue.

57. Some of the Royal Commissions and Committees that have preceded us in the past have recommended the substitution of a Central Authority in place of the three Boards, and similar suggestions have been made by several witnesses in the course of the present Inquiry. These suggestions have taken one of three forms. One proposal was that the Trinity House, with or without an amended constitution, should be the new Central Authority. Mr. Norman Hill considered that if the Light Dues continued to be levied as at present, the Lighthouse Administration should be

entrusted to a Committee elected by the Shipowners. But the plan which found most support was that of transferring it to a State Department, preferably to the Board of Trade.

58. The proposal to constitute the Trinity House sole Lighthouse Authority, apart from any other objections which might be urged against it, would not remove the very anomaly which is one of the main grounds of criticism, namely, the administration of the Lighthouse Fund by a self-electing body. It might indeed be possible to amend the constitution of the Trinity House, but hardly to the extent that would be required in order to satisfy this criticism without destroying its corporate character altogether.

59. On the other hand to entrust the lighting of the coasts to a Committee of Shipowners would in our opinion be a very unwise proceeding. The tendency of such a body would almost certainly be in the direction of leaving those parts of the coast which lie away from the most frequented trade routes insufficiently provided with seamarks. It may be doubted indeed whether this proposal was put forward as one meant to be entertained seriously, or was intended as anything more than a declaration of the principle stoutly upheld on the part of the shipowners, that so long as the cost of Lighthouse Administration is not a charge on the Exchequer, the management of the Lighthouse Fund should be in the hands of those who pay the dues. The principle in question, although claiming to rest upon the maxim that taxation and representation should go together is, in reality, more plausible than sound. If accepted it would appear to involve the inclusion of foreign shipowners on any such Committee, inasmuch as under the existing system some £150,000 or 30 per cent. of the entire cost of the lighting of the coasts of the United Kingdom is estimated as being paid by foreign vessels. We are inclined, however, to agree with the opinion expressed by Lord Courtney's Committee, that the Light Dues paid by Merchant Shipping do not in the long run come out of the pockets of the shipowners, but "are ultimately a tax on consumers of commodities carried in the Merchant Navy." Even if this opinion is mistaken the contention advanced on behalf of the shipowners seems of very doubtful validity. The old system of maintaining roads by means of tolls presents a fairly close analogy. We are not aware that it was ever suggested that the expenditure of the money received at the turnpikes ought to be entrusted to a committee of the payers of tolls. Harbour Boards again derive their revenue from the payment of dues, but it has never been held that this gives the payers of dues a claim to control the management, although it may be reasonable and expedient to give them some share of representation. 1785.

60. In any case we are not prepared to recommend either of the proposals above mentioned on their merits, and we are convinced that if the present system of Lighthouse Administration is to be abolished, management by a State Department in some form or other would be the only practicable alternative.

If such a change were to be carried out, the simplest and easiest plan would be to transfer the powers and duties of the existing Lighthouse Authorities to the Board of Trade; but it might equally well be effected by transferring them to Commissioners appointed by the Government, and constituting an additional Government Department created for the purpose. Would a new system on these lines promise a clear balance of advantage as compared with the old, over and above the purely theoretical satisfaction of bringing the machinery of administration into more logical agreement with modern tendencies?

61. On this subject we think the evidence given by Mr. Llewellyn Smith, the Permanent Secretary to the Board of Trade, deserves careful attention. With reference to the proposal to make the Board of Trade the sole Lighthouse Authority, Mr. Llewellyn Smith says: "If Parliament put the duties upon us we would do our best to discharge them, but I think the feeling of the Board of Trade is that the ordinary departmental organisation is better suited for the purposes of general control than for the purpose of the detailed management of a large business of this kind. Of course, there would be no great difficulty, if desired, in constituting some special sub-department or special board under the control of the Board of Trade which should undertake this work, but the Board of Trade have great doubts as to whether an arrangement of that kind is a desirable one. The Board of Trade . . . . . is already an overworked Department, on which new duties are continually being thrown by Parliament, and however much we decentralised the administration by the constitution of a special sub-department, the ultimate responsibility would have to be with the heads of the Board of Trade. I think that we should view with 6059.

something like dismay the prospect of having to add to our very multifarious functions the detailed management of the Lighthouse system. It is comparatively easy to set up the necessary machinery, but the real difficulty—which I do not see how we could quite satisfactorily overcome—is the growing congestion at the top of the Department. We could not get rid of the ultimate responsibility."

Pressed to say whether he thought a Government Department would, on the whole, be more economical or less economical than the existing Authorities, Mr.
6062. Llewellyn Smith replied that it was a somewhat delicate matter on which to express an opinion, but he added, "It must be obvious to the Commission that in a case of this kind, where the potential demands for lighting all round the coast are practically inexhaustible, there being scarcely a part of the coast where some sort of case could not be made out for some advantage resulting from an extension of lighting, it would be difficult always to maintain economy."—There was always the difficulty arising from political pressure on a Government by its supporters.—"Of course we should endeavour to resist such pressure, but I do not know how far we should
6064. always be successful."

Asked whether the existing Authorities would be more likely to deal fairly with distant interests, such as those of the coasts of Northern Scotland, than a Central Authority, his answer was: "I think you might pay very dearly if you weakened
6065. local interest in these matters . . . I do think that if the Board of Trade or some other Central Department were entrusted with this work, we should have somehow to decentralise, we should have to have some local sub-departments in Scotland and Ireland." Again, in reply to a later question, he added: "It seems
6067. to me that a very strong objection is likely to be raised, both in Scotland and in Ireland to the abolition of the separate administrations, and subject to some provisions for securing some degree of uniformity, it seems desirable in itself that the actual current administration should be to a greater or less extent decentralised. There might, and probably would be, some economy in having one central staff of officials, but I am not sure that that would not be too dearly bought by the loss of local knowledge, and the weakening of local interest. I am quite sure that the proposal would be pretty strongly opposed."

62. We cannot but attach great weight to opinions thus strongly expressed by so competent a witness. To transfer the Lighthouse Administration to a Government Department is a perfectly practicable course, and might carry with it certain advantages; but we agree with Mr. Llewellyn Smith, that it would also have its accompanying drawbacks, and in existing circumstances we do not recommend it.

We say "in existing circumstances," because in the event of the Light Dues being abolished, and the cost of lighting the coast becoming a charge on the National Exchequer, it is obvious that fresh considerations would arise. The question from what source the expenses of Lighthouse Administration should be defrayed is not included in our Reference, and we neither express any opinion upon it nor attempt a more precise examination of its bearing upon the matters into which we have been instructed to inquire. We content ourselves with recording the impression left on our minds that the opinions held on the question of the Light Dues by many of the witnesses have largely coloured the views expressd by them on the subject of the Lighthouse system as now administered; and that if this question could be definitely cleared up in one sense or the other, the work of the existing Lighthouse Authorities would perhaps be more impartially judged than it is at present.

63. It remains to be considered whether the criticisms directed against the constitutions of the three Boards respectively cannot, in some measure, be met by changes of a minor character. Certain of these criticisms are eminently reasonable, and point to defects for which it ought to be comparatively easy to find a remedy. The impossibility, under the existing charter, of retiring Elder Brethren on pension after they reach an age limit is an evident source of weakness at the Trinity House. The fact that no security exists for the presence of an expert nautical element on either the Scottish or the Irish Board is an obvious defect in the constitution of each of these bodies.

64. Our recommendations include proposals for remedying both of these shortcomings, as will be seen presently. The former we suggest may be met by a modification in the charter of the Trinity House; the second by assigning one Elder Brother to each of the other two Boards in the capacity of assessor. This latter proposal, if carried out, will, we think, have the further advantage of promoting an interchange of ideas between all three Authorities to their common benefit.

65. The question of strengthening the existing Boards by adding to each a limited number of representatives of the shipowners is a more difficult one. There is a good deal to be said in favour of the plan, and it has the support of the Board of Trade. Moreover, both the Trinity House and the Commissioners of Northern Lighthouses have stated that they would not oppose it, if its adoption were considered desirable. On the other hand it is strongly objected to by the Commissioners of Irish Lights, who urge that the forced introduction of an element of this kind would be destructive of that unity and comradeship which is so important a factor in the smooth working of an unpaid Board. Nor do the shipowners themselves appear to be anxious for representation on the Lighthouse Authorities. At all events Mr. Norman Hill, on behalf of the Liverpool Steamship Owners' Association, said he did "not think it would be possible to produce a Board which would work harmoniously by adding a few representatives of payers of dues to the existing Boards, to be in a hopeless minority on those Boards"; and he roundly declared that he did not believe the shipowners would accept such an offer under any circumstances. Notwithstanding these expressions of opinion, if we could be confident that representatives nominated by the shipowners would attend the Boards, in Mr. Llewellyn Smith's words, "in order to help forward the work, and not merely to represent their class," we should be inclined to say that the experiment ought to be tried. But with the shipowners in their present frame of mind, and taking into account that an Act of Parliament would be necessary to give effect to the proposal, we do not feel disposed to press it, especially as we hope that some of the advantages which might be expected to result will be secured by the scheme which is described later on for the re-modelling of the Advisory Committee.

85, 6069, 4948, 5451, 5844. 1938.

66. We recognise that there is some foundation for the complaint that the Scottish and Irish Commissioners are unnecessarily numerous, and that many of them hardly ever attend the meetings; but as no practical inconvenience has been found to arise, it does not seem imperative to provide a remedy. Indeed the undue size of the Boards is in a measure neutralised by the paucity of constant attendants; and the members who do constantly attend in an unpaid body are those who take a genuine interest and pleasure in the work.

67. We received evidence on behalf of the Conference of Harbour Authorities in Ireland in favour of giving the various Harbour Boards some representation on the Board of Irish Lights, which was characterised as a "Dublin Board." The examination of these witnesses showed that they had hardly thought out their proposals with sufficient care or knowledge, and that they were by no means unanimous as to the change which they desired to see introduced into the existing system. The addition of representatives elected by Harbour Boards to the General Lighthouse Authority for Ireland was strongly opposed, both by Sir William Watson on behalf of the Irish Lights Commissioners, and by Alderman Lawther, of Belfast, mainly on the ground that such representatives would inevitably be the mouthpieces of sectional interests. The same view was also expressed by Mr. Llewellyn Smith. We think there is force in this objection, and the proposal is not one we are able to support.

5757. 4636. 6159.

No doubt it is anomalous that Dublin should contribute five *ex officio* members to the General Lighthouse Board when no other seaport town in Ireland sends any. But if it be considered worth while to remove this anomaly, we think the better way would be to eliminate the Dublin representatives (who seldom take an active part in the work of the Board) rather than increase the number of the Commissioners by adding to them representatives of other localities.

The Board of Trade.

68. Possibly the Terms of our Reference do not require us to consider the part which the Board of Trade plays in the system of Lighthouse Administration, or to inquire into the manner in which the financial control which belongs to it is exercised. As, however, that control has been criticised on the one hand for being inefficient and in fact amounting to no more than a power of audit, and on the other for being so rigidly exercised as seriously to diminish the responsibility of the Lighthouse Authorities in the ordinary work of administration, we think it right to say that neither of these allegations is sustained by the evidence. The Lighthouse Authorities themselves are unanimous in regarding the financial control of the Board of Trade as

5080 5463 5800

a real control, and equally unanimous in declaring that they are helped and not hindered by it. To relieve the Board of Trade of its present functions of supervision and control over the Lighthouse Authorities and transfer them to a new *ad hoc* body is not a course we are prepared to recommend.

The Advisory Committee.

69. The relations of the Advisory Committee to the Lighthouse Authorities, and its place in the general system require to be carefully considered. Unfortunately, as we have already had occasion to indicate, we have not been favoured with any evidence from the Advisory Committee themselves, as they were of opinion that the Terms of Reference were not sufficiently comprehensive to enable them usefully to appear as witnesses. On the other hand, we have had an opportunity of reading the verbatim reports of the Conferences in which they have taken part since their institution, and we have also heard testimony from various quarters bearing on the extent and character of their contributions to the cause of sound administration.

5448 On this subject great divergence of opinion appears to exist. The Commissioners of Northern Lighthouses are frankly hostile to the Advisory Committee, and would like to see it abolished. So far as Scotland is concerned they consider that the Annual Conferences have contributed nothing either to the public service or to the despatch of business, and that the Advisory Committee has put forward no useful suggestions.

4948 A more favourable view was expressed on behalf of the Trinity House by Sir George Vyvyan, although he too describes the attitude of the Committee as one of systematic opposition to proposed expenditure on New Works, based less on the merits of each case than on the feeling of the shipowners that the money comes out 5688 of their pockets. Sir William Watson, speaking for the Commissioners of Irish Lights, took a similar view; on the whole he thought that the Advisory Committee had worked well, and had been of service; but he considered that its members were too much influenced by local and special interests, and too anxious to keep down expenditure.

The Advisory Committee was called into existence primarily for the purpose of advising the Board of Trade before sanction is given to proposals for New Works. We should be inclined, therefore, to attach greater importance to the opinion which the Board of Trade have formed of its practical utility than to the views of the Lighthouse Authorities, with whom the duty of making proposals for 6088 New Works lies. Mr. Llewellyn Smith had no doubt that the Board of Trade had derived advantage from the appointment of the Committee. He says: "I think we do derive value from its advice, and that might be expected to increase. Of course, there is no doubt that the benefit would be greater in some ways if the shipowners did not happen to be so much engrossed with their campaign against the payment of the Light Dues. That colours, to some extent, the proceedings, but that can scarcely be avoided at present, and I would say decidedly that we do derive benefit from the Advisory Committee."

70. Reviewing all the evidence available, we believe these remarks of Mr. Llewellyn Smith are a fair summing up of the case. When the Advisory Committee was first created there was evidently a good deal of friction between them and the Lighthouse Authorities. Since then the friction has greatly diminished, and relations have become less strained; but the Committee are still dominated by the feeling that they are there as watch dogs for the payers of dues, and their instinct is to resist expenditure rather than to consider whether money may be wisely spent. The Board of Trade can, and do, discount this attitude, and they have repeatedly overruled the objections of the Advisory Committee; on the other hand they value the Committee, because by its means they are put in possession of the views held by shipowners and others represented on it, and they feel it to be advantageous that these views should have a hearing before New Works of a costly character are undertaken.

71. While, however, we agree in regarding it as undoubtedly desirable that provision should be made for giving those who are now represented on the Advisory Committee a voice in expenditure of this kind, we very much question whether the plan adopted by Lord Ritchie is the best that could be devised. It appears to us not only cumbrous, but calculated to accentuate those very defects in the Advisory Committee which both the Lighthouse Authorities and the Board of Trade have pointed out.

The stages in the procedure with respect to New Works are as follows:

1. The General Lighthouse Authorities submit rough estimates to the Board of Trade, in the autumn of each year, of the New Works proposed to be constructed during the next financial year, commencing April 1st. 14.

2. These estimates are printed and discussed at a preliminary Conference held in December between the Board of Trade and the three Lighthouse Authorities.

3. The revised estimates are sent to the Advisory Committee for their consideration.

4. A second Conference takes place in January or February, in which the Board of Trade, the Lighthouse Authorities, and the Advisory Committee all take part. The proceedings at this Conference are thus described by Mr. Pelham, who has been present at all of them. "At this latter Conference," he says, "each item is dealt with separately, and the reasons which have led to the necessity for the work are explained by representatives of the General Lighthouse Authorities. In the case of works proposed by the Scotch or Irish Boards, the opinion of the Trinity House is taken. The Advisory Committee are invited to express their opinion as to the desirability of the New Works proposed by any of the Lighthouse Authorities. They are also asked if they wish to suggest any new lighthouses or buoys. Very often the Nautical Adviser of the Board of Trade is asked by the President to give his views. In some cases the President gives his decision at the time, but in other cases the decision is reserved by the President for further consideration, and further information is obtained and submitted to the Advisory Committee, who submit their views by letter." 14a.

The procedure above described certainly seems a round-about way of arriving at the desired result, and one likely to lead to a very unnecessary multiplication of correspondence. But we think it has other and still graver defects. In the first place its inevitable tendency must be to throw the Lighthouse Authorities on the one side, and the Advisory Committee on the other, into hostile camps, with the Board of Trade acting in the difficult position of umpire between them. In the second place, and in close connection with this first defect, the procedure does not appear to us well adapted for securing a really thorough and impartial discussion of the merits of the various proposals that are put forward. The Lighthouse Authorities and the Advisory Committee meet once in the year at opposite sides of a table. The Advisory Committee have been made acquainted beforehand with the proposals of the Lighthouse Authorities, but not with the reasons on which those proposals are grounded. They come with a strong bias on the side of resisting expenditure, and perhaps even definitely committed to opposition to particular proposals, and they hear what the Lighthouse Authorities have to say in support of those proposals for the first time, and practically without any opportunity for further consideration of them in private. If the Advisory Committee have themselves any suggestions to put forward for new seamarks (not a very common case), it is impossible for the Conference to discuss these adequately on the spur of the moment, and they have necessarily to be postponed to the following year.

72. We think the most effective remedy for the defects to which we have called attention would be found in a complete remodelling of the Advisory Committee, by placing on it, in addition to the elements which it now contains, representatives of the three Lighthouse Authorities and of the Board of Trade. We have accordingly included a scheme of this nature in our recommendations. With an Advisory Committee thus strengthened it might also be possible and desirable somewhat to enlarge its functions.

It may be of interest to point out that a scheme on the lines indicated recalls a more or less similar recommendation made by Lord Courtney's Committee, but never carried out. "From the evidence brought before us," say Lord Courtney's Committee (Sec. 71), "we unanimously recommend the formation of a small Committee containing representatives, possessing, so far as possible, nautical knowledge, of the Trinity House, the Scotch Board, and the Irish Board, which

should be summoned at least once a year to advise the Board of Trade upon the advisability of all New Works, whether in respect of lighthouses, lightships, steamers, buoys, or signals, together with all renewals, alterations and important repairs." It seems probable, though the words are not quite free from ambiguity, that Lord Courtney's Committee meant to confine the members of the proposed Committee to representatives of the three Lighthouse Authorities. This recommendation may have suggested to Lord Ritchie his own very different plan of an Advisory Committee consisting wholly of representatives of shipowners, underwriters, and merchants. Our own scheme would be in some sort a combination of the two.

Trinity House Control over the Scottish and Irish Commissioners.

73. As has been already stated, the Trinity House, under the Merchant Shipping Act, 1854, are invested with a statutory control over the other two General Lighthouse Authorities in respect of the exercise of their "Lighthouse powers." Some objections were urged against this control, principally by the Northern Lighthouse Commissioners. The Irish Lights Commissioners were, on the whole, satisfied with it, though they would have preferred a return to the practice followed
3092 some years ago, when the Trinity House concerned themselves only with the character and utility of proposed new lights instead of insisting on a detailed financial examination into the cost of erection and maintenance. The Trinity House
5094 themselves were of the opinion that the control was salutary, in default of any nautical element on the other two Boards, but they professed themselves not
5081, 5094. unwilling to forego it should this latter modification be introduced. The Board of Trade did not in practice attach very much importance to the control, as such. In the last resort an appeal always lay to themselves, so that in fact the position of the Trinity House in this connection was rather advisory than one of real power. On the other hand the Board set great value upon the expert advice which they received from the Trinity House. So long as full opportunity of calling for this was reserved to them, they were not so much concerned about the form in which it was furnished.

The grievances of the Northern Lighthouse Commissioners have apparently arisen more from the way in which the Trinity House control has latterly been exercised, and from a somewhat detailed supervision that has been pressed, perhaps at times needlessly, than from any inherent objection to the principle itself. At the same time they point out that it is somewhat anomalous for one spending department to have financial control, however slight, over other claimants on the same fund.

That the tendency has been, of recent years, to make the control more close
3092. 5086. and more searching than it formerly was is evident from the remarks of the Irish Lights Commissioners. This greater stringency may have had its justification. But we are of opinion that the principal objects aimed at—namely, uniformity and an assurance that no new seamark shall be set up without full consideration from nautical experts—can be equally well secured without offending the susceptibilities of either of the junior Lighthouse Authorities, and with less complication of administrative machinery.

74. The addition of a Trinity House Elder Brother to the Scottish and Irish Boards, which is one of our recommendations, will at once supply that expert element
5094. which, in Sir George Vyvyan's opinion, would justify the elimination of the Trinity House control, and also help to secure such uniformity as the interests of the Lighthouse Service as a whole demand.

But beside this, if our suggestions for a remodelled Advisory Committee are carried out, all proposals for New Works, no matter from what source they may come, will have to be submitted to this Committee, whose conclusions the decision of the Board of Trade would, we anticipate, in the large majority of cases follow.

With these two safeguards, we think the statutory control of Trinity House over the Scottish and Irish Boards might either be abolished, or at least cease to be more than a mere form. To abolish it altogether would be the most satisfactory plan. On the other hand this would require legislation; and the same end would in practice be attained if the Trinity House, with the approval of the Board of Trade, would consent to allow their statutory control to lapse into desuetude.

(IV.) CONCLUSIONS AND RECOMMENDATIONS.

75. We have now considered at some length the existing authorities and methods by which the administration of the Lighthouse Service in these Kingdoms is carried on, and the faults which are alleged against them. It remains for us to gather up the conclusions at which we have arrived, and to develop in greater detail the changes which we have already briefly indicated as being, in our opinion, desirable in order to remove or mitigate the defects which have been disclosed.

76. It will have been clear from the general trend of our observations up to this point that the evidence before us has not brought to light any crying abuses, and that we are consequently not disposed to recommend any radical changes. Should the time ever come when the Light Dues are remitted and the expense of lighting the shores of the United Kingdom is made a national charge, some comprehensive reconstitution of the whole scheme of Lighthouse Administration might perhaps be inevitable. But as matters stand, it appears to us that it would be injudicious to cast into the melting pot of legislation Authorities which, venerable though they be, have done and are still doing good service to the country, and a system which, albeit evolved many years ago, has yet in the main worked reasonably well.

(*a*) It has been almost universally admitted by the expert and unprejudiced witnesses before us that the lighting of the coasts of these islands is as good as, if not better than, that of any other country. This would appear to afford at least a *primâ facie* case for supposing that there can be no very glaring defects in the administration.

(*b*) We have been unable, after a very close scrutiny, to detect any evidence of unreasonable expenditure or of inefficient service sufficient to justify us in characterising the administration generally as other than sound.

77. We are content, therefore, to address ourselves to the remedy of those defects and anomalies in the existing system which can be dealt with without danger of destroying its entire fabric.

Our recommendations, although they fall under three heads, are to some extent interconnected. They are concerned with :—

(1.) The composition of the three General Lighthouse Authorities.

(2.) The Advisory Committee.

(3.) The controlling power of the Trinity House over the other two Lighthouse Authorities.

78. (1.) There is no doubt in our opinion :—

(*a*) That some system of superannuation or pension should be applicable to the Elder Brethren of the Trinity House.

(*b*) That some expert element should be admitted to the Scottish and Irish Boards.

79. (*a*) We therefore recommend that a new charter should be granted to the Trinity House, as was done in 1871, by which it would become the duty of the Corporation to establish a compulsory age for retirement on pension of the Elder Brethren. We would suggest £300 a year for the pension, and for the compulsory age of retirement 65, with power to the Board of Trade to sanction an extension of service up to 70 for cause shown. Arrangements might also be made for retirement at an earlier age in case of ill-health or incapacity. There are at present 13 Acting Elder Brethren. Assuming that not more than three of these would ordinarily have been retired on pension at any given time, ten at least would remain available, two of whom we contemplate should be attached to the Scottish and Irish Boards. There would thus be eight Elder Brethren left for discharging the Lighthouse and other public duties of the Corporation. It is, of course, possible that more than three of the Elder Brethren might be pensioners at a given time, and this contingency must be provided for. In that case we think it should be made competent to the Elder Brethren, if they see fit, to elect additional members to their body to the extent of the number of pensioners in excess of three.

If these arrangements were carried out, we consider that the pension money could be supplied out of the sum of £7,000 a year which is at present set apart for the remuneration of the Elder Brethren, without risk of unduly affecting the emoluments of those who were in active service. It would be understood that the retired Elder Brethren would cease to discharge any pilotage, assessor, or other similar duties, or to receive any remuneration for such duties. In making these suggestions we do not propose that the rights of existing Elder Brethren should be affected, unless any of them should elect to benefit by the new rule.

Should it be found impossible to effect an alteration on these lines in the constitution of Trinity House by Royal Charter, either because of objections on the part of Trinity House or otherwise, we recommend that a short Bill should be submitted to Parliament embodying the necessary provisions.

80. (*b*) There is, in our opinion, no doubt that the Northern Lighthouse Commissioners and the Irish Lights Commissioners would be materially strengthened by the addition of an expert naval or shipmaster element.

We therefore recommend that two Acting Elder Brethren should always be deputed by the Trinity House to reside one in Edinburgh and one in Dublin for a term of not less than one year, and should attend the meetings of the Scottish and Irish Boards, and serve on Committees of those Boards in every way as if they were members of them by statute. In the absence of legislation the consent of the three Boards to this arrangement would, of course, be necessary, but we venture to hope it would be readily given. The Elder Brethren attached to the Scottish and Irish Boards would not in that case be actually entitled to vote, but their knowledge and experience and the prestige of their position would probably render this unimportant. They would be paid professional men in constant touch with their own Corporation, and we believe that their advice and opinions, even though they might not always be followed, would be received with the highest consideration by the Boards to which they were assigned.

81. Two additional advantages may fairly be anticipated from this proposal :—

(*a*). It would help to secure uniformity in the lighting of the coasts of the three Kingdoms.

(*b*). A mutual interchange of ideas and information would necessarily grow up between the three Authorities as the various Elder Brethren successively took their turn of being attached to the Scottish and Irish Boards; and it is even possible that occasion might be found for more active forms of co-operation, for instance, by purchase of stores in common, or by utilisation of each other's resources and appliances.

82. Should it appear necessary for the two Elder Brethren serving in Scotland and Ireland to receive any additional allowances to indemnify them for any special expenses incurred through change of domicile, we consider that such allowances might properly be furnished, with the concurrence of the Board of Trade, out of the General Lighthouse Fund.

83. (2.) We recommend that the Advisory Committee as now composed should not in future be summoned by the Board of Trade, but that in place of it a new Committee should be set up by minute of the Board, to consist of 12 members, viz. :—

2 Officers of the Board of Trade, one of whom would act as Chairman of the Committee;
1 Representative of the Hydrographic Department of the Admiralty (this would, of course, be subject to the Admiralty's consent and approval);
2 Elder Brethren of the Trinity House;
1 Representative of the Northern Lighthouse Commissioners;
1 Representative of the Irish Lights Commissioners;
3 Shipowners;
1 Representative of Lloyd's;
1 Representative of Cargo-owners.

The last five should be nominated by the Board of Trade, in consultation with the Associations concerned. The representation of master mariners would be secured by the inclusion of two members of the Trinity House. We propose that the Committee should be called the "Lighthouse Committee for the United Kingdom," and be provided with a Secretary from the Board of Trade.

84. The official minute which sets up the new Committee should also define its functions. Its primary duty would be to report to the Board of Trade on all proposals for the establishment of new seamarks. Every such proposal, whether submitted to the Board of Trade by one of the General Lighthouse Authorities or coming from outside sources, would as a matter of regular routine be sent on for consideration and report to the Lighthouse Committee. It would be an understood thing that no proposal for a new seamark which had failed to obtain the approval of a majority of the Committee should receive the sanction of the Board of Trade. On the other hand it would be open to the Board of Trade to refuse their sanction even when a proposal had been approved by the Lighthouse Committee, though it is reasonable to hope that a case of this kind would not often occur. We also venture to hope that when a proposal had been approved by the Lighthouse Committee and sanctioned by the Board of Trade, the Lighthouse Authority concerned would invariably accept the decision and proceed to carry it out without demur, even (it might be) against its own judgment of the merits of the case. If, however, experience should prove this hope to be over-sanguine, it would be necessary to introduce legislation, making the Lighthouse Committee a Statutory Body and giving to the Board of Trade the power to require a General Lighthouse Authority to carry out any proposal for the establishment of a new seamark which had been both approved by the Lighthouse Committee and sanctioned by the Board of Trade itself. This would in our opinion be the best and least objectionable way of giving effect to the suggestion put forward by Mr. Llewellyn Smith, that in the last resort the Board of Trade should have power to require the Lighthouse Authorities to carry out any New Works which the Board is satisfied are necessary—a power which he admitted would need to be carefully hedged about with safeguards if the danger of conferring or seeming to confer on the Board an initiative in the matter of New Works is to be avoided. 6089-6059

85. In addition to the duty of reporting on proposals for new seamarks, we think the Lighthouse Committee might be called upon to report on other questions connected with the Lighthouse Service, particularly upon questions relating to :—

(*a*) Renewals, alterations and special repairs,

(*b*) Experimental investigations,

(*c*) Efficient organisation of the administrative services,

(*d*) Increase or reduction of Light Dues.

But as regards these matters we consider that it should be entirely within the discretion of the Board of Trade to refer them to the Lighthouse Committee or not as it thought fit; nor should the Board be in any way bound by any report on such points which it might receive from the Committee.

On all matters referred to them by the Board, whether concerned with the establishment of new seamarks or otherwise, the Committee should be entitled to call for papers and records, and to be supplied with all necessary information by the General Lighthouse Authorities.

86. (3.) Following on the above recommendations, we think that the controlling power of the Trinity House over the other two Lighthouse Authorities may cease to be exercised.

To this end we do not consider any legislative change essentially necessary. Probably it would be sufficient for the Board of Trade to desire the Trinity House, as indicated at Paragraph 74, to examine into and to report at length upon the proposals of the two other Boards only when specially requested to do so. The supervision of the Trinity House would thus in practice cease.

87. The above embody our principal proposals. We would add to them two minor recommendations :—

(1) We think it desirable that a detailed examination should be undertaken, by the Board of Trade and the Trinity House conjointly, into the expediency of removing the Blackwall Workshops to some other locality, and, should it appear advisable, into the entire question of the plant, output, and economy of that establishment.

(2) We consider that the Board of Trade should, so far as may be found practicable, cause the accounts of the three General Lighthouse Authorities to be prepared in such a manner as to render them more easily comparable than at present.

SUMMARY

88. Summarising our recommendations they are : —

(1) The institution of a system of retirement with pension for the Acting Elder Brethren of the Trinity House.

(2) The assignment of an Elder Brother of the Trinity House to act as assessor to the Scottish and Irish Boards respectively.

(3) The setting up of a new Lighthouse Committee for the United Kingdom, in place of the existing Advisory Committee, but with a more established position and a wider scope of activity, to be composed of representatives of the Board of Trade, the Admiralty, the three General Lighthouse Authorities, shipowners, underwriters and cargo-owners.

(4) Abolition or disuse of the statutory control exercised by the Trinity House over the Commissioners of Northern Lighthouses and the Commissioners of Irish Lights.

(5) A detailed expert examination into the Blackwall Works Establishment.

(6) Preparation of the accounts in a form which shall make the expenditure of the three General Lighthouse Authorities more readily comparable.

89. These recommendations could be carried out without additional expense of appreciable amount either to the General Lighthouse Fund or to the public, and also, we believe, without involving any absolute necessity for recourse to fresh legislation.

90. We conclude by placing on record the very valuable assistance which we have received from our Secretary, Captain C. Bigham, C.M.G., who has discharged his duties throughout this inquiry with much ability and to our entire satisfaction.

ALL WHICH WE HUMBLY SUBMIT FOR YOUR MAJESTY'S MOST GRACIOUS CONSIDERATION.

G. W. BALFOUR, *Chairman*

F. FORBES ADAM.

M. A. ENNIS.

CLIVE BIGHAM, *Secretary.*

29 *January*, 1908.

RESERVATIONS BY MR. M. A. ENNIS.

With four of the six Recommendations contained in the foregoing Report, viz., Nos. 1, 2, 5, and 6, I am in full agreement. With the principle embodied in No. 4 I also agree and differ from my colleagues only with regard to the method by which that principle should be applied. With Recommendation No. 3 I am in direct conflict.

In this position I feel that I should not be justified in refusing to sign the Report, although I have arrived at this conclusion with very considerable difficulty owing to the fact that my opinions diverge widely from those of my colleagues on several important points not covered by the Recommendations, and my signature must therefore be taken to indicate a limited acquiescence only subject to the following reservations.

On two cardinal points I find myself unable to accept the views of my colleagues as set forth in various portions of the Report :—

1. The relative efficiency of the present service of Lights, Buoys, and Beacons on the coasts of the United Kingdom as compared with similar services on the coasts of foreign countries, notably of France.
2. Reform of the Constitution of the three General Lighthouse Authorities with the view to secure a higher standard of administrative efficiency, coupled with the question of the retention in an amended form or of the abolition of the Advisory Committee.

The Report states, Paragraph 76 :—

"It will have been clear from the general trend of our observations up to this point that the evidence before us has not brought to light any crying abuses and that we are consequently not disposed to recommend any radical changes." . . . . . (*a*) "It has been almost universally admitted by the expert and unprejudiced witnesses before us that the lighting of the coasts of these islands is as good as, if not better than, that of any other country. This would appear to afford at least a *primâ facie* case for supposing that there can be no very glaring defects in the administration."

I agree that our Inquiry has not disclosed any very glaring defects or crying abuses in the administration of the Lighthouse Authorities, but it does not necessarily follow that a higher standard of efficiency combined with greater economy is unattainable.

I further agree that a fairly high standard of efficiency has been reached in the administration of the three General Lighthouse Authorities, especially by the Commissioners of Northern Lighthouses.

I am not, however, prepared to regard the existing standard of efficiency as indicating "that the lighting of the coasts of these islands is as good as, if not better than, that of any other country."

It appears to me at least doubtful whether the lighting of the coasts of the United Kingdom is equal to the lighting of the coasts of France.

In this connection it may be useful to refer to the Report of the Royal Commission of 1861 on the Condition and Management of Lights, Buoys, and Beacons.

I quote as follows therefrom :—

"*Lighthouses.*

"The following Table shows the number and the nature of the Lights in the United Kingdom :—

Country.	Lights on Shore.			Floating Lights.	Total.
	General Authority.	Local Authority.	Total.		
England	82	89	171	41	212
Scotland	46	67	113	1	114
Ireland	69	4	73	5	78
Total	197	160	357	47	404

"Of all the Lights under the General Authorities, and about half of those under the Local Authorities, Your Commissioners have obtained full returns, which will be found at length in the 2nd Volume. The Lights on shore, for which returns have been received, are classified in the following Table:—

Authority.	Light-houses.	Catoptric.	Dioptric or Catadioptric.	Apparatus not stated.	Order of Dioptric Apparatus.					
					1st.	2nd.	3rd.	4th.	5th.	6th.
England:—										
Trinity House - - - - -	82	51	31	—	20	8	—	1	—	2
Local - - - - - -	49	35	14	—	1	1	3	4	2	2
Scotland:—										
Commissioners of Northern Lights	46	14	32	—	16	4	—	9	—	—
Local - - - - - - -	24	13	3	8	—	—	—	—	—	—
Ireland:—										
Ballast Board - - - - -	69	51	18	—	10	1	4	3	—	—
Local - - - - - - -	6	—	3	3	—	—	—	—	—	—

"The Index Map at the end of Vol. I. shows the *position* of the Lighthouses in the United Kingdom, and on a portion of the French, Belgian, Dutch, and Norwegian coasts. Very few complaints are made as to the position of Lighthouses by mariners, or the agents of Lloyd's, and those which are made are generally confined to three or four sites.

"It will be seen, by looking at the Map, that the number is sometimes *insufficient*, because vessels might be within a very short distance of some parts of the coast, and beyond the estimated range of any lighthouse, even in clear weather; for instance, at Great Orme's Head on the approach to Liverpool.

"The circles of lights on the Index Map are taken from the Map published by the Board of Trade, and represent the column in the Admiralty List of Lights headed '*Miles seen in clear weather*;' but from the evidence before us, and from our own observations, the lights are not uncommonly seen at much greater distances. Any attempt to make lights so brilliant or so numerous as that one at least should be visible in fogs which are dense enough to obscure the sun, would necessarily fail; but any increase in the brilliancy of the lights will increase their range in hazy weather, and make them more efficient; and their number ought to be such as to ensure that one or more may always be within sight of a ship approaching a danger in ordinary weather.

"The west coasts of Scotland and Ireland are still *insufficiently* illuminated; and the Channel Islands lying near the track of ships bound up Channel, and surrounded by rapid tides, have been left in a state of blameable darkness, although a light is now being erected on the Hanois Rocks on the west coast of Guernsey. A reference to the Index Map will best show the *positions* where the *number* of lights is *sufficient* or *insufficient*.

"It will be observed, as respects *number* and *position* of lights, that the British coasts are *not* so well guarded as the French, for the lights are purposely so placed on the coasts of France as to 'cross their fire.'

"This may also be tested by comparing the proportion between the number of lights and the amount of coast line in England, Scotland, and Ireland, with the proportion between the number of lights and the coast line in France. The measurement of the coast line and of the islands in the respective countries is given in a Table in

Vol. I., p. 222; the number of Lighthouses is taken as before from the Admiralty List. From these data the following Table is constructed :—

Country.	Number of Lighthouses on shore.	Coast Line.	Propo. tion.
		Nautical miles.	
England - - - - - - - -	171	2,405	1 for 14.0 Miles
Scotland - - - - - - - -	113	4,469	1 „ 39.5 „
Ireland - - - - - - - -	73	2,518	1 „ 34.5 „
France - - - - - - -	224	2,763	1 „ 12.3 „

"Hence it appears that the lighthouses in France are more than three times as numerous, compared with the amount of coast, as in Scotland; but a considerable allowance must be made for the very large amount of mileage afforded by the Scottish islands and the bays on the Irish coast, which do not require a commensurate amount of lighting, as a light on an island or on one side of a channel will often obviate the necessity of a light on the main land, or on the other side. The lights in France appear to be nearly three times as numerous, comparatively speaking, as those in Ireland; but if to the 73 Irish Lighthouses be added the 5 floating lights, the discrepancy is somewhat reduced. In England too there seems at first sight to be a somewhat smaller provision made for illuminating the coasts than in France, yet if the 41 English floating lights be added to the 171 Lighthouses, as indeed justice requires, England will be found to provide a light for every 11·37 nautical miles of coast, while France furnishes one for only every 12·3 miles.

"As to the *position* of lights in France and in England, there is this notable difference: the English lights have been steadily and gradually increasing in *number* during the last two centuries and a half, additional lights having been placed, from time to time, wherever the interests of commerce demanded, and a sufficient pressure was exerted; while, on the contrary, the French lights were very few till 1825, when a grand comprehensive plan was undertaken of erecting a large *number* of additional lights, on what were considered the best *positions*, and of remodelling the whole system.

"The coasts of the United Kingdom are better guarded than those of Holland, Norway, or perhaps any other country, excepting France. . . . . .

"*Quality compared with Foreign Lights.*

"With reference to *the quality of the lights of the United Kingdom as compared with foreign lights*, the answers to Questions 4 and 5 of Circular VIII. show that the majority of the mariners who use them consider British lights generally to be at least equal to all others in the world, and that those of France rank next. Out of 586 who have replied to Question 4, 'Do you think that the coasts of the United Kingdom are as well lighted as any of the foreign coasts which you have already named?'—514 consider the coasts of the United Kingdom as well lighted as any others with which they are acquainted, while in reply to Question 5, 'If you think that the coasts of the United Kingdom are not so well lighted as those of any other country or countries, name those countries in the order in which you prefer their lights'—out of 311, 200 express their preference of the British lights, and only 33 prefer those of any other country. Nor is this due to any patriotic prejudice in favour of England, for of the 34 masters of foreign vessels who have answered Question 4, 24 think England as well lighted as any other country they know; one is doubtful; but not one foreigner prefers the lighting of any foreign shore.

"These comparisons by the 200 mariners who prefer British lights and the 33 who prefer those of some other country have, however, been more closely analysed; and it appears that out of the 200, only 42 profess to be well acquainted with the coasts of France, while it must be remembered there are 25 who express a preference for the French lighting. This weight of evidence, therefore, in favour of the United Kingdom as compared with France is not great. Many circumstances also must interfere with the accuracy of such comparisons; for instance, on the one hand an advantage is given

to foreign countries by the greater clearness of the atmosphere, and, on the other hand, an advantage is given to Great Britain by its shores being the usual landfall of those mariners who have replied to the questions."

A study of the foregoing seems calculated to lead to the conclusion, notwithstanding the replies to Question 4, which are somewhat discounted by the Commissioners' remarks thereon, that at the date of the 1861 Report the lighting of the coasts of the United Kingdom compared unfavourably with the lighting of the coasts of France.

Since 1861 the Lighthouses and Lightvessels on the coasts of the United Kingdom under the control of the three General Lighthouse Authorities have increased in number as set forth in the following Table (Appendix A-VII.):—

	Lighthouses.		Lightvessels.	
	1861.	1906.	1861.	1906.
Trinity House - -	82	93*	41	52
Northern Lighthouses - - -	46	91†	1	1
Irish Lights - - - - - -	69	75	5	11
	197	259	47	64

† 82 Lighthouse stations, including 11 double stations.
1 Double station.

This discloses an increase of about 29 per cent. in Lighthouses and 36 per cent. in Lightvessels.

During the same period the number of "Local Lights" on the coasts of the United Kingdom has enormously increased, as shown by the following comparison between the figures quoted in the Report of 1861 and the current Admiralty List:—

	1861.	1906.
England and Wales - - - - - -	89	882
Scotland - - - - - - - -	67	405
Ireland - - - - - - - -	4	203
	160	1,490

disclosing an increase of over 830 per cent., which, however, is far more apparent than real, as the Admiralty Lists now contain a large number of lights which can with great difficulty be regarded as of much navigational value.

Thus of 882 "Local Lights" within the jurisdiction of Trinity House about 108 only can reasonably be classed as Lighthouses. Between 50 and 100 lights are erected on promenade piers. The Corporations of Bristol (51), Wisbech (24), and Preston (39), control over 100 lights. Numerous private individuals and firms have also erected lights which are entered in this list. The Manchester Ship Canal appears for a few lights, and the various Railway Companies account for over 150 lights, a larger number than the General Lighthouse Authority holding jurisdiction within the same area controls.

Lighthouses on the coasts of France number at present 534, as compared with 224 in 1861, an increase of over 138 per cent.

Lightvessels on the same coasts number 7, as compared with 2 in 1861, an increase of 250 per cent.

The coastline mileage of France is 2,970 nautical miles.

The proportion of lights to coast mileage is, therefore, 1 in 5·5 miles.

Without more exact data as to the number of Lighthouses included in the list of Local Lights on the coasts of the United Kingdom, I cannot accurately state the exact proportion between lights and coastline mileage. I believe the following figures to be approximately correct, but probably to over-estimate the actual number of Lighthouses:—

Total number of Lighthouses, United Kingdom - - -	506
,, Lightvessels ,, ,, - - -	64
	570

Coastline mileage, United Kingdom :

England and Wales - - - -	2,317	Nautical Miles.
Scotland - - - - -	4,557	,, ,,
Ireland - - - - - -	2,518	,, ,,
	9,392	

The proportion of lights to coast mileage is, therefore, 1 in 16·4 miles.

Consequently it would appear that for each 16½ miles of coastline France possseses 3 lights, and the United Kingdom 1.

Turning to the question of the intensity and character of lights, the Engineers and Scientific Advisers of each of the three General Lighthouse Authorities agree that whilst electric light is not in their opinion worth the high cost of its installation and maintenance, its efficiency apart from its cost is greater than that of any other illuminant. (Questions 2200, 2207, 2510, 2516, 4138, 4140, 6040.)

Mr. D. A. Stevenson, B.Sc., M.I.C.E., Engineer to the Commissioners of Northern Lighthouses, states in his evidence (Question 2516) :—

"Some people think it is not a good illuminant for a Lighthouse, but it is ; it is the very best. I have not the least doubt in my own mind it is the best illuminant for a Lighthouse, bar the expense."

The French coastline is provided with 13 powerful electric lights, the coasts of the United Kingdom with 5. I cannot profitably endeavour to compare the relative intensities of these lights, as the British Authorities challenge the accuracy of the French method of computation, which gives 29,000,000 candle-power for Grisnez and similarly large figures for other important lights.

As to cost, the French Ministry of Public Works estimates the average annual cost during the past three years of the French Lighthouse Service as 3,100,000 francs, plus 100,000 francs for Head Office expenses, and a further considerable sum, which cannot be definitely stated, for the services of a large staff of local engineers and officials who have numerous other duties to perform in addition to those connected with Lighthouses, Buoys, and Beacons.

In any comparison as to cost it must, in justice to the British Authorities, be borne in mind that Rock and Island Lighthouses and Lightvessels, which are numerous on the coasts of the United Kingdom, cost enormously more to erect and to maintain than Mainland Lights, of which the French Service is chiefly composed.

Various witnesses admit that expenditure on experimental work in the United Kingdom has been inadequate. Probably, as a result, we find that most of the important modern inventions in aid of marine lighting, such as mercury floats, hyperradiant lenses, etc., have come from France and other countries. (Questions 3007, 3011, 5233.)

The modern development of vessels of great tonnage, high speed and heavy draught appreciably increases the dangers of collision and stranding in fog, and renders attention to effective fog-signalling imperative. Anything calculated to avoid "areas of silence" deserves careful investigation, and the submarine bell adopted by foreign countries some years since does not appear to have received in these islands the attention to which the favourable opinion expressed by many witnesses would appear to entitle it. (Questions 2651, 3664, 4125, 4225, 4296, 5945, 5946, 6036.) The refusal of the Trinity House to permit the Zeeland Steamship Company to carry out at the Company's expense experiments with this admittedly valuable invention indicates a conservatism on the part of the General Lighthouse Authority not calculated to keep a modern Service of ever increasing importance abreast of modern invention. (Question 5039.)

I quote from an address delivered in January, 1905, to the Canadian Society of Civil Engineers by Lieutenant-Colonel W. P. Anderson, M.I.C.E., F.R.G.S., Chief Engineer of the Canadian Department of Marine and Fisheries :

"A modern lightship such as those lately moored off Anticosti and off Lurcher Shoal in the Bay of Funday is a perfect battery of ingenious mechanisms. From the electric lights at her mastheads automatically occulted by clockwork, making and breaking the current produced by a dynamo in the engine room, to her moorings connected with powerful automatic buffers and steam windlasses to relieve the strain on her bows, she is full of interesting machinery. She is self-propelling, provided with

a powerful fog alarm, a submarine bell, and a Marconi telegraph instrument. For the design of these vessels we are indebted to the United States Lighthouse Board, whose plans were adopted under the conviction that its long experience with lightships in the open Atlantic was too valuable to be ignored."

We do not appear to have any modern lightship of this advanced type on the coasts of the United Kingdom.

I may summarise my views on this branch of the subject by stating that the United Kingdom does not, in my opinion, hold that front rank position with regard to the Lights, Buoys, and Beacons on her coasts which her maritime supremacy and the enormous volume of her seaborne trade would appear to demand.

In considering the questions of the Constitution of the three General Lighthouse Authorities and the position of the Advisory Committee the Commissioners appear to be agreed that the Constitution of each of the three General Lighthouse Authorities, especially the Trinity House and the Commissioners of Irish Lights, is unsatisfactory and capable of improvement.

We are also agreed that the absence of an expert nautical element is a source of weakness to the Scottish and Irish Boards, which we desire to remedy.

I am of opinion that the absence of a commercial element may also conceivably be a source of weakness to a highly expert body, from a nautical point of view, such as the Trinity House, whose business methods do not appear to me to be quite as efficient as those of the sister authorities, especially of the Commissioners of Northern Lighthouses.

I regard the original appointment of the Advisory Committee as an error of judgment. It was, as stated in the Report, Paragraph 23, a compromise with regard to the request of shipowners that direct representation on the three General Lighthouse Authorities should be given to them, and, in my opinion, such representation is preferable to an arrangement whereby New Works only are submitted to this Committee, whilst at least four-fifths of the annual expenditure of the three General Lighthouse Authorities lies entirely outside their purview, the result seeming to be that economy which, spread over the whole system of administration, might be harmless and even desirable may, when applied to one particular and important branch of the Service only be excessive and hurtful.

The proposal of my colleagues to perpetuate the principle embodied in the appointment of the Advisory Committee by setting up a new Committee to be known as the Lighthouse Committee for the United Kingdom (Report, Paragraph 83), which Committee would be, like the Advisory Committee, devoid of statutory powers, meets with my strongest disapproval, and I regard as being especially objectionable the condition set forth in Paragraph 84, viz., "It would be an understood thing that no proposal for a new seamark which had failed to obtain the approval of a majority of the Committee should receive the sanction of the Board of Trade."

Some forecast of the probable result of the adoption of this recommendation may be arrived at by reference to two Returns furnished to the Commission by Mr. Pelham, Board of Trade, viz., Appendix A—I., "New Lighthouse Works objected to by the Advisory Committee," and Appendix A—II., "New Lighthouse Works recommended by the Advisory Committee."

I select for consideration the proposals of the Commissioners of Northern Lighthouses, who are probably the most practical and efficient of the Lighthouse Authorities, and I desire to point out that in the period 1901-1906 the Advisory Committee recommended for adoption one proposal only emanating from the Scottish Board, whilst during the same period they objected to no less than 20 proposals coming from the same source. Fortunately the Advisory Committee did not possess the absolute power of veto now proposed to be conferred on the Lighthouse Committee, and the Board of Trade disregarding the objections of the Advisory Committee sanctioned 16 of the proposals objected to by that body, the proposals so sanctioned involving expenditure estimated at £61,544. With regard to the remaining four proposals objected to by the Advisory Committee the Board of Trade postponed three and refused one only.

The creation of a Lighthouse Committee on the basis suggested in the Report appears to me to be calculated to deprive the Commissioners of Northern Lighthouses and the Commissioners of Irish Lights of the semi-independent position which they

have hitherto enjoyed, and by depriving them of their right of appeal to the Board of Trade to reduce them to a condition of absolute dependence upon the Lighthouse Committee, which would become in effect a new Supreme Authority.

In the reconstruction of the three General Lighthouse Authorities which I contemplate, and which I suggest hereunder, I aim at

1. A strong central control to be vested in the Board of Trade.

2. Direct representation of the Board of Trade on each of the three General Lighthouse Authorities.

3. A decentralised system of administration.

4. Uniformity of method so far as is practicable.

5. Abolition of the Advisory Committee and direct representation on each of the three Lighthouse Authorities of the interests represented by that body.

6. Abolition of the present control of the Scottish and Irish Boards by the Trinity House.

7. Direct representation of Trinity House on the Scottish and Irish Boards and consequent addition of an expert nautical element to each.

Proposed Reconstruction of Lighthouse Authorities.

Trinity House

1. The body known as "Younger Brethren" to cease to exist.

2. Existing arrangements with regard to co-option of Honorary Elder Brethren to continue in force.

3. The qualifications for Acting Elder Brethren, viz., rank of Commander in the Royal Navy, with three years command at sea, or, if in the Merchant Service, four years command at sea on foreign voyages, to continue in force.

4. Vacancies as they occur by death or retirement of Acting Elder Brethren to be filled with a view to the ultimate constitution of the Board thus :—

7 Representatives elected by Local Authorities, one from each district into which the administration of Trinity House is sub-divided, viz., Holyhead, Milford, Penzance, South-East, London, Yarmouth, and North-East.

3 Representatives of the shipowning interest elected by the Associated Chambers of Commerce of England and Wales.

1 Representative elected by Lloyd's.

1 Representative elected by Shipmasters' Association.

1 Representative nominated by the Board of Trade.

13

Commissioners of Northern Lighthouses:

The following additional members to be appointed :—

3 Representatives of the shipowning interest elected by the Scottish Chambers of Commerce.

1 Representative nominated by the Board of Trade.

1 Representative nominated by and to be an Elder Brother of the Trinity House.

5

Commissioners of Irish Lights.

A new Board to be appointed, consisting of :—

5 Members of the existing Board to be nominated by that Board before its dissolution, and to hold office for life or until voluntary retirement.

8 Representatives of Local Authorities elected, two for each Province in Ireland, by the Harbour Boards possessing statutory existence and situated within the limits of the Province.

3 Representatives of the shipowning interest elected by the Chambers of Commerce of Dublin, Belfast, Cork, Limerick and Waterford.

3 Representatives elected by the Dublin Port and Docks Board.

1 Representative nominated by the Board of Trade.

1 Representative nominated by and to be an Elder Brother of the Trinity House.

21, the Board gradually falling to 16 members as the 5 members to be nominated by the present Board die or retire.

M. A. ENNIS.

ROYAL COMMISSION ON LIGHTHOUSE ADMINISTRATION.

MINUTES OF EVIDENCE

TAKEN BEFORE THE

ROYAL COMMISSION ON LIGHTHOUSE ADMINISTRATION.

FIRST DAY.

Tuesday, 6th November 1906.

PRESENT:

The Right Hon. G. W. BALFOUR (*Chairman*).

Sir FRANK FORBES ADAM, C.I.E.
Colonel I. J. C. HERBERT, C.B., C.M.G., M.P.
Vice-Admiral W. H. HENDERSON.
Mr. M. A. ENNIS.
Captain C. BIGHAM, C.M.G. (*Secretary*).

The Hon. T. H. W. PELHAM, C.B., called in; and examined.

Hon. T. H. W. Pelham, C.B.
6 Nov. 1906

1. (*Chairman.*) You are Assistant Secretary to the Harbour Department of the Board of Trade?—Yes.

2. And it is on behalf of the Board of Trade that you are here to give evidence?—Yes.

3. Can you indicate to us the general scope of your evidence?—I propose, with your permission, Sir, to state the powers and jurisdiction of the Board of Trade and the three General Lighthouse Authorities with respect to the lighting and buoying of the coasts of the United Kingdom. I do not propose on the present occasion at any rate to make any suggestions for the alteration of the existing Authorities.

4. Can you state the extent of the jurisdiction?—The lighthouses, buoys and beacons on the coast of the United Kingdom are superintended and managed by three General Lighthouse Authorities, the Trinity House being the authority for England and Wales, the Commissioners of Northern Lighthouses for Scotland, and the Commissioners of Irish Lights for Ireland, including in each case the adjacent seas and islands. I may mention that the jurisdiction of the Trinity House also extends to the Channel Islands and Gibraltar, while the Isle of Man is included in the area of the Commissioners of Northern Lighthouses.

5. And you propose to deal with the constitution of the General Lighthouse Authorities?—Yes, I have no doubt that the witnesses for the three Lighthouse Authorities will give more detailed evidence as to the history and the constitution; I propose just to give in a general way the powers and authorities under the Merchant Shipping Acts.

6. There are also local Lighting Authorities, are there not, in addition to the General Lighthouse Authorities?—Yes, wherever there is a local Lighthouse Authority, the General Lighthouse Authorities are excluded. Most of the harbours and estuaries of rivers are lighted by local authorities, who may be Harbour Commissioners, Conservancy bodies, or sometimes private owners of harbours. In some cases, as in the Thames, the General Lighthouse Authority is responsible for the lighting of the whole port, while in other cases, *e.g.*, the Mersey, the Harbour Authority lights not only the river but a large extent of sea forming the approach to the harbour.

7. Will you describe to us the powers of the General Lighthouse Authorities and the relations of the different Boards to each other and to the Board of Trade?—The powers of the three General Lighthouse Authorities are set out in Part XI. of the Merchant Shipping Act, 1894. Their powers are subject to the control of the Board of Trade, more particularly as regards expenditure. Beginning with the Scotch and Irish Boards, any schemes submitted by them have to come through the Trinity House to the Board of Trade. Whenever the Northern Lighthouse Board or the Irish Lights Board propose to exercise any of their lighthouse powers, they have to submit a scheme to the Trinity House and through them obtain the sanction of the Board of Trade. The procedure is set out in Section 640 of the Merchant Shipping Act.

8. Will you read the Section?—The second paragraph begins:—"(2) The Trinity House shall take into consideration any scheme so submitted to them and shall make a report, stating their approval or rejection of the scheme with or without modification, and shall send a copy of the report to the Commissioners by whom the scheme is submitted.

Board of Trade control.

"(3) For the purpose of obtaining the sanction of the Board of Trade to any scheme so submitted to the Trinity House, the Trinity House shall send a copy of the scheme and of their report thereon, and of any communications which have passed with reference thereto between them and the Commissioners by whom the scheme is submitted, to the Board of Trade, and that Board may give any directions they think fit with reference to the scheme, and may grant or withhold their sanction either wholly, or subject to any conditions or modifications they think fit.

"(4) The Commissioners by whom a scheme is submitted may, before a decision on the scheme is given by the Board of Trade, forward either to that Board or to the Trinity House any suggestions or observations with respect to the scheme or the report of the Trinity House thereon, and the Board of Trade, in giving any decision on the scheme, shall consider those suggestions or observations."

The object of the requirement of the sanction of the Trinity House to works proposed by the other Lighthouse Authorities would appear to be to secure uniformity of system of the lighting of the coasts of the United Kingdom. In the case of the exercise of lighthouse powers by the Trinity House themselves there is no similar requirement that the sanction of the Board of Trade shall be obtained. This may be an omission in the Act, but as a matter of fact the Trinity House cannot exercise any of their powers which involve expenditure out of the General Lighthouse Fund without the approval of the Board of Trade.

9. The sanction of the Board of Trade is required to expenditure?—That is under Section 660, which says that no expenses for lighthouses, buoys, and beacons shall be paid out of the General Lighthouse Fund until an estimate or account has been approved by the Board of Trade. Under the provisions of that section estimates are submitted by each of the three Authorities in the month of October or November for the expenditure of the year, which commences on the next 1st of April. The new works proposed are carefully considered by a Nautical Adviser of the Board of Trade, and subsequently in the month of December a conference is held at the Board of Trade Offices

Hon. T. H. W. Pelham, C.B. 6 Nov. 1906.

between representatives of the Lighthouse Authorities, the President of the Board of Trade generally being in the chair. At this meeting the objections of the Trinity House to any of the works proposed by the other Authorities are considered, and also any objections which may be raised by the Board of Trade. An endeavour is made to bring the expenditure on new works down to a reasonable sum. Some of the works which are considered less pressing are, if the total estimates are considered too high, postponed till another year.

Advisory Committee: Constitution.

10. Of late years an Advisory Committee have been taken into counsel when proposals for new works are under consideration, is not that so?—Yes. Since the year 1899 an additional conference has been held every year at the offices of the Board of Trade between representatives of the Board, the three General Lighthouse Authorities, and an Advisory Committee representing various shipping interests. The circumstances which led to the appointment of this committee are as follows: In April, 1899, a deputation from the Chamber of Shipping of the United Kingdom, the Shipping Federation, and the Associated Chambers of Commerce had an interview with the President of the Board of Trade (Mr. Ritchie) to urge that representation should be given to shipowners and shipmasters on the Lighthouse Boards, and that the General Lighthouse Authorities should be reconstructed. Mr. Ritchie, while declining to initiate legislation for this purpose, offered that "if the Chambers of Commerce and the Chamber of Shipping would submit the names of a committee that would adequately represent the views of shipowners with respect to all questions of new works and new lights, where they ought to be, and how they ought to be placed, and what the expenditure ought to be, he would undertake that they should be called together annually to meet at the Board of Trade, and before any proposals submitted by the General Lighthouse Authorities were sanctioned the Committee should be consulted, with a view of seeing whether the wishes and objects which the shipowners desired could be secured, before consent was given to the works which were suggested."

11. And the offer was accepted by the Chamber of Shipping?—This offer was accepted by the Chamber of Shipping, by whom a scheme for the constitution of the Advisory Committee was prepared. The scheme provided that the Committee should consist of twelve members, namely:—Four shipowners representing England, two shipowners representing Scotland, two shipowners representing Ireland; all of these shipowners to be elected by the Executive Council of the Chamber of Shipping; two merchants to be selected by the Council of the Associated Chambers of Commerce; two underwriters to be selected by the Committee of Lloyd's. The Committee, which of course has no legal status, was constituted accordingly, and met for the first time in April 1900 to consider the new works proposed to be undertaken in the year 1900-1.

Functions.

The above extract from Mr. Ritchie's speech is the only authority as to the extent of the powers and duties of the Advisory Committee. It will be observed that only new works and the expenditure thereon were included amongst those subjects. Care had to be taken that the appointment of a voluntary committee should not in any way interfere with the responsibilities of the statutory Authorities, to whom Parliament had entrusted the management of the lights of the United Kingdom.

12. The functions of the Advisory Committee were not formally defined by any official reference or limit?—No, nothing of the sort; nothing except Mr. Ritchie's speech, which was taken down, and of which we have a report. The Committee was supposed to consist of experts who would be able to give advice to those statutory Authorities as to what lights were required and what were not required by the shipping interests. The shipowners, however, have never been satisfied with the limitation of the advisory duties of the Committee on the questions of new works, and at the annual meetings and on other occasions have frequently expressed the desire to widen the scope of their discussions so as to include expenditure on maintenance, salaries, pensions, etc., but the Board of Trade did not, on the grounds which I have mentioned, see their way to comply with the request.

13. It rests entirely with the Board to decide what schemes shall come before the Advisory Committee?—Entirely. In general the distinction between the proposed new works and other proposals presents no difficulty, but this is not always so. For example, in the case of the construction of a new vessel, the erection of piers and stores, and dwellings for the keepers, the question was more difficult, but the Board of Trade came to the conclusion that such works did not come within the scope of the Advisory Committee's appointment. The Advisory Committee have also asked to be allowed to criticise the salaries and pensions and other establishment expenses of the General Lighthouse Authorities; but these seemed clearly to be matters upon which it would be impolitic to consult the Advisory Committee. I may here state that the Board were advised that they had no power to pay out of the General Lighthouse Fund any remuneration to the members of the Advisory Committee, but they are allowed their travelling and other expenses, which amounted to £77 in the year 1904-5.

New Works. Procedure for initiation of.

14. Will you explain to us in more detail the procedure followed when proposals for new works have to be considered?—As already stated, the General Lighthouse Authorities submit rough estimates in October or November in each year of the new works proposed to be constructed during the financial year commencing on the following first of April. These estimates are printed and discussed at a preliminary conference held in December, to which only the Lighthouse Authorities are invited. The revised estimates are then sent to the Advisory Committee for their consideration, and are afterwards further discussed at a conference of the Advisory Committee and the Lighthouse Authorities in the following January or February at the Board of Trade.

14a. I think you proposed to put in a specimen of the print of the estimates?—Yes. I put in a specimen of the print of the estimates as discussed at the preliminary conference with the General Lighthouse Authorities. I also put in a specimen of the print of the revised estimates as subsequently submitted to the second conference to which the Advisory Committee took part.* At this latter conference each item is dealt with separately, and the reasons which have led to the necessity for the work are explained by representatives of the General Lighthouse Authorities. In the case of works proposed by the Scotch or Irish Boards, the opinion of the Trinity House is taken. The Advisory Committee are invited to express their opinion as to the desirability of the new works proposed by any of the Lighthouse Authorities. They are also asked if they wish to suggest any other new lighthouses or buoys. Very often the Nautical Adviser of the Board of Trade is asked by the President to give his views. In some cases the President gives his decision at the time, but in other cases the decision is reserved by the President for further consideration, and further information is obtained and submitted to the Advisory Committee, who submit their views by letter.

Advisory Committee. Value of.

15. Are you in a position to express any opinion as to the value of the assistance given by the Advisory Committee?—There is no doubt that the views expressed by the Advisory Committee have been of considerable assistance to the Lighthouse Authorities and the Board of Trade, but it is difficult to state to what extent the Advisory Committee have been successful in controlling expenditure on the one hand or in getting useful works done on the other. The former is more difficult, perhaps—that is to say, to show how far they have prevented expenditure. I have observed that in some cases the Advisory Committee have taken credit to themselves for having prevented the expenditure of so many thousand pounds, but the effect of their recommendations has been somewhat exaggerated. Works are often proposed by the Scotch or Irish Boards which are objected to by the Trinity House, and which would not have received the approval of the Board of Trade even if the Advisory Committee had not existed, but the Board have thought it desirable in some of these cases before refusing sanction to hear the opinion of the Advisory Committee on the proposal, and therefore the works have been included in the estimates to be considered at the Conference. In some years the expenditure originally proposed on new works by the three General Lighthouse Authorities has, in the opinion of the Board of Trade, been more than should be sanctioned, but before postponing any particular work the Board of Trade have been anxious to avail themselves of the advice of the

* See Appendix A. III.

Advisory Committee, as to which works are desirable or most urgent. At the same time, though the Committee are hardly justified in such cases in taking credit for reduction, their advice has been of considerable assistance in these cases to the Board and the General Lighthouse Authorities.

New Works: Those objected to and suggested by Advisory Committee.

16. Can you hand in lists showing the principal works objected to by the Advisory Committee, and the decision of the Board of Trade in respect thereto?—Yes, I hand in two lists. The first list shows the principal works objected to by the Advisory Committee, and the decision of the Board of Trade with respect thereto, while the second gives the works suggested by the Committee, and the action taken by the Lighthouse Authorities and the Board of Trade.*

Expenditure on,

17. The Advisory Committee has often urged, has it not, that expenditure on new works in any one year should be limited to a sum of £50,000?—That was the sum which was mentioned by some representatives of the General Lighthouse Authorities to Lord Courtney's Mercantile Marine Fund Committee as being in their opinion reasonably sufficient for the future annual expenditure on new works. I hand in a statement of such expenditure for the last twenty-five years, from which it will be seen that this sum has been exceeded every year since the Committee reported, though for the last year, 1905-6, the excess was only £456.

Procedure in urgent cases.

18. Would you give us an account of the procedure followed in the case of urgent new works?—It is provided by Section 660 (2) that where it is necessary in providing for any sudden emergency to incur any expense without waiting for the sanction of an estimate, a full account of the expense shall as soon as possible be submitted by the Lighthouse Authorities to the Board of Trade. These cases, of course, cannot be submitted to the Advisory Committee. There are other cases in which urgent new works are submitted to the Board of Trade for approval after the yearly conference with the Advisory Committee has been held. These are sanctioned by the Board of Trade if considered urgent, but proposals for large expenditure are laid before the Advisory Committee by correspondence for their observations.

19. Perhaps it would be convenient that you now kindly summarise what you have told us about the procedure as to expenditure?—The above procedure relates to all expenditure by the three Lighthouse Authorities for lighthouses, buoys and beacons, other than establishment expenses, which are dealt with on a separate principle. The procedure may be re-stated shortly as follows:—In the case of lighthouse works, as defined by Section 638, being proposed by the Scotch or Irish Boards a scheme has to be submitted to the Trinity House and the sanction of the Board of Trade obtained through them. In the cases of all expenses of a Lighthouse Authority in respect of the service of lighthouses, buoys, and beacons (other than establishment expenses) an estimate or account thereof has to be approved by the Board of Trade. So far as those expenses relate to new works, any proposal is submitted by the Board of Trade to the Advisory Committee for their observations, and the matter is discussed with them and the three General Lighthouse Authorities at the annual conference. In urgent cases of new works proposed after the conference has been held, and which involve large expenditure, the Committee are asked to submit their observations in writing.

Board of Trade: Have no authority to initiate expenditure.

20. Have you anything more to add on the subject of new works?—No, I think that is all, Sir, except that I may mention that the Board of Trade have often been asked by Members of Parliament or by local authorities or by others to establish some lighthouse, beacon, or buoy on a particular part of the coast. The Board have always replied that they have no statutory authority to initiate or to suggest expenditure. They have only power to sanction or refuse sanction to works which are proposed by the General Lighthouse Authorities. As regards Scotland and Ireland, the Trinity House have power, with the sanction of the Board of Trade, to require the General Lighthouse Authority to establish a light, but as regards England, the Trinity House are the only body who can propose the establishment of a light. The Board have, as a matter of fact, submitted suggestions of this nature to the Lighthouse Authorities for their observations, and in some cases works have in consequence of such suggestions been adopted by the Lighthouse Authorities, who have subsequently applied to the Board of Trade for sanction to the necessary expenditure.

But control Contracts,

21. What about contracts for works, stores and other supplies; have these to be submitted to the Board of Trade?—Yes, sir; all contracts have to be submitted to the Board of Trade for their sanction in the case of works, stores and other supplies, and as a general rule the Lighthouse Authorities are obliged to invite tenders. In this respect the control of the Board of Trade would seem to be more complete than that exercised by the Treasury over the expenditure of Public Departments.

22. In this sense, that the Treasury sanctions the total sum to be spent by any Public Department, of course the general items being specified, but does not examine into the contracts which that Department may enter into?—Yes, that is so.

Establishment Expenses,

23. What control is there over establishment expenses?—Establishments are fixed—that is to say, the number of officers and their remuneration are fixed—by His Majesty by Order in Council, which fixes the salaries which are to be paid to the various officials (see Section 659 of the Merchant Shipping Act, 1894). These Orders in Council are prepared by the Board of Trade from time to time, after conference with the General Lighthouse Authorities. The section provides that no increase of any establishment shall be made without the consent of the Board of Trade. An Order in Council has to be obtained by the Board if they desire to give effect to any recommendation of a General Lighthouse Authority for the increase of salary for any official. There are various temporary and other minor officials whose remuneration is not fixed by Order in Council, but payment of which cannot be made without the consent of the Board of Trade.

and Pension

24. Will you state the regulations as to pensions?—By Section 665 pensions are payable to the officers of the General Lighthouse Authorities, subject to the sanction of the Board of Trade. Under the same section the amount of the pension is limited to the proportion of his salary which might be granted to a person in the Public Civil Service, under the Civil Service Superannuation Acts. I think I have now given details of the mode in which the Board of Trade exercise control over the management of the three General Lighthouse Authorities as regards works and expenditure.

And have powers of inspection.

25. Are there any other provisions of the Merchant Shipping Act conferring lighthouse jurisdiction on the Board of Trade?—Yes, Sir. By Section 635 the Lighthouse Authorities have to give to the Board of Trade all such returns, explanations or information as the Board may require. By Section 636 the Board of Trade are empowered, on complaint, to cause an inspection to be made as to the condition or management of any light, buoy, or beacon; but they have no power, I should say, to follow up that inspection by giving any order.

26. Have such complaints often been received or ever been received by the Board of Trade?—I do not remember any as to which we have had to hold formal inspections, though occasionally, when somebody has raised a complaint and asked for additional work, we have sent down our Nautical Adviser. By Sections 652-657, certain powers are conferred on the General Lighthouse Authorities with respect to the lighthouses, buoys and beacons belonging to local Lighthouse Authorities. These powers are to be exercised subject to the control of the Board of Trade, and annual reports of the results of their inspections of local lights are to be made to the Board of Trade by such Lighthouse Authorities, and are laid before Parliament, in accordance with the Act. Perhaps the Chairman would like to see that.

27. This is a Parliamentary paper?—This is a Parliamentary paper. By Section 664, each General Lighthouse Authority shall render account to the Board of Trade, who have power to appoint persons to inspect their books.

Constitution of General Lighthouse Authorities

28. Passing now to the constitution of the General Lighthouse Authorities, have you anything to tell us

* See Appendices A., I. and II.

Hon. T. H. W. Pelham, C.B.

6 Nov. 1906.

on that subject?—The constitution of the three General Lighthouse Authorities is given on pages 3, 7 and 9 of the Return made to an order of the House of Commons dated the 11th of August, 1904, which also gives information as to the ages and emoluments of the members and principal officials of the three Boards. I hand in a copy of this Return. The Elder Brethren of the Trinity House consist of 11 honorary and 13 acting members, all of whom are co-opted at meetings of the Corporation. The acting members are elected from amongst the Younger Brethren, and must have served in command at sea on foreign voyages for four years, if in the Mercantile Marine, and must have attained the rank of commander, if in the Royal Navy. The office is held for life, and the Acting Elder Brethren are paid by salary, a sum not exceeding £7,000 being devoted to this purpose in accordance with Section 6 of 3 Geo. IV., c. III.

Trinity House.

29. Can you tell us how the Younger Brethren are appointed? You say nothing about that; perhaps we had better leave that for the Trinity House to deal with?—I think you will get that from the Trinity House themselves. The Commissioners of Northern Lighthouses are constituted as follows, under Section 668 of the Merchant Shipping Act, 1894, that is to say:—(*a*) The two Scotch Law Officers. (*b*) The Lord Provosts of Edinburgh, Glasgow and Aberdeen, and the Provosts of Inverness and Campbeltown. (*c*) The eldest Bailies of Edinburgh and Glasgow. (*d*) The Sheriffs of the Counties of the Lothians and Peebles, Lanark, Renfrew and Bute, Argyll, Inverness, Elgin and Nairn, Ross Cromarty and Sutherland, Caithness, Orkney and Shetland, Aberdeen Kincardine and Banff, Ayr, Fife and Kinross, Dunfermline and Galloway. In addition, the Commissioners may elect the provost or chief magistrate of any Royal or Parliamentary burgh on or near any part of the coasts of Scotland, and the sheriff of any county abutting on those coasts, to be a member of their body. The Commissioners of Irish Lights consist, in accordance with Section 3 of the Dublin Port Act, 1867, of 5 ex-officio members (namely, the Lord Mayor, the High Sheriff, and 3 aldermen of the City of Dublin) and 17 others who are co-opted, all the members taking part in the election when a vacancy occurs. No special qualification is required in the case of the co-opted members, whose period of office is only terminated by death or resignation. I may mention incidentally that under Section 531 of the Merchant Shipping Act, 1894, each of the General Lighthouse Authorities have power to remove wrecks which cause obstructions to navigation in places where there are no harbour or conservancy authorities. I do not know what the eldest bailie means. It may be the eldest in age, but I suppose it means the senior.

Northern Lighthouse Commissioners.

Irish Lights Commissioners.

Wrecks: Removal of,

30. It is a duty imposed upon them, is it not, to remove wrecks which are in the way of navigation?—No, the act merely gives them the power to do so.

31. (*Admiral Henderson.*) They do not interfere within harbours, I think, do they?—No, not in harbours. I was going to say, sir, in explanation—a difficulty always arises about wrecks which are in an approach to a harbour, because the local authorities may not only remove in their limits, but in their approaches, too, and it is very difficult to say what is an approach.

32. (*Chairman.*) There may be a conflict of jurisdiction there?—A conflict of jurisdiction, yes; they generally both decline to act.

33. Naturally, because it involves considerable expenditure, and each wants to throw it on the other?—Yes.

General Lighthouse Fund: Source of revenue.

34. Turning to the question of revenue, will you inform us what arrangements are made for the collection of revenue by the Lighthouse Authorities?—I propose to take that very shortly. I do not suppose you want to inquire into the incidence of the lighthouse charges.

35. No.—By Section 1 (c) of the Merchant Shipping (Mercantile Marine Fund) Act 1898 (61 and 62 Vict., ch. 44), the light dues received in respect of the lights, buoys and beacons under the management of the General Lighthouse Authorities, and the expenditure for carrying on the service are carried to the General Lighthouse Fund, which took the place of the Mercantile Marine Fund. By that Act all the expenses incurred by the General Lighthouse Authorities in the works and services of lighthouses, buoys and beacons, or in the execution of any works, necessary or expedient, for the purpose of permanently reducing the expense of those works and services, were charged on, and made payable out of the General Lighthouse Fund, and it is further provided that that fund shall be applied to the payment of the expenses charged upon it by the Act, and to no other purpose whatsoever.

Light Dues: Arrangements for levying.

36. What are the administrative arrangements for levying light dues?—All three General Lighthouse Authorities are empowered by Section 5 of the said Act to levy light dues on ships engaged in voyages to and from ports in the United Kingdom, the collectors appointed by them being required by Section 648 of the Merchant Shipping Act, 1894 (57 and 58 Vict., ch. 60) to pay over to them the amounts collected to the Paymaster-General as the Board of Trade may direct, and the General Lighthouse Authorities are required by Section 664 of the latter Act to account to the Board of Trade for the light dues received.

By Departmental arrangement—

(1) The dues are collected by officers of Customs only.

(2) The power of levying them in Scotland and Ireland has been delegated to the Trinity House.

(3) The collectors of Customs account to the Trinity House for the light dues collected, but remit the amounts received direct to the Paymaster-General, as instructed by the Board of Trade, and

(4) The Board of Trade remit to the General Lighthouse Authorities the amounts required for carrying on the lighthouse service.

Control and audit of accounts.

37. What provisions are there for the control and audit of the accounts?—The General Lighthouse Authorities render to the Board of Trade quarterly fully detailed and vouched accounts of all expenditure for carrying on the Lighthouse Service in accordance with Section 664 of the said Act. These accounts are compared with the estimates previously sanctioned, and are then audited by the Comptroller and Auditor-General in accordance with Section 679 of the said Act. As soon as may be after the meeting of Parliament the General Lighthouse Fund Account for the preceding financial year is laid before Parliament with the certificate of the Comptroller and Auditor-General. Complaints have been made by the Advisory Committee as to the delay in publishing the yearly accounts.

38. What are the reasons for delay?—Where accounts are presented to Parliament in pursuance of the provisions of an Act, it is not competent to the Board of Trade to publish them before presentation, but should there be an autumn session every effort is made to present the accounts during that session. This was done in 1902 when the accounts for 1901-02 were presented on the 16th December. The Board of Trade have been asked to publish the accounts during the session of Parliament of the year in which each account closes. The General Lighthouse Fund Accounts, however, include dues received for the Basses lights, and expenditure for those lights and for the lighthouses in the Bahamas, Sombrero, and the Falkland Islands. The sub-accounts from these lighthouses cannot, owing to the distance of the places from this country, all be adjusted until some time after August, the month in which Parliament usually rises, and it is, therefore, impossible to complete the audit and to present the accounts before the adjournment. It is, however, the practice to supply members of the Advisory Committee with copies of the unaudited accounts (which are practically correct) for their own information before the annual meeting to discuss the estimates for new works is held.

39. Can you hand me copies of accounts of the General Lighthouse Authorities?—I hand in copies of accounts of the General Lighthouse Fund for three years, 1902-3, 1903-4, and 1904-5. Of course, the last one is not quite complete—I mean the one for 1905-6 is not complete.

General Lighthouse Authorities: Objections to constitution.

40. Have any objections come before you respecting the constitution of the Lighthouse Authorities?—Yes. In the case of the Trinity House it has been objected that the Elder Brethren are self-elected, and that several of them are of an advanced age. On the other hand, all the members have had nautical experience, and if the Corporation had had power to grant pen-

sions the age difficulty might have been avoided. So far as the Board of Trade know, the work has been done efficiently.

41. As regards the constitution of the Northern Lighthouse Commission?—The objection has been raised that it is only by accident that any of them could have any nautical experience, and that the number of members is too large, several of them never attending the meetings. It has been objected that a body consisting of lawyers and municipal representatives is not a suitable one to deal with nautical matters. The Board of Trade have no reason to complain of the way in which the Northern Lighthouse Commissioners have conducted their business, but there is no doubt that they suffer from the absence of nautical advice. Sometimes they have had to come and ask our Nautical Adviser to give them advice about a ship or a quay or a new lightvessel. It is to be remembered that, unlike the acting members of the Trinity House, the members of the Northern Lighthouse Commission are unpaid.

42. Then as to the Irish Lights Commission?—The members are also unpaid. As regards the constitution, the objection has been raised that bodies which administer public funds should not be self-elected, and that no qualification is required in those elected. Complaints have also been made from Ireland that most of the members are Dublin men, and that the large ports of Ireland, such as Belfast, Waterford, Cork, Derry, and Limerick, are not represented.

and Administration of,

43. Do the Board of Trade consider that the administration of the Irish Lights is satisfactory?—Not so satisfactory as in the case of the other two Lighthouse Authorities.

44. Does that judgment rest upon general impression or upon specific failures?—It rests upon a certain number of cases where they hardly acted in a business-like manner. They have forgotten to submit estimates beforehand for us to sanction. I do not know whether it would be convenient or whether you wish to go into that. I have a list here of cases in which we have had to complain of a want of business capacity. These are none of them very strong cases individually, but there is a number of them. They do not do the thing quite in the same way as the Scotch or the Trinity House people do.*

45. Have you received any complaints respecting administration?—The more general complaints which have been received by the Board of Trade from time to time with respect to the administration of the three General Lighthouse Authorities have been that the Authorities are not in touch with the shipping interests, and do not take the trouble to ascertain what their navigational requirements are. It is further urged that the shipowners who contribute the money should have a voice in the expenditure. It was to meet this objection that the Advisory Committee was established in the year 1899, but it would, no doubt, have been more desirable if, instead of establishing a voluntary body, it had been possible to provide that representatives of the shipping interest should be placed on the General Lighthouse Authorities. Where there are statutory bodies to discharge certain duties, it may be a doubtful policy to call together a voluntary body to share the responsibility. The effect might be to weaken the sense of responsibility on the part of the statutory bodies.

Advisory Committee: Reason for establishment of,

46. Were these objections to a voluntary body considered by the Board of Trade at the time?—Yes. There seemed to be considerable difficulty in securing representatives of the shipping interest on the General Lighthouse Authorities. In the first place legislation would have been necessary, and secondly it would be difficult to form a satisfactory register of shipowners—more particularly for Scotland and Ireland. There are not a great number of shipowners in Dublin, and the people who use the Irish lights are probably the Liverpool and Glasgow and Bristol people. It would be very difficult to get any of them to go on to an Irish Lighthouse Authority meeting in Dublin. That was one difficulty. There would be no difficulty in getting it at Trinity House.

47. There are cases in which the representation of shipowners is provided for. It is provided for Pilotage Committees, for instance, is it not?—Yes; under the Merchant Shipping Act, 1894, shipowners may be represented on the Pilotage Committee of the Trinity House and on other pilotage authorities. Is is provided by Section 577 of the Merchant Shipping Act, 1894, that the Board of Trade may, by provisional order, make provision for the direct representation of pilots and of shipowners on pilotage authorities. I have here a Provisional Order which was made for such representation on the Pilotage Committee of the Trinity House. The shipowners on the Committee are selected from a list of payers of dues kept by the Thames Conservancy; but no such list would be available for elections by payers of dues of representatives on the English, Scotch and Irish Lighthouse Authorities separately. Of course, you might take the list of shippers who pay light dues, but it would be a very large list. Of course, it would come from all parts of the United Kingdom. Perhaps it would be rather difficult to arrange for their voting, and it would be specially difficult to make a separate register for Scotland and Ireland.

48. In the case of the Advisory Committee some provision is made for the representation of the shipowners by trusting to various bodies connected with the shipping interest the appointment of such representatives?—Yes.

49. Do you think that would be practicable, or would it be contrary to precedents to make a provision of that kind by Act of Parliament?—I believe it is rather difficult to arrange for the election of a central body by representation of non-statutory bodies?

50. Yes?—They might amalgamate or be dissolved at any moment, without going to Parliament.

General Lighthouse Authorities: Objections to constitution of,

51. Have any other objections of a general character been taken to the present system?—It has also been urged by the objectors to the present system that the existence of three Lighthouse Establishments adds very much to the expense of maintenance, and that the work could be done very much more economically by one Central Authority in London. This last objection is urged by the shipowners; but it would seem doubtful whether some of those who criticise the Scotch and Irish Boards would be anxious to see the administration transferred to London. Another objection has been urged that the Lighthouse Authorities are apt to suggest works which are not wanted, in order to give employment to their staff. This has been specially suggested in the case of Northern Lighthouse Commissioners, whose Engineer is not paid by salary, who might therefore be personally interested in suggesting new works which are not urgently required.

52. The Board of Trade have no reason to believe that suggestion well founded?—They are convinced that there is no ground for such a suggestion as against the Engineer of the Northern Lighthouse Commissioners; but the Northern Lighthouse Commissioners have tried to put the Engineer in such a position that the suggestion could not be made. The difficulty is that the Engineer is a member of a celebrated firm, the members of which, as well as their staff, are engaged in other work besides the work of the Northern Lighthouse Commissioners. This would prevent the possibility of putting the Engineer on a fixed salary and engaging his whole time, and it would be still more difficult to require him to have a separate staff always engaged on lighthouse work. The Northern Lighthouse Commissioners have for some time past been anxious to establish a system which would prevent any suspicion that the Engineer was interested in recommending that new works should be undertaken. The Board of Trade have had before them a scheme from the Commissioners, under which the Engineer would be paid for the next five years a fixed sum (inclusive of engineer's fees and remuneration of his staff) based on the amount expended on an average of the last ten years; but the consideration of the scheme has been postponed pending the sitting of the Royal Commission.

Local Lights Questions as to provision of, out of General Lighthouse Fund.

53. Have any questions ever arisen as to what local lights are?—Yes; we have had a good many. The Board of Trade have on several occasions received petitions from fishermen and others for the establishment of such lights, and the matter has been referred to the General Lighthouse Authority interested, the answer sometimes being that, though the light would be useful to those using a particular port—most of whom, being fishermen, do not contribute to the General Lighthouse Fund—it would be no benefit for passing traffic, and therefore should not be provided at the expense of the General Lighthouse Fund. It has therefore been urged by the General Lighthouse Authorities that such lights, if required, should be undertaken by some local authority. But it generally happens in such cases that there is no local lighthouse authority.

* See Appendix A, IV.

Hon. T. H. W. Pelham, C.B.

6 Nov. 1906.

54. What view has been taken on this subject by the Board of Trade?—The Board of Trade view has been that the General Lighthouse Authorities are responsible for the lighting of the whole coast of the United Kingdom, except in places within the jurisdiction of a local Lighthouse Authority. There seems to be nothing in the Act to suggest that the Lighthouse Authorities are only to expend money for the benefit of passing trade. Of course, where there is very little shipping, the need of the light may be less urgent, and the erection might reasonably be postponed until more important works have been erected. There is something to be said for the view that the lighting of places navigated by shipping paying light dues, should take precedence over lights which are to be used only by fishing boats which do not pay dues, but I do not find anything in the Act which would prevent the Lighthouse Authorities from erecting lights for the benefit of fishing boats. Of course this view which has been taken by the Lighthouse Authorities as to the fund only being spent on passing trade is shared by the Advisory Committee. We had a case last year in connection with the new Fishguard route to Ireland. I think it was last year or the year before that a light was asked for by the Great Western Railway Company off Strumble Head, and the view of the Advisory Committee was that that light, being for the advantage of a particular railway, should be paid for by the railway company. But the proposed site was situated a good way from Fishguard Harbour, in the open sea, and we had evidence that the light would be used for trade going to the coast of Wales—Cardigan Bay. The Great Western Railway were asked to contribute, and they have contributed £2,000 out of an estimate of £12,000. That was two years ago. Last year a somewhat similar proposition came up on the other side of the Channel. There is a light maintained by the Irish Lights, the Tuskar Light, a few miles off Rosslare, but when a ship has passed there are some difficult shoals, and the railway companies, the Great Western of England and the Irish Railway Company, were very anxious that four lighted buoys should be put down there. Strong objection was taken to this, both by the Trinity House and the Advisory Committee, on the ground that it was a local matter, and our Nautical Adviser thought that the difficulties could be overcome by an arrangement of lights on the pier and on the land. The railway people are still urging for the sanction of the lights, and they have now got a proposal before the Board of Trade that one lighted whistling buoy should be put there at the expense of the railway companies for a time, at any rate. But it is evident they hope and expect that if it is found to be successful it will be maintained in future out of the General Lighthouse Fund.

Strumble Head Light.

Rosslare lighted buoys.

55. How did that proposal originally come before you; was it put forward by the Irish Lights themselves?—Yes, they were very strongly in favour of it. Four lighting buoys were proposed at first, and now they want to have one, the railway companies being prepared to pay for it themselves.

56. The proposal was made by the Irish Lighthouse Authority but resisted by Trinity House and by the Advisory Committee?—Yes, and the Board of Trade also thought it was more of a local light, and that the difficulty could be overcome by an arrangement of lights on the pier or on the land. There is just one other suggestion I have got to make, and that is that the Board of Trade think that under the Act it is clear that where there is no local lighthouse authority, the General Lighthouse Authority are responsible, but if there is any doubt the Board think that the point should be made clear.

57. If, however, on that point, both the Lighthouse Authorities themselves and the Advisory Committee take a different view, the Board of Trade having no power of initiative, it seems very probable that no such proposals would be brought forward or carried into effect?—Quite so. But there is a very strong feeling amongst certain people that we ought to be able to initiate, but I am afraid that is not a feeling that we share. We are not anxious for the power to initiate; we think it would increase the cost.

58. There is nothing else that you desire to add to your evidence-in-chief?—No, that is all.

Control exercised over, by General Lighthouse Authorities.

59. (*Colonel Herbert.*) I understand from what you say that in places where there is a local lighthouse authority there practically exists a dual authority, that there is the local authority itself and the Trinity House or the General Authority exercise a sort of control over that; so I understand it?—Yes, there is a certain amount of control certainly over the local lighthouse authority. They cannot put up lights without the permission of the General Lighthouse Authority. If, say, a place on the coast of Yorkshire or Lancashire were to put up a light at the end of a pier, they have to submit the light for the approval of the Trinity House. That is generally done under a Local Act which authorises the pier.

60. Then, in fact, there is a dual authority with respect to that part of the lighting of the coast?—Yes, to a certain extent.

Trinity House: Dual function of.

61. Then I also understand that the Trinity House itself exercises a dual function?—Yes, that is so.

62. As the lighting authority for England and as a revising authority for the other parts of the United Kingdom?—Yes.

63. Now with regard to the local authorities, where they exist. How do they derive funds for carrying out their work?—That is generally done under some private Act, some local Act. If you take any harbour on the coast you will find that they have several local Acts, probably and possibly some Provisional Orders which are confirmed by Act of Parliament authorising them to take dues and to execute works.

64. As Harbour Boards do generally, I understand?—Yes. What I meant to say was that the local lighthouse authority is generally the Harbour Authority.

Its control over Scotch and Irish Lights.

65. Now with regard to this function of Trinity House as to Scotch and Irish lights; I understand that the Scotch and Irish Authorities can only approach the Board of Trade through Trinity House?—That is so for new lights, for new works.

66. For other purposes, can they?—They can.

67. Ordinary administrative work?—Ordinary administrative work they can.

68. They go straight to the Board of Trade?—Yes, they go straight to us.

69. But for anything in the nature of new works they have to get the concurrence, practically, of Trinity House, or get them overruled by the Board of Trade?—Or get them overruled by the Board of Trade, yes.

70. (*Chairman.*) Is that the provision of an Act of Parliament?—Yes.

71. The control of the Irish and Scotch lights in respect of new works by Trinity House is provided by Act of Parliament?—Yes, that is by Section 640 of the Merchant Shipping Act.

Lighthouse Powers: Definition of,

72. Is there a definition of new works in that Act?—Well, it is a definition of lighthouse powers, and lighthouse powers are "(*a*) To erect or place any lighthouse, with all requisite works, roads, and appurtenances; (*b*) to add to, alter, or remove, any lighthouse; (*c*) to erect or place any buoy or beacon, or alter or remove any buoy or beacon; (*d*) to vary the character of any lighthouse or the mode of exhibiting lights therein." Those are described as lighthouse powers. It goes a little further than new works, perhaps. "New works" is not an expression which is mentioned in the Act.

New Works: Procedure for initiation of,

73. (*Colonel Herbert.*) Referring to another part of your evidence, in which you say the Board of Trade have no power of initiating expenditure, I gather that the channel of communication, taking the case of an Irish lighthouse or proposed lighthouse, would be something as follows:—An Irish Member of Parliament might attack the President of the Board of Trade and would receive the answer that the Board of Trade has no power of initiating expenditure, but the Board of Trade would then make a suggestion to the Irish Authority. The suggestion would have to be developed into a scheme by the Irish Authority and referred to Trinity House, and Trinity House would have to move the Board of Trade?—Yes.

74. The Board of Trade might concur, or otherwise, and correspondence would ensue, and in fact you get a sort of maelstrom of correspondence which may arise out of the fact of there being these two different authorities?—Yes.

75. With unequal powers?—Of course, the suggestion of the Board of Trade is not sanctioned by Act of Parliament, but, as a matter of fact, it has been done occasionally. It leads to great difficulties.

76. Then in such a case, carrying that idea on, would the Treasury have any say in the matter?—No

77. None at all?—No. The General Lighthouse Fund is now quite free from Treasury control. It used to be subject to Treasury and Parliamentary control, because money was paid by the Treasury into the old Mercantile Marine Fund, and certain expenses were paid out of it, but since the Act of 1898 the Fund has been entirely separated, and nobody has any control except the Board of Trade.

78. But the Admiralty might be brought into a discussion of that sort. Is the Admiralty ever called in as adviser?—No, I do not think so. I do not remember any case. I think, perhaps, in particular cases we may have consulted the Admiralty.

79. The coastguard administration of the Admiralty has nothing to do with lights?—It has nothing to do with lights, no; we have a great deal to do with them on other matters.

80. My point is to see to what extent we get one of those things, which, I daresay, you have seen in your experience as I have in mine, where a number of departments, greater and less, are all brought in, till the object which was originally in view is lost sight of altogether.

81. (*Chairman.*) With reference to that point, supposing a representation were made to the Board of Trade that a light was required on some particular part of the coast, say, of the Irish coast, would not the ordinary procedure of the Board be to refer those that made that representation to the Irish Lights?—Yes, that is the rule; and sometimes we have sent the application on to the Irish Lights for their observations. I think both courses have been adopted.

82. (*Colonel Herbert.*) I think you state here that the Board of Trade would make a suggestion to the Irish Lights?—Yes.

83. That might be done by sending on the original persons or making a special suggestion, but it comes to the same; there is that additional step in the procedure.

84. (*Sir Frank Adam.*) If a suggestion were made and proposed by the Local Authority or the Irish Authority in this case, the Board of Trade have no power to go further?—No, no power to go further; but we might give a hint that if they applied we should be willing to sanction. We have done that, I think, sometimes, but it is not contemplated by the Act.

Representation of Shipping Authorities on Lighthouse Board: Advisability of,

85. (*Colonel Herbert.*) I see the Board of Trade is rather against the idea of the shipping authorities being brought in in any greater degree than in an advisory capacity?—Oh, I do not see that there would be any objection to shipowners being represented on, say, a Committee of the Trinity House for management. I think it would be a little difficult to arrange it in Ireland or Scotland, but I think it might be done in the Trinity House just as shipowners and pilots are represented for pilotage purposes.

86. Would not that be the case if Trinity House or something equivalent were made a department of the Board of Trade managing the whole of the lights throughout the Three Kingdoms?—I am not prepared to suggest that.

87. I am really asking whether it would not be the same?—I think if there were the Central Authority like the Trinity House managing all the light it would be desirable that shipowners should be represented on it in some way more directly than they are at present.

88. Do you think that such a body could be brought in with the general administration of the Board of Trade, as a sort of department of the Board of Trade?—No; I would rather not answer that question; I have not got any instructions on that point. It is a point of rather high policy.

89. Exactly. I say it is a question of policy, but it is likewise a question of administration?—Yes.

90. (*Admiral Henderson.*) I was going to ask you that question myself when you proposed to make suggestions, because I suppose the Board of Trade having a great experience, may offer the Royal Commission suggestions.

91. (*Chairman.*) I understand you have no instructions to express an opinion upon broad questions of policy?—I have no instructions at present.

92. You do not care to express an opinion of your own?—No; my idea was to start the evidence by giving information as to the existing state of things.

93. (*Admiral Henderson.*) And to wait?—And to wait.

94. I may say they would be forthcoming if we want them later?—I think they would express their opinion on any suggestion the Royal Commission laid before them. I do not think they would initiate any suggestions. *Hon. T. H. W. Pelham*, C.B. 6 Nov. 1903.

Contracts: Board of Trade control leads to uniformity.

95. (*Colonel Herbert.*) Now, with regard to the questions of contracts. I see the Board of Trade exercises a control over that. Is that rule at all occasioned by the fact that there are three separate Lighthouse Authorities, and therefore it is necessary to bring them to accord?—Of course it has that effect. For instance, the Irish Lights would sometimes suggest that they should try experiments and spend so much on experiments on a certain light or buoy, and we should refer to the Trinity House and ask them if they had made experiments and what their experience has been. So it does lead to uniformity.

96. It does lead to uniformity, but it was not established for that purpose?—No; I think not.

97. (*Mr. Ennis.*) I take it that you regard this question of lighting the coasts of the United Kingdom as a question of great national importance?—Oh, certainly.

98. And in view of the great volume of trade of the country, and of the importance of the lighting of the coasts, that we should be entitled to expect a high degree of efficiency with regard to that?—Certainly.

99. I notice in the first paragraph of your evidence you state what you have stated verbally that you do not propose to make any suggestion for the alteration of the existing authority, but I take it from what you have said that that is not to be interpreted as meaning that you consider the existing authority is perfect or that changes with regard to them might not possibly be desired?—Oh, no; certainly I think changes are desirable, and I think probably that is the reason why the Commission was appointed. It was felt that the whole thing should be gone into.

Advisory Committee:

100. Well now, with regard to the Advisory Committee. I take it that the Advisory Committee might be regarded somewhat in the nature of a makeshift arrangement, of an arrangement which was designed to give a certain amount, not of power—because you have told us they have no statutory powers whatsoever—but a certain degree of authority to suggestions made on behalf of the shipping community and the underwriters, and so on, that that body was established for that purpose?—That was so; a sort of body of expert witnesses.

101. But they have absolutely no statutory powers, and any suggestions made by that Committee they are not in a position to carry into effect in any way?—No.

102. And therefore if it should be found possible later on to establish the General Lighthouse Authorities on an amended basis which would give adequate representation to the various interests affected on the Boards of the General Lighthouse Authorities, there is no reason why that Advisory Committee should continue its existence?—No, quite so.

103. Where can I obtain the names of the two shipowners who represent Ireland on the Advisory Committee? Is it any bar to their being appointed as members of that Advisory Committee that they should also be members of the Lights Boards of the country?—No.

Election of Irish Members of,

104. In Ireland there are, as a matter of fact, no shipping companies. I mean there are no companies of shipowners belonging to Ireland proper?—There are very few, I think.

105. And therefore the two members representing Ireland have been elected by the Executive Council of the Chamber of Shipping?—Yes, that is so.

Consideration of urgent New Works by,

106. It is stated here in your evidence that there are cases in which urgent new works are submitted to the Board of Trade for approval after the yearly conference with the Advisory Committee has been held. These are sanctioned by the Board of Trade if considered urgent, but proposals for large expenditure are laid before the Advisory Committee by correspondence for their observations. How do the Advisory Committee deal with such proposals laid before them by correspondence? Do they meet for the purpose?—No; I think, as a rule, they do not meet for the consideration of single cases.

107. No, simply invite opinions?—I think that the opinions are obtained from the members of the Committee and forwarded by the Secretary to the Board.

108. The constitution of the Lighthouse Authorities with regard to Trinity House and with regard to Irish

Hon. T. H. W. Pelham, C.B.

6 Nov. 1906.

Lights differs very considerably from the constitution of the Northern Lights?—Yes.

109. As to the constitution of Trinity House, it is a body in which the appointments are made by co-option?—Yes.

General Lighthouse Authorities: Constitution of,

110. The Irish Lights is a similarly constituted body?—Yes.

111. I should like to ask in regard to that, the Irish Lights consist of 17 members, 5 ex-officio members and 12 members who are co-opted?—Yes.

112. Now were those 12 members who were co-opted originally co-opted by the five?—There is an old Act of Parliament. The Irish Lights used to be part of the Port of Dublin Commissioners.

113. Quite so?—I cannot exactly remember the provisions of the Act; I have read them, but I do not exactly bear them in mind at the present moment. I think that that Act of Parliament named certain people; they were named in the original Act.

114. They were not originally co-opted by the five ex-officio members?—No.

115. Then, as a matter of fact, the Irish Lights Board, as at present constituted, is practically a Board which was originally the Dublin Port Board, as you say, and which has existed ever since by co-option?—Yes.

116. Therefore, assuming that any conflict of interests should arise as between Dublin and other ports in Ireland, the other ports of Ireland have no representation on the existing Lighthouse Authority?—No, but they do not have any in England or Scotland either.

117. But it does not necessarily follow that in England the constitution of the Trinity House is perfect either?—Oh, no.

118. And with regard to both the constitution of the Lights Boards and of the Advisory Committee, the Advisory Committee is a Shipowners' Committee?—Yes, practically.

119. And therefore the trend of both Boards would be, so far as I can judge, as you have stated in the latter portion of your evidence, that the Advisory Committee and probably the Lighthouse Authority would be inclined to object to the erection of new works, new lighthouses, erections of lights, buoys or beacons, which would benefit any interest except the interest of passing trade?—Yes, that would be the tendency.

120. That is to say that the interests of shipowners lie on the one hand and the interests of fishermen, as another class, lie on the other hand?—Yes.

Advisability of providing for representation of various interests on,

121. And that, in the constitution of a properly constituted Lighthouse Authority, it would be only reasonable that the interests of the fishermen and the interests of the fishing industry, which is, I take it you will agree with me, a very valuable industry, and an industry capable of large developments in some parts of the country?—Yes.

122. That the interests of the fishing industry have a right to be consulted?—Yes. I am not prepared to express an opinion as to whether they should be represented, having regard to the fact that they do not pay dues.

123. Yes, I quite grasp the difficulty which would arise in that connection, because I assume the contention would be on behalf of the shipping community that the shipping community pay the light dues?—Yes.

124. And that it would not be fair to saddle upon them the cost of erecting lights for purposes other than the purposes of their trade?—Yes, that is so.

125. But still, as a general principle, I take it you would be prepared to say that the rights of the seafaring community are of great importance?—Oh, of great importance.

126. And that as a national asset the life of a sailor is of greater importance to the nation than the life of a soldier. It is more difficult, I would say, to provide an efficient sailor than an efficient soldier. I mean that the life of the sailor, I take it, is a greater national asset than the life of a soldier. It is more difficult to procure a trained sailor than a trained soldier. But, in any case, you agree that the lives of the seafaring community are of very great importance?—Yes, certainly.

127. And that anything which would tend to save the lives of the seafaring community, whether in the interests of passing trade or the fishing industry or any other industry is desirable, and that public expenditure should be made upon that from whatever source such expenditure might be derived?—Perhaps I might mention that a great deal is done in Ireland and Scotland by the Congested Districts Board, which puts up small piers, and which puts up lights to help them.

Congested Districts Board: Lighting work of,

128. I only instance the fishing industry as one branch of the question, that it would be desirable that all precautions should be taken for the safety of human life?—Yes.

Wrecks: Causes of,

129. Can we have anything valuable as to the wreck statistics on the coast of the United Kingdom and the annual loss of life through wreck?—There is a return of wrecks published every year. I think that it would want looking out a good deal. It has been very often said by somebody who wants a light that there have been 50 wrecks in a particular place. Then it is discovered, when you go into it, that a great many of them were in the daytime, and that other ones could not have been helped if there had been a light at the particular spot. It has to be very carefully gone into.

130. I mean, is it the general impression of the Board of Trade that there would be a preventible loss of life by the erection of more lights, were sufficient funds available?—I should think that the coast of England is pretty well lighted, and possibly the coast of Ireland. I should think there is a great deal of room for more lights in Scotland.

131. (*Sir Frank Adam.*) Have you in your mind, in saying that, parts of the coast of Scotland where there is no great traffic?—Yes, principally, perhaps.

Harbour Authorities: Representation of, on Lighthouses Boards.

132. (*Mr. Ennis.*) With regard to the difficulty that you spoke of as to the representation of the shipping interest, and I assume other interests if necessary, on a reconstituted Lighthouse Authority, you expressed an opinion as to the difficulty in Ireland on that point. Would not that difficulty be overcome by the election on a General Lighthouse Authority of representatives of the Harbour Boards in Ireland which possess statutory existence?—Well, I do not know, sir, how that would be. It has never occurred to us, I think, at the Board of Trade that the harbour people are the people who ought to be represented on the Lighthouse Authority, because the harbour people have got their own lights to look after. It would bring representation from different parts of the country, no doubt.

133. But, so far as shipowners are concerned, no doubt the harbour people have their own lights—their internal lights?—Yes.

134. But take, at the same time, this case to which you have referred. I did not intend to take any particular case, but as you have spoken of the Fishguard route, and I have travelled by it a couple of days since, I should like to ask you as to that case. A local authority, of course, may deal with the lights within their own harbour, but it is, in my opinion, very doubtful—in fact, I know the coast there thoroughly well; I have been cruising about it all my lifetime—whether lights on the pier would be sufficient to guide vessels in through the very intricate channels that lie between the south end of the Long Bank and the harbour?—I think that our Nautical Adviser, Commander Frederick, stated that he thought that if a light were still maintained as they used to have it on the land it would give a line to the light on the end of the pier, which would be of use when the Tuskar Light was once passed.

135. But the point I wish to make to you is this: assuming that it is not a question of the incidence of the cost of that light, but assuming that the local authority were entitled to put a light on the end of their pier—the Harbour Commissioners would light their own harbour—would it not also be desirable, in the interest of the shipping trade coming to their port, that the lighting arrangements outside should be efficient?—Oh, certainly.

136. I mean a Harbour Authority might conceivably have admirable lighting arrangements within their harbour which would be rendered nugatory by the want of proper lighting arrangements outside in the area in which there is no authority?—I think there is a hiatus between the harbours and the lights maintained by the General Lighthouse Authorities. I mean that I think there is a case where a light is considered desirable, and it is impossible to say who ought to do it.

137. (*Admiral Henderson.*) I would like to ask one question. Do not the vessels plying between Fishguard and Rosslare pay light dues to the General Lighthouse Fund?—Oh, yes, certainly.

138. That is a decided point, if they pay they should be provided with essentials?—Yes.

Advisory Committee: Change of present system desirable.

139. (*Mr. Ennis.*) Then it is stated in your evidence also that legislation would be necessary to effect a more complete arrangement or a better arrangement than the Advisory Committee?—Yes.

140. But would not, in a matter of such importance, legislation be desirable?—Oh, certainly. I think I may mention that when the Advisory Committee was under consideration there was a proposal to bring into being a voluntary body rather different from the Advisory Committee, and I think there is no harm in my stating that I rather protested against it. I said it would be very much better if Parliament gave power to the Board of Trade to nominate three members, three shipping representatives on the Trinity House and three representatives on the Scotch Board, and three on the Irish Board. The remark of Mr. Ritchie, the President of the Board, was: "I wish you had suggested that last year when we had the Bill of 1898 before the House." The question had not arisen then.

General Lighthouse Fund: Delay in publishing accounts unavoidable.

141. There is just one question more I should like to ask, and that is with regard to the accounts, the expenditure for lights and dues. The accounts are not laid, generally speaking, we will say, at an early date on account of the difficulty of obtaining returns from the Basses Lights and the Falkland Islands, and some others?—The Bahama Lights.

142. Some other foreign lights?—Yes.

143. Would it not be possible to lay the accounts in two separate portions; to lay the accounts of the United Kingdom separately, and a smaller account for those foreign lights when received?—I am afraid that the Auditor-General would not look at them till they were completed. They could not be audited accounts.

Colonial Lights: Maintained by General Lighthouse Fund.

144. (*Admiral Henderson.*) May I ask whether it would not be possible to get rid of these lights altogether, and turn them over to the local authorities? Why should we manage these lights, which really belong to the communities interested, with some composition, some arrangement made?—I am not quite sure, Sir, that I understand the question.

145. Would it not be possible to turn the Basses Lights, the Minicoy Light, the Falkland Islands Light, and the Bahama Islands Lights, over to the people of the Falkland Islands, the Bahamas and Ceylon?—Well, sir, all I would say about that is that that is a bargain with the Treasury in 1898. They made great concessions, to the advantage of the General Lighthouse Fund and the advantage of the shipping interest, and they made it a bargain that all lights to which England in any way contributed should be taken over by the General Lighthouse Fund, and paid for out of that in future. As regards the Basses and Minicoy, it would not be at all difficult, because tolls are levied on ships that use those lights, and they support themselves.

Collection of dues for,

146. (*Sir Frank Adam.*) Where are they collected, may I ask?—They are collected at Colombo, at Mauritius, at the Straits Settlements, and in the United Kingdom; I think that is all.

147. (*Mr. Ennis.*) But the expenditure on the lights of the United Kingdom enormously exceeds the expenditure on those foreign lights?—Yes.

148. This is merely a small item?—Yes.

149. In your opinion, would it not be desirable, if at all possible to accomplish it, that the accounts of the expenditure on the lighting of the coast of the United Kingdom, which are a matter of such importance to everybody concerned, should be furnished at as early a date as possible, and that if it were possible to arrive at the arrangement I suggest, that is, segregating the expenditure into two separate accounts, or any other arrangement that might be made which would facilitate the return, would be desirable?—I think that is worth considering. I will not say more than that, because I think it would involve several other considerations, which I have not given attention to, as to how far it would be possible.

150. (*Chairman.*) Do you think the delay in the making public of the accounts gives rise to any serious inconvenience?—Well, I think it would be a little unfair to the Advisory Committee, were it not that we meet them by sending them the unaudited accounts.

151. (*Sir Frank Adam.*) Is it within your knowledge at the moment whether the dues collected locally in regard to Basses and Minicoy cover expenditure of upkeep?—Yes, they do, and when they were taken over there was a considerable balance in hand, I forget how much, but a large balance in hand, and the light dues have since been reduced there, so that they just pay their way. Sometimes we should have liked to spend money on one or two extra lights on the coast of Ceylon, but we have been advised by the law officers that we have no power to put up any new light outside the United Kingdom at the expense of the General Lighthouse Fund.

New Works: Initiation of,

152. (*Admiral Henderson.*) I want in general terms to know who are the originators of new works, new proposals?—The Trinity House for England, and the Northern Lighthouse Commissioners for Scotland, and the Irish Lights Commissioners for Ireland.

153. Do they receive suggestions from other people?—I can hardly answer that question; I think that their representatives will be able to tell you that. They have often been asked at the Conference by the Advisory Committee, "Have you consulted the shipping interest on this point?" and they sometimes say "No"; at other times they say, "We have had a lot of complaints."

154. What I wanted to get at was whether these Boards do the things off their own bat, or whether they are prompted by the community outside.

155. (*Chairman.*) I would suggest that the question should be put to the representatives of the Board.

156. (*Admiral Henderson.*) Very well. Then the Lighthouse Authorities themselves really resolve themselves into (1) the railway companies, Harbour Boards which are supervised by the Trinity House as to the character of their lights?—Yes.

157. (2) The Irish Board supervised by the Trinity House?—Yes.

158. (3) The Scotch Board supervised by the Trinity House?—Yes.

159. (4) The Trinity House itself?—Yes.

160. And the ultimate control of the whole of these agencies and sub-angencies is the Board of Trade itself?—Yes.

161. A control that is absolute as to new work?—Yes.

162. As to finance, as to emoluments, pensions, and supplies?—Yes.

163. Maintenance; the whole thing?—Yes.

Board of Trade: Work involved by control over Lighthouse Boards.

164. Now, I should like to know what staff you have at the Board of Trade to do that work?—Well, I am not quite sure that I could answer that fully, because in my Department I have two clerks, I think, who give up most of their time to the work, and there is a Nautical Adviser, who advises as to nautical matters, but he also advises as to foreshores and as to matters of navigation, too. Then there is the Finance Department, which is separate from mine, and everything about expenditure goes to them. We refer it to them, or in some cases it is started in that Department, and is referred to us.

165. I see; but does this Finance Department know anything about lighthouses?—They would not know anything about the technical matters. They would be guided by our Nautical Adviser.

166. Would they know anything about supplies?—Yes.

167. And establishments?—Yes.

168. They would?—They have learned it, I suppose, as they have other matters of very much the same character which they have to deal with.

169. Would it be possible for you to give any idea of what work the management of the lighthouses involves at the Board of Trade?—I could state the number of papers, and practically the amount of time that is given by how many clerks; I could get that for you, sir.

Nautical Adviser, Powers of,

170. I think I should like it. Your Nautical Adviser, Commander Frederick, really is superior to all these other Authorities combined; I may say he is the ultimate authority. If you come to a nautical question you go to Commander Frederick, who has the power to override all the other Authorities?—Yes.

Hon. T. H. W. Pelham, C.B.

6 Nov. 1906.

171. He has to decide between them; you have to trust to his judgment?—Yes, almost entirely.

172. He is the one man who ultimately runs the show from the nautical side entirely?—From the nautical side, yes.

173. If you had a question between shipping interests and the Irish Lights or the Trinity Board, or whether the Trinity Board did what they ought to do or did not, he is the ultimate authority?—I should say so, generally.

(*Sir Frank Adam.*) As to the direction of placing new lights, I suppose you mean?

Extent of control over Lighthouse Boards.

174. (*Admiral Henderson.*) No, I mean to say nearly all the questions connected with lighthouse administration. Some are nautical questions; but it is the whole question. The Board of Trade is the ultimate authority for every thing. Not one farthing can be spent, not one sixpence extra can be given to a man's pay; they cannot put an additional brick into a lighthouse or repair it even, without the sanction of the Board of Trade. The evidence given by Mr. Pelham is that you do in some cases give financial authority immediately, without waiting for the return, but it is a fact, and the fact comes back, that this Harbour Department—am I speaking correctly?—in the Board of Trade is the ultimate lighthouse authority for every little bit of work connected with it?—Yes.

175. And that that nautical authority is centred in Commander Frederick, who is their Nautical Adviser?—Yes.

176. (*Chairman.*) Is that quite a fair way to put it?—I am not sure that it is, quite.

177. The Board of Trade possess a veto?—Yes.

178. (*Admiral Henderson.*) It possesses a veto. The Trinity House control over these Irish and Scotch Boards has nothing to do with their administration?—No.

179. Nothing but as to the character of the lights or new work; that belongs to the Board of Trade itself?—Well, it is something more than the character; I think it is the position, and the necessity of the proposed works. It is any exercise of lighthouse powers.

Lighthouse Powers: Definition of,

They have control of lighthouses. Powers are described as erecting or placing any lighthouse, with all requisite works, roads, and appurtenances; adding to, altering, or removing any lighthouse; erecting or placing any buoy or beacon, or altering or removing any buoy or beacon; and varying the character of any lighthouse.

180. Therefore, in coming to the practical work of establishment, the Trinity House itself really, in that sense, has no real power; it must apply to the Board of Trade for everything?—Yes.

181. I see that no expense for lighthouses, buoys and beacons can be paid out of the Lighthouse Fund until an estimate of amount has been approved by the Board of Trade. Does this apply to new work only?—No, almost everything.

182. To almost anything?—Yes.

183. Can we see some of the correspondence and the estimates and matters that are submitted annually by the Trinity House?—Yes, certainly.

184. Do you not consider at the present moment that the Advisory Committee is the fifth wheel of a coach?—Yes, it is somewhat. I do not think it is the best solution of the difficulty.

185. You have handed in those lists that you have spoken about, the principal works objected to by the Advisory Committee, and the works suggested by the Committee?—Yes.

186. We shall be able to see the whole of the establishment charges of these various Boards?—Yes, they will all come out in the accounts.

187. And I think you told me just now that the Financial Department of the Board of Trade was the section that overhauls these estimates?—Yes.

188. Who at the Board of Trade again would be the authority after an Order in Council has been obtained by the Board—if they desired to give effect to any recommendation by any Lighthouse Authority for an increase of salary; who does that at the Board?—The Harbour Department, assisted by the Finance Department. In some cases a small Departmental Committee has been appointed to consider a new scale of salaries.

189. And the same with the question of pensions, I suppose?—Yes.

190. You do not practically carry out, I think you said, Section 636 of the Merchant Shipping Act; that is the inspection. I mean to say do you trust these Boards to do their own inspection, or does the Board of Trade over-inspect them, so to speak?—Well, sometimes Commander Frederick goes down. He went down the other day with the Trinity House representatives to see a light at the Skelligs.

191. That would be at the request of the Trinity House, or is independent action in that respect taken by the Board of Trade?—Generally it is the solution of a difficulty.

192. I mean to say Section 636 of that Act is practically a quiescent section?—I would not say entirely.

193. Board of Trade empowered on complaint. It is after complaint; that would be complaint from an outsider?—Practically we do not do very much under that section, at any rate, except where there is a difficulty and the parties cannot agree, and we sometimes have a conference on the spot.

Local Lights: Inspection by General Lighthouse Authorities.

194. And the same you may say as to Sections 652 to 657, the local authorities; do they often worry you?—Not very often. The General Lighthouse Authorities ought to inspect, and the Trinity House and the Northern Lighthouse Authorities do inspect the local lights. We have had great difficulty with the Irish Lights Commissioners in getting them to discharge this duty. They said they were not bound to send in a report every year.

195. And, again, the finance side carry out Section 664; that is inspection of the books?—Yes.

196. That is done regularly every year?—It is done whenever necessary.

Wrecks:

197. I want to know whether you could give me statistics of the number of wrecks which have been removed by these Boards within the last few years each year?—I will try and find that out, sir.

General Lighthouse Fund is increasing.

198. And their position. The question of the General Lighthouse Fund, has it been increasing?—Yes, it has been increasing, and the Board of Trade are at the present time reducing the rates.

199. Since its institution, since 1898, has it annually met the whole of the demand of the Lighthouse Fund?—Yes, certainly.

Light Dues: Amount leviable.

200. (*Mr. Ennis.*) With regard to that, there is a question I had intended to ask. Is the amount of the light dues regulated by statute; I mean is there a limit to the amount of light dues leviable?—There is a maximum fixed by the second schedule of the Act of 1898, and there is power by Order in Council to alter that.

201. But there is a maximum fixed beyond which you cannot go?—The scale can be raised or reduced by Order in Council. A few years ago the rates were reduced by 12½ per cent., and it is now proposed to reduce them by another 7½ per cent. on the original amount, so as to make it 20 per cent. altogether.

202. There is a maximum rate fixed?—Yes, but subject to alteration by Order in Council.

203. (*Admiral Henderson.*) What I wanted ultimately to get at was whether these various Boards felt that they had a very good round sum coming in for them to deal with?—Oh, yes, they do.

204. I mean whether there is a tendency towards the economy there ought to be in consequence?—I think the Board of Trade has to look after that, because naturally each Authority in England, Ireland, and Scotland would like to see a little more expenditure on their lights.

205. They always do naturally?—And therefore we have to see that the total does not exceed a reasonable sum. We put off certain lights in consequence.

Controlled solely by Board of Trade.

206. Therefore it is correct to say that all the three General Lighthouse Authorities by this Section 648 of the Act of Parliament have no power whatever over the money; the Lighthouse Authorities themselves have no power over the money?—They have no power over the money coming in.

207. And the collection by the Collector of Customs on behalf of the Trinity House in that sense is only a figment; I mean the Trinity House themselves have nothing to do with the money?—No, not with the actual collection of the dues.

System of levying,

208. The Collector of Customs' power of levying it in Scotland and Ireland is delegated to the Trinity House, who shall keep accounts thereof, and shall cause the dues to be remitted to Her Majesty's Paymaster-General in such manner as the Board of Trade direct. As a matter of fact, the Trinity House is only a sleeping partner in the business?—I should not quite say that; they have to assess the dues leviable, when any question is raised.

And liability of ships to pay,

209. The Board of Trade have to levy the rate, have they not; the Trinity House have no power to alter the rate?—They have power to say whether certain ships are liable to pay. A great many intricate questions arise as to whether a ship is liable.

210. But do many questions arise now as to the liability of ships to light dues?—I think there is a certain number; I do not know how many.

211. And to what extent, and who settles it?—The Trinity House would settle it probably, subject to our approval in the case of dispute.

212. You say that, so far as the Board of Trade know, the work has been done efficiently; that is the Trinity House?—Yes.

213. Of course, you do not make any very close inspection of the work, I suppose?—No, there is a good deal of responsibility put upon them.

214. Upon them really?—Oh, yes.

Representation of shipping interest on Lighthouse Authorities: Difficulties as to,

215. Of course, there would be no objection to legislation as to putting on representatives. You say here in one of the paragraphs of your evidence "in the first place legislation would be necessary"; that is to get the shipping community represented?—Yes.

216. There would be no objection to legislation, I suppose?—No; I think there might be some difficulty about it. If you are to keep up the Irish and the Scotch bodies, it would be a little difficult to put satisfactory representatives on their bodies.

217. Now work is really not increasing, is it? There is some question about the Scotch Engineer. The sum approximates the same year after year that you are spending?—I think we are diminishing. I think the new works last year were certainly lower than they have been for some time; in fact, it is just down to the £50,000 recommended by Lord Courtney's Committee.

218. So far as you know, is the tendency of the demands of these Departments increasing, of these various Boards?—I think not.

219. Do you think it is lessening?—I think there is less in Ireland and less in England; I think there is a good deal of work left undone still in Scotland.

220. Practically the coast is sufficiently well lit now not to demand very much new work?—It is rather difficult for me to say that, because so often new lighthouses have to be put up in place of old ones. I do not know how far they are up to date. They are very expensive. For instance, there was a light at Beachy Head; it had to be taken from the top of the cliff and put down below; it was not a new light, there was always a light there, but they had to do the whole light from the beginning.

(*Mr. Ennis.*) There are three lighthouses at Wicklow Head, one over the other.

221. (*Admiral Henderson.*) Is there any reason why fishing vessels should not be subject to light dues? The character of the fishing trade has altered since 1894. It is mainly done by steamers; they go a long way out; and use the sea-going lights to a certain extent.—I am not prepared to express any opinion on that; no doubt there would be very strong opposition to it, I daresay, but I believe it is a pretty lucrative industry.

222. (*Sir Frank Adam.*) I think you said that there would be no difficulty in getting the mercantile marine shipowners represented at Trinity House, but there would be some difficulty on the Irish and Scotch Boards?—I think there would be, sir.

Suggestion as to nomination of members.

223. The Advisory Committee have got two representatives of Irish shipowners and two of Scotch; would men like these not be available?—They are not truly representative in one sense; they are nominated by a body which has its headquarters in England. One solution of it, no doubt, would be for the Board of Trade to nominate representatives of shipping interests to each of the three Lighthouse Boards. That would be one solution.

224. One other question I wished to ask. On all new works and any works connected with lighthouses in Scotland and Ireland Trinity House has control, supervision, subject to the final sanction of the Board of Trade, but is it not a fact that very large sums are sometimes expended on vessels in Ireland or Scotland over which Trinity House has no supervision?—Yes, I think that is so, and I think dwellings for the lightkeepers are not subject to Trinity House supervision.

Trinity House control over Scotch and Irish Boards.

225. And there have been much monies expended by especially the Irish Board, I think, in the past, that have not come before Trinity House at all in connection with providing new vessels or for various purposes?—I think a new lightvessel would come before Trinity House.

226. But not a vessel for navigation in connection with lighthouse work—No.

227. Then when it comes to the Board of Trade for sanction, who has the power of deciding?—That comes for our financial consent only.

228. You want someone to assist you to say whether it is necessary or not necessary, whether the expenditure is extravagant or not extravagant. Would that be Captain Frederick again?—Well, Captain Frederick would be consulted, but we should compare it with other expenditure in the past by other lighthouse authorities, and we should certainly ask questions—we constantly do ask questions—"Why are you paying so much more for this sort of thing than the Trinity House?"

Difficulty of comparing expenditure of the General Lighthouse Authorities.

229. Only one other question: Have you from time to time made comparison in regard to the cost of administration of Trinity House and the Scotch and Irish Boards?—We have, in particular cases—certainly. If they want a new vessel, we should ask why it is that they want a more expensive one, perhaps, than the Trinity House or the Scotch Board. But it is rather difficult to compare the expenditure as a whole one with the other; the circumstances are different.

230. (*Admiral Henderson.*) Can we get a return of the actual number of lights, buoys and beacons, etc., in the United Kingdom—I mean those under the Trinity House, and those under the Irish Board, and those under the local authorities?—You shall have a map showing them all.

231. The Admiralty do a great deal of work, for instance?—Yes.

232. And, as a local authority, they take all the naval ports?—Yes.

Local Lighting Authorities.

233. (*Colonel Herbert.*) Just to make two points clear that I asked before. With regard to my question with reference to local authorities, am I right in assuming that, unless constituted by Act of Parliament, doubts may arise as to whether they are really responsible authorities?—You mean local harbour authorities?

234. I was asking how they derive their authority, and I understand it was chiefly under private Bills, and that sort of thing?—Yes.

235. Except in such cases doubts may always arise unless it is actually by some statutory power?—There are doubts sometimes whether there is a harbour authority.

236. And then we get the difficulties to which you referred?—Yes; but it is not only that, but it is a question where there is a harbour authority and a light is wanted two or three miles outside the harbour limits.

237. As to the limits of those authorities?—Yes.

Functions of Trinity House.

238. Then the other point on which I wanted to make my question a little more clear and full was with regard to the functions of the Trinity House. I would ask it in this way. Am I right in stating that the functions of Trinity House would be as follows:—(*a*), Lighthouse Authority for England; (*b*), controlling authority over Scotch and Irish Authorities; (*c*), the sole authority for levying dues? I did not ask that last point?—Yes; I think that is it.

239. Those would be broadly the functions of Trinity House?—Yes.

Expenditure on experiments.

240. (*Mr. Ennis.*) With regard to expenditure, have the General Lighthouse Authorities or the Board of Trade power to expend money for the purpose of experiment, or for offering inducements to inventors to perfect and improve the existing lighting apparatus?

Hon. T. H. W. Pelham, C.B. 6 Nov. 1906.

—Yes. We are sometimes asked to expend money on experiments. We have been asked lately by the Admiralty to expend money in fitting up vessels with bells, and £1,000 was put down last year. I think that before the Admiralty applied the Trinity House applied to spend £1,500. There was very strong opposition to this, and the President said it had better drop, for the present at any rate. In the meantime the Admiralty wrote and asked us to sanction something of this sort, and we made some inquiries as to how much they wanted to spend. They wanted a few bells put up; we thought it would be very small. It turned out to be £600, and the President of the Board of Trade said he could not sanction that at present.

241. But the Board of Trade have power, should they wish to do so, to expend money for this purpose?—I think so.

242. (*Chairman.*) That was a case where the Lighthouse Authority desired to try some experiments, and the Board of Trade, after hearing what the Advisory Committee had to say upon the matter, decided that such experiments must be postponed?—Yes.

General Lighthouse Authorities Responsibility of,

243. With a view of clearing up a point raised by Admiral Henderson, I should just like to ask you whether you consider it would be a correct way of putting the matter to say that the veto of the Board of Trade deprived the Lighthouse Authorities of all real administrative power?—No; I think not. I think that they have considerable latitude in their administration and in their constitution.

244. The whole power of initiative with regard to new works rests with them in the first instance?—Certainly, as regards England.

245. So far as the veto of the Board of Trade is exercised, it is, of course, exercised to some extent upon the advice of their expert, Captain Frederick?—Yes.

246. But would you say that, in the majority of cases it was not rather questions of finance that entered into the decision of the Board as to whether a new work should or should not be undertaken? That is to say, that in general it might be admitted that several works were in themselves desirable if there were unlimited funds to carry them out, and that the ultimate decision whether a particular work shall or shall not be carried out depends very often upon considerations of the expenditure proposed during any given year?—That is very often the case, indeed. But there are other cases where the utility of the light is disputed.

247. Then, as to the ordinary administration, so far as the maintenance of lights on the coast is concerned as opposed to the erection of new works, that rests entirely with the Lighthouse Authorities, does it not?—Yes.

248. The Board of Trade does not interfere with them? —Yes; there is a general financial control. They have to bring their estimates and their contracts for approval. Control exercised over, by Board of Trade.

249. But that financial control is on all fours with the financial control exercised by the Treasury over other Departments of the Government?—That is so.

250. It is greater as to new works?—Yes.

251. And, to some extent, as to contracts?—Yes.

252. But in general it is comparable, and you would hardly be prepared to say that the powers of the Board of Trade were such as to destroy the administrative responsibility of the Lighthouse Boards?—Of course not. We have tenders submitted to us, and very often one of the Lighthouse Authorities says, "We will not accept the lowest." They want to accept a higher one, we want to know why, and we have correspondence upon the subject. It has happened that the Irish Lights Board want to adopt a higher one because it is from an Irish firm, or something of that sort.

253. The control of the Board of Trade to a large extent resolves itself into this—that the Lighthouse Authorities are compelled to give reasons for what they propose to do?—Yes.

SECOND DAY

Friday, 9th November 1906.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.

Captain C. Bigham, C.M.G. (*Secretary*).

Mr. Arthur Owen, called in; and examined.

Mr. A. Owen. 9 Nov. 1906.

254. (*Chairman.*) You are the Secretary of the Trinity House and appear here to give evidence on its behalf?—Yes, Sir.

Constitution of Trinity House.

255. Will you tell us to begin with by what charters the existing constitution of the corporation is defined? —The corporation is defined by charters granted by James II. in 1685, and the supplemental charter of Queen Victoria in 1871. By the Merchant Shipping Act of 1854 (consolidated with other Merchant Shipping Acts in 1894) the corporation was appointed as the "General Lighthouse Authority throughout England and Wales and the Channel Islands and the adjacent seas and islands, and at Gibraltar," and under this Act the financial control of lighthouse revenue, which had hitherto been vested in the corporation, was transferred to the Board of Trade.

256. The corporation consists of Elder Brethren and Younger Brethren?—That is so, Sir. Under the original charter of James II. the number of Elder Brethren was 31, and of these 20 were practical seamen, the majority being master mariners in the merchant service. The remaining eleven Elder Brethren, who took no part in the active duties of the corporation, consisted of persons of distinction, such as members of the Royal Family, Ministers of State, naval officers of high rank, etc. In the year 1871, as the result of correspondence which took place between the Deputy Master and the then President of the Board of Trade (Mr. John Bright) it was agreed, for reasons given in the Parliamentary paper, which I will put in, that the number of the acting members of the Board should be reduced from 20 to 13, and in November, 1871, the supplemental charter above referred to was granted to enable this reduction to be carried into effect. Of course this could not be done immediately; it could only be done by the non-filling up of vacancies so that the complete reduction under the supplemental charter did not come into effect until 1888.

257. Will you give us the reasons for the reduction in the numbers of the Elder Brethren?—The reasons for the reduction are set forth in Mr. Bright's letter to the Deputy Master dated March 23rd, 1869, of which the following is an extract:—"The remuneration fixed by Parliament, viz., £7,000 a year is not, when divided among the whole number, sufficient to attract the service of the best men of an active profession whilst still in the prime of life." *Remuneration of Elder Brethren.*

258. From what source is this £7,000 paid?—It was a sum allowed by an Act of 1822, to be taken from the lighthouse revenue for the payment of the Acting Elder Brethren, in lieu of certain fees called "Elder turns" which, from time immemorial, had hitherto been the method of paying the Elder Brethren, and which were derived from fees charged on vessels entering or leaving the Thames. From that time those fees were credited to the lighthouse revenue.

259. I suppose the object in making this change was to have a fixed sum instead of a fluctuating one? —Yes, I take it that was so.

Appointment of Younger Brethren.

260. Then as to the Younger Brethren, how are they appointed?—They are proposed and seconded by any two members of the Board, then they are elected and pay a small fee of entry. They take no part in the duties of the Trinity House, excepting that once a year when we have our anniversary meeting they attend at the Trinity House and vote in the elections of Master and Wardens.

261. What is the actual number at present?—About 205, I think, at the present moment.

262. Is the number maintained at about that figure as a rule; has it varied much from time to time?—I think we might put it at that.

263. Supposing the number had already reached 200 or upwards?—The number is unlimited.

264. It is unlimited not merely in theory but in practice as well?—In practice as well, yes that is so.

265. Do you find that the suggestions made by the Younger Brethren as regards improvements of lighting on the coast are of value to the Elder Brethren?—They do make occasional suggestions and write and suggest alterations.

266. They are encouraged to do that?—Yes, that is to say we tell them on election that we are always very glad to see them, and if on their way about they have any suggestions to make by which a seamark may be improved, the Elder Brethren are very glad to hear what they have to say.

267. Do you get many suggestions as a matter of fact?—No, as a rule we do not get many, but when we do they are generally very practical suggestions.

268. They are in no way consulted when there is any doubt in the minds of the Elder Brethren as to whether some new seamark should be erected?—No. There would be considerable difficulty in getting their opinion as a body, because they are men all over the world. We only see them occasionally.

269. They are actively engaged in their profession for the most part?—They are actively engaged in their profession, and of course we very rarely see anything of the senior men except at the annual meeting, that is those men who have been on the list of Younger Brethren for many years.

Elder Brethren: Election of,

270. Then how is the election of the Elder Brethren managed?—The election of an Elder Brother is by co-option. On a vacancy occurring arrangements are made for filling it, and they vote amongst themselves by ballot.

271. The Younger Brethren vote?—I thought you said how are the Elder Brethren elected.

272. Yes.—The Elder Brethren are elected by co-option amongst themselves. The Board fill up the vacancies in the Board.

273. They must be Younger Brethren?—They must be Younger Brethren.

274. Is there any qualification necessary besides that?—No person is eligible to fill the office of an Acting Elder Brother unless he has served afloat actually in command of one or more of His Majesty's ships for at least three years or has attained the rank of commander in the Royal Navy, or unless he shall have commanded in the Mercantile Marine on foreign voyages for at least four years. The Mercantile Marine also is held to include the Royal Indian Marine, or the marine service organised by the governing body of any British colony. That is the qualification.

Division of, into Committees.

274a. For the purpose of carrying out the duties of the Corporation the Elder Brethren are divided into committees?—Yes, Sir, we have three committees. First the Committee of Wardens, which is presided over by the Deputy Master for the time being; then there is the Committee for Lights and the Examining Committee. These Committees meet on Tuesdays and Fridays and on such other days as may be necessary, a member or members of each committee also attending daily to deal with any matters of urgency. The full Board of Elder Brethren holds a weekly meeting (on Tuesdays) for the consideration of special matters, and to deal with the various reports and recommendations submitted by the committees.

275. Have the committees power to give effect to any decision at which they may arrive without submitting it to the Board?—On matters relating to the general personnel of the service they would have, but if there was any special matter that would come to the Board for their confirmation.

275a. Reference to the Board is only made in matters of importance?—That is so.

276. Are any Elder Brethren members of more than one committee?—Not of these three committees.

Duties of Committees: Warden's Committee.

277. Will you describe to us the duties of the Wardens' Committee?—The Wardens' Committee deals with all matters of finance and accounts, light dues questions, tenders and contracts, etc. This committee also deals with the special matters referred from the Board for consideration and report, and occasionally sits with other committees on special questions, *i.e.*, forms part of a joint committee. The Wardens are appointed from the senior members of the Board, whose long experience in all branches of the service specially qualifies them for the responsible duties of this committee.

Lights Committee.

278. What are the duties of the Lights Committee?—The Lights Committee is the executive committee for administering the lighthouse, lightvessel, steam vessel and buoy and beacon services of the corporation. This committee deals with all matters relating to the personnel of the several branches of the service, inquires into all complaints and casualties, regulates the admission of light keepers or light and steam vessel men, and their removals, promotions, superannuation, etc. It is also responsible for the efficient maintenance and repair of stations, controls the store department of the service generally, including the invitation of tenders, etc., and all experiments with lights, fog-signals and inventions are carried out under its supervision. It also shares with the other committees in the important duties which are required afloat. All lighthouses, lightvessels, beacons, etc., round the coast are visited and inspected by a member of the Lights Committee at least once a year, and all lights under local jurisdiction once every four years. Another very important branch of this committee's duty is that connected with the powers given to the Trinity House under the Removal of Wrecks Clauses of the Merchant Shipping Act specially referred to later.

279. You say that the duties which are required afloat are shared by the Lights Committee and the other committees?—Yes, mainly with the Examining Committee, whose duty it is to examine and see that all the seamarks are in their proper assigned position.

Examining Committee.

280. Then let us proceed to the duties of the Examining Committee?—To the Examining Committee is entrusted the duty of periodically examining the whole line of English and Welsh Coast, and any changes in the navigable channels are duly considered by them view a view of effecting such alterations in seamarks as may be necessary. The positions of all lightvessels, buoys, etc., are also personally verified by a member of this committee at least every two years, or oftener, if necessary. The Examining Committee also advises the Board as to the necessity for any additions to the lighting or marking of any particular locality or channel, and the character of the seamarks which may be required. It also advises as to the extent to which wrecks, reported from time to time, constitute a danger to navigation or to lifeboats, also as to their removal, when necessary, and the depth required over them for the safety of shipping.

281. The duties in connection with wrecks seem to be shared then between the Lights Committee and the Examining Committee?—Yes, the Examining Committee advises as to the extent that a wreck is a danger, and how much water should be made over it, and then it goes back to the Lights Committee to be carried out. The Examining Committee also issue all Notices to Mariners relating to seamarks, and the character and efficiency of all lights, etc., under the jurisdiction of local authorities is considered by this committee, as well as the applications by the Scotch and Irish Lighthouse Boards in respect of changes or additions to the seamarks under their respective jurisdictions. These proposed changes require to be approved by the Examining Committee before receiving the statutory approval of the Board. These duties require at times a personal inspection on the spot before the matter which is being dealt with can be reported on. The members of the Examining Committee also act as the Pilotage Committee of the Corporation, and in that capacity

Mr. A. Owen.

9 Nov. 1906.

manage all matters of detail connected with the London and outports pilotage districts, for which the Corporation of the Trinity House is the pilotage authority. It should be added that, so far as the London pilotage is concerned, the committee of Elder Brethren is supplemented by a shipowner and pilot, who are elected yearly by the shipowners and pilots respectively, in accordance with the terms of the Pilotage Confirmation Act of 1896. There is also an Audit Committee, consisting of one member of each of the other Committees and myself, which meets once a month to examine the General Lighthouse Fund accounts for the previous month. I will put in a memorandum describing our system of account and audit. Besides the above committees there are four committees dealing with corporate matters, such as charitable pensions, almshouses, estates, etc., etc., the accounts of which are rendered to the Charity Commissioners.

Audit Committee.

Committees dealing with corporate matters.

282. I presume those matters do not concern the Lighthouse Fund at all?—No, not in the slightest.

283. And any expenditure that is required is provided for out of the corporate funds?—Out of the corporate funds, pure and simple. Of course, there would have been no necessity for me to state that, but it was thought the Commission would like to have a full knowledge of what the Elder Brethren do at the Trinity House.

284. The duties which belong to the Elder Brethren in their corporate capacity are comparatively small, are they not?—Yes, there is not very much, but of course these committees meet once or twice a week for dealing with these matters, but, as you say, their duties are comparatively small as compared with their public duties.

Head Office Establishment of Trinity House.

284a. Will you next describe to us the official establishment?—The official establishment at the Trinity House, which is regulated by Order in Council, is at present constituted as follows:—

One Secretary.
Two Principals.
Four First-class Clerks.
Four Second-class Clerks.
Four Lower-grade Clerks.

All the above are covenanted officials, and are under the same conditions as respects superannuation, etc., as the regular Home Civil Service. Appointments are made to the second class and lower grades after competitive examination by the Civil Service Commissioners, five candidates being nominated for each vacancy. The official establishment also includes a female typist, two extra clerks and a number of boy clerks.

285. How does this distinction arise between covenanted and uncovenanted officers?—I think, Sir, that is very much on the same lines as in every Government Department. There is a covenanted staff, and some of the lower-grade men are uncovenanted. It is the same in our Engineer's department.

286. Does the appointment of uncovenanted officers require the sanction of the Board of Trade?—Yes.

287. Just the same as of a covenanted officer?—Just the same. They are paid according to a scale. The uncovenanted men are paid according to a scale which had been previously sanctioned by the Board of Trade. There is also a Scientific Adviser to the Board (this appointment being at present held by the Right Hon. Lord Rayleigh) and a surveyor of shipping.

288. Is the post of Scientific Adviser a paid post?—Yes.

289. What is the salary of that?—Of the Scientific Adviser?

290. Yes?—He gets an honorarium of £200 per annum. If you like we can give you particulars of the salaries.

291. We shall require undoubtedly a statement of the salaries of all the officers.—I have them here; I can put them in now.

Salaries: Office Staff.

292. You had better put in a statement of the salaries of the whole staff.—I do not think this is quite in a form I can hand in officially. The Secretary's minimum salary is £1,000, rising by annual increments of £50 to £1,200. The two principals; their minimum is £600, rising by £25 to £800. The four first-class clerks; their minimum is £400, rising by £20 to £550. The four second-class clerks; their minimum is £120, rising by £15 to £380; and the four lower-grade clerks begin at £80, and for the first five years, I think it is, they have an annual increase of £5 to £100. After they have got £100, they rise by £7 10s. every year to £190; and then by annual increments of 10 to £250. Extra clerks have £3 a week. The typist gets £1 5s. per week, and the boy clerks are paid according to the scale in the Government's service. They commence at 15s. a week and rise a shilling a week per annum to 19s.

293. Can you tell us how those salaries compare with the salaries in Government Departments?—They are lower than the salaries of the Board of Trade. I think the principal clerks in the Board of Trade rise to £900; ours to £800. These figures you can easily compare, and you will find that our scale of pay is certainly lower.

294. Is on the whole lower than in Government Departments?—It is on the whole lower.

295. Taking the Board of Trade as an example?—Yes.

296. In addition to the staff you have already mentioned, there is also a Pilotage Department and an Estates Department?—Yes, in addition to the above staff, there is a Pilotage Department and an Estates, etc., Department (four clerks in each), but these are quite distinct from the Lighthouse Department, and there is no charge upon the General Lighthouse Fund in connection with them. The salaries of the Engineer's staff are—the Engineer-in-Chief, £1,000, rising by £50 to £1,200, and this has subsequently been increased in the case of the present holder to a maximum of £1,500 per annum.

Engineer's Staff.

297. That is a personal salary?—I think so—yes. The salary under Order in Council is £1,000, rising by £50 to £1,200, but the present Engineer is allowed to go up to a maximum of £1,500. That, of course, is after consultation and with the sanction of the Board of Trade. The Assistant Engineer has a minimum of £400, rising by annual increments of £20 to £600. The Mechanical Assistant Engineer has a minimum of £200, rising by annual increments of £15 to £400. The Marine Assistant Engineer has a minimum of £200, rising by annual increments of £15 to £400. The Chief Engineering Clerk has a minimum of £300, rising by annual increments of £20 to £500. The Assistant Clerk has a minimum of £150, rising by annual increments of £15 to £250. The draughtsman, whose appointment is to lapse, has £225 per annum. As regards the uncovenated staff, there is a Civil Constructive Assistant with a minimum salary of £250, rising by £15 per annum to £350. There is also one clerk with a minimum salary of £70, rising by £10 increments to £180 per annum; one clerk with a minimum salary of £52, rising by increments to £78; and one boy clerk at 15s. a week, rising by increments of 1s. annually to 19s. per week. In addition to that, the Engineer gets a percentage of 2½ on the value of any work for other Departments, such as the Colonial Office or India Office, that passes through his hands, but that does not amount to very much. On the average, it would be under £150 a year. That is also done with the consent of the Board of Trade.

298. (*Mr. Ennis.*) Who gets this 2½ per cent.?—It is handed to the Engineer, and I believe he gives a proportion to the men in the staff that help him.

299. (*Chairman.*) But that is an arrangement between him and them?—That is an arrangement between him and them; the money comes to him and he signs for it.

Light Dues: System of levying,

300. Passing from that subject, have you any observations to make on the way in which lighthouse revenue is raised?—The funds for meeting the expenditure of the General Lighthouse Authorities of the United Kingdom are derived from light dues levied on vessels trading to or from the various ports in Great Britain and Ireland. Prior to April, 1899, these dues were levied in the form of specific tolls on the net tonnage of a ship, for each seamark within the jurisdiction of a General Lighthouse Authority which she either passed or derived benefit from on her voyage, and these tolls were payable in respect of every voyage made by the ship during the year. By the Merchant Shipping (Mercantile Marine Fund) Act, 1898, these tolls were done away with, and a fixed charge per ton, payable for a limited number of voyages in any one year, was substituted. Details of these charges will be found in the printed schedule attached. The Trinity House is now responsible for the proper collection of light dues at all ports in the United Kingdom, and, by arrangement with the Board of Customs, the

and of collection.

Chief Officers of Customs at the different ports are appointed by the Corporation to collect the dues. The dues are remitted periodically to the Paymaster-General through the Board of Trade. But accounts of collection are rendered to the Trinity House monthly and there examined and checked.

301. Practically the only work of the Trinity House, after collecting the dues, is this examination and checking?—Well, of course, the collectors are constantly in communication with us in connection with special matters, such as claims for repayments, cases requiring special consideration, etc., etc., and these are dealt with direct between the collector of the Customs and the Trinity House.

Seamarks controlled by, Trinity House.

302. Would you kindly enumerate the Trinity House seamarks?—The seamarks in England and Wales which are under the direct control of the Trinity House are as follows:—71 lighthouses (with resident keepers), 12 unwatched lights, two separate fog-signal stations.

303. By separate fog-signal stations I suppose you mean stations which are fog-signal stations, and that only?—That is so; then there are 50 lightvessels, five lighted bell buoys, 35 lighted buoys, 18 bell buoys, two whistling buoys, 517 ordinary buoys, and 64 beacons, and for the work afloat in connection with the service generally a fleet of eleven steamers of small tonnage is kept constantly employed.

304. Have these vessels to be specially constructed for their work?—Well, of course, by reason of the work that they have to do, it is necessary that they should be of exceptional strength, and fitted with special lifting gear. I have a statement here which perhaps you would like me to put in of the tonnage and general particulars with regard to these vessels.

305. Including the cost?—Including the cost. Would you like that furnished?

Division of coastline into Districts.

306. If you please.—For Trinity House purposes the English and Welsh coast line is divided into seven districts, each being under the charge of a local superintendent, who has been trained in the service from his boyhood, and who, in addition to his other duties, is required to inspect and verify all stations under his charge at least once a quarter. The accompanying book contains maps showing the limit of each district, the positions of the respective depôts at which the superintendent resides, and a detailed list of all the lights, etc., stations, included in each district. The preface contains particulars of the English light, etc., service, generally. I have also put in a copy of the Service regulations, which contain full particulars of the manner in which the duties of the district superintendent are to be carried out.

307. Can you give us full particulars with regard to the first cost, tonnage, and so forth, of lightvessels and steam vessels?—I have prepared a statement which will give that information, and I shall be able to put that in.*

308. Can you also give us information as to the cost of maintenance and repairs of lighthouses and fog-signalling stations?—Yes.†

Stores: Method of obtaining, by contract.

309. As to store supplies, these are always obtained by contract, are they not?—Yes, that is so invariably. The various stores required are always obtained by contract, tenders being invited either by public advertisement or from selected firms. The former method is adopted in regard to stores, etc., the supply or manufacture of which does not necessitate previous knowledge of Trinity House requirements, the remainder are obtained from selected firms. In all cases, where feasible, samples are obtained from firms tendering. These samples, when appertaining to oils, paints, etc., for which specifications are provided, are subjected to analysis in the Government Laboratory, and the lowest tender is only accepted when the sample complies with the specified requirements. Lighthouse oils have, in addition, to undergo an exhaustive burning test. The tenders for stores in regard to which expert opinion is required are submitted to the Engineer-in-Chief, or other expert, for his report before arriving at a decision as to their acceptance. In order to ensure that the quality of the oils, paints, etc., delivered shall be equal to that of the samples submitted with the tenders, further samples are obtained from the deliveries and analysed; if these are reported as unsatisfactory the deliveries from which they have been taken are rejected. Chain cables, rope, etc., are subjected to special test at the Blackwall workshops, and rejected if they fail to pass; the cables having previously been subjected to the statutory proof strain at a public chain-proving house licensed by the Board of Trade.

and of supplying, to light stations.

310. Arrangements are made to have certain complements of stores at all lighthouses and on board all lightvessels?—At all lighthouses and on board all lightvessels a certain complement of stores has to be kept, and every year the officer in charge of each station submits to the Trinity House, through his superintendent, an indent for such stores as are required to make up this complement. Special indents are furnished by the superintendents throughout the year for such expendable or other stores as may from time to time be required.

Wreck removal work of Trinity House.

310a. Will you tell us something about the wreck work of the Board?—The Removal of Wrecks Act, 1877, imposed upon the Trinity House, as a General Lighthouse Authority, the duty of marking, removing and otherwise dealing with all wrecks (not within the jurisdiction of a local authority), which are, or may become a danger to navigation, and by an Amendment to the Act in 1889, this duty was made to include all wrecks which are, or may become a danger to navigation, or to lifeboats engaged in lifeboat service. This wreck work, the obligation to perform which is continued in the existing Merchant Shipping Act of 1894, which absorbed the previous Wreck Removal Acts, adds very considerably to the duties and responsibilities of the Trinity House, necessitating as it does, the employment of their steam tenders and a staff of trained divers for a large portion of the year. It has been estimated that the time occupied by the various Trinity House steamers upon wreck work is, in any one year, equivalent to the continuous employment on such work of one steamer during the whole year. The ordinary staff of officers in the Steam Vessel Service, all of whom receive training in the use of explosives at Portsmouth Dockyard, not being sufficient to cope with the large amount of wreck work, a supernumerary officer has recently been appointed, one of whose special duties is to take charge of wreck dispersal operations. Apart from the time occupied in actual wreck dispersion, etc., the steam vessels are frequently engaged in searching for floating or other wreckage, which has been reported as having been seen by passing vessels, and in doing so are sometimes required to travel long distances, on what proves to be a fruitless errand.

Control of Trinity House over Local Lights.

311. What are the duties of the Trinity House with regard to local lights?—The duties and responsibilities of the Trinity House in respect of local lights (*i.e.*, seamarks belonging to local authorities) are defined in the 652nd and following sections of the Merchant Shipping Act, 1894. These include periodical inspection by the Elder Brethren of all such local seamarks as are under the jurisdiction of the Trinity House. The results of such inspection are communicated to the local lighting authorities concerned, and also to the Board of Trade annually for presentation to Parliament. In addition to this inspection duty considerable work is entailed at headquarters in dealing with applications from local authorities in connection with any proposal for new or altered seamarks, full particulars of which must be laid before the Trinity House and statutory sanction obtained thereto before such proposals are carried into effect.

312. The local authorities are not entitled to put up any new light without the sanction of the Trinity House?—That is so.

Seamarks maintained by Trinity House for other bodies.

313. Are there seamarks maintained by Trinity House not on account of the Lighthouse Fund, but for other bodies?—Yes. In addition to the work appertaining to the light, etc., service in Great Britain and Ireland, there are several seamarks round the coast which are maintained by the Trinity House, on repayment, for the Admiralty, War Office, the London County Council, and certain local authorities, particulars of which are as follows:—At Dover Pier Works

* See Appendices B, III. and IV. † See Appendix B II.

Mr. A. Owen. 9 Nov. 1906.

we have placed a lightvessel outside the works, for which we have an annual rental of £2,275. Then there is the Warner lightvessel for the Admiralty; that is somewhere down by the Isle of Wight.

314. (*Admiral Henderson.*) The entrance to Spithead.—Dover Lighthouse, beacon lights on Portland Breakwater, three gas buoys in Solent, three gas buoys on Cant Sand, one gas buoy at Kingsdown Rifle Range, bell buoy and gas beacon at Dover, two measured mile buoys on Maplin Sands. All these are for and on behalf of the Admiralty. Then for the London County Council and others we have five gas buoys in Black Deep. That is for marking the sludge deposit area. Then for the Harwich Harbour Conservancy Board, one gas buoy at North Shelf; one gas buoy at each end. For the Colchester Corporation we have one gas buoy at Knowl. For the Great Eastern Railway we maintain two ballast buoys at Lowestoft, and for the Lowestoft Corporation a sewer outfall buoy. The expenses of all these seamarks are charged and paid by the respective authorities for whom they are placed.

Payment for Extraneous Services.

315. (*Chairman.*) Do you charge an annual rental?—We charge an annual rental, which is computed to cover every expenditure.

316. To cover every expenditure?—To cover every expenditure, including renewal after a certain number of years, sinking fund; everything that can be possibly added to such a calculation we take care to add.

317. Leaving, I suppose, a certain margin to cover contingencies?—Oh yes, we take care to have a good rental for anything we do in that way.

318. You do not seek, however, to make a profit?—No, we do not make a profit. We give them what we call a fair average price. Of course we give them particulars; we show them how we arrive at that before they consent to it.

319. Is it the fact that your advice is sought by the Government of India and the Colonial Governments in connection with lighting?—Yes, we frequently advise the Colonial authorities in regard to proposals for new or improved lights, while some of the Colonial authorities obtain their principal lighting stores through the medium of the Trinity House.

320. Do you charge the Colonial authorities who obtain their lighting stores through you at cost price?—We charge them what they originally cost, and in addition we charge them a percentage to cover departmental expenses. In addition to those figures I gave you just now of work we do for the Admiralty at the Dover Harbour Works, we have carried out other work for them there in lighting the works under construction to the extent of £3,000, and that is still going on. Then at Portland Breakwater we erected all the lighthouses that mark the new Portland works—the harbour of refuge there, that was at a cost of £3,000. The Admiralty asked for our advice as to lighting the Moles at Gibraltar, and we constructed the necessary lights, and sent them out with men to fit them up, at a cost of £2,300.

321. We may take it, then, that in the view of the Admiralty——?—The Admiralty, Sir, comes to us for everything in connection with seamarks.

322. The view of the Admiralty is that you can do the work at least as efficiently and cheaply as they can themselves?—Well, you see we have a staff always ready to do it.

Difficulty of comparing English and French Lighthouse Services.

323. Do you desire to make any observations in reply to criticisms from time to time made upon the administration of the Trinity House?—Various charges have been made from time to time in past years of inefficiency and extravagance in regard to the Trinity House Service, and amongst other things it has been stated that the lighthouse service of France is much more economically conducted than that of England. I am quite certain that the Trinity House will be ready to meet any charges of inefficiency which might be made before this Commission by others. We shall have a ready answer to that; but in respect of French lights, in 1894, when that question was gone into in connection with the investigation by the special Committee appointed by the Board of Trade to inquire into the condition of the Mercantile Marine Fund, it was found to be impossible to obtain reliable data from which an accurate comparison could be made between the English and French Lighthouse Services, owing to the fact that in addition to the fixed sum which is voted annually for lighthouses, etc., in France, a considerable amount of lighthouse work is carried out by the "Ponts et Chaussees" branch of the Public Works Department, the cost of which is not specifically charged to the Lighthouse Service.

324. Have you endeavoured to ascertain as far as you can what the system of administration is in foreign countries, and what is their expenditure, so as to be able to institute a comparison?—We have not done anything like that in connection with this present Commission, but, as I say, on Lord Courtney's Committee, I think our people went very carefully into it, and they found they could get no reliable data from them. They could make no fair comparison. Of course, if the Commission would like that matter looked into——

325. I was wondering whether you had ever endeavoured to obtain this information, not to put before a Commission of Inquiry, but to check your own expenditure?—The conditions are so totally different, you see. To begin with, the cost of wages, labour, and material are so very different in this country from what they are in foreign countries; wages would be much less abroad.

Interchange of information with Foreign Lighthouse Authorities.

326. Do you, as a matter of fact, endeavour to keep in touch with everything that is being done in the way of lighting the coasts abroad—in foreign countries, I mean?—Yes; they supply us with reports of changes in their seamarks, as we do them.

327. You interchange information?—Oh, yes, we do; with France particularly. For instance, now, when we propose to make any change in the character of a seamark in the English Channel we always communicate with the French authorities. That was agreed to some years ago, and when the French Government propose to make any change in the distinctive characteristic of a seamark they write and tell us, and ask us if we have any observations to make, and we do the same with them.

328. That is in order that you may work in harmony?—Yes.

329. But if, over and above that, the French Lighthouse Authorities were carrying out any experiments, would they, as a matter of course, communicate the results to you?—No, I do not think they would; not unless we asked them for it.

330. But you do in practice ascertain if such experiments are being carried out?—If it came to our knowledge that they were doing something which would be of interest to us we should write and ask them. We occasionally write to the Lighthouse Departments of France and of the United States and ask them for information in respect of what they are doing. Only recently, for instance, in connection with this latest invention for fog-signalling by the submerged bell, we communicated with the Lighthouse Department at Washington, and asked them if they would give us their experience.

331. Those are the two most important countries from the coast lighting point of view?—Yes.

332. (*Colonel Herbert.*) You have no system of collating information and keeping a sort of intelligence department as regards lighting operations?—No, I cannot say that we have that.

333. (*Admiral Henderson.*) You would not generally know if there was any very great improvement made in Germany, for instance?—Well, we should, of course, in this way: we should have the Notices to Mariners; and if we saw anything in them——

334. Yes; but I mean to say mechanical improvements in lighthouses themselves, methods of burning oil for lights?—We should indirectly, because the inventors would be sure to bring them to our notice.

335. (*Chairman.*) You do not think any important improvement experimented upon or adopted abroad is in the least likely to escape your notice?—I should say not.

Functions of Trinity House.

336. (*Colonel Herbert.*) I gather from your general evidence that the functions of the Trinity House generally are numerous. You are, in the first place, the Lighthouse Authority for England?—Yes.

337. You are the controlling authority over the Scotch and Irish Lighthouse Authorities?—Well, to a certain extent that is so. They cannot establish a new light or alter any existing light without first submitting the proposal to the Trinity House and getting their statutory approval.

338. They cannot communicate with the Board of Trade except through Trinity House?—That is so in respect of proposals for new or altered lights.

339. Then you are further the inspecting authority of Local Lighthouse Authorities?—Yes.

340. And you are the collecting authority for all light dues throughout the whole kingdom?—Yes.

As to wrecks.

341. In addition to that you have likewise the duty of superintending the removal of wrecks. I do not quite follow whether that was in England only or in Scotland and Ireland as well?—That is within the jurisdiction of the Trinity House as the General Lighthouse Authority for England and Wales.

342. That function is exercised separately by Scotland and Ireland?—Yes, just so.

As to pilotage.

343. Similarly with regard to the Pilotage Committee, I did not quite follow the limits of the functions of the Trinity House with regard to pilotage?—The Trinity House is constituted the Pilotage Authority for the London District under their Charter of 1685, and by the Act of 48 Geo. III., 1808, powers were given to the Trinity House to provide pilots at out-ports where no provision already exists for the appointment of pilots. That is their charter, as it were, by which they are the General Pilotage Authority.

344. Then you are a pilotage authority for the Thames only?—We are the pilotage authority for the London District only.

345. And under exceptional circumstances for other places?—At certain outports round the coast.

346. But you do not deal otherwise officially with any of the other pilotage authorities in the kingdom?—No, we have no jurisdiction in respect of other pilotage authorities the same as we have with the light authorities.

As to survey work.

347. Exactly; that is the point I wanted quite clear. Then with regard to the duties of the hydrographical survey, do you take any part in that? It is a necessary part, of course, of the survey to have lights, beacons, and so forth, marked. In what way is the responsibility limited as to the correctness of that? There is the correctness both for the position of the thing itself and also for recording that position on the chart, and between the two an error might occur. Do you see the point I am driving at?—Of course the hydrographical work pure and simple, I take it, is the department of the Hydrographer of the Admiralty. Our duty is to satisfy ourselves that our seamarks are in their proper position.

348. I want to know what functions you discharge as to survey at all?—Only to satisfy ourselves that our seamarks are in their proper position and properly mark the channels they are intended to. Of course, the Admiralty always communicate to us any results they obtain in their work of survey round the coast.

349. But the position of buoys and marks of certain characters must be dependent upon the condition of the sea bottom?—Yes.

350. Which varies from time to time. That is ascertained by the hydrographical survey; therefore you have to be brought into communication with that body, which is constantly revising the charts?—Yes, that is so; and we are constantly in communication with the Hydrographer. The Hydrographer at once sends us a proof of the latest print of a chart that he may have printed, and if there is anything that requires special attention he would call our attention to it.

351. You trust to them for that?—Oh, no; I should not say that we trust to them for that, because our people are constantly on the look out. We are constantly sending our vessels up and down the channels sounding. In fact it is one of the principal instructions to our men in charge of steam vessels to satisfy themselves that the buoys and lightvessels are in their proper positions.

352. Do I understand rightly there are two different points which have to be attended to? First, are the buoys in their proper place, that is the place marked out for them in the chart?—Yes.

353. And, secondly, is it desirable at any time to shift that place elsewhere; but these are two distinct questions?—Well, that is the duty of the Examining Committee I told you of just now; it would be their business.

354. It would not be necessary to communicate with the Hydrographer with regard to the question whether your buoys were in the right position; you could ascertain that for yourselves with a survey, and if they were not in the right position you have them put in the right position?—Quite so; and if there were any change in its original position we should issue Notices to Mariners and tell them so.

355. And communicate with the Hydrographer?—And communicate with the Hydrographer.

356. But the necessity for the change of the position would very probably be discovered in the course of the Hydrographical Survey work?—Such a thing might occur.

357. Would not that be so?—This very rarely occurs.

358. But generally you regard that as your own function?—We certainly take the responsibility of properly marking the channels, and that the seamarks are in their proper position for that purpose. That is the Trinity House responsibility undoubtedly.

359. (*Admiral Henderson.*) I think every sailor gives them every information. A sailor sings out; it is enough if he fancies a buoy out of position; we always give them notice immediately.

360. (*Colonel Herbert.*) It is more the case of providing protection beforehand; I understand, therefore, it is to see that the Trinity House is beforehand, and it is not always a question of crying out after an accident has occurred. That is the point I am upon?—That is the special duty of the district superintendents who are constantly afloat to see that the buoys are in their proper position.

361. My point, if you follow me, is, I want to see that there is no danger of a sort of hiatus between the two authorities where danger might come in between the Hydrographer and yourselves. You have not mentioned that fact, but from the nature of things you must be in constant communication with him?—Yes, we are.

Younger Brethren: App int- ment of,

362. With regard to the appointment of the Elder Brethren. The Elder Brethren, you stated, were elected from the body of Younger Brethren, but is there any qualification for the candidature of a Younger Brother?—No, I do not think that there is, excepting that I do not think we should elect a Younger Brother unless he were a sailor. You see, the election of a Younger Brother is entirely in the hands of the Board. They come in on being proposed and seconded by two of the acting members of the Board. They, as it were, are sponsors for them.

363. Practically anybody may be?—There is nothing in the Charter, as far as I know, which defines the qualification, excepting an assumption in the first lines of the Charter. The Charter of James II. reads as follows:—"To all to whom these presents shall come, greeting. Whereas our well-beloved lieges and subjects, shipmen and mariners of this our Realm of England." There is an assumption that the charter is dealing with the body of "shipmen and mariners."

364. (*Chairman.*) As a matter of fact, are there any Younger Brethren at the present time who are not practically connected with the sea calling?—There is one I know who is not practically connected, although he has got a master mariner's certificate, and that is the present Lord Brassey. He is the only man I know of who has not been in active service at sea.

365. He has got a master's certificate?—He has got a Board of Trade master's certificate.

366. (*Colonel Herbert.*) He is only a Younger Brother?—He is only a Younger Brother. Would you like to see this list of Younger Brethren; that gives their service, every one of them?

(*Chairman.*) I think it would be a very useful thing to have, certainly.

Work of Examining Committee.

367. (*Colonel Herbert.*) With regard to the Examining Committee, I see you say the Examining Committee also advises as to the necessity, and so on. Has the Examining Committee any systematised communication with the representatives of the shipping interest. The Examining Committee, you said that it advises the Board on certain matters connected with lights?—Yes.

368. Has the Examining Committee any systematised communication with representatives of the shipping

Mr. A. Owen. 9 Nov. 1906.

interest?—No, the Examining Committee is the committee that advises the Board upon matters that are sent to the Trinity House for consideration. For instance, communications from the Irish or the Scotch Commissioners to the Trinity House asking for sanction to any proposed work, go to the Examining Committee to report upon, and then to the Board with the Committee's recommendation.

369. The point I was on was this: There is an Examining Committee, I may be wrong in saying the Examining Committee, but one that makes reports to the Board of Trade with regard to changes; has it got any communication with recognised representatives of the shipping interest who are obviously interested in the lighting question?—The Examining Committee as a committee would have no communication whatever with the outside public.

Opinion of Shipping Community sometimes invited by Trinity House.

370. (*Chairman.*) In connection with that, I think it is the fact that on one or two occasions, on the suggestion of the Board of Trade when there has been a difference of opinion between the Lighthouse Authorities and the Advisory Committee, you have put yourself in communication with shipmasters?—Oh, yes, that is so.

371. Acquainted with the navigation of the particular locality?—We have sometimes asked for outside opinions as to what was thought of a proposal when we have thought it necessary.

372. But you do not do that habitually?—No.

373. (*Colonel Herbert.*) It is no part of the system?—No, it is not part of the system, but, of course, we have applications, petitions, and memorials from seamen and others frequently for alterations or additions to the seamarks round the coast. These are duly considered, and the Board having come to a decision thereupon communicates that decision to the people who communicated with us.

374. I see a representative element has been introduced into your system with respect to pilotage?—Yes.

375. Has it ever been considered whether such an element could be introduced in respect of lighting?—Well, that, you see, is a matter which affects the corporation and its constitution. I should prefer, if you do not mind, Sir, that you should ask that question when the Deputy Master comes to be examined. I have no authority to speak for the Board on the matter at all.

376. I am merely asking you as a matter of record, has such a thing ever been considered?—Not by the Trinity House.

Corporate Funds: Source of,

377. Now, one of your committees deals with other matters, such as charitable pensions, almshouses, and so forth. Whence are those derived?—From money that has been specially left to the corporation for the purpose, charitable funds specially earmarked.

378. Then the corporation does benefit by charitable bequests and so forth?—Yes.

Control of,

379. Like other corporations?—Yes, but, of course, we are under precisely the same conditions in respect of those funds as are other charities, that is to say, everything is done with the sanction and knowledge of the Charity Commissioners.

380. I had a note here to ask what was the extent of your authority in respect to that; you are under the Charity Commissioners?—Yes, the same as other charitable bodies would be.

General Lighthouse Fund: Expenses borne by,

381. Now, with regard to the salaries of the officers whom you have mentioned, are these borne by the General Lighthouse Fund?—They are all borne by the General Lighthouse Fund.

382. They are all borne by the General Lighthouse Fund?—Except those for the Pilotage and Estates Departments.

383. There are some extra ones, I know, but all the regular ones?—All the official staff, the cost is borne by the General Lighthouse Fund.

384. That is, the payments made in respect to this salary and superannuation, those officers do not come within the purview of Parliament at all?—Only to the extent that the account for the General Lighthouse Fund is presented to Parliament every year.

385. It is not under the control; there is no vote?—No, there is no vote, that is so.

386. How are the officials of the Pilotage and Estates departments paid?—The estates department would be paid out of the Corporate Funds. The accounts of the corporation as a pilotage authority are presented to Parliament every year, the same as all other pilotage authorities throughout the country.

387. The point I am on is the question of Parliamentary control. Those accounts of the corporation are accounts over which Parliament has no authority whatever?—They merely take cognisance of accounts which are presented, I suppose, by courtesy or custom.

388. (*Chairman.*) They are moved for, I think?—That is so; they are presented annually.

389. (*Colonel Herbert.*) They do not appear in any Government estimate?—No, they do not appear in any estimates.

Arrangements for collection of Light Dues.

390. The charge for collection of light dues, is that likewise borne by the General Lighthouse Fund?—The cost of collecting?

391. Yes.—There is no cost, because the work is done by a Customs officer—the amount is paid to the Commissioners of Customs. The following is taken from the General Lighthouse Fund Account for 1904-5, that is the latest printed. Amount paid to the Commissioners of Customs for the collections of light dues, £7,500. That does not come through us at all; they get that through the Board of Trade; it does not come through the Trinity House at all.

392. Then it is not borne on the Lighthouse Fund Account?—Oh, yes, it is borne on the Lighthouse Fund, because here is the General Lighthouse Fund Account.

393. You are credited with that by the Customs Authority, and you repay it, or rather the Board of Trade does it for you?—As I take it, this amount of £7,500 is paid over to the Commissioners of Customs, and it is a transaction between the Board of Trade and the Customs; the Trinity House have nothing whatever to do with it.

394. But I understand that you are the collecting authority?—We are the collecting authority, but we never handle the money.

395. So that, technically, you are responsible, though it may be done for you by the Board of Trade?—Under the Act we are responsible for the collection of light dues.

396. And, therefore, you are responsible for the payment?—Yes, but by arrangement the money is sent direct through the Board of Trade to His Majesty's Paymaster-General. The Collector of Customs makes remittances according to instructions, but that, as I say, is a matter which is now entirely in the hands of the Board of Trade.

397. (*Chairman.*) The sum paid to the Customs is by agreement with the Treasury, probably?—I must say that I do not know. I think Mr. Pelham would have been able to have told you that. In years gone by, I know as a fact, that the monies used to be remitted direct to the Trinity House. We paid a small commission to the collectors of Customs, who were then more clearly recognised as our servants, as it were, so far as collectors of light dues were concerned, but when the alteration was made, and the money instead of coming to Trinity House, went direct to the Paymaster-General through the Board of Trade, no fresh commission was given to collectors as fresh appointments were made, and I do not think now there are any left who receive any commission. It is regarded as part of their duties as collectors of Customs. None were left after the 1898 Act.

Functions of Trinity House with regard to finance.

398. (*Colonel Herbert.*) What I am driving at is the financial aspect of the administrative surveys; certain financial arrangements have to be made; I want to know exactly what are the functions of Trinity House in respect to the financial arrangement?—We are a spending department; we are not a receiving department at all now, and when we want money we get it by an imprest. We send an imprest every week to the Board of Trade, stating the money that we want for the next week, and then we get an authority on His Majesty's Paymaster-General, and he credits us at the Bank of England with the amount that we have asked for.

399. You are a spending authority, and you are a spending authority independent of Parliament?—Yes.

400. For a public service? With regard to those sums that you mentioned, they are all borne on the

General Lighthouse Fund?—On the General Lighthouse Fund—yes.

Steamvessel Service: Appointment of crews,

401. Now, with regard to the manning of that fleet of steamers, how are they manned; do you get men who have served in the Royal Navy or anything of that sort?—No, the officers enter our service as apprentices and work right up. All the officers in our steamboat service have entered as apprentices. So far as the foremast hands are concerned, they simply enter as A.B.'s, and if they elect to remain in the service and can pass the doctor, they ultimately get a small pension.

402. But men who have served in the Navy have no benefit from it?—They have no prior claim. We have, as a matter of fact, men who have served their time and have got their discharge from the Navy, who come and offer themselves to us, and if they are satisfactory they are taken on.

403. But altogether, it is an entirely different service from the Navy?—Quite.

404. And you do not consider you need give any preference to the Navy?—No; you see it very frequently happens that a man is discharged from the Navy because he cannot pass the doctor. Well, he has to pass the doctor to come into our service.

District Superintendents,

405. With regard to your local superintendents, what experience is required?—Our district superintendents are recruited from masters in our steam vessel service.

406. That, again, is an entirely close corporation; it is entirely from men within that service?—That is so; they have been trained in the steam vessel service all their lives, and they know as much of that service as any man possibly can. Of course it is a speciality.

407?—I mean it is a close service?—Yes, it is a close service.

408. (*Admiral Henderson.*) Might I ask one question? Do masters of these vessels have a master's certificate?—Not a Board of Trade certificate, but they pass the Board of Trade examinations for navigation. They have to pass the same examination before the Board of Trade for navigation as the same grade do in the mercantile marine.

409. (*Colonel Herbert.*) What are the qualifications for appointment as district superintendent?—Well, good service all their lives. When there is a vacancy for a district superintendent, the Board would look round and see which of their masters in the steam vessel service was best fitted for the berth, and he would get it.

410. Is there any principle of selection; or is it by seniority?—No; it would be entirely in the hands of the Board. If two men were equal, seniority would count, of course.

411. By whom are the appointments made?—By the Board; by the full Board. That would be a matter which the Lights Committee would go into and would recommend to the Board the man that they would suggest for the appointment.

412. That is the whole Board of Elder Brethren, is it?—That is the whole Board of Elder Brethren.

413. They make the appointment?—Yes.

414. On the recommendation of one of the committees?—Yes.

415. You never admit a man from the outside?—Well, I cannot say that; there have been exceptional cases. For instance, there is one at the present moment. We regard him more as an agent than as a district superintendent, although he has the title of district superintendent; that is the man at Sunderland. He has no steamer; there are no lightvessels on the north-east coast of England, and he merely has a few buoys and some shore lighthouses to look after, and for that reason it is not so essential that he should be one of our own men.

and Wreck Disposal Officer.

416. Then there is another officer mentioned here, the wreck disposal officer; how is he appointed?—He is just one of the staff of officers in the steam vessel service.

417. It is an appointment in the marine service?—Just so, yes. We should not always send a particular man, because all our officers go down to Portsmouth and go through the course for dealing with torpedoes and diving. They all get the certificate from Portsmouth; that is a *sine qua non* when they are appointed as second mates; directly they are appointed second officers they have six weeks' training at Portsmouth.

418. You would only employ a man in that who has been through all the courses?—Just so.

Elder Brethren: Privileges of Honorary Brethren.

419. (*Mr. Ennis.*) With reference to the Honorary Elder Brethren, you have stated in your evidence that they possess neither duties nor emoluments?—That is so.

420. I just want to ask one question with regard to that. Do they possess the power to vote in the election of an Elder Brother when a vacancy occurs?—There is nothing in the Charter to prevent their coming, but as a matter of fact and a matter of practice, they never attend.

421. But I mean they would have power should they so desire?—If they wish to come they have the power to exercise their vote.

Superannuation desirable for Acting Brethren.

422. It is further stated in your evidence that in the year 1871, I think, the number of Acting Elder Brethren was reduced to 13, and that the reasons for the reduction are set forth by Mr. Bright in a letter to the Deputy Master, dated 23rd March, 1869, and the reason is stated as that the sum fixed by Parliament, £7,000 a year, is not, when divided amongst the whole number, sufficient to attract the service of the best men of an active profession while still in the prime of life?—Yes.

423. Well, as a matter of fact now, 35 years after that Act was passed, are not the average ages of the Elder Brethren between 63 and 64 years?—Yes, but they did not come in at that age.

424. I understand, but I ask that as leading up to another question?—Yes, I have got a return here to Parliament.

425. I think we have a copy of that, and it is from that that I have made a rough calculation.—There are some considerable alterations now. For instance, the average age has been lowered by the deaths of Captains Fenwick, Atkins, and Ladds.

426. But in any case, at the time that return was issued the average age, I take it, was between 63 and 64 years? I only merely wished that in a general sense?—Yes, I take it that is correct, although I have not worked out the average.

427. Then, following that question, I should like to ask, do you not consider that it would be desirable that in the case of the Elder Brethren such a power should exist as the power of superannuation, at an age limit on pension?—There is no such power. An Elder Brother elected is an Elder Brother for life.

428. Do you consider that an alteration which would admit of such a power would be desirable?—I think you will see by the correspondence which took place with Mr. Bright in 1871, that this question was very seriously considered then, but the difficulty, as far as I can understand, is one of funds.

429. But though the difficulty may exist with regard to want of funds, I take it that in a general sense you would hold that the Commission would have a right to expect that the lighting of the coasts of the United Kingdom should be at least equally efficient with the lighting of the coasts of any foreign country?—I should say certainly.

430. Having regard to the great volume of trade of this nation, and speaking of its maritime position, that we should expect that efficiency would be the very first consideration?—Yes, that is so.

431. That although cost is undoubtedly an important factor, efficiency should be a first consideration?—Yes.

432. And therefore you would be of opinion, I take it, that if greater efficiency could be obtained by a regulation as to superannuation on pension in the constitution of the Board of Elder Brethren, that that would be a desirable change?—Yes, I should say so; it is an individual opinion; I cannot give you an opinion from my Board.

Younger Brethren: Election and qualifications.

433. I understand that, yes. Well, now, with regard to the Younger Brethren, 205 Younger Brethren exist at present, of which you have undertaken to hand in a list. Is any previous notice required with regard to the election of a Younger Brother? I mean the name of a candidate for the position of one of the Younger Brethren comes before the Board of Elder Brethren

Mr. A. Owen. 9 Nov. 1906.

at any time without previous notice?—The procedure is this: A would-be Younger Brother generally submits his name to an Elder Brother who is personally known to him, and that Elder Brother proposes him at the Board, and gives particulars of his qualification. Then the name is posted for a fortnight in the Common Room of the Elder Brethren.

434. He may then be duly elected by the Board?—Then at the end of the fortnight his name comes up again by his proposer and another Elder Brother to second him, and then he would come in, as a general rule.

435. I take it the effect of that system would be that in the event of a vacancy occurring among the Acting Elder Brethren, and that vacancy had to be filled, that the candidate who may be elected to the position of one of the Elder Brethren must possess, you say here, a master mariner's certificate; I think you expressed some doubt as to whether he is by statutory obligation obliged to hold it or not; it has been the custom of the Board to appoint nobody else?—That is under the regulations which have been passed by the Board.

436. Quite so, but there is no statutory obligation, so far as I can gather, that he must hold a master mariner's certificate?—There is no statutory obligation. These are the rules and regulations: "4. No person shall be eligible to fill the office of an Acting Elder Brother unless he shall have served afloat actually in command of one or more of H.M. ships for at least three years, after having attained the rank of Commander in the Royal Navy, or unless he shall have commanded in the Mercantile Marine on foreign voyages for at least four years. The Mercantile Marine shall be held to include the Royal Indian Marine, or the marine service organised by the Governing Body of any British Colony." Those regulations were passed by a Court of the Corporation in June, 1899, modifying the previous ones.

Election of, as Elder Brethren.

437. Then am I correct in assuming that in the event of an election to the body of Acting Elder Brethren, it might possibly occur under the existing regulations that an outsider, one who was not a Younger Brother, the name of an outsider might be posted; with a fortnight's notice he might be elected a Younger Brother at a day's meeting of the Board, and he might be co-opted by the same Board as an Acting Elder Brother a week afterwards; would not that be possible?—That would be possible.

438. That is to say, that the existing regulation is such that practically anyone in the kingdom who possessed the qualifications with regard to holding a Master Mariner's certificate, and having commanded a ship, and so on, would really be eligible for the post of a member of the Board of Acting Elder Brethren, provided they wished to put him in the position?—Well, I should be inclined to say that is so.

439. (*Chairman.*) Does that depend on the terms of the Charter?—No, Sir, I do not think so. Perhaps it might be as well if I were to read the regulations to you.

440. (*Admiral Henderson.*) Can that be put in?—Oh, yes, I can put that in. "Any person desirous of becoming a Younger Brother shall, upon being proposed and seconded by two of the Elder Brethren, and after notice given at least a fortnight before the proposition is considered, be admissible without ballot, at the pleasure of the Court."

441. (*Mr. Ennis.*) My point is, there is no provision, so far as I can see, whereby anyone elected or co-opted by the Acting Elder Brethren as a member of their body, should necessarily be a member of the Younger Brethren for any specified period previous to his election?—I think that is so.

442. Therefore it leaves the appointment of a member of the Board, an Acting Elder Brother, practically open to anyone holding nautical qualifications in the kingdom.

(*Chairman.*) In theory, but I presume the danger is not very serious in practice.

(*Mr. Ennis.*) No, but still, we are inquiring into the constitution of the bodies.

(*Admiral Henderson.*) It is quite true to say that a man may have been only a Younger Brother for a year, and then elected an Elder Brother.

443. (*Mr. Ennis.*) He might be for one week. Well, for that very reason it might be desirable that there should be a certain period of service as a Younger Brother. Now, with regard to Committees, you have three Committees—the Wardens' Committee, the Committee of Lights, and the Examining Committee. I think I understood you to say, in reply to another Member of the Commission, that none of the members of the Board of Elder Brethren act on two of these Committees?—No.

Committees.

444. Well, could you indicate to us the members of these different Committees—there are 13, probably?—I think I can from memory. The Deputy Master is Chairman of the Board and also Chairman of all Committees. Then the Wardens are Admiral McClintock, Admiral Stewart, and Captains Fenwick and Barlow.

Names of Members.

445. Captain Fenwick is dead?—Yes, as are also Captains Atkins and Ladds. Captain Bell is on the Lights Committee, Captain Thomson is on the Examining Committee, Captain Clarke is Examining Committee, Captain Hoare is Lights Committee, Captain Blake is Lights Committee, Captain Crawford is Examining Committee. Well, then in addition there are Captain Marshall, Examining Committee, and Captain Golding, Lights Committee. Captain Fenwick's vacancy has not been filled, so there is one vacancy in the Wardens of the present moment.

446. (*Chairman.*) Perhaps you would be kind enough to revise that list and bring it up to date, and at the same time indicate which of the members belong to each Committee?—Yes.*

447. (*Mr. Ennis.*) Well, at present we have in the Board four members of the Examining Committee, I take it?—Yes.

448. And the Chairman, of course. That makes a total of five?—No; the Committee consists of four.

449. And the Deputy Master is Chairman of all Committees?—Yes, the Deputy Master is Chairman of all Committees; but he does not sit at the Committees as a general rule. But he is Chairman of the whole Board, and, when necessary, of the Committees.

450. But on the Executive Committee there are four members of the Examining Committee?—Four members.

Work of Examining Committee,

451. With regard to the Examining Committee, what number of those four constitute a quorum?—I do not think there is any question of quorum. If there are one or two absent the Committee sits as usual.

452. You say the Committee is a very small one?—Yes.

453. And therefore, in the absence of any regulations as to quorum, would it not be possible to occur that very important questions might be decided by one or two members?—I do not think so, because then they would defer it. I think any important question involving matters of principle a Committee of one or a Committee of two certainly would not attempt to deal with it; they would defer it. And if it were a matter of urgency to be dealt with, they would go to the Committee of the Deputy Master and Wardens.

454. Who would make a fifth member of the Committee?—Yes.

455. (*Chairman.*) Important questions would also be referred to the Board before any action was taken?—Yes.

and of Visiting Committees.

456. (*Mr. Ennis.*) To the Examining Committee is entrusted the duty to examine the whole lights on the English and Welsh coasts, within what period?—Well, I should think it is about once every two years. I think I say further on that they satisfy themselves.

457. I do not find that in your evidence, Sir, and that is the reason I ask the question?—Yes; the position of all lights, vessels, buoys, etc., are also personally verified by a member of this Committee at least once every two years.

458. By a member?—Yes.

459. But then that inspection of the whole coast-lights, and all the lightvessels, the buoys, and so on, may be entrusted to only one member of the Committee?—No; an Inspecting Committee would generally consist of at least two members. One of these would be a Lights Committee man, and they would do their work in that way.

460. They would do work; but, at the same time, it would be the Examining Committee man who would report to the Examining Committee. The Lights Committee man would not report to the Examining Committee, and therefore this inspection of the coast would rest in charge of an individual member of the

* See Appendix B I.

Committee practically?—Perhaps it would. Sometimes the Examining Committee go away as a Committee.

461. That is the point I wanted to urge: Do they ever go away as a Committee?—Yes, they go away as a Committee, and make periodical inspections round the coast.

462. About how often do these periodic inspections take place?—Every two years.

463. By what I may call a full Committee—by at least two members of the Examining Committee?—By at least two members of the Examining Committee.

464. Because it is stated here that they must be examined every two years by a member of the Committee?—Yes.

465. But you tell me that in practice two members of the Committee go?—When the Examining Committee go away specially for examining work, they go away a Committee of at least two.

466. You say here, also: "The Examining Committee also advise the Board as to the necessity for any additions to the lighting or marking of any particular locality or channel, and the character of the seamarks which may be required." Well, under the system of one member examining only, of course, that is an individual opinion?—No, pardon me, Sir. What would be done then is this: A Visiting Committee's report, whether it is an Examining Committee or whether it is a Lights Committee, is made to the Board. The Board, having then read that report, refers it back to the Examining Committee or to the Lights Committee. Any particular part of the report that might be in the department of the Examining Committee or the Lights Committee they refer back to the respective Committees to come up to the Board with a recommendation as to whether they concur in the views of the Visiting Committee or not, and it would depend on the report to the Board of the Committee as a whole whether any suggestion of the Visiting Committee is carried out.

467. Of whom would the Visiting Committee consist?—If it were an Examining Committee it would probably be an Examining Committee of two members.

468. Well, that is so, that an individual member would report the additions to the lighting or marking of the locality, or character of the seamarks. Then, on the report of the individual member, it might be considered advisable that the Visiting Committee would inspect, in which case two members would go and report a second time upon it?—Yes; but whatever the report of the Visiting Committee was in connection with an altered seamark, nothing would be done on their recommendation pure and simple without its being fathered, as it were, by the whole of the Examining Committee sitting in consultation at the House upon it.

469. Yes; but the whole Committee sitting in consultation would practically be guided by the report and recommendations of the members of that Committee who had actually inspected, I take it. I mean in practice that would, generally speaking, happen?—Well, if it were not so it would not be much good sending the Committee.

Control over Scotch and Irish Boards: Consideration of proposals for New Works.

470. You also say: "The character and efficiency of all lights, etc., under the jurisdiction of local authorities is considered by this Committee, as are also the applications by the Scotch and Irish Lighthouse Boards in respect of changes or additions to the seamarks under their respective jurisdictions." These proposed changes require to be approved by the Examining Committee before receiving the statutory approval of the Board?—Yes.

471. Therefore, unless the Examining Committee report in favour of a recommendation of the Scotch or Irish Lighthouse Boards, it cannot come before the full Board?—You see, the application from the Scotch or Irish Boards would be addressed to the Secretary, and he would read it to the Board first, perhaps, and then it would be referred to the Examining Committee for their consideration and report.

472. Yes; but it is stated here that these changes require to be approved by the Examining Committee before they can receive the sanction of the Board?—Perhaps I put that rather strongly when I say "require to be approved." The Board refer it to that Committee to advise them as to what they shall do.

473. Take a suppositious case. Suppose the Scotch or Irish Board sent up a proposal to the Trinity House. Let us assume that that proposal is considered at a meeting of the Examining Committee, at which, say, two members were present, and these two members refused to report in favour of that proposal to the Board of Elder Brethren, what redress, if any, would the Lighthouse Authorities in Scotland and Ireland have against the decision of two members of the Examining Committee?—But I take it, as a matter of fact, that it is not the decision of two members of the Examining Committee—it is the decision of the Board of Trinity House. They certainly get an opinion from the Examining Committee; but then you must remember there are the other two members of the Examining Committee who sit at the Board, and who would be present then at the Board, although they had not actually been at the Committee when this recommendation was made.

474. But do all the members of the Committee, as a matter of practice, attend the meetings of the Board?—As a general rule, certainly they do. After a certain number of absences, if a member does not attend, he is fined.

475. The point I want to make clear is this: Assuming a meeting of the Examining Committee was held at which two members were present, and assuming those members report to the Board: "We are not disposed to recommend that this suggestion from Scotland or Ireland should be adopted," by what method or what channel would the Authorities in Scotland or Ireland be able to bring that before the Trinity House?—The Board receiving such a recommendation as that, knowing it is only sent up by a Committee at which two members were present, would consider it themselves, and very likely would send it back again. They might possibly send it back for further consideration—such things do occur. It is not to be supposed, because a Committee recommends to the whole Board that such and such a thing should be done, that the Board always agrees to it.

476. (*Chairman.*) Is it not true, also that in the last resort both the Scotch Lighthouse Authority and the Irish Lighthouse Authority have the right of appeal to the Board of Trade against the decision of the Trinity House?—That is so; that frequently occurs. When we do not see eye to eye with the Scotch or Irish Commissioners, they can appeal to the Board of Trade.

477. (*Mr. Ennis.*) You must not misunderstand me, because in inquiring as to the methods of the Trinity House I only want to arrive at the constitution of the Board, and those methods of work which, although in practice they may work perfectly well, may not in theory be correct?—Quite so. May I read this clause of Section 640 of the Merchant Shipping Act of 1894: "The Trinity House shall take into consideration any scheme so submitted to them" (that is by the Scotch or Irish Boards), "and shall make a report, stating their approval or rejection of the scheme, with or without modification, and shall send a copy of the Report to the Commissioners by whom the scheme is submitted."

478. In the event of such recommendation coming now from these other Boards to the Trinity House, has it been the practice to refuse to sanction recommendations of the kind without inspection on the part of the Trinity House?—Yes; we do not always inspect. We have the whole of the papers and their reports, and we have the charts before us—unless, in exceptional cases, the Trinity House send down a Committee, which would be the case where we are not able to agree.

and inspection of sites by Trinity House.

479. I think you were speaking of the Examining Committee?—Yes.

480. You say: "These proposed changes require to be approved by the Examining Committee before receiving the statutory approval of the Board. These duties require at times a personal inspection on the spot before the matter which is being dealt with can be reported on." I take it that these inspections are sometimes made, but not frequently?—So far as the Irish and Scotch are concerned, they are occasionally.

481. In connection with new works?—In connection with new works. There has been one just this past year. That was on a proposal of the Irish Commissioners in connection with Skelligs. They wanted

Skelligs inspected.

Mr. A. Owen.
9 Nov. 1906.

to erect another lighthouse at Skelligs in lieu of the one that is there now, and a Committee went over and examined it on the spot before they came to a decision.

Decisions of Trinity House overruled by Board of Trade,

482. Would there be many cases in which a proposal of the Scotch or Irish Lights was rejected by Trinity House without personal inspection of the locality?—Yes; I should say, as a rule, the rejection would be without personal inspection. Perhaps I should say that, under the Act, it does not altogether rest with the Trinity House. The final decision rests with the Board of Trade, because, if the Trinity House, in reply to an application of the Irish Commissioners, say they are unable to grant their statutory approval of it, the whole of the correspondence goes to the Board of Trade under Clause 640 of the Act of 1894, which says: "For the purpose of obtaining the sanction of the Board of Trade to any scheme so submitted to the Trinity House, the Trinity House shall send a copy of the scheme and of their report thereon, and of any communications which have passed with reference thereto between them and the Commissioners, by whom the scheme is submitted to the Board of Trade, and that Board may give any directions they think fit with reference to the scheme, and may grant or withhold their sanction, either wholly or subject to any conditions or modifications they think fit."

483. (*Mr. Ennis.*) As a matter of fact, do you know of any cases in which the Trinity House having refused their sanction to an Irish or Scotch scheme, that the Board of Trade have granted it?—I know, as a matter of fact, there have been some. I do not know that I can mention one to you at this moment. There have been cases where the decision of the Trinity House has been overruled by the Board of Trade.

Head Office Establishment: Appointment of higher officials,

484. On the application of the Lighthouse Authorities of Ireland or Scotland?—On the application of the Lighthouse Authorities.

485. The official establishment of the Trinity House. It is said in your *précis* of evidence here, with regard to covenanted officials, that "appointments are made to the second class and lower grade after competitive examination by the Civil Service Commissioners, five candidates being nominated for each vacancy." How are the appointments made with regard to "more highly salaried posts?—They are promotions.

486. Invariably promotions?—All promotions from the lower ranks.

487. I thought so. I wished to be perfectly sure on that point. That is so. Anyone entering the official establishment has first to pass a competitive Civil Service Examination to enter as second-class clerk?—As a second-class clerk in the upper division or the lower grade.

488. And then the higher officials are all promotions from this?—All promotions to the higher posts are made from the second class.

and of engineering staff.

489. With regard to the appointments on the engineering side—how are those made?—They are made upon the recommendation of the Engineer.

490. Then how is the appointment of Engineer-in-Chief made?—The Engineer-in-Chief, Mr. Matthews, has been in this service over 30 years; he entered under Sir James Douglass, and he was a member of the engineering staff for many years.

491. That is the present Engineer-in-Chief?—That is the present Engineer-in-Chief.

492. I am asking you not with regard to any individual, but is the appointment made of one who has been a member of the staff, and who rises by promotion to this post?—Mr. Matthews is the second Engineer-in-Chief we have had. Prior to Sir James Douglass there was another arrangement altogether.

493. And then the assistant engineers are recommended to the Board by the Chief Engineer?—By the Chief Engineer.

494. Who selects men that he considers competent and efficient for the purpose?—Yes, and from their testimonials.

Conflicting interests of different classes of vessels,

495. Now, with regard to lighthouses. You have referred us here to the second schedule of the Merchant Shipping (Mercantile Marine Fund) Act, 1898, with regard to light dues and the scale of payments. Would I be correct in assuming that the users of the maritime highways on our coasts may be divided, say, into—I put them down as six classes. First of all, His Majesty's ships, the Navy trade, the over-sea foreign trade, coasting trade, steamers on passenger service?—Just across channel; cross-channel service.

496. Fishermen and yachtsmen?—Yes.

497. Well, the interests and the needs of those different classes, though they are in many respects identical, still it is conceivable that they may diverge from each other in many instances; that is, that the needs of the over-sea trade are not necessarily the needs of a coasting trade, with regard to lighting services of the coast?—Well, I should say if they were both steam vessels they would be.

498. Steam vessels, yes; but there is a large proportion of comparatively small sailing vessels?——

499. (*Chairman.*) Interests might diverge with respect to the urgency of any given light?——

500. (*Mr. Ennis.*) Passenger service, for example, cross-channel service?—You mean cross-channel service from here to France.

501. There are, so far as I know, three services existing between England and Ireland, cross-channel daily service; you have a number of others, Newhaven and Dieppe; you know all these routes better than I can mention, but necessarily what would be essential for one branch of these users of the maritime highways, would not be essential for another, the interests would diverge?—That might be so.

502. (*Chairman.*) Is it not more correct to say that the interest diverges respecting the urgency of any particular work? Could it really happen that a particular seamark which is put up in the interests of one class of trades is injurious to another?——

and relative proportions of light dues paid.

503. (*Mr. Ennis.*) No, I do not mean that; but we have had evidence already from the Board of Trade with regard to any expenditure on works of this kind, that if an estimate were exceeded for one year, some works were postponed, put back, and it might possibly happen that if the Lighthouse Authority for a particular country is constituted more in the interests of a particular class than any other, that the interests of that class would have preponderance in the erection of the lights that are suitable. With regard to the impost of light dues on the over-sea trade, and on the coasting trade, would one not be justified in assuming that the coasting trade pays a considerably larger sum in proportion to the registered tonnage of the vessels engaged in the foreign trade?—Well, I think it was to rectify that a good deal that the method of charging light dues was altered at this time.

504. But also even with this incidence, it is stated here that if the ship is a home-trade ship—and I think this clause would cover more fully what I mean to convey—"Provided that no steamer shall be required to pay more than one shilling and fourpence-halfpenny per ton, and that no sailing vessel shall be required to pay more than one shilling and a penny half-penny in any year." Now, as a matter of fact, do not the sailing vessels pay more in proportion to their gross tonnage capacity than the steamers. Is not a steamer's registered tonnage, by reason for deductions for engine-room space and so on, very frequently lowered very much below her carrying capacity?—I think that is so under the tonnage laws. The foreign-going steamers are by far the largest aggregate tonnage.

505. I understand that. The one point I want to make clear is, assuming from the definition given here, "no steamer shall be required to pay more than one shilling and fourpence-halfpenny per ton"; now, a steamer in the passenger service, making daily passages between these various places, necessarily pays 1s. 4½d. straight away?—Home trade sailing vessels only pay 1d. per ton for ten voyages, and home trade steamers 1½d. per ton for ten voyages.

506. Let me put it to you in this way: Suppose we take a tramp steamer, engaged in carrying coals, say, from a Welsh port to an Irish port, or any home trade port, that steamer will in a very short time—making such rapid and frequent voyages as she does—run her contribution to the light dues up to her maximum rate of 1s. 3d. per ton; is not that so?—Yes.

507. Whereas a steamer going foreign—going to the New Zealand trade—will not reach her maximum capacity of payment in a year?—No, probably not.

508. She would not work up to her maximum capacity. The only other point I wanted to get from you is that the coasting trade, in proportion to the carrying capacity, really pays a larger proportion of the light dues than the over-sea trade?—I should like

to go into the figures before I could give an answer to that.

509. (*Chairman.*) But in any case it does not rest with the Lighthouse Authorities to decide what the scale of payments should be?—No; we could give you this information by going into the statistics at the office; I could not say right off.

510. (*Mr. Ennis.*) I should be very glad to have an approximation of the information?—Very good.

Steamvessel service: System of attending on lightvessels and rock stations.

511. Now with regard to the steamers in England and Wales under the direct control of the Trinity House. You have here a list of the lighthouses, lightvessels, and so on, which are under the control of the Trinity House, and you have a fleet of eleven steamers kept constantly employed. What I wish to know is with regard to the service of the lighthouses, isolated lighthouses on the detached rocks at sea and the lightvessels; is the service of conveying provisions, stores, and shifting men, and all that, performed by your own steamers, or is it performed otherwise?—It is performed by our own steamers. All our lightvessels invariably are relieved by our own ships, and tended by them in every way.

512. That is to say, provisions are put on board?—So are the majority of the rock lighthouses. There are some exceptions where the relief is done by boat. To suggest one—Longships—which is a short distance from the shore. That is done from Sennen by a boat.

513. Could you give us particulars of the few cases in which the relief is done by boat and the cost of doing it?—Of the rock stations?

514. Or lightvessels?—There are no lightvessels.

515. The rock stations which are tended by boat and the cost of their relief, because I think it will be useful for us later on in comparing similar services in Ireland and Scotland?—Yes.

516. Any lighthouses that are tended by contract, what the cost per trip or average is?—Yes.

Control of local lights.

517. You say with regard to local lights, "The duties and responsibilities of the Trinity House in respect of local lights (*i.e.*, seamarks belonging to local authorities), are defined in the 652nd and following sections of the Merchant Shipping Act, 1894." In your opinion, would it be desirable or advisable that local authorities should be empowered to erect or maintain lights outside the immediate area of their harbours; that is, that their lights should extend to any distance from the coast line and come into what I may call the maritime highway used by vessels not bound to that port?—Well, I think it would be a very difficult thing to make a hard-and-fast rule. I should think every case of that kind should be dealt with on its merits.

518. But, as a general principle, I assume you would lay it down that it would be more desirable that the General Lighthouse Authority of the country should deal with all the lights at a reasonable distance from the coast?—That would be useful to the general passing trade.

519. Because, necessarily, a light established by a local authority and not efficiently attended, must cause disaster to passing ships?—Under such circumstances as you state, it must, of course.

520. And therefore it would be desirable to confine the administration of local lights to the limited area in connection with the harbours or estuaries in which these local authorities act?—Yes.

521. With regard to the cost of the French Lighthouse Service, I think you have told us there was practically no result from the inquiries that were made in that direction?—That is so.

Payment for collection of light dues:

522. Just before there was a question asked by Colonel Herbert about the collection of the light dues. I think you said a sum of £7,500 is in the estimates as being paid to the Customs for that collection?—Yes.

Experiments: Expenditure on,

523. And that practically amounts to about 1½ per cent. on the total sum collected?—Yes.

524. With regard to experiments, I take it that you are entitled to expend money on experiments where it is desirable to do so?—Yes; there is an amount set down in every year's estimate, which is sanctioned by the Board of Trade, for experiments.

525. Could you give us the total expenditure—say during the past ten years—on experiments by the Trinity House sanctioned by the Board of Trade?—Yes; I could put in the returns, if you wished it.

526. And have you any information, or could you tell us whether foreign lighthouse authorities expend more or less on experiments than our own?—We have no information.

Areas of silence tested at Lundy.

527. In the event of something coming to your notice unofficially—say, such as at a recent inquiry into the stranding of the "Montagu." There was a statement given in evidence there that at Lundy there was an area of silence in which the fog-signal was not heard. Well, now, when a statement of that kind is made before a tribunal such as the court martial which was held in this case, would you consider it desirable that you should make experiments in that matter to ascertain whether such an area did exist? I mean, would it be the custom of the Trinity House?—As a matter of fact, they have done so.

528. With a view to remedying it if it is found?—With the view of ascertaining whether there was a sound shadow or a silent area.

529. And if you ascertained there was a silent area, I understand steps would be taken to put that right?—Certainly, if it was regarded as possible to remedy it.

530. (*Chairman.*) Do not the results of experiment show that it is impossible to avoid silent areas in connection with fog-signals?—The configuration of the coast frequently produces a silent area to vessels approaching from certain directions. At the present time we are constantly having complaints at Flamborough that they do not hear the explosive signal there coming down or going up—I do not quite know which. But they complain they do not hear it, and they immediately assume that the signal is not sounding.

531. But, in addition to that, do not experiments go to show that there are concentric areas in which the sound is heard and not heard alternately?—In varying conditions of the atmosphere that is shown.

532. It varies with the varying conditions of the atmosphere?—The Hydrographer of the Admiralty has put this caution in the preface to the Admiralty List of Lights:—"Fog Signals.—It has been clearly shown: (1), That fog-signals are heard at greatly varying distances. (2), That under certain conditions of atmosphere, when a fog-signal is a combination of high and low tones, one of the notes may be inaudible. (3), That there are occasionally areas around a fog-signal in which it is wholly inaudible. (4), That a fog may exist a short distance from a station and not be observable from it, so that the signal may not be sounded. (5), That some fog-signals cannot be started at a moment's notice, though every endeavour will be made to sound them as quickly as possible after signs of fog have been observed. Mariners are therefore warned that fog-signals cannot be implicitly relied upon, and that *the lead should never be neglected.*"

Submarine bell.

533. (*Mr. Ennis.*) Has the Trinity House undertaken any experiments in connection with this new suggested submarine bell?—Yes; they did last year, at the North Goodwin Lightship. They made a series of experiments in connection with that bell there.

Gibraltar:

534. (*Admiral Henderson.*) You say here, "the Channel Islands and the adjacent seas and islands, and at Gibraltar." Does the Trinity House do any work at Gibraltar except what you mentioned just now?—The lighthouse at Europa Point belongs to the Trinity House.

535. And is maintained?—And is maintained.

Collection of light dues at,

536. And how do you get the dues? Are they collected at Gibraltar?—They were collected at Gibraltar.

536a. And passed on to you?—They are now done away with. Since 1898 the dues from Gibraltar have been abolished. Prior to that they were collected at Gibraltar and sent direct home.

537. Is the expense of the lighthouse at Gibraltar paid out of the General Lighthouse Fund now?—Out of the General Lighthouse Fund now.

Trinity House: Abolition of Elder Turns.

538. No charge made on the Colony itself. I see that "Elder Turns" were derived from fees charged on vessels entering or leaving the Thames. Are these special tonnage dues still collected?—No.

Mr. A. Owen.

9 Nov. 1906.

539. The £7,000 allowed to the Elder Brethren?—That is now paid out by the General Lighthouse Fund. So far as the Trinity House are concerned, we merely collect light dues.

540. Do you know whether they are collected or not?—I should say not.

541. There are no tonnage dues collected?—I do not know what the Thames Conservancy might collect; but certainly those "Elder Turns" are abolished.

542. There is no sum that you have that remunerates the Elder Brethren except it comes from the Lighthouse Fund fees?—From the General Lighthouse Fund.

543. (*Chairman.*) Then it is not correct to say, as I think you said in your evidence in chief, that "thenceforward (that is, from the year 1822) these fees were credited to the Lighthouse Revenue"?—Yes; but do you not see, Sir, since then the incidence of light dues has been altered altogether?

544. You mean since 1898 they have no longer been collected?—Yes.

545. (*Admiral Henderson.*) You do not think there are any?—No; there are no special dues of that kind.

Younger Brethren: Position of,

546. How often do Younger Brethren attend the Trinity House?—The majority of them are men on active service.

547. They are not obliged to attend at all?—They are not obliged to attend at all.

548. Have they any power if they attend?—They get a formal notice once a year to attend on Trinity Monday for the purpose of assisting at the election of the Master under the Charter, and then they attend that Court and can vote for the election of Master.

549. What privileges have they?—I do not know that they have any special privileges, except that they are exempt from serving on juries. That is one of the old privileges.

550. Have they any corporate privileges?—I do not think they have any at all, except, as I say, their privilege of attending at the annual court which takes place on Trinity Monday, when the Prince of Wales, who is Master at the present time, generally attends, and is formally elected as Master of the Corporation.

551. Year by year?—Year by year.

552. Re-elected?—Re-elected.

Committees: Agenda of meetings,

553. You say these committees meet on Tuesdays and Fridays; have you any record of proceedings and attendances at the meetings?—Oh, yes, agendas.

554. Can you produce them?—Yes. You mean to say you wish a copy of the agendas?

555. What I think would be best to produce is a copy of the agendas going over some period of time on the Tuesdays and Fridays; what action is taken, and to let us see what are the attendances at the meetings?—Yes.

and attendance of members.

556. How the business is managed, in fact?—For what period would you like that?

557. Well, for a year?—Of course, we will give it.

558. That would be rather a tall order?—It would be rather a tall order.

559. A period of three months?—You wish to have practically the attendances of the Elder Brethren for three months.

560. And the agenda of their meetings; a record of their work for three months, April, May, and June?—Yes, or we will begin at October, if you like, when we all get back from the holidays; October, November and December, whichever you like.

561. Say April, May and June.—April, May and June.

562. (*Chairman.*) The agenda and the minutes?—One book contains both the agenda and the minutes.

563. And the list of attendances?—Yes.

Election of Wardens.

564. (*Admiral Henderson.*) Wardens; I do not think it is quite clear how many Wardens there are?—Four.

565. And they are elected by the Elder Brethren from amongst their number?—Yes, that is so.

Inspection of seamarks by Visiting Committees.

566. "Vessels inspected by a member of the Lights Committee at least once a year, and lights under local jurisdiction once every four years"; is there any record of these inspections?—Of which?

567. First of all by a member of the Lights Committee at least once a year?—Yes; there is a book kept at every station, and on committees visiting they record their visit and what they find, whether the place is in order or anything that is wrong.

568. Is the Elder Brother who goes round accompanied by the superintendent of the district?—Sometimes when a committee goes on to a district they occasionally have the district superintendent with them.

569. Have you any record at Trinity House itself?—Yes, we have, in their reports.

570. Have you any reports of these committees on their inspection?—Yes, they always report when they return.

571. Can you let us have copies?—We can give you copies of their reports.

572. Is a year too long to ask for?—Copies of all the committees' reports for a year?

573. Copies of all the reports of inspection?—We could give them to you for a year.

574. (*Chairman.*) I should say six months?—Six months.

575. (*Admiral Henderson.*) "To the Examining Committee is entrusted the duty of periodically examining the whole line of English and Welsh coast, and any changes in the navigable channel are duly considered by them with a view to effecting such alterations in marking as may be necessary." How is this done?—They have one of the steamers, and go afloat.

576. One or more of the Examining Committee?—Two generally, at least, on a duty of that kind.

577. Are not the superintendents of districts responsible for the correct position of the buoys and beacons?—Yes, it is a portion of their duty, for the performance of which they are responsible to the Board.

578. What is the good of this yearly examination, then, and the four-yearly examination in the case of the local lights?—Well, the district superintendent has no duties in respect of local lights.

579. No, I am speaking now of your own lights. What is the use of an officer going from the Trinity House to inspect a buoy once a year, because a buoy wants constant and frequent inspection, and wants inspection after almost every gale of wind, to see it has not shifted, and any question affecting a lightship or a beacon or buoy must be known to your local superintendents at once?—Well, I take it there is advantage in supervision in any man's work, and there is the duty to look round and see that the district superintendents are doing their work.

580. There is a certain amount of necessity about that; but my own impression is that inspection must necessarily be, considering the duties of members of the Committee, rather of a perfunctory character, that they cannot possibly go round and properly inspect the large number of buoys?—I beg your pardon; when the Examining Committee go away to inspect a particular district—and, of course, they do it in districts—they go and personally verify the position of every buoy in that district, and see that it is down in its position according to the book of marks and angles. They take with them the official buoy book, which gives the exact position and depth of water the buoy should be in.

581. And they go and examine the position of each buoy?—Yes, with their own sextant in hand.

582. And how do they go? Every two years it is said.—At least once in two years.

583. "All lighthouses, lightvessels, beacons, etc., round the coast are visited and inspected by a member of the Lights Committee at least once a year, and all lights under local jurisdiction once every four years"?—That is the Lights Committee's inspection.

584. Who does the floating seamarks?—The Lights Committee; it is the Lights Committee's function.

585. But this every two years?—Every two years means to say that the coast must be divided up into districts; one committee will take the east coast, and another committee will take the estuary of the Thames.

586. Have you got any record of these inspections?—Yes.

587. Will you let us have one?—Yes.

588. Are they published regularly, the reports?—No, they are not published.

589. You get them in as reports?—We get them in as reports.

590. Will you send us a copy of six months' reports, or a year's reports?—I have already got that down, Sir; Committee's reports for six months.

Wrecks:

591. Can you give us a list of the wrecks that have taken place during these last twelve months, that you have had to deal with?—That we have dealt with?

592. Yes.—Yes.

593. In the last year?—Yes.

Notices to Mariners:

594. "All Notices to Mariners relating to seamarks are prepared by the Examining Committee." Now, what part does the Hydrographic Department of the Admiralty take as to that?—In the Trinity House Notice to Mariners?

595. Yes?—None whatever.

Issue of, by Trinity House and by the Admiralty.

596. But all the hydrographical notices are issued by the Hydrographical Department of the Admiralty?—The Admiralty notices are; they are quite distinct from the Trinity House Notices to Mariners.

597. The Trinity House Notices to Mariners are entirely different from the Hydrographic notices?—Yes.

598. In the Hydrographic notices the Admiralty do not put any notices of the alterations of a buoy?—We send a copy to the Hydrographer of our notice, and the Admiralty re-issue it.

599. As a hydrographic notice?—As a hydrographic notice.

600. Then what becomes of your notices?—They are issued.

601. What is the good of a duplicate issue?—We issue them in the first instance; the Hydrographer issues them for the Admiralty.

602. (*Colonel Herbert.*) Does he incorporate yours?—Yes, he would say, "The Trinity House has given notice, etc., etc."

603. (*Admiral Henderson.*) There is a duplicate publication?—But the Hydrographer does not issue it for the information of the public. He issues it for the information of His Majesty's ships.

604. Oh, no, I beg your pardon, the hydrographic notices issued to mariners are published also, I think?—I do not think they are published in the way that ours are. Ours go to the Customs House and to the principal shipowners, and we send a batch of each notice to each port in the United Kingdom if they are important notices.

605. As to any alteration of a light or buoy?—As to any alteration of a light or buoy.

606. Do you include in them any hydrographic notice—such as the inspection of a shoal?—If we noticed it we should communicate that fact to the Hydrographer, and he most likely would issue a notice.

607. (*Chairman.*) That would not be included in your Notices to Mariners—the extension of a shoal?—Not unless the extension necessitated a change in the position of a seamark. As to our reason for altering the position of a buoy, we should say: "Consequent on the alteration of the shoal, it is necessary that the buoy be moved."

608. Would your notices be earlier available for the nautical community than those of the Hydrographer?—So far as Trinity House seamarks are concerned, certainly they would, because the Hydrographer would not know anything about it until he got our notice into his hands.

Wreck notices.

609. The question of time may be of importance. It is desirable that the notice should be given as early as possible?—For instance, the wreck notice. Directly we get notice of a wreck and its position, we put a wreck-buoy down—and at once there is a notice to mariners out, within 24 hours, if it is a danger to navigation.

610. (*Admiral Henderson.*) "These duties require personal inspection"—that is, the Irish and Scotch lights—"before the matter which has been dealt with can be reported upon." Have you any record of these personal inspections?—Well, I gave one instance just now—of Skelligs. A Committee of Elder Brethren went over to Skelligs.

611. That is one. But in that sense they are not frequent?—No, they are not frequent; it is not a matter of course.

612. Where do the funds of the Pilotage Committee come from in the pilotage arrangements?—They are derived from a poundage on the pilot's earnings, and also from the fees that are obtained from the pilots for their licences.

Pilotage Committee: Source of Funds.

613. Have you a statement of account of these?—Yes; I merely put that in my memorandum because we were anxious that the Commission should know.

614. I do not know whether it comes into the question of the administration of Trinity House at all or not. But there comes the next point questions have been asked about—that is, about committees dealing with corporate matters, such as charitable pensions. What are the corporate funds?—They consist of money that has been left to the Corporation in years gone by for special charitable purposes.

Corporate Funds: Source of,

615. Have you to account in any shape or form for that?—Only to the Charity Commissioners.

Control of,

616. Have you any published return?—We send the account every year to the Charity Commission.

617. What are the duties of the two principals under you?—Well, there is one in the Lights Committee's Department, and there is one in charge of the Secretary's and Finance Departments, who in my absence acts for me.

Head Office Establishment: Duties and salaries of.

618. Who nominates the five candidates for one vacancy?—The Elder Brethren in turn.

619. They nominate one?—Five Elder Brethren each nominate one man, who has to meet the qualifications laid down by the Civil Service Commissioners.

620. I think you said you were going to produce a list of the establishments and the salaries. I think that was asked for?—Yes; I will put that in

621. And the actual cost of the administration of the Lighthouse Fund?—Well, I cannot give you that in any better form than as it appears——

622. As you submit it to the Board of Trade?—As it appears in the General Lighthouse Fund's yearly account, which is presented to Parliament.

Expenditure: Form of estimates submitted to Board of Trade.

623-4. Is that the only thing that you submit to the Board of Trade?—Oh, no. I have got here blank forms showing our method of submitting the estimates to the Board of Trade. In the first instance, in October or November of each year we submit to the Board of Trade a preliminary approximate account. We do that for their convenience, because they like to know how much we are likely to want. Then, in the beginning of the year, we send a detailed statement or estimate to the Board of Trade, and in that way show the expenditure required under each abstract. We have eight abstracts. Abstract A is lighthouses, Abstract B is lightvessels, Abstract C buoys and beacons, Abstract D steamvessels and district lighthouses, Abstract E is office and house expenses.

625. I will not trouble you to go on with this. Are these for maintenance?—Those are for maintenance, and in each abstract we give—now, for instance, I look at Abstract A, Statement No. 2. There we give the number of principal keepers, with their salaries; the number of assistant keepers, the number of supernumeraries—everything.

626. Have you got anything for a past year that will show us what the transactions between you and the Board of Trade are, and how you put your demands and requisitions before them? And can you give us something a little closer to an estimate of expenses than this extract?—I will give you, if the Commission would like it, a copy of the estimates in detail that were submitted to the Board of Trade last January for the year ending March, 1907. Would you like that?

627. Yes, please—something of that sort?—While we are dealing with these estimates, perhaps I might be allowed to say that the Board of Trade convey their sanction year by year in the following terms:—"I am directed by the Board of Trade to convey to the Trinity House the statutory sanction of the Board to the estimated expenditure in respect of maintenance of new works as set forth in the enclosed statement, amounting to £————, on the understanding that no increase of salary, wages, or allowances shall be made, nor any new works or extensive repairs be undertaken, although included in the estimates, without the special sanction of the Board of Trade." So that we are completely tied. We can do

Form of sanction given by Board of Trade.

Mr. A. Owen.
9 Nov. 1906.

nothing outside paying the men their wages and carrying out anything that has already been approved.

628. But, otherwise, practically you are irresponsible?—That is so.

Light dues: Collection of, by H.M. Customs.

629. Now, I wanted to ask a question about the collection of the light dues. How do you know they are properly collected?—No ship can have a Customs clearance unless she has paid her light dues under the Act.

630. You trust the Custom House authorities to do that at home?—We are bound to.

631. And you practically do not interfere unless there is some question brought directly to your notice by them?—It is entirely in the hands of the Custom House.

632. You do not know whether they collect all light dues properly or improperly, except that you suppose they are bound to?—No; that is not our intention at all. But there is the fact that the collector is forbidden by the Act to give a Customs clearance to the ship before she has paid her light dues.

Rock Lighthouses: Number under Trinity House.

633. How many rock lighthouses are there out of the total number?—I cannot tell you offhand; I should think there are about eight or nine rock lighthouses.

District Superintendents: Payment and duties of,

634. The superintendents of the districts; what is their pay and allowances; it would be all seen in the accounts?—Particulars of pay of all grades in the service are contained in the Service Regulations.

635. And they are entirely responsible for the efficiency of the whole district, its beacons, and the working of lighthouses?—Yes.

636. And the discipline of the men as well?—Oh, yes, they see to that. Of course, they take nothing upon themselves outside their instructions in the Service Regulations without first communicating with the Trinity House.

637. Without reference to the Trinity House?—Without reference to the Trinity House.

638. Outside what they are supposed to do, except, of course, in emergency; accidents, something of that sort?—Oh, yes.

639. All the arrangements about analyses, examination of samples, and matters of that kind, is what is done in all establishments, as a matter of course?—Yes.

Chain Cables: Testing of,

640. "The chain cables, rope, etc., are subjected to special test at the Blackwall workshops, and rejected if they fail to pass them." Are those your own workshops?—These are our own workshops at Blackwall.

641. And you have a chain testing house there?—We have a chain testing house there.

Local Lights: Number of, in United Kingdom.

642. Have you a complete list of the local lights, beacons, and buoys in the United Kingdom, or in England and Wales?—Well, the Admiralty list of lights contains particulars of the whole of the lights in the British Isles.

643. You know what you have to do; therefore have you any tabulated list of the actual numbers?—Oh, yes, we have.

644. I should like to have it?—Yes.

645. Particulars of the local lights, the actual numbers, what it means. What relation does the local light service, so to speak, bear to the Trinity House service? Do the Admiralty base their list of lights on your information entirely?—They always send a proof of the new edition down to us for correction.

646. Yes, but where do they get their list of local lights from; where does the Hydrographer get his list of local lights?—You see, many of these local lights that appear are merely pier lights; a great many of them are promenade pier lights; they are all down.

647. One wants to know roughly what it means. I see about the question of assistance to local authorities you said you were to give some particulars?—Yes.

New Works: Initiation of.

648. Speaking generally, how is the initiation of any new works started; what is the process of initiation of new work?—Well, there would be more ways than one; for instance, we might get a petition signed by some association, some mercantile marine association, asking for a light.

649. Am I correct in supposing that it is generally done by some local or other authority?—No, I do not think so. Of course, going round the coasts, the committees deal with these matters.

650. Can you tell me how often a lightvessel or an off-shore lighthouse has to be visited?—The lighthouse, under ordinary circumstances, is visited once a month.

Lightvessel Crews and Rock Lightkeepers: Relief of,

651. And the rock lighthouses?—And the rock lighthouses at the same time. There are one or two rock stations where they are relieved fortnightly.

652. That is in general terms?—That is in general terms; it is a monthly relief.

653. When the crew are taken off the lightship or the lightvessel once a month, do they come to a shore station, or do they get a holiday?—They go back to the depôt of the district from which the steamer comes.

654. And how long do they remain on shore—for a month?—They are supposed to have a month on shore, but the lightvessel's crew consists of nine men and two officers, and there are always seven men on board; that is, six men and one officer. The two officers exchange month and month, and the rest of the crew get two months at their station and one month on shore.

655. So that the lighthouse keepers themselves practically exchange with the crews of these vessels?—Oh, no, the lighthouse service is a totally distinct service from the lightvessel. The lighthouse men are landsmen pure and simple. They enter as supernumerary keepers between the ages of 19 and 28, and they are trained as light keepers, and then are drafted off to lighthouses according to where they are wanted.

656. Have you any information which gives us any particulars of your system of management in that sort of way? Can we see what your arrangements about your lighthouse keepers are?—Yes, I think if you were to study the Service Instructions you would find it there.

657. What I understand is that a lighthouse keeper remains on a rock lighthouse for a month, and then gets a month's spell on shore?—No, he gets two months on the rock.

Employment of, while on shore.

658. During which he is employed on a shore lighthouse?—No, he returns to the depôt; he is a sort of handy man at the depôt for the month that he is on shore. At some of the stations I should tell you—one or two of the rock stations which are not relieved by the tender, but are relieved by boat under contract—I shall give you a list of these in reply to Mr. Ennis' request—those men would be practically doing nothing their month on shore, because they are relieved from a place some distance from the depôt, and they simply live there with their families.

659. You said something about the crews?—Those are the lightvessels, the crews of the lightvessels; the four men that come ashore return to the depôt from whence the steamer went to relieve them, and there they are employed at the wharf cleaning buoys, and chain cables, etc., and, in addition to that, they occasionally go to sea in the tenders to assist to make up the crew.

660. Therefore I understand you to say that your service consists of a set of lighthouse keepers who are in the big lighthouses, and a set of sailors practically who do the work of the lightvessels and the tenders?—Yes.

Telegraphic communication with lightvessels: Extent of use.

661. With what lightvessels is telegraphic communication established?—We have four, I think; there is the North Goodwin, the Kentish Knock, the Shipwash and the Hasborough.

662. Does the cost fall on the Lighthouse Fund?—Well, as far as I know all the cost falls on the Lighthouse Fund; but that information you would get from the Board of Trade.

Value of,

663. Is it really found of any great value?—Do you ask me for my personal opinion?

664. Yes?—I should say it is of very little value, to the Light Service, and it has only been introduced for the saving of life and property.

665. It is really only required in one or two particular places, I suppose?—As a matter of fact, the sound signals, the system of signalling when assistance is required from the shore, has always been found, as far as my experience goes, quite sufficient for the purpose. I may say we are now fitting some of the lightvessels with wireless telegraphy.

666. You are?—Yes, that was at the request of the Board of Trade.

667. Do you think it is likely to be of any use?—It would be of no more use to our service than those vessels which are connected by submarine cable, but that also is not for commercial signalling.

668. It is for the case of saving of life?—Yes.

669. Do you know what stations are going to be wireless?—Yes. There is the East Goodwin, South Goodwin, Gull, Tongue, Sunk and the Cross Sand. I think they are all under way now except the Tongue.

Light Dues: Increase or reduction of, rests with Board of Trade.

670. A question has been asked; does Trinity House increase or decrease the dues?—No.

671. It does not?—No, that is the Board of Trade.

672. It just accepts the money that the Board of Trade gives it, so to speak; is that correct?—You may put it that way. The Board of Trade decide whether the General Lighthouse Fund is in such a condition as to justify any alteration in the light dues.

673. Is there any accumulation of the Lighthouse Fund?—There is at the present moment, and you are probably aware that after next April the present Government have decided to further reduce the light dues by 7½ per cent. for three years to bring down the balance which remains in hand.

674. Where is the balance?—In the hands of the Board of Trade.

675. Do you get any interest for it?—It is in this paper here.

Expenditure of Trinity House: Effect of Board of Trade control.

676. What is the effect of the Board of Trade overhauling your expenditure?—The general effect is this—that we cannot spend any money without getting the Board of Trade's sanction for it.

677. Are you pretty well certain you are going to get sanction for what you ask, or do they very often quarrel with you?—We are very careful not to ask for anything that we do not feel perfectly justified in asking for.

678. I think you have said you were going to show us how the estimates are submitted; you are going to give us a copy of the Estimates?—I am to give you a copy of those for last year.

679. Do you find that the work you have to do with the Board of Trade gives rise to a good deal of office work on the part of the Trinity House?—Well, of course, there is a good deal of work naturally that goes on between ourselves and the Board of Trade, they being, as it were, a supervising Department; for instance, all our accounts go to the Board of Trade every quarter.

680. Is your correspondence with the Board of Trade very considerable?—I should not say it is very considerable. Anything that requires to be sanctioned we write and ask for it, and we get a reply.

681. Do you look on it as a matter of form or business?—I should say it is certainly business. I do not think the Board of Trade would look at it in any other light.

Responsibility of Trinity House.

682. Well, then, at any rate, the Trinity House has no responsibility, and the question becomes, what is the good of the Trinity House?—I do not know, I am sure, about that, Sir. Of course, the work must be done somewhere.

683. The work must be done; you do the work, and do not have any responsibility?—Oh, yes, we do; we have a considerable amount of responsibility; we have the responsibility of keeping everything in an efficient condition.

684. I notice from reading the correspondence attached to your evidence, especially the letter, I think from Captain Vyvyan of the 7th May, 1904, that it puts the whole responsibility on the Board of Trade, that the Trinity House is very shy of any question of responsibility really?—What letter are you speaking of?

685. I am speaking of the letter of the 7th May, 1904. It is clearly shown from that that you do not accept any responsibility. The general tenor of the letter is to put the whole of the responsibility upon the Board of Trade for everything?—Certainly, the Trinity House has the responsibility of administration, to see that everything is kept in proper and efficient order. The Board of Trade would have to show, as you say, that the Trinity House is not required. I take it that is your meaning, is it not?

686. My own experience is that you do not get efficiency without responsibility?—Well, we are responsible; surely the Trinity House is responsible for the general efficiency of the Service.

Mr. A. Owen.
9 Nov. 1906.

687. I asked for some inspection returns. This is an inspection return ordered to be printed by the House of Commons, 26th March, 1906. This is an inspection of local lighthouses by some members of the Trinity House and of local lighthouses by the Scotch and Irish Commissioners. I want to know who made those, and when they were made; who made those inspections, the names of the Trinity House members who made the local inspections?—We can give that. That is the last printed Report to the Houses of Parliament on local lights.

Steamvessel Service: Work of S.S. "Irene."

688. A question was raised in a previous Committee about the "Irene," what are her duties?—Well, she is employed the same as other vessels, in addition to which she is generally used as the inspecting ship.

689. Whenever any members of the Board have to go afloat?—Yes, she would be used for that.

690. Is she fitted as a yacht?—She is fitted the same as the other vessels are fitted.

691. But is she fitted as a yacht; how many people would she accommodate?—She is fitted with comfortable accommodation for the Committees afloat. In the after-part she has got every accommodation for the Committees that have to go afloat.

692. Have you got any record of the work that she does or that these vessels do; does she keep a log?—Yes, she keeps a log the same as any other vessel keeps a log.

693. I think I should like to see a copy of the "Irene's" log?—For how long?

694. I think we had better say a year?—I think we had better send up an original log for a year.

695. The original log would do for this year, from the 1st of January up to the 1st of October.—Very well.

Divers: Employment of, by Trinity House.

696. Have you any suggestions to offer as to any improvements in the system of administration; you yourself?—Well, Sir, I am here to give the Commission information as to facts.

697. And you have no suggestions to offer?—I have no instructions from my Board to make any suggestion of that kind.

698. You mentioned divers, I think; how many divers do you employ?—We have eight seamen divers. There are two attached to the London District, two to the Milford District, two to the Yarmouth District, and two to the Harwich District.

699. And you employ them in wreckage and examining moorings?—Yes.

700. They go to Portsmouth for a course of instruction in the "Excellent" first of all?—Yes.

701. And they are men you trust to do your diving operations in connection with wrecks?—Yes.

702. Do you ever have to call in further assistance?—No, we do not now; we do it all ourselves.

Aberdovey: Application for harbour lights at,

703. There is a question about a fishing community or some light at Aberdovey; the Lancashire Sea Fisheries Joint Committee state that they have endeavoured to establish suitable lights at Aberdovey with a view to it being available as a harbour of refuge for fishing boats. Now, has the Trinity House gone into that question?—I think we had an application of that kind. There are already two or three buoys to assist vessels going into Aberdovey; I think there are three buoys. We decided that we were not justified in spending any more money from the General Lighthouse Fund for such a purely local purpose.

704. Speaking in general terms, have you very many applications from ports that are entirely used by fishing vessels for lights?—No, I do not think we have.

705. I mean to say ports that have no dues, so to speak, and no harbour board, and no authority; are there many?—No, there are not. You see, the general rule would be that we are not able to spend the General Lighthouse Fund excepting for the benefit of general navigation, and the Board of Trade would not allow us.

Fishing Vessels: Exemption of, from payment of light dues.

706. Is there any reason why, in order to meet the views of those fishing vessels, the fishing vessels themselves should not be subject to light dues?—Well, they never have been.

707. I know, but fishing vessels now are nearly all steamships, and make great use of the lights, and go long distances; in fact, they are nearly always fishing outside the local light range?—This is not our func-

Mr. A. Owen.

9 Nov. 1906.

Jurisdiction of General and Local Authorities,

tion. It is for the Board of Trade to decide such a question as that, or the Legislature.

708. In that sense you consequently have a little dispute as to the border line between you and the local authorities?—Sometimes those cases do arise, where we consider that it is a matter for the local body to find the necessary money.

709. (*Chairman.*) Where there is no local authority with any power to put up local lights, may it not still sometimes happen that local lights would be desirable for local interests?—Then, of course, we would consider it. Those cases very rarely occur; in fact, I do not remember any such case as that at the present moment. Under the Clause—I know the one you mean—it is Clause 653 (3) of the Merchant Shipping Act, 1894. I really do not remember any case ever coming to the Board for a light on that plea.

710. They would not put forward that plea. They might contend that it was the duty of the Lighthouse Authority to light the coast, and that the light was required on that particular place, but the reply of the Lighthouse Authority might be that it was out of the fair-way, and it was not of sufficient benefit to trade in general; that is so, is it not?—That is so, yes.

711. Do cases of that kind often arise?—No, they do not; very rarely.

Lightvessel, crews: Salaries.

712. (*Mr. Ennis.*) On Admiral Henderson's question about the rock lighthouses and lightvessels, I wish to ask, can you tell us first of all with regard to the lightvessels what are the standing wages of the officers and crews of those vessels?—They are all here, Sir, full particulars of every grade of the service; the pay of every grade.

713. If they are in that book I shall not trouble you?—You have a copy of that book.

714. Lighthouse keepers the same, I presume?—Yes, full particulars.

and provisioning of

715. Well, with regard to maintenance; I mean do the crew feed themselves?—They feed themselves; that is included in their wages.

716. If the tending vessels only tend the lightvessels once a month, how are the provisions sent off to the crew?—They take their own provisions every month. The Trinity House keep a reserve of provisions, tinned meat and biscuit, and if they fall short they can buy them off the Trinity House at the cost price.

717. How do the provisions of the men on board these vessels hold good for a month; must they take tinned provisions?—We never find any difficulty; how do other vessels manage that go long voyages?

718. Vessels that go long voyages generally find the maintenance of their crews?—I am open to correction, but I think there are lines of vessels at the present time——on coasting tramps for instance—where the men get 30s. or so a week and find themselves.

719. Could you give us any idea—you have eleven vessels to do your entire work—could you give us any approximation of the number of these vessels that are engaged in the tending of the lightvessels and the rock lighthouses?—Well, they are all more or less.

720. I mean about how much; of course it could be only an approximation, but could you give us a rough estimate as to how many of these vessels would be required for the tending only?—The letterpress of the book of maps gives you all particulars of each district and the vessels that are attached to that district.

721. You have kindly promised to give us a return as to the question of the light dues payable by the coasting trade and the over-sea trade; if you could in addition to that give the volume of the coasting trade and the over-sea trade as nearly as possible, I should be obliged?*—You mean the tonnage; yes.

Local lights: Rosslare.

722. Just one more question with regard to what has been asked by our Chairman. I think we had it from a previous witness that the Irish Lights Board submitted to the Trinity House a proposal with regard to some gas buoys, I think it was, for lighting the approaches to this Fishguard—Rosslare route passenger service?—Yes, that is so.

723. Did that proposal obtain the sanction of the Trinity House?—No, not the original proposition of the Irish Commissioners.

724. The matter is still under consideration?—As a matter of fact, last year this proposal was before the Advisory Committee, and they objected to it, and the Board of Trade threw it out.

725. My question with regard to local authorities controlling lights that would be fairly out in the fairway for passing traffic would apply in that particular case. I know the locality fairly well, and of course the entrance to what you may call the channel, the fairway leading into the new harbour, is some five or six miles off shore?—Yes.

South Shear

726. The local authority would have no power to erect lights there.—As a matter of fact we have an application before us at the present moment from the Irish Commissioners for a lighted buoy at the South Shear.

727. Irrespective of the cost, whether local sources or private companies should bear the cost of them, it would undoubtedly be desirable in the interests of the passenger service that the channel should be properly lighted?—I should say, as a matter of opinion, that goes without saying.

Board of Trade: Control over Trinity House satisfactory.

728. (*Chairman.*) I should just like to ask one question. Do the Trinity House feel themselves hampered and interfered with in their administrative work by the supervising powers of the Board of Trade?—No, I should say not, Sir; on the contrary, of late years we have worked most amicably, and we are always glad of any assistance the Board of Trade can render us, either by advice or pointing out to us why such and such an expenditure that we might have submitted, might not be desirable.

729. And you have not found that the control of the Board of Trade over your expenditure has in any way destroyed the sense of responsibility on the part of the Trinity House?—No.

* The Commission subsequently decided not to call for this return.

THIRD DAY.

Tuesday, 13th November 1906.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. H. G. Cook, called in; and examined.

730. (*Chairman.*) You are the Secretary of the Commissioners of Irish Lights?—Yes, Sir.

731. And are here as their representative to-day?—And I am here as their representative.

Irish Lights Board: Constitution and powers of.

732. Would you begin by giving us a short account of the constitution and powers of the Commissioners from the date of their incorporation?—Yes; the constitution of the Commissioners of Irish Lights dates back to 1786, when they were incorporated by the Act 26 Geo. III., C. 19 (Irish), entitled "An Act for promoting the Trade of Dublin by rendering its Port and Harbour more Commodious."

733. Under what name were they incorporated?—The Act for Promoting the Trade of Dublin; that is the Act.

734. That is the title of the Act?—By which they must be called.

735. They must have been incorporated under a distinct title; what was the title?—The Corporation for Preserving and Improving the Port of Dublin.

736. Did their powers at that time include the lighting of the Irish coasts generally?—No, not at all; that did not come on till 1810.

737. Will you explain the circumstances under which the Commissioners of Irish Lights were established?—Between 1786 and 1810 there were several minor Acts as to the raising of light dues and repairing lights, some of which were local lights, but in 1810 all the unrepealed Acts were vested in the Corporation, which was then called the Ballast Board. That is under the Act of 1810.

738. I do not quite follow you. In 1810 these various powers in connection with the lighting of the coast were vested in the Corporation for Preserving and Improving the Port of Dublin?—Yes.

739. Had there been any common Lighthouse Authority for Ireland before that?—No, the lighthouses were under different bodies, principally the Customs, and there were some little local lighthouses under the Board of Works—Howth Harbour and Dunmore.

740. So that the connection of the Corporation for Preserving and Improving the Port of Dublin with the lighting of the Irish coast began in 1810?—Began in 1810.

741. And later on?—Then we come along to 1854; nothing was done till then. 17-18 Vict., Ch. 16, Clause 389, the Merchant Shipping Act, Part VI., enacted that "The superintendence and management of all lighthouses, buoys and beacons shall be vested in Ireland and the adjacent seas and islands in the 'Port of Dublin Corporation.'" That is another name for the same Corporation.

742. But it was the same Corporation?—It was the same Corporation exactly as that of 1786—constituted exactly the same, and the constitution of the present Board is precisely the same as it was then.

Mr. H. G. Cook. 13 Nov. 1906.

743. Was the title altered to the Port of Dublin Corporation by the Act of 1854?—Yes, by the Merchant Shipping Act.

744. Were any new powers conferred upon the Corporation by that Act?—No, Sir.

745. It merely changed the title?—It merely changed the title.

746. Practically, then, a repetition of the Act of 1810?—Yes.

747. Then in 1867 there was a further Act?—The Act of 1867 was the Act which gave the Commissioners the present name, the Commissioners of Irish Lights.

748. The Corporation for Preserving and Improving the Port of Dublin was then, as it were, divided into two?—Divided into two.

749. Or, rather, its functions were divided into two?—Its functions were divided into two.

750. Would not that be a more correct way of putting it?—Yes, the Commissioners were given charge of all the lights round the coast of Ireland, with the exception of Poolbeg and other lights; and the Corporation for Preserving and Improving the Port of Dublin became the Dublin Port and Docks Board.

751. In spite of the fact that there was a new statutory authority for the Port of Dublin, the constitution of the Irish Lights Commissioners remained as it had been fixed in 1786, when they were only a Corporation for Preserving and Improving the Port of Dublin?—That is quite right, Sir. Under the Act of 1810, we took over the 13 existing lighthouses in Ireland at that time. We were then called the Ballast Board.

Composition of,

752. Now, will you state to us the composition of the Board?—The Board is composed of 22 members, namely, 17 members nominated by members for the time being of the Corporation for Promoting the Trade of Dublin by rendering its Port and Harbour more Commodious, subject to the approval of the Lord Lieutenant and Privy Council in Ireland; the Lord Mayor of the City for the time being; the High Sheriff of the City of Dublin for the time being; and three Aldermen of the City of Dublin annually nominated by the Municipal Corporation of Dublin.

753. So that there are five ex-officio members, and all the remaining 17 are co-opted by the whole Board?—Yes, self-elected or co-opted.

754. Would you state the names, age, date of appointment, and qualifications of the Commissioners?—Yes.

Mr. H. G. Cook.

13 Nov. 1906.

Names, ages, date of appointment and qualifications of Commissioners.

Name.	Age in October 1906.	Date of Appointment.	Qualifications.
Sir William Watson, D.L.	64	1875	Managing Director, City of Dublin Steam Packet Company, Associate Institution of Civil Engineers, Associate Institution of Naval Architects.
Arthur G. Riall- - -	64	1882	Retired Commander, Royal Navy.
George B. Thompson- -	68	1883	Merchant. Bachelor of Arts and First Senior Moderator and Gold Medallist in Natural and Experimental Sciences, Trinity College, Dublin. Holds Master's Certificate of Competency, Board of Trade.
John Jameson - - -	67	1884	Distiller. Master of Arts and Bachelor of Engineering T.C.D.
Viscount Monck - -	57	1887	Late Captain Coldstream Guards. B.A. Christ's Church, Oxford.
Duke of Abercorn, K.G., C.B.	68	1892	Landed Proprietor. M.A. Oxford.
Sir Howard Grubb, J.P., F.R.S.	62	1893	Constructor of astronomial instruments for the British, Colonial, and Foreign Governments. Consulting Engineer and Optical Expert to Messrs. Vickers Sons and Maxim, Ltd. Fellow of the Royal Society, London. Fellow of Royal Astronomical Society, London. Late Vice-President of Astronomical Society, Liverpool. Member of British Astronomical Association. President of Photographic Convention of United Kingdom, 1894. Hon. Member of Astronomical Society of Mexico. Master of Engineering; hon. causa, University of Dublin. Hon. Member of the Institute of Civil Engineers in Ireland. Vice-President of the Royal Dublin Society. Member of the Council of the Optical Society, London. Cunningham Gold Medalist, Royal Irish Academy. Inventor and patentee of "Grubb's" patent gun sights, range finders, new forms of geodetical instruments and optical apparatus for submarine boats. Author of various papers on optical and scientific instruments in the transactions and proceedings of the different societies mentioned above. Member of the Board of Visitors of the Museum and Science and Art. Justice of the Peace for County of Dublin. Hon. Member Royal Irish Yacht Club.
Sir William J. Goulding, Bart.	50	1894	Manufacturer; and Chairman G.S. and W. Railway. Deputy Chairman Fishguard and Rosslare Railways and Harbours. M.A. Cambridge.
Edward P. Stewart - -	65	1894	Land Agent and J.P. Late Captain 78th Highlanders.
Alexander A. Walker -	49	1900	Secretary and Superintendent, Local Marine Board, Dublin. Examiner in Navigation and Seamanship to Board of Trade. In command of sailing ships and steamers for about eleven years. Registrar, Royal Naval Reserve, Dublin.
John Jolly, F.R.S. - -	48	1901	Professor of Geology, Trinity College, Dublin. Civil Engineer (B.A.I. Trinity College, Dublin). Fellow of Royal Society. Member of Optical Section of Board of National Physical Laboratory. Familiar as a yachtsman with navigation of Irish waters; Author of various papers on Physical and Optical subjects, upon Navigation, Nautical Instruments, Deep-Sea Exploration, etc.
Charles E. Martin, J.P., D.L.	67	1902	Shipowner, Merchant, Director of Bank of Ireland. Associate Member of the Institute of Civil Engineers, Ireland.
Rowland Hill Scovell -	43	1902	Bachelor of Arts, Medicine and Surgery, University of Dublin (not practising Medicine).
Henry L. King - - -	46	1903	Landowner and J.P.
Frank Fitzgerald - -	50	1904	Merchant and Shipowner. Director of British and Irish S.P. Company.
Sir Daniel Dixon, Bart., D.L.	62	1904	Merchant and Shipowner. Member Belfast Harbour Board. Lord Mayor, Belfast.
T. C. Burnside - - -	—	1905	Retired Commander, Merchant Service.

EX-OFFICIO COMMISSIONERS.

The Lord Mayor of Dublin for the time being.
The High Sheriff, City of Dublin, for the time being.
Three Aldermen of the City of Dublin, elected annually by the Corporation.

Separation from Dublin Port and Docks Board.

755. After the Act of 1867 there were two bodies, the Irish Lights Commissioners, and the Dublin Port and Docks Board?—Yes.

756. But the Irish Lights Commissioners had, in the first instance, a right to appoint a certain number of representatives to the Dublin Port and Docks Board?—Yes, seven members.

757. And that was the only connection between the two bodies which continued after the Act of 1867?—That is all, Sir.

758. And even that was done away with by the Dublin Port Act of 1898?—Yes.

759. The two bodies are now entirely separate?—The two bodies are entirely separate.

760. And have entirely distinct functions?—And have entirely distinct functions.

Procedure of Board.

761. Will you describe the procedure of the Board, please?—The Board meet every week during the year on Friday, unless that day should happen to fall on a holy day or other festival, when they meet on some other suitable date, in which case every member is notified of the change; a special summons is also issued to each member when any special business is to be laid before the Board. The hour of meeting is 1 p.m. under ordinary circumstances; when a meeting is specially summoned another hour may be decided upon, of which each member receives due notice. The Board meetings are in private, and three members form a quorum. All matters of an important nature are laid before the Board to be dealt with, and, if necessary, are referred to either the Finance, Inspecting, Office and House, Removal, or Stores' and Steamers Committee. The various heads of departments and masters of steamers (when available) are in attendance on each occasion the Board meets, in the event of it being considered necessary to consult them on any matter. All Committees as above are struck by the Board at a meeting held in January of each year, which is specially called for the purpose. All annual tenders for contract supplies or other tenders of an important nature are opened in the presence of the Board, and initialled by the chairman of the day. All cheques on the disbursement account, on being passed by the Finance Committee, are signed by three members of the Board and the Secretary, or his "locum tenens."

762. So that three members form a quorum of the Board?—Yes.

Attendance of members.

763. Can you give us some idea of the numbers that usually attend these meetings?—I can, Sir. I have made up a return for three years on the same lines as a return was made up for a previous Commission on Lighthouses. In 1903 we had 52 meetings of the Board, and the average attendance was 9.1. In 1904 we had 53 meetings of the Board, and the average attendance was 9.6. In 1905 we had 52 meetings of the Board, and the average attendance was 8.9, which averages 9.2 attendances of members for the three years.

764. You say that all matters of an important nature are laid before the Board to be dealt with, and if necessary are referred to the various Committees?—Yes, Sir.

765. Who is charged with preparing the agenda; the Secretary, I suppose?—I am, Sir, as Secretary.

766. The questions that come before the Board are not dealt with by Committees in the first instance?—Oh, never, Sir, except they be referred to the Committee, and then they come back to the Board.

767. So that a large part of the administrative work is done by the Secretary and his staff?—Always; well, it must be. We could not wait for Board meetings. We have to act in a case of emergency, but we report to the Board whatever we do.

Committees:

768. And the various Committees only deal with the special matters which are referred to them by the Board?—With the exception of the Finance Committee. As a matter of fact, they get all the accounts regularly, before they come to the Board to be passed.

769. With the exception of the Finance Committee there are no standing Committees at all?—No, Sir.

770. Would you give us further details as to the numbers constituting the various Committees, and the functions of those Committees?—The Inspecting Committee is composed of eight members.

Mr. H. C. Cook.

13 Nov. 1906.

Finance Committee

771. Perhaps we had better deal with them in the order you have given them here. Take the Finance Committee first, which is the only standing Committee?—The Finance Committee is composed of nine members—Commander Riall, R.N., Mr. C. E. Martin, Mr. Fitzgerald, Mr. Jameson, Mr. Scovell, Sir W. Watson, Sir W. J. Goulding, Capt. E. P. Stewart, and Sir Howard Grubb.

772. Do they meet every week?—They meet every week regularly, Sir.

773. Before the Board meeting?—Before the Board meeting; they meet at 12 o'clock; the accounts are prepared in a certain form, which is devised by the Board of Trade, and submitted to the Finance Committee.

774. Can you tell us what the average attendance of the Finance Committee is?—Yes, Sir. The Finance Committee, 2.7. We have only three members at a time on the Finance Committee, although there are nine here, I should make that clear, Sir. During the months of January, April, July, and October Commander Riall, Mr. Martin, and Mr. Fitzgerald are deputed to attend. In the months of February, May, August, and November Mr. Jameson, Sir Howard Grubb, and Mr. Scovell. In the months of March, June, September, and December Sir W. Watson, Sir W. J. Goulding, and Capt. Stewart.

775. I see; although the Committee consists of nine members, the effective Committee at any given time only consists of three members?—That is quite right, Sir.

776. (*Admiral Henderson.*) Then they are divided into three sections?—Yes.

777. And work four months in the year?—Yes.

778. (*Chairman.*) What is the average attendance?—The average attendance of the Finance Committee in 1903 was 2.7, in 1904 2.8, in 1905 3. The average attendance for the three years is 2.9.

779. Practically, we may take it that the three members of the particular division of the Committee which is then taking duty almost invariably attend?—They are very regular in their attendance indeed.

780. Is there a quorum?—There is no quorum, but if I find I have not got a Committee—some member cannot attend—I immediately telephone to some gentleman near me, and he comes in and assists us, so that there is always a Committee.

781. I suppose in the event of the absence—enforced or otherwise—of any of the three gentlemen who for the time being are acting as the Finance Committee, it is always possible to obtain the services of another?—Yes.

782. One of the nine?—One of the nine; there is no difficulty whatever; it is only a matter of time.

783. (*Sir Frank Adam.*) There are generally three; sometimes two?—If I have a large quantity of work to put before them, I may have three or four in attendance.

784. (*Colonel Herbert.*) It may occur that one of the members of the panel may never attend?—Well, I do not think that has ever occurred, Sir.

785. His place would be taken by somebody else you telephone for?—I never knew the case occurring; do you mean continually or on an occasion?

786. I mean it might occur; although the name would be put on the panel of three members, one of those members might for some reason or another never attend, and still the average would be maintained by another person being called in?—I never knew a case of that kind to occur. The Finance Committee and the Inspecting Committee are the best Committees. The members are very regular in their attendance.

Inspecting Committee.

787. (*Chairman.*) Well, now, as to the Inspecting Committee?—The Inspecting Committee meet whenever required. There are no fixed periods. The average number of meetings in the year is 22. This Committee is composed of eight members, who are elected annually in the month of January, and are chosen for their special qualifications.

788. What are the duties of the Inspecting Committee?—Practically all subjects in connection with the lighting, buoyage, and steamship operations of the service that present any difficulties, and which the Board considers require special consideration; they are referred to this Committee.

Mr. H. G Cook.
13 Nov. 1906

789. There is no regular inspection carried out by members of the Board of all the lighthouses round the Irish coast within a given period?—Every year they are inspected by members of this Committee.

790. Every lighthouse?—Every lighthouse, unless sometimes they have run by some of the big rock stations on the west coast of Ireland, where you could not get a landing. But they land at places most difficult of access.

791. But the Board would regard it as the duty of the Inspecting Committee during some portion of the year to inspect every seamark round the coast of Ireland?—Yes; they do so, I may say, always. There are two stations that sometimes they find a difficulty in visiting—namely, Black Rock, Mayo, and Eagle Island. They have sometimes had to run past them. We know very well that, although you were to stop a week or ten days, a landing could not be effected.

792. (*Sir Frank Adam.*) On account of the weather?—On account of the weather; the seas.

793. (*Chairman.*) How many members of the Inspecting Committee perform this duty at any one time?—Last year we had six, I think. On the coast inspection in 1903 Sir William Watson spent 23 days, Capt. Riall 23 days, Mr. Jameson 12 days, Lieut. M. Knight, since dead, 20 days, and Mr. Scovell, I think, was on the whole time—that is, about 22 or 23 days.

794. (*Colonel Herbert.*) But is the same system followed in regard to that as with the previous Committee, of there being a certain number told off to carry that inspection out?—No, Sir, they are all summoned specially; on each occasion the Inspecting Committee is summoned.

795. Then the case may occur here that I referred to in my previous question, that there may be members who never do a day's inspection?—Some of them may not have visited every station, but as a matter of fact all these gentlemen on this Committee have been round the coast. Captain Burnside, who was only elected this year, was round the coast with Mr. King, Captain Riall, Mr. Fitzgerald, Mr. Scovell and Sir William Watson, those are the six that went round this year.

796. (*Admiral Henderson.*) Might I ask, do you divide the coast up amongst these six members?—No, Sir.

797. They all go together?—They all go together in the "Alexandra" s.s.

798. (*Colonel Herbert.*) Is it all done in one cruise?—It is all done in one cruise; that is all the lights which are under our jurisdiction, and paid for out of the General Lighthouse Fund.

799. (*Chairman.*) It is one cruise, and carried out during the summer time?—In the month of June.

800. (*Sir Frank Adam.*) What is the duration of the cruise?—About 21 or 22 days.

801. (*Admiral Henderson.*) They inspect the lighthouses; they do not attempt to verify buoys, or anything of that sort?—Not to verify buoys.

802. They just inspect the lighthouses?—They inspect the lighthouses and lightships, buoys and beacons.

803. (*Sir Frank Adam.*) Do they take any other steps when they cannot land at certain points, and do they inspect them by some other means?—No, Sir, the Commissioners do not.

804. (*Colonel Herbert.*) Is there any other system of inspection?—The inspector and the assistant inspector.

805. (*Chairman.*) Are there any other duties devolving upon the Inspecting Committee besides those you have enumerated?—They inspect from time to time the seamarks under their jurisdiction, and under the jurisdiction of the various local authorities in Ireland, when possible.

806. Do they make it their business to carry out that inspection over the whole coast during a period of twelve months?—They do whenever possible; sometimes they inspect some lights which they cannot visit in other years. It is difficult to land at some of the West Coast lights, and if they landed they might find a difficulty in getting off again.

807. It is also the duty of the Board to report to Parliament, is it not?—Yes, Sir.

808. With respect to local lights?—The report of every local inspection is sent on to the Board of Trade; that is published every year.

809. But it is not possible to say that all the local lights are inspected every year?—Oh, they are not, Sir.

810. (*Colonel Herbert.*) It is a collective responsibility for the efficiency of inspection; the Board is collectively responsible for the efficiency of the inspection?—Certainly, Sir.

Office and House Committee.

811. (*Chairman.*) Then as to the Office and House Committee, what duties are assigned to them?—They consider all applications from the officers as regards salaries, also steamers' or stores staff's salaries generally.

812. But does not the Finance Committee consider the question of salaries?—No, Sir, never; it deals with matters of account, nothing else but the accounts.

813. (*Colonel Herbert.*) What is the number of the Committee?—The Office and House Committee?

814. Yes?—The Office and House Committee consists of four members: Sir William Watson, Mr. George B. Thompson, Mr. Martin, and Alderman Cotton.

Removal Committee.

815. (*Chairman.*) What of the Removal Committee?—The Removal Committee is simply for transferring light keepers and lightship men. They are all members of the Inspecting Committee, and they meet immediately after the Inspecting Committee.

816. (*Colonel Herbert.*) How many?—Three; Sir William Watson, Commander Riall, and Mr. G. B. Thompson.

817. (*Chairman.*) I presume that is not a committee which meets very often; the need for appointments of lighthouse keepers is not continually arising?—No, they have generally a couple of meetings after their visit round the coast, so as to transfer the keepers in the summer months when possible.

Stores and Steamers Committee.

818. And the Stores and Steamers Committee, what are its functions?—Any matter affecting the personnel of the District Stores, Kingstown, improvements or alterations of the Store premises. They meet whenever required, and it is very seldom they are called.

819. Are the offices of these various committees quite distinct?—For instance, the Office and House Committee and the Removal Committee, and the Stores and Steamers Committee, all seem to deal with the staff. Are their functions clearly demarcated?—Nothing would be dealt with at the Stores Committee, except things connected with the Stores staff, but any case of salaries would come before the Office Committee. Might I make a distinction between wages and salaries? The salaries are paid to the officers, and the wages to the men. Men get daily wages, you see, Sir.

820. But the Office and House Committee only deals with salaries, not with wages?—Salaries.

821. I think if we had a statement setting forth the numbers of the committees, and their personnel, with a brief enumeration of their functions, it would be useful?—I have got it; I will pass it up to you.

Duties of Committees: Inspecting Committee.

822. Will you read out the duties of the committees?—The Inspecting Committee meet whenever required. There are no fixed periods. The average number of meetings in the year is 22. This Committee is composed of eight members, who are elected annually in the month of January, and are chosen for their special qualifications. Practically all subjects in connection with the lighting, buoyage and steamship portions of the service that present any difficulties, and which the Board consider require special attention, are referred to this Committee. They also carry out an annual tour of inspection, when, weather permitting, they visit each lighthouse and lightship station under their jurisdiction. They also inspect from time to time the seamarks under the jurisdiction of the various local authorities in Ireland, when possible. The annual estimates are examined and checked by them before being forwarded to the Board of Trade.

Finance Committee.

The Finance Committee meet every Board day throughout the year, at noon. It consists of nine members; three of each are deputed to attend each meeting and serve monthly in rotation. They meeting and serve monthly in rotation. They—

1. Examine accounts submitted for payment (weekly average) and initial same.

2. Check the book in which the accounts are entered (called the docket book), and amounts extended under the several abstracts, and ascertain that the castings are all correct.

3. Sign cheques on disbursement account for amounts passed as correct, all such cheques being signed by three members of the Board.

4. Audit and initial all receipted vouchers, mark off same in docket book and note the number of passed accounts for which receipts have not yet come to hand.

5. Check disbursement account with bank book.

6. Check drawing account with bank book.

7. At the conclusion of each quarter, when the accounts are in order for transmission to the Board of Trade, they are submitted to this Committee for approval, and when examined and found correct the schedule is signed by two members.

8. Deal with matters of account laid before them for decision.

Office and House Committee.

The Office and House Committee deal with matters referred to them by the Board in connection with :—

1. Salaries of officials, steamers, or stores staffs.

2. Appointments, promotions, and transfers of same.

3. Office premises, repairs, alterations, etc.

They meet when required, and are specially summoned.

Removal Committee.

The Removal Committee deals with the appointment, promotion, transfer or discharge of the permanent hands in the lighthouse and lightship branches of the service. They meet when required, and, being members of the Inspecting Committee, they transact their business on the same day as the Inspecting Committee meet.

Board and Committee Meetings :

823. Do you think it would be possible to put in a statement giving the agenda for the different Board and Committee meetings for a period of six months?—Give you just a copy of an agenda? I could tell you the number of subjects that the Board dealt with at each meeting. Is that what you mean?

Procedure.

824. Well, I should like to have a written statement put in, giving the agenda for a considerable period?—Do you want the details of the agenda?

825. We want the details of the agenda?—I would report to my Commissioners; it would take some time to make that out. For instance, on January 13th there were 15 subjects; on the 28th there were 33 subjects. Sometimes we go up as far as 34 and 39. There are some cases where we had as many as 47 items before the Board on the agenda.

826. Can you give us a copy of the agenda of the Board and of the Committees for a period of six months?—Yes; will that be any six months, or would you like the last six months to date or the first six months of this year?

827. The first six months of this year. If there is any change in that, we will inform you of it through the Secretary?—Yes, Sir. The average subjects dealt with by the Board are 25.75 weekly.

828. Let us also have a copy of the minutes of the Board meetings and the Committee meetings?—A full copy?

829. There will be no difficulty in preparing something of the sort?—No, Sir, a copy of the agenda is a very different thing from a copy of the minutes.

830. (*Sir Frank Adam.*) How long do your meetings last?—About two hours; from one o'clock to three o'clock.

831. Then when you have forty subjects to dispose of?—Some of these may be formal; contentious subjects are referred to Committees. The Committees take a great deal longer time to deliberate than the Board, because the Committees go very fully into everything. We have just got a case about the Roselare light, which alone would occupy, perhaps, half an hour's deliberation.

Stores and Steamers Committee.

832. (*Chairman.*) Some information of that kind we shall ask for, and I understand you will be able to provide it?—Oh, certainly. The Stores Committee: 1. Matters affecting the personnel of the district stores, Kingstown; 2. Alterations or additions in the stores premises; 3. They meet when required, and are specially summoned.

833. (*Sir Frank Adam.*) Steamers are included in that; what was that about?—The new steamer was being built, the "Alexandra."

834. (*Admiral Henderson.*) How many does it consist of?—Three members, Sir; Sir William Watson, Commander Riall, and Mr. G. B. Thompson. When they were building the steamer they had a small committee to decide important items.

Mr. H. C. Cook.

13 Nov. 1906

835. (*Chairman.*) The duties of the Committee with respect to steamers only refer to the construction of any steamer that may be wanted?—That is all.

836. Not to the actual duties carried out by the steamer?—No, Sir.

837. (*Mr. Ennis.*) Nor for repairing?—No.

Head Office Establishment:

838. (*Chairman.*) Well, now, will you proceed to give us some particulars of the personnel of the various departments, and the duties and salaries attached thereto. Have you prepared a general statement?—No, I have not had time. The notice I got was very short. There was an epidemic of influenza, and I have had to work 16 or 18 hours a day to get up the information. I have not got it here; I have not had the time to prepare it.

839. Perhaps the convenient course would be that we should ask that a written statement be sent in later on?—I will tell you what I have got. I deal with the different abstracts in which they arise. Our accounts are kept in a certain way by direction of the Board of Trade. Abstract A are lighthouses, therefore I will begin with Abstract A.

Staff employed.

840. Tell us how many officers are employed?—That is Abstract F, Sir. The office staff consists of a Secretary an accountant, a cashier, the Engineer, and assistant engineer, the inspector, an assistant inspector, two clerks in the Secretary's office, three clerks in the accountant's office, a check clerk who is divided between the inspector and Engineer, a surveyor of shipping attached to the inspector's department, and in the Engineer's department we have one permanent draughtsman, one chief clerk of works, one engineer's clerk, a foreman mechanic, a foreman lampfitter, one assistant ditto, one carpenter, one foreman rigger, one blacksmith, one assistant blacksmith, and also, when necessary, four temporary draughtsmen or surveyors, and a retort setter. We have a housekeeper, two messengers, and a hall porter.

Salaries.

841. In the statement which you put in I presume that we sholl have particulars as regards the salaries of all the officials?—I can make that out for you, Sir, with pleasure.

842. Perhaps you might tell us the salaries of the principal officials now?—The salary of the Secretary is £450 a year, rising by £25 to £700; the accountant £400, by £20 to £500; the cashier £290, by £15 to £400; the Engineer, £700, and he is sanctioned up to £900, no special rates of increase. The inspector, £350, by £20 to £500; one clerk in the Secretary's office, £290, by £15 to £350; the assistant inspector, £250, by £15 to £350; the assistant engineer, £220, by £20 to £300; another clerk in the Secretary's office

843. We should like a statement of salaries?—I shall have one prepared; just in the form I have given it to you, I presume?

844. In the form in which you have given it to us, except that it should be filled up with respect to all the officials?—The whole group of departments as well, Sir?

New works: Initiation of proposals for.

845. Yes. Now, with whom would it rest to bring before the Board proposals for new works?—The Inspecting Committee, when they go round the coast, generally decide what new works are necessary, and they instruct the Engineer to draw plans and estimates.

846. Then the Inspecting Committee would make a report to the Board?—Yes, Sir; when they come back they make a report to the Board.

847. The Board would consider the report, and would then decide whether any further steps should be taken as regards any recommendation of the Committee?—That is quite correct, Sir.

848. Do the Inspecting Committee endeavour to put themselves into communication with the shipping community in any way?—Some of them are shipowners; yes.

849. In connection with any proposed new lights?—No, Sir.

850. Do they receive suggestions?—Oh, we get inundated with suggestions, sometimes for new lights from shipowners, all of which are laid before the Board.

851. Does the Board refer these to the Inspecting Committee?—Yes, Sir.

Mr. H. G. Cook.

13 Nov. 1906.

852. Is it any considerable part of the work of the Inspecting Committee to consider these suggestions?—A very considerable part.

853. Are these suggestions carefully gone into at the time that they are received, or do they have to wait until the Inspecting Committee carry out their inspection?—Sometimes the recommendation is made by the Inspecting Committee on their own initiation, or they may have heard about these suggestions.

854. In some cases it is possible to deal with any suggestion at once, without waiting for an inspection of the locality before deciding?—Oh, yes, sometimes we carry out things without waiting for an inspection of the locality.

855. And sometimes they reject suggestions?—Really, some of these gentlemen have been on the Committee so long that they know the coast perfectly; they can navigate a vessel round the coast. Sir William Watson, Commander Riall, Mr. Thompson and Mr. Jameson have been round the coast very frequently, probably 24 or 25 times.

856. Any suggestion brought to you would be very carefully considered on its merits?—Most carefully, Sir.

Official Establishment: Board of Trade Inquiry into, in 1890.

857. I do not know whether there are any observations you would like to make upon the duties and the personnel of the office?—It is very fully set out in the report of Mr. Trevor and Mr. Stoneham, made a few years ago, in 1890; it is put very concisely and very nicely.

858. Who made the inquiry?—Mr. Trevor and Mr. Stoneham, of the Board of Trade; they held an inquiry into, and reported on, the establishment of the Commissioners of Irish Lights.

859. Was that printed in the report of Lord Courtney's Commission?—No, Sir, this is not in connection with that; it is the report of the Board of Trade of the 20th June, 1891.

860. (*Admiral Henderson.*) Is that up to date?—It could be made up to date very easily.

861. (*Chairman.*) Could you do that for us; send us a copy of that report, with annotations bringing it up to date?—I could, Sir; I presume I can get a copy of this from the Board of Trade, but if not, we can get it typed out.

862. Send us a copy here?—It will take some time, it is fourteen pages.

863. We had better have it brought up to date and circulated to the Commission.—That brings up to date the officers, the crews of our steamers and stores, office staff generally, attendance at committees; it is very voluminous, and if you wish it on the same lines exactly——

864. Yes, I think we had better have that?——

865. (*Colonel Herbert.*) Could you work upon that general plan and bring it up to date? Have you got it as a sort of record and kept it up to date?—No, I have brought it with me, because I thought it would be useful.

866. (*Sir Frank Adam.*) You have examined it?—Oh, yes, I know it all.

867. Are there many important changes which have occurred since the last fifteen years when that was drawn up?—Not very many.

868. It would not take you very long, perhaps, to indicate the changes which have taken place?—No, Sir, it would not.

Seamarks: Number under Irish Lights Board.

869. (*Chairman.*) Can you give us some particulars relating to the lighthouses, lightships, beacons, buoys, and perches and steamers; as to numbers, for instance?—We have 74 lighthouses, one fog-signal only, 11 lightships on their stations, and four spare lightships. We have 109 buoys altogether, some of which are lighted. Out of that number seven are lighted and four have whistles, and one bell-buoy only.

870. (*Mr. Ennis.*) Are they all included in the 109?—They are all included in the 109.

871. (*Admiral Henderson.*) Gas, I suppose?—Yes, all oil-gas, which we manufacture ourselves; we have two stations for manufacturing oil-gas; one is Howth Bailey and the other is Larne district.

872. (*Chairman.*) Perches and steamers?—We have 31 beacons—they are generally constructed of masonry—two of which are lighted, and 34 perches.

Steamvessels:

873. (*Sir Frank Adam.*) Steamers?—We have got three steamers.

874. (*Chairman.*) Are your steamers constantly employed?—They have to lie up occasionally in consequence of stress of weather, when they cannot do any work.

875. But apart from that?—Apart from that they are constantly employed. We have to charter other steamers very frequently, especially since these new lighted buoys were established.

876. (*Mr. Ennis.*) How many rock lighthouses are there in the 74——

877. (*Admiral Henderson.*) Have you any chart showing the position of these?—I have got a lighthouse map, Sir. I thought it might be useful, so I brought it with me. That shows the position of all the lights, buoys and beacons on the coast of Ireland under the Commissioners' jurisdiction.

878. (*Chairman.*) You might supply us with copies of that, please, for the Commission.—Certainly; you want a copy for each member of the Commission?

879. (*Admiral Henderson.*) You have plenty of copies?—I think I have about half a dozen left.

880. (*Chairman.*) Very well, let us have a couple of them.—I can leave you that one now if you like; if it would be of any use.

Work of s.s. "Alexandra" and "Tearaght."

881. Can you describe to us what the principal work of the steamers consists in?—In the spring of the year they devote their time to delivering oil and ordinary stores at the lighthouses and lightship stations. The "Alexandra" last year—it was the first time she did it—took all the oil round the coast, and did it very rapidly indeed. She had about a thousand casks on board.

882. How often have the oil stores to be repleted?—We like to have the stations all oiled by the end of April.

883. And that lasts for?—Up to the following September twelve months.

884. For eighteen months then?—Yes, practically eighteen months.

885. (*Mr. Ennis.*) That is, that you have six months' reserve store?—About six months, so as not to let any station run short of oil and lighting stores; the same way with furnace and cannel coal.

886. (*Chairman.*) That is the work during the spring?—That is the work during the spring. Then, while she is doing that, one of the other vessels is buoy-shifting, and frequently, when she is delivering that oil, when the weather is unsuitable to do work outside, she can shift buoys in the harbours and different places where we have them.

887. Is there much of that work?—Yes, we have got 109 buoys to be shifted every year; then they have to tow the lightships in and out, examine the lightship cables, which is a very onerous task indeed, each cable being 220 fathoms in length. Some of the cables are $1\frac{3}{4}$ inch, and there are very few hands to do the work.

888. How are the shifts on the lightships managed?—Transfers of men are arranged by the Removal Committee, Sir; changes of lightships are carried out by the steamers.

889. And carried out by your own steamers?—By our own steamers in almost every case.

890. Have you anything else to add respecting the steamers? I do not quite understand how they are employed during the rest of the year. You have told us about the spring time?—Yes, only oil. During the rest of the year they have to go round with building materials, brushes, mats, artificers' tools, and things like that, and shift lightships, buoys, etc.

891. Just supplying the various stations with stores of every kind?—When the "Alexandra" has finished her spring trip she has to get ready for the Commissioners going round.

892. That is for the inspection?—Yes, the time comes round for her to lie up in dry dock and be cleaned. She wants a good scrubbing after delivering the oil; that is, paraffin.

893. That is during the month of June, I think you said?—That is during the month of June.

894. What is her autumn employment?—Her autumn employment is shifting buoys, towing lightships back-

wards and forwards in different places, and delivering oil and provisions, cotton-powder charges, gunpowder charges, and fog-signal stores generally.

895. In fact, broadly speaking, you may say the principal duty of the steamers is to supply the various stations with stores?—With the exception of the time they are employed by the Inspecting Commitee that is what those two steamers, the "Tearaght" and "Alexandra" are employed at.

Work of s.s. "Ierne."

896. That work takes up the whole time of the steamers, except so far as it is necessary to lay them up for bad weather and repairs?—No, in the case of the "Ierne," a different vessel, she is employed for the purpose of attending on the lighthouses on the south-west corner of Ireland. She is a very small vessel.

897. Was she built for that purpose?—No, Sir, she was built for attending on the Fastnet Rock.

898. During the construction of the lighthouse?—During the construction of the lighthouse.

899. But after the lighthouse was finished she was then employed in general lighthouse work on the South-West coast?—On the South-West coast, attending on the Fastnet Rock, Roancarrig, Bull Rock, Skelligs, and Inishtearaght. Those are the five rock stations round there; they are very difficult of access. That work was previously carried out by a little vessel called the "Moya."

Expenditure of Irish Lights Board.

900. As regards the expenditure on maintenance of establishments and cost of new works, you are prepared, I presume, to put in a detailed statement?—I do not know how many years you want it for. We can give it you under the several headings—wages, allowances, rent, lighting stores, ordinary stores, fuel, repairs, carriage, boat hire, incidentals, and the total. Those are the headings under which we give it to the Board of Trade, so it is only a question of making an abstract for you. Do you want it for each station?

901. We should like to have the accounts as you present them to the Board of Trade?—Yes, a copy of what we send to the Board of Trade each quarter.

902. (*Admiral Henderson.*) It is in a very condensed form, what you send to the Board of Trade?—Oh, no, we give full details.

903. Every particular?—Every particular, Sir, supported by vouchers.

904. (*Chairman.*) Anyway, whatever information you give to the Board of Trade we should like to have.—For how many years?

905. We will let you know as to the number of years?—Thank you, Sir.

Additions and improvements during 25 years.

906. I see you are prepared to give evidence with regard to additions and improvements, including new establishments, during the past quarter of a century?—Yes.

907. What does that refer to specifically?—It is the improvements which the Commissioners of Irish Lights have made on the coast of Ireland for the past 25 years.

908. Well, will you make a statement, please?—We have put up six new lighthouses and 40 improved lights for lighthouses. We have two new lightships and 11 improved lights in lightships; two lighted beacons, one bell-buoy, eight lighted buoys, four whistling buoys, 16 ordinary buoys, 64 new dwellings, and allowances in lieu thereof for 15 men, 14 new fog-signals, and eight improved signals, with an addition of 62 men.

Stores: Method of ordering and distributing.

909. And have you any observations you wish to place before the Commission on the method of demanding, ordering, receiving, issuing, transmitting, and accounting for stores?—Well, all stores that we supply for the lighthouses, lightships, and steamers are indented for by the lighthouse-keeper, the lightship master, or the master of the steamer, and they are checked in the office; so far as the lighthouse and lightship branch of the service is concerned they are checked by the Inspector and his assistants.

910. (*Sir Frank Adam.*) As to whether they are necessary or not?—As to whether they are necessary or not. In that statement the light-keeper specifies how much he requires, what is the date of the last supply, the quantity that was supplied, and the quantity that he has remaining on charge, to enable us to decide whether he requires any of the goods, which may be oil, or gunpowder, or any store. In the case of the steamers, the items are checked by the Superintendent of Stores, and if they are not approved the demands are sent up to me; and if I approve of them I send them back to the Superintendent with instructions to order the goods.

911. By what means do you order them?—Orders are made out in triplicate, one part is retained in the office, one is sent to the Superintendent and one part is issued to the contractor.

912. They have previously tendered?—The contractors have previously tendered, and the tenders have been accepted and passed by the Board of Trade.

913. (*Chairman.*) Yes.—Stores for steamers, etc., are ordered from the different contractors by the Superintendent of Stores, stores for lighthouses and lightships are ordered by the Inspector or Engineer, and all orders are countersigned by me. I am dealing now with annual stores only.

914. Do any of these matters come before the Lighthouse Board itself?—Well, no, Sir.

915. Or are they finally settled in the Secretary's office?—They are finally settled in the Secretary's office. If I saw an extravagant demand, and I refused to pass it, it would be open to the person demanding the Stores to appeal to the Board, but that has never yet been done.

916. (*Sir Frank Adam.*) Do you report to the Board at each meeting what you have done; sanctioned during the previous week?—No, Sir.

917. When does it come before the Board?—When the accounts come before the Finance Committee.

918. At?—At the weekly meeting of the Board.

918a. (*Chairman.*) But the Finance Committee do not go into these questions at all?—Oh, they do, Sir, very carefully; they look into every account; they initial every account, and not only when they pass it, but they initial it when it has been paid, and mark off in a book that all the accounts they have passed have been paid.

919. Is the sanction of the Finance Committee required before any stores can be issued?—No, Sir, once the estimates are passed and framed.

920. The whole of the rest of the work is left to the Secretary?—To the Secretary and the different departments to carry it out. It may be the Stores, the Engineer's, or the Inspector's department, but everything goes before the Secretary finally.

Allocation of contracts for,

921. (*Admiral Henderson.*) You said just now you obtained your stores by contract?—Yes.

922. Annual contract?—Annual, some; some are triennial.

923. And who accepts the contracts or rejects them?—The Board. They are opened in the presence of the Board; annual tenders usually come in in a single day, with the exception of oils, coals for lighthouses and clothing, which are considered separately. Tenders are advertised for in the public Press.

Kingstown depôt for,

924. Have you a central depôt for stores?—Yes, Sir, at Kingstown.

925. Do all the stores come in there?—Well, practically all, Sir; we have to deliver them direct to the stations sometimes, but very rarely.

926. Do you survey the stores?—No, I do not.

927. No, but is it done by any of your officers?—Oh, certainly; by the Superintendent of Stores and his staff.

928. They examine the stores, and report on them as correct?—All stores that come into the depôt are unpacked and examined, to see if they are in accordance with the contract.

929. And are issued then?—And are issued then as opportunity offers.

930. Would there not be any economy if they were sent direct to the lighthouses?—We do away with that as far as possible. We find it likely to lead to corruption.

931. (*Colonel Herbert.*) I understand that those officers are the ones who are responsible for the custody of the stores?—Yes, responsible for the custody and due delivery at the different stations.

932. Then there is no one who checks above them?—No, they go to the light-keeper. The light-keeper has made a demand, and if he does not get what he wants——

Mr. H. G. Cook.

13 Nov. 1906.

933. What I mean is this; the person in custody, or supposed to be in custody, reports on the presence of stores, but there is no check over him?—Goods pass through three or four hands at the Stores.

934. There is no one to check the correctness of that; there is no system of inspection or checking, is there?

Distribution of,

935. (*Chairman.*) Is there any stocktaking?—There is no necessity to take stock; the things go out to the stations; we have nothing left at the Stores when the storing of the stations is completed. For instance, we order so much oil or so much powder for Tuskar Rock Lighthouse; when that is taken out of the stores is goes to Tuskar, and Tuskar has to account for it in the store account books.

936. (*Sir Frank Adam.*) In this depôt you do not keep any permanent stores from which you draw as you may want them?—Well, a little oil, also chain cable, rope, etc., but we do not like keeping it—we are too cramped for space.

937. (*Admiral Henderson.*) But you have to distribute by land to a great extent, in the usual way of commercial distribution. With people that have large contracts, and who are respectable firms, could you not carry out the inspection on their premises? It is done to a great extent?—We have rarely done so, Sir, in recent years. Many years ago we did send stores overland, and it was decided never to do so again, except when absolutely necessary.

938. (*Sir Frank Adam.*) Because?—I think there were some frauds carried out.

939. Between the contractor and the lighthouse keeper?—No, between the contractor and one of the officials in the office. That was the origin of Mr. Trevor's and Mr. Stoneham's report in 1880; they held an inquiry then.

940. (*Chairman.*) What was the origin of that inquiry? Were there certain scandals which had occurred?—The carrier was charging for carriage of oil and stores round the coast that never were sent and the accounts got through; the accountant passed these charges. The custom of sending stores overland was then discontinued.

941. Do you feel confident that your system of checks is sufficient to prevent fraud?—I think it is as perfect as it can be. I think if a man is inclined to be dishonest you cannot possibly stop him till he is found out. He can hoodwink you for a certain time, but that he would be ultimately caught, there is no doubt. I think our check is very good—very perfect.

942 4. I understand the system is this; that everything contracted for is delivered at a central depôt?—At a central depôt.

945. And there examined, and from there sent out to its destination in your own steamers?—Yes, that is the general rule.

946. And that no demand is made to get delivery direct from contractors to the different stations where the stores are needed?—No, Sir.

Steamvessels: Work of,

947. (*Sir Frank Adam.*) Do the steamers ever go half full or one-third full?—I prefer giving you a written statement of the duties of the steamers, because it is very difficult to repeat it off by heart.

948. (*Chairman.*) It would be very desirable that we should have that.—Because they have a great deal of work to do in improvements to lighthouses. They carry round cement, lime, sand, bricks and mortar, and the appliances for improving lights.

949. (*Admiral Henderson.*) Things like bricks, sand and mortar ought nearly always to be able to be got locally within a mile or two.—It is a strange thing, we cannot do it; we have had to send sand round to the West Coast of Ireland from Dublin—strange as that may appear—lately.

950. (*Chairman.*) Perhaps the best way of giving the Commission the information they want would be to let us see the logs of the steamers.—That would not say how much cargo they were carrying. I would have to give you a special statement of the work the steamers are employed at—a detailed statement.

951. (*Sir Frank Adam.*) That would be better; and the cargo which they carried over a certain date.—Say six months.

952. Copies of the logs of all the steamers.—Would the original log do?

953. (*Admiral Henderson.*) Yes, the original log will do. That is what we are to get from the Trinity House.—It would be tedious making out a copy.

954. (*Sir Frank Adam.*) With particulars of the cargo which does not appear in the log?—Yes.

955. (*Colonel Herbert.*) There is one point I should like to ask: Are all these steamers fitted in the same way for lighthouse work? I mean, are they practically interchangeable?—Oh, yes, Sir, they can do any work—buoy work or lighthouse work.

956. (*Chairman.*) I understand the "Ierne" is specially constructed, or at all events specially suited, for the particular work she has to perform; it is confined to the rocky coast on the south-west?—Yes, Sir.

957. (*Colonel Herbert.*) And the "Alexandra" is specially fitted as a store ship?—Specially fitted as a store ship and a buoy ship. They have got these rollers over the bows.

958. And likewise to carry passengers?—To carry passengers.

959. (*Mr. Ennis.*) The "Alexandra" is the largest?—Slightly largest—there is not much difference between her and the "Tearaght."

960. (*Sir Frank Adam.*) The "Alexandra" is the inspection steamer?—Yes. But they carried out the inspection in the "Tearaght" in 1903.

Annual Estimates: Compilation of,

961. (*Chairman.*) The next point is the compilation of annual estimates?—Well, in the compilation of the annual estimates the first thing we have to deal with is the wages, and they are calculated out to the very penny. I commence at Abstract A again, and go right through them. The wages for lighthouses and the allowances are calculated out to a penny piece. Then the rents are put in, exactly what was in the previous year. Any extra rent that has to go in, we have to get the sanction of the Board of Trade to before it appears in the estimates. All the stores are priced according to contract. A man wants so many brushes, or so many chisels and hammers, as the case may be, and they are priced out for each station separately on what are called the station sheets. The same way for oil, coal and any other items—small repairs, etc. Each station is done separately. Then they are entered on a summary sheet, on which the 75 stations all appear, and that has to be balanced up, of course, as well. Abstract B is done in precisely a similar manner—that is, lightships. Both Abstract A and Abstract B are compiled in the Inspector's and Engineer's departments.

Stores: Delivery of Coal.

962. (*Admiral Henderson.*) Take the question of coal. Do you send coal for all the lighthouses round by steamer?—No, Sir; a contractor delivers the coal at the various stations.

963. A local contractor?—A Scotch firm has had the contract for many years.

964. Delivered by steamer?—Delivered by steamer and by sailing vessels.

965. At the various lighthouses?—At the various lighthouses, with three exceptions.

966. Does that apply to rock lighthouses as well?—Yes.

967. (*Sir Frank Adam.*) Then the contract price includes delivery?—Includes delivery in store. The contractor has to weigh the coal when it is delivered at the lighthouse.

968. (*Chairman.*) That is an exception to the general rule that all stores shall be delivered at a central depôt, and from there again re-delivered to their ultimate destination?—Except at two stations—the Maidens Rocks, shore dwellings, where we give the men an allowance in lieu of coal, because we have got no coal store; and Buncrana, Lough Swilly, where the keeper is allowed £3 a year for heating the watch-house on the pier.

Annual Estimates: Compilation of,

969. (*Sir Frank Adam.*) In compiling these annual estimates, I gather, from what you have said, that they are made up in prices and quantities that have been provided for the previous year in the first instance?—Oh, no, Sir. When the Committee go round to the station, they are handed an annual demand, and if there is anything of an exceptional description in these demands, the keepers are to draw the attention of the chairman of the Committee to it. A man says "I want so-and-so," and the Commissioners turn to the

book and say "Why do you require it?" Anything exceptional—furniture, or anything like that, or any big repair—has to be brought under the notice of the Commissioners, and they post the demand to Dublin. It is checked by the official staff at Dublin. The items are all checked and priced to come into the estimates for the coming year.

970. (*Chairman.*) For estimates of things which are habitually required you fall back upon the contract prices of the previous year?—Formerly upon the contract prices of the previous year. But because our contracts now terminate on the 31st March, according to the financial year. Previously they were to 31st December. Now we can estimate correctly on the current prices.

971. I do not quite follow that. Does that mean that the estimates for the year are based on current prices?—Yes; now they are. But heretofore they were not.

972. They were based on the contract of the previous year formerly?—Yes.

973. (*Sir Frank Adam.*) When was that change introduced?—This is the first year we have had an opportunity of doing it.

974. (*Chairman.*) You have altered your financial year, in short?—Yes, we have made our financial year and the tenders run concurrently.

975. Have you finished with the annual estimates?—Then we have other portions of the estimates dealing with the buoys and beacons, which are principally the Engineer's department. They are compiled in the same way; we put in so much money for new buoys or anything else we require of that description including new chain cables.

Submission of, to Board for approval.

976. Are these estimates submitted to the Finance Committee?—No, but to the Inspecting Committee.

977. To the Inspecting Committee?—To the Inspecting Committee. They are always submitted to the Board, and the Board refers them to the Inspecting Committee, and gives the Inspecting Committee power to act, to send them on to the Board of Trade, who require comparative statements to be made out under every heading to compare with the previous year in every item we deal with.

978. We shall have an opportunity of seeing the estimates exactly as you present them to the Board of Trade?—Certainly, Sir. Kindly give me a note of what things you require.

979. We will let you know by letter later on, and give you a written statement of what we require?—Without the particular forms before you it would be wasting time, more or less; but in every case, whether there is an increase or a decrease, the cause must be shown and explained.

980. Have you anything else to add?—When we ascertain the quantities from the demands we receive, we insert the approximate quantities required in the forms of tender, and we invite tenders in the public Press.

Contracts: Allocation of,

981. By public advertisement?—By public advertisement.

982. In every case?—In every case for annual stores, but for some things, like the repairs of a lightship, we send to the people who had contracted with us for years past, say 12 or 15 tenderers, and we save the expense of advertisement.

983. There are cases where you ask special firms, who are accustomed to the work, to tender?—Yes.

984. (*Sir Frank Adam.*) It is an absolutely open tender in the other cases, or have you a list?—We keep a list of all the people who have ever supplied us with paraffin oil, for instance, chain cables, etc.

985. And who are respectable?—Yes.

986. (*Chairman.*) Do you always accept the lowest of those who are on the respectable list?—Yes, and almost invariably we recommend them to the Board of Trade, and they are accepted. I would not say always; there was one I remember lately where we did not.

987. For what reason?—The price was absurd, the work could not be done for the money. I forget the exact case in which it arose, but I know it was not recommended.

988. Was that a case in which you had publicly advertised for tenders?—Yes, I think it was; I cannot quite say.

Mr. H. G. Cook.

13 Nov. 1903

989. Was the tendering firm one who had tendered previously, or was it a new firm?—No, it was a new firm.

990. On the method of obtaining funds to meet expenditure, have you any observations to make?—We obtain all funds by imprest on the Board of Trade; we get the imprest from the Paymaster-General for any amounts we want.

Expenditure of Irish Lights Board: Method of obtaining funds.

991. You do that week by week?—Week by week, as a rule; one week may elapse; this last week it was not necessary to have an imprest.

992. But I understand your regular practice is to apply to the Board of Trade week by week?—Week by week, as a rule we specify what balance we have got in the disbursement account in the bank, and we say what we have to pay. Supposing there is an instalment on a lightship due, we ask for £4,000 or £5,000, as the case may be.

Pensions.

993. Are there any superannuation charges?—There are, Sir; superannuation charges come to £8,211 12s. 11d. a year.

994. (*Admiral Henderson.*) Have you a list of them?—Yes, they are divided under several headings, official, light keepers, lightships, steam vessels, and district stores, and widows and children.

995. (*Chairman.*) Are those specified in the estimates sent in every year?—They are all specified in the estimates.

996. It is not necessary, then, for us to have a special statement put in?—No, Sir; there are 170 pensioners, I think.

997. Will you give us some particulars now with regard to the superannuation?—Certainly.

998. I understand the estimates will provide us with fuller detail?—I cannot give you fuller detail than in this account.

Head Office Staff.

999. Give us some general heads?—Of the official pensions there are five: Peter Benjamin Le Clerc, Alexander F. Boxer, F. A. Symes, William Douglass and Michael J. O'Grady. They come to £1,450, the official pensions.

1000. On what system is superannuation calculated for these officers?—One sixtieth for every year's service.

1001. It is the ordinary Civil Service scheme?—It is the ordinary Civil Service scheme.

1002. (*Sir Frank Adam.*) Do they contribute towards it during their official lifetime?—Well, it is regarded as deferred pay, more or less.

Light-keepers.

1003. There is no contribution direct?—No, Sir, there is no contribution direct. Then you have got light-keepers who come under the next heading. The light-keepers amount to £3,299 6s.

1004. (*Chairman.*) On what system is their superannuation calculated?—In the same way.

1005. On the Civil Service scale?—On the Civil Service scale.

1006. (*Admiral Henderson.*) And is everybody in the lighthouse service entitled to pension?—Well, except what may be called special assistants. There are only three; two of them get £21 a year; the keeper at Buncrana, the place I spoke of, and at Charlesfort, Kinsale; the watchman at Youghal is paid £26 per year.

1007. (*Sir Frank Adam.*) They do not come under the Civil Service scale?—No, but every other light-keeper does.

1008. (*Chairman.*) What is the cause of that exception?—Well, they never apply for it. These men as a rule die in the service. The family of the late keeper at Charlesfort has been in the service for 150 years. He died lately, and the son got the appointment.

Lightship-men.

1009. Are there any other headings for superannuation?—Yes, lightship men in the same way, they are under the Civil Service scheme.

1010. Who?—Lightship masters, mates, gunners, carpenters, lamplighters, seamen, fog-signalmen, siren men; and these amount to £2,011 4s. 2d.

1011. The crews of the steamers are not under a superannuation scheme, are they?—Yes, and some of the district stores.

Mr. H. G. Cook.
13 Nov. 1906.

1012. (*Mr. Ennis.*) Is the superannuation compulsory at any period of age?—In the case of the lightkeepers and the lightship men we dispense with their services at 60 years of age, because the Commissioners consider it unwise to keep those old men at dangerous stations. They fear they would be killed or meet with some accident.

1013. (*Chairman.*) That is to say, the age of retiring is fixed at 60 instead of 65?—Yes, at 60 instead of 65.

Steamvessel crews.

1014. (*Admiral Henderson.*) Is that the same as at the Trinity House?—I could not say what is the practice at Trinity House. Then we have steam vessels and district stores. Those are comprised of the masters of steamers, cooks and stewards, firemen, first officers, book-keepers, and other ratings. These amount to £1,300 18s. 8d.

1015. The superannuation begins at 65?—Well, at 65 they are superannuated, but many of them have been given a pension on retirement from the service through inability to work. For instance, the man Carter was a packer at the stores, and he got an affection of the heart.

Widows and children.

1016. By reason of ill-health, I presume. It is still the regulation with regard to Civil Service superannuation which determines the amount?—Yes; and the widows and children. There is one, Mary Joyce. Her husband was drowned at Slyne Head in 1826; she is drawing her pension still.

1017. (*Mr. Ennis.*) Is she alive still?—She is, indeed. And there is Catherine Callaghan, the widow of a light keeper who died in 1849.

Cost of lighting and fog-signal stores.

1018. (*Chairman.*) You might give us a statement of the expenditure on lighting and fog-signal stores for the last few years?—Yes, this list is kept by me for checking the estimates.

1019. It is useful to you to be able to compare one year with another?—Oh, yes, I have got a statement from 1898.

1020. Have you a statement you can put in?—No, only a statement in pencil.

1021. You might make that out in ink, and let us have it. We only want a statement for three years.—For three years; very good, Sir.

1022. Let us have it since 1898.—Since 1898.

Head Office Establishment: Admission of clerks, etc.

1023. What are the regulations with regard to admission to the service of clerks, steamers' officers, lightkeepers, lightship men, and other officers?—In the case of the clerks, they must get a nomination from the Commissioners in the first instance, and then they have to pass an examination before the Civil Service Commissioners—the ordinary examination, Class II., the lower division.

1024. The nomination is required from the Commissioners in the first instance?—From the Commissioners; they nominate five candidates for each vacancy.

1025. Do the Board as a whole nominate, or individual Commissioners?—The Board have the right to nominate; they refer these things to the Office Committee. The Office Committee deal with this, get the candidates before them, and see whether they be eligible or not in their opinion.

1026. How many, as a rule, are nominated in proportion to the number of vacancies?—We nominate five for each vacancy.

1027. You nominate five for each vacancy; that is the rule?—That is the rule, Sir.

Steamvessel Service: Admission of officers.

1028. (*Admiral Henderson.*) That is all clerks?—Clerks, Sir.

1029. And officers or other people?—In the case of steamer officers, they always come in as junior officers—that is, perhaps second mate; they go on to be first mate, and then Commanding Officer of a ship.

1030. (*Colonel Herbert.*) How do they get their first appointment?—Men who have come in in a temporary capacity in room of officers absent from duty, if they commend themselves are given the first vacancy that arises.

1031. (*Sir Frank Adam.*) Do they come in with a certificate in the first instance?—Always.

1032. (*Colonel Herbert.*) Who nominates or selects them?—The captain of a ship will report that a certain gentleman has given him great satisfaction in a temporary capacity, and the Board appoints him for six months on probation.

1033. (*Chairman.*) The appointment in a temporary capacity rests with the captain?—Yes.

1034. (*Mr. Ennis.*) In the case of the clerks it is a Civil Service examination?—Yes.

1035. With regard to the higher posts, is it similar to the Trinity House arrangement; all the higher posts are filled from the most promising of the junior grades?—That is so; yes.

1036. That ensures that every official of the Commissioners has originally qualified by passing an examination, and rises in the service then?—Yes.

Lightkeepers and Lightship-men: Admission of,

1037. (*Chairman.*) As to lightkeepers and lightship men?—They make an application to the Commissioners on a special form for the purpose, on which they have to give their name, their age, and the nature of their occupation, with their own local doctor's certificate as to the state of their health, their height, and chest measurement, inflated and deflated. Each man must have served his time either to a trade or have been brought up to sea; he must have one of those qualifications; he may be a plumber or a blacksmith or a carpenter, or a seaman if he has an A.B. discharge. All these requirements having been complied with, the candidate is called up for examination, a medical examination by our own doctor and a literary examination in the office of the inspector. Many of the men that are passed by the local doctors are rejected by our head doctor in Dublin. We have to be very careful about the physique of these men, because they are in very important positions at outlying stations.

1038. With whom does the appointment ultimately rest?—The inspector reports to the Board.

1039. The Board appoints?—They are appointed by the Board.

1040. That applies also to lightship men as well as to lightkeepers?—Yes, except that there is no literary examination for lightship men; their only qualifications are that they shall be of good character and have an A.B. discharge, and be of good physique, and under 32 years of age.

Duties of,

1041. Why is that distinction made between lightkeepers and lightship men; is it supposed that a certain standard of literary education is more desirable for light-keepers than for lightship men?—Yes, Sir; because they have to keep returns at the lighthouses. A very great mass of returns comes in monthly, quarterly, and yearly.

1042. The masters of the ships keep those?—The masters of the ships keep those, but the light-keepers keep most of their returns. We make it a rule that the assistant lightkeepers keep those returns; they make them out, and they are supervised by the principal keeper.

1043. (*Sir Frank Adam.*) The lightship men only look after the lights?—They do that, and the cables, and attend to other duties aboard ship.

1044. (*Chairman.*) They have no reports to make?—No. There are three lamp-lighters on board each lightship, whose special duty it is to keep the lamps trimmed.

Lightship-men: Numbers in each lightship.

1045. (*Admiral Henderson.*) What is the crew of a lightship?—Eleven on all the stations except three, on two of which there are fog-sirens, Codling and Coningbeg, and the third, Daunts, is a very hard station; in these vessels an extra man is employed.

1046. Eleven is a big crew.—There is always a master or mate on board, and a master or mate on shore, seven hands on board, and four on shore. The big crew is necessary to carry out these men's reliefs.

Employment while on shore.

1047. Do they do anything when they are on shore?—When they are in Kingstown they are employed at the Stores when necessary, when they are remunerated at the rate of 2s. per day for their work, masters or mates get 3s. 6d. per day.

1048. In addition to their pay?—In addition to their pay and victualling allowance.

Relief of,

1049. How long do they serve on a lightship?—Either 60 days on board and 30 days on shore, or 40 days on board and 20 days on shore; it is twice as long on board as on shore.

1050. (*Chairman.*) Does the question whether it should be 60 days or 40 days depend upon the season?—With the masters and the men; some men like to have it 40 and 20, and some prefer 60 and 30 days.

1051. It is an arrangement made to some extent to suit the convenience of the men?—To suit the convenience of the men.

1052. (*Mr. Ennis.*) But at any rate, you get two-thirds of their time?—We get two-thirds of their time.

1053. (*Admiral Henderson.*) Practically, at any time, there are six men on board each lightship?—Yes, and a master or mate.

1054. Is the arrangement for relief the same for the rock lighthouses?—Some of the rock lighthouses have the same periods of relief, but they come in fortnights instead of ten days. The keepers at places like Fastnet Rock, Bull Rock, and Skelligs are six weeks on the rock and a fortnight on shore.

Light Keepers and Light-ship Men: Medical attendance for,

1055. (*Chairman.*) Have you anything to say as regards the arrangements for medical attendance?—Except that the doctors are getting very particular now about getting their fees. There was lately a meeting of the Irish Medical Association to increase the prices very considerably. I was just speaking to the Board of Trade about it yesterday. I think the system of payment to the doctor of a certain amount per annum would be far the better way to do it for the service.

1056. What is the existing arrangement?—It is 2s. 6d. per visit for some places, where the doctor will accept the 2s. 6d. a visit, of which the lightkeeper has to return 10d., if getting medical attendance; either on his own account, or for his family, we stop 10d. for every visit. When injured in discharge of duty medical attendance is free.

1057. (*Admiral Henderson.*) They pay the doctor 2s. 6d., and they recover from the light-keeper 10d.?—Some doctors now charge one, two, and three guineas a visit, and we can only get 10d. in return from the keeper in the same way.

1058. I suppose, when three guineas a visit is charged, that is generally to stations difficult of access?—There are two stations—Rathlin O'Birne, and the Aran Islands.

1059. The Aran Islands are rather distant?—A little steamer goes out there, and the doctor is resident on the middle island.

1060. (*Admiral Henderson.*) When men get ill at rock lighthouses or lightships, you relieve them at once?—If we can—if we can get near them.

1061. (*Sir Frank Adam.*) What sort of a practice has the man got who lives in the middle island and can charge two guineas?—A wretched practice—a very poor practice.

1062. And the reason he charged two guineas is that he thinks the Board of Trade has to pay it?—That is the reason, I presume. He knows very well we have to give the men medical attendance.

1063. (*Admiral Henderson.*) Are your rules as to medical attendance the same as the Trinity House?—I do not know what the Trinity House rules are, Sir.

1064. But I understand it is practically part of the service that they should have medical attendance, minus a small fee?—Yes; that is part of the service. The Trinity House lightship men get free medical attendance and ours do not. I was trying to ascertain the reason yesterday, and I was unable to find out. I expect an application will be made to the Board of Trade on that subject.

1065. (*Chairman.*) In the case of the Trinity House men, no payment is required from the men themselves?—Not from the lightships.

1066. (*Sir Frank Adam.*) What do your men pay?—The lightship men pay the 10d. a visit.

1067. But it is limited to 10d. per visit?—It is limited to 10d. a visit—yes.

1068. (*Mr. Ennis.*) Does that apply to their families as well as to themselves?—No, Sir; we do not give the men in the lightships anything for their families, but the light-keepers we do.

1069. But the lightship men, no?—No; because the families of the lightship men live on shore. That would mean a great increase in the cost of medical attendance.

1070. (*Admiral Henderson.*) The larger lighthouses?—The larger lighthouses we give the families there, the same facilities, but we pay for no maternity cases or vaccination fees.

Steamvessel Service.

1071. (*Chairman.*) Then what have you to say with respect to the system of steam vessels and district stores?—It is a very expensive item on the cost of Ireland. I think it comes to about £18,000 for the lighthouses alone.

Mr. H. G. Cook.

13 Nov. 1906.

Cost of,

1072-3. That is for the supply of victuals to the lighthouses?—For carrying out reliefs, the mails, letters, food, and things like that. At some places they have charges up to £6 10s. a trip—the Black Rock Mayo—and we had to supply a lifeboat and advance the money for the lifeboat. The man lost all his boats in one storm. I do not know how he escaped with his life.

1074. (*Admiral Henderson.*) Can you give us any particulars?—Carriage of supplies to lightships by water, £1,400.

1075. (*Chairman.*) Does that include the cost of supplies, or only the carriage of the supplies?—The carriage of supplies to lightships by water, £1,400; for lighthouses, £1,800.

1076. (*Mr. Ennis.*) These are the rock lighthouses?—Rock and island. In addition to that we have the cost of the "Ierne," which is chiefly employed in carrying out the attendance on the south-west coast stations.

Work of ss. "Ierne."

1077. (*Sir Frank Adam.*) Carrying food?—Carrying food and carrying relief. She sometimes searches for wreckage, when it is reported. Some of the trans-Atlantic liners inform us that a wreck has been seen off the south-west coast, and we send the "Irene" in search of it.

1078. (*Chairman.*) A good deal of the service of the "Ierne" ought to be under the same heading?—The cost of maintenance of the "Ierne" for the year ending March 31st, 1906, was £3,158 12s.

1079. And she attends how many stations?—Five. It is difficult work. She also runs up and down to Cork, Bantry, and other ports, and brings down a lot of stores for these five stations.

1080. (*Sir Frank Adam.*) In your accounts you have never attempted to divide what part of her expenditure applies to lightships and what applies to rock lighthouses, and what applies to stores?—No, Sir; we have never done that; she does not attend any lightships.

1081. (*Admiral Henderson.*) She tends those five lighthouses entirely. Would the actual tending be by her boats?—Yes; the tending would not be in hired boats there.

Light vessels and Rock Lighthouses: Provisioning of,

1082. It is no part of the arrangement that the men should be supplied with food?—We only supply reserve provisions.

1083. That is in case of accident?—That is in case of accident. If they use any of the reserve food they must replace it by the next boat.

1084. (*Mr. Ennis.*) I think that is the same as the Trinity House; they have reserve provisions, too. But why do you fix the period of ten days for the attendance?—On the lightships?

1085. Yes. Do you know the periods for attendance with regard to the Trinity House men?—No, Sir.

1086. I mean, why do you consider it is necessary to make an attendance every ten days?—It is for the purpose of giving the men fresh food—fresh vegetables, milk, etc.

1087. (*Admiral Henderson.*) On many of these lighthouses on shore they are so far from a village or town that you are obliged to undertake the cost of supplying the people?—Yes. At some of the land stations we have to give them market carts. That is the next item on the list. They are very expensive in some cases, and very cheap in others.

1088. (*Chairman.*) Do I understand you to say that they pay for their own food, but the Lighthouse Authority pays for the carriage of the food?—Quite right, Sir. We get food for them; we ask them what they would like. We take tenders for those things, and we deduct the cost from the men's salaries afterwards.

1089. (*Sir Frank Adam.*) The cost of the food?—The cost of the food.

1090. (*Chairman.*) You supply the food and the cartage, and you make a deduction of the cost of the food from the lighthouse-keeper's wages?—They get allowances to cover them at rock stations of 1s. 9d. per day. Every day they are on a rock station they get 1s. 9d.

1091. Irrespective of the desirability or otherwise of attending them less frequently than at present, what economy could be effected, do you think, if the

Mr. H. G. Cook.

13 Nov. 1906.

attendances were once a month instead of once every 20 days? That would be one-third off the attendances? —It would take twelve trips off the station, one-third less. It would save about £500 a year to lightships alone, tending them twice instead of three times a month.

Expenditure of Irish Light Board: Source of funds.

1092. (*Colonel Herbert.*) There are one or two small matters I want to clear up. From what source is drawn the funds of the administration?—From the General Lighthouse Fund.

1093. And you do that by imprest on the Board of Trade?—Yes.

1094. With regard to accounts, do you know under what accounts the expenditure is borne—what branch of the Public Accounts?—I do not, any more than it is the General Lighthouse Fund.

Inspector's Duties.

1095. You do not know in what form it would come under the cognisance of Parliament?—As the General Lighthouse Fund, I presume, Sir; it is a regular Fund. It used to be the Mercantile Marine Fund, but that was changed some time ago, and now it is the General Lighthouse Fund. I think it was in 1898 that the change took place.

1096. You have nothing to do with the collection of dues, I understand?—No, Sir; not since the year 1880.

1097. But do you know anything about the amount of dues collected?—Nothing whatever.

1098. You could not state what proportion the expenditure bears to the dues collected in Ireland?—I could not, but it appears in the General Lighthouse Fund Accounts.

1099. Now with regard to the duty of inspection, you mentioned several times an inspector; I was not quite clear as to who that inspector was, or what his duties were?—He is Captain Reginald Deane.

1100. Is he the only inspector in the Service?—We have an assistant inspector, Herbert H. Manders, who was first officer of the s.s. "Alexandra."

1101. There is an inspector's branch of the Service? —The inspector's department.

1102. Yes, the inspector, assistant inspector, and his two clerks?—Two clerks.

1103. What are his duties with regard to inspection? —To keep and maintain stores at the 74 lighthouses and two fog-signal stations, the 11 lightships and the four spare ships.

1104. There was only a question of providing them with materials?—To see that they are all correct, and kept in a proper state of efficiency in every respect.

1105. I mean only as regards provisions?—Provisions and stores of all descriptions.

1106. Efficiency of every kind; the personnel as well? —The personnel as well; to see discipline is properly maintained, that the lighthouse keepers are properly clothed when they are attired in their uniform, and that everything connected with a lighthouse is properly carried out.

1107. (*Admiral Henderson.*) That buoys are in their proper places?—That buoys are in their proper places.

1108. (*Colonel Herbert.*) That is the duty of the inspector?—Yes.

1108a. Quite apart from the Inspecting Committee? —Absolutely, Sir.

1109. How does he carry out that inspection—every year?—He and the Engineer accompany the Committee round the coast on their tour of inspection every year, in June.

1110. That is the only opportunity he has for regular inspection of a number of stations?—Oh, no, Sir. I anticipated that question might be asked, so I got a return showing the approximate number of times the inspector has been absent from the Office on service during the past few years. In one year he was 126 days—that was in 1903.

1111. Carrying out inspections?—Carrying out inspections, or inspecting lightships under repair; anything of that kind.

1112. Then, in fact, the 22 days' inspection by the Inspecting Committee is a very small portion of the work of inspection that is done?—Oh, very small, as the stations are usually in good order in anticipation of the visit of the Committee.

1113. But the cost of sending the Inspecting Committee round the coast on a tour of inspection would be considerably more than keeping an inspector, or staff of inspectors even, to do the work of inspection? I should not say so.

1114. You put a ship into commission specially for this trip, and you have six or seven inspectors on board?—Inspectors and a Scientific Adviser; as a rule, six of the Inspecting Committee and the Scientific Adviser, Sir Robert Ball. He invariably accompanies the Board round the coast.

1115. Does he come up from Cambridge for this purpose?—Yes, sir, to give his advice in case it is necessary.

1116. (*Admiral Henderson.*) Is the coast line divided into districts?—We have only got one, the store at Kingstown.

Replacement of Buoys.

1117. Supposing a buoy gets out of place somewhere, we will say up at Belfast?—If we have a steamer available we load her with cargo for stations in that direction, and send her off to replace the buoy. Masters of all steamers are acquainted with the proper marks for placing buoys.

1118. Does the inspector go up and do it?—No, not always.

1119. Sometimes the masters of steamers do it; they are competent to do it?—Yes.

1120. Does not some time elapse?—Sometimes three or four days, sometimes three or four weeks.

1121. You do not attempt to have it done locally?— We do if we have a spare buoy locally, but if not we cannot do so.

1122. Where are your spare buoys kept?—The majority are, of course, at Kingstown, but all round the coast.

Engineer's Duties.

1123. (*Colonel Herbert.*) Then you have an Engineer's Department?—Yes.

1124. Is the Engineer's Department responsible for constructions like a building, and so forth?—Yes, all things connected with the buildings and the erection of new lighthouses; the Engineer is a great deal away from home.

1125. How does the Engineer become acquainted with the condition of buildings—say a lighthouse on the north-west or west coast of Ireland?—Well, he visits them all once a year.

1126. Does he accompany this tour?—He accompanies the Committee as well, and when a light-keeper points out any defects in a building, the Engineer inquires into the matter on the spot, and decides what shall be done; take down a wall, erect a new roof, or anything like that.

Inspecting Committee's duties.

1127. On these tours of inspection you have a technical inspector, that is to say, the inspector, and you have another technical officer, the Engineer, to do the work. What do the other gentlemen do?—And the Scientific Adviser.

1128. What do the other nine gentlemen do?—They inspect the stations generally, as their name implies—Inspecting Committee—hear any complaints the light-keepers have to make. The light-keepers have often complaints—say they have been badly treated, and different things like that; the Committee inquire into all such complaints.

1129. It strikes me that my idea of inspection is personal, not all divided over so many people; however, that is the point I wanted to bring out. There is another point with regard to the Inspecting Committee. You stated that they are responsible for estimates?—I stated the estimates are submitted to them, Sir, when the estimates are prepared.

1130. But they are not responsible for them?—Oh, no, Sir. The estimates are submitted to them, and they go into them very carefully, and examine them, and if there is any increase or decrease they inquire the cause.

1131. But they are responsible for all recommendations for works and so forth which involve expenditure?—I should say that is correct, Sir.

1132. Are we to understand that the Inspecting Committee is responsible for general recommendations which involve expenditure, but they are not responsible for the accuracy of the estimates connected with the

expenditure?—Oh, they are, except that they refer all the different points to the Engineer, and discuss them with him. He submits his estimates and tenders are afterwards obtained if necessary.

Barr Point: Cost of fog-bell at,

1133. I might refer to one of these cases. The case here has been drawn to our notice of recommendations which have been made with regard to certain works of construction. In the one case the proposal varied from £80 to £730. The recommendation was put down as being £80, and it eventually ran out to £730. That shows that there must be some want of connection between the recommending authority and the estimating authority?—Well, you see, Sir, they might have commenced a certain portion of work, and the moment they commenced to open up the place they might have found a very radical repair was necessary. Perhaps they might, in the case of the roof of a house, have to take off a few slates which are loose, and then find all the rafters gone.

1134. This case I had before me is an entirely new work?—If it were a case of a landing I could understand that very easily, because they are washed away so frequently when they are very nearly completed.

1135. This was a proposal to place a fog bell on Barr Point, of which the cost, as originally estimated was £80?—We had intended to instal a clockwork bell, and it was decided afterwards to ring the bell by electricity from Larne.

1136. In next year's estimates this proposal appeared under the heading of new works sanctioned but not yet commenced. The cost was given as £730, and the Commissioners explained that the additional £650 was for land and machinery; do you remember that?—Yes, I say we had intended to have a bell worked by a clock. That would have necessitated another keeper. Then we decided to have it rung by electricity from Larne lighthouse. Now the keeper at Larne rings that bell by electricity. The keeper sees the fog, turns on the switch, and the bell rings.

1137. (*Chairman.*) The policy of the Commissioners was altered subsequently to the first estimate being presented?—I am not quite fully alive to those facts, because I was not Secretary at the time. But I know there is something like what I say. Whatever was done, was done with the concurrence of the Board of Trade.

Estimates and Accounts: System of submitting, to Board of Trade.

1138. (*Colonel Herbert.*) The system of submitting estimates and accounts, are they drawn out under heads which are furnished to you or required by the Board of Trade, or have you merely worked out your own system?—No, Sir, it is worked out on the system authorised by the Board of Trade.

1139. It has got to be done; that system has been laid down for you?—Yes, it has been laid down for us; we have no choice in the matter but to carry out our instructions.

1140. As to the system of estimating and accounting?—Yes, Sir, Trinity House have precisely the same form that we have, with the exception of different names for lighthouses and things of that kind.

Irish Lights Board: Constitution of,

1141. (*Mr. Ennis.*) I do not quite understand that original constitution of the Commissioners from this report here. You refer to Act 26, Geo. III., in 1786, Chapter 19 (Irish), entitled "An Act for promoting the Trade of Dublin by rendering its Port and Harbour more Commodious." The body created under that Act was the Corporation for Preserving and Improving the Port of Dublin?—Yes, Sir.

1142. You then later on tell us that the present Board is composed of 22 members, and is constituted in accordance with the Act of George III, 1786, 17 members being nominated by members for the time being of the Corporation created under the Act for promoting the Trade of Dublin by rendering its Port and Harbour more Commodious; but was not this Corporation created by this Act of 1786?—Yes, Sir.

1143. How were these original members appointed?—They were named in the Act originally.

1144. And then the existing Board nominate or co-opt to fill up vacancies?—Yes.

1145. Is there any age limit?—No age limit whatever, Sir; they can only disappear by death or resignation. Those are the first members of the Corporation; their names appear in the Act.

Co-option of members.

1146. Then with regard to the co-options, are the co-options limited to any particular class?—No, they are proposed by one member, and another member seconds them.

1147. And they are open to anyone?—They are open to anyone.

1148. There is no such restriction upon the nomination as in the case of the Trinity House, where anyone to be nominated one of the Younger Brethren must possess nautical qualifications. There is no arrangement of that kind?—None whatever, Sir.

1149. And there is no age limit for a member. I presume the Board are an absolutely honorary body—unpaid?—Unpaid.

Commissioners' Allowances.

1150. They receive no emolument?—They do receive an allowance if they are travelling on the Commissioners' business. If they are coming across here, for instance, they get one guinea a day personal allowance, first-class railway fares, and car fares.

1151. There is no emolument payable with respect to the annual inspection?—The Board of Trade authorises us to expend a sum not exceeding £400 a year for refreshments for the Commissioners at the Board and Committee meetings, and their expenses on their tour of inspection.

1152. But there is no such payment as £1 a day during the visit?—No, any Commissioner who travels for a day to get on board the steamer will get £1 1s. a day, personal expenses, and his car fares, but when he gets on board the ship his allowance ceases.

1153. (*Colonel Herbert.*) Does he get it when he goes up for Board meetings?—He gets his luncheon provided.

1154. (*Mr. Ennis.*) Does he get his train fare for coming up?—No.

1155. Anyone who of necessity has to travel a distance, his travelling expenses would be paid?—They would if he demanded them.

and Attendance.

1156. It seems from what you have told us that you have certainly a limited number of gentlemen, at least, who are on this Board, who are very active indeed, and deserve great credit for the trouble they take; are all the members generally active?—No, Sir.

1157. I think you have already promised to give us a list of the attendances of all members of the Board?—Yes, Sir.

1158. Is there any penalty on any committee in the event of a member failing to attend any number of times in the year, or ceasing to attend at all?—Yes; if he is three months absent from the Board without leave he loses his seat.

1159. After three months?—He is always licensed before that.

1160. (*Chairman.*) Is that provided for under the Act?—Yes, the old 1786 Act.

1161. (*Mr. Ennis.*) I take it that there is a certain number of active members on the Board; but the members who are at present on it are not all equally active?—They are not, Sir.

Control of Irish Lights prior to 1810

1162. Can you give us any information; I mean, can you give us any detailed information, any documentary evidence, as to who controlled the lights on the coast of Ireland, the lighthouses and the lightships, if any such existed, prior to 1810?—They were under the Board of Customs, Sir.

1163. Can you give us any information with regard to that Board; is there any information in your possession you could lay in regard to that?—My information I got from the Lighthouse Inquiry of 1834. It is a big book; I did not bring it across. There is just the remark there that there are 13 lighthouses taken over by the Corporation for Preserving and Improving the Port of Dublin. I found out what those 13 lighthouses were by hunting up old records in Dublin. The names of the stations are:—Hook Tower; Duncannon Fort; Charlesfort; Old Head, Kinsale; Loop Head; Clare Island; Aranmore; Copeland Island; Ardglass; Southrock; Cranfield Point; Balbriggan; Howth Bailey. Those are the 13 stations.

1164. If we could get summarised information—I do not suggest in any very great detail—as to the body or bodies that controlled these prior to 1810, it would be interesting?—The Board of Customs, Sir, and these local authorities.

Mr. H. G. Cook.

13 Nov. 1906.

1165. And what the Board of Customs consisted of?—Yes, Sir.

1166. Dunmore at present is a Royal harbour; it was not at that time?—It was built by the Government, and it is so stated on the records.

Irish Lights Board: Quorum for Meetings.

1167. With regard to the Board meetings, I notice one rather peculiar thing here in your evidence. You have a Board of 22 members?—Yes.

1168. Three form a quorum?—Yes.

1169. Why such a small number as three? The usual proportion of any board that forms a quorum is one-third?—Well, I do not know about that; it was done long before I came into the Service, and it has been carried out ever since.

1170. (*Chairman.*) Is that provided also by the Act of 1786?—No, Sir, there is nothing about a quorum there, so far as I am aware.

1171. (*Mr. Ennis.*) It does seem a very small number of members to form a quorum for such a large Board?—Well, you see, in the month of August, when these gentlemen go away on their leave and vacation—they require some little vacation—the Board available is rather small.

1172. Still, a very small quorum in a large Board means that very important business may possibly be dealt with by a very limited number of men?—Anything important is referred to a committee before it is dealt with by the Board, invariably.

1173. I think you have promised to give us particulars of most of the things that I desire information on, but with regard to your funds that you receive from the Board of Trade, the General Lighthouse Fund, is there any limitation to the amount you may receive in any year?—No, Sir, up to our requirements. I have never known a case of refusal of an imprest.

Expenditure of for the last 10 years.

1174. Could you give us for a considerable number of years back—say, ten years back—just the total expenditure on the Irish Lighthouse Service?—Certainly, I have it here with me.

1175. I do not suggest details, but we should like details in regard to the one you promised to give us; just the total amount of expenditure?—Under either the Mercantile Marine Fund or the General Lighthouse Fund. I have a statement here showing the expenses for maintenance of lighthouses, etc., showing wages, rents, lighting stores, ordinary stores, fuel, repairs, carriage, boat hire, incidentals.

1176. Will that give us the cost of administration, as distinct from the total expenditure?—Yes, Sir, I can give you that if you give me notice of what you require.

Kingstown: Ground at, leased from Board of Works.

1177. It has been stated that there is an agreement about land leased from the Board of Works at Kingstown; are you conversant with that?—Yes.

1178. (*Chairman.*) The statement to which Mr. Ennis refers is that in 1873 the Commissioners leased certain ground at Kingstown from the Board of Works, and in 1899 applied for sanction to lease further adjoining land from the Board of Works. The Board of Trade made inquiries whether any further expenditure beyond the yearly rental of £6 13s. 4d. was contemplated, and were informed that no further expenditure would be incurred during that year, but that about £15 would be spent in the following year. On the strength of that information the Board sanctioned the lease. But in 1904 the Irish Lights Commissioners entered into a further agreement with the Board of Works by which they bound themselves to carry out certain work, and as this did not involve any immediate expenditure, they did not bring it to the notice of the Board of Trade. Have you any information on that point? That is a statement, you see, that without the sanction of the Board of Trade you entered into an agreement with the Board of Works to carry out certain work on this ground; was that work of an extensive character?—It was levelling a buoy bank we have there. We want to level that for the purpose of shifting these big heavy buoys. Since we have got these new lighted and sounding buoys, we require better appliances for moving them about, they are so much more unwieldy.

1179. (*Mr. Ennis.*) What would the total expenditure on these works, that you covenanted with the Irish Board of Works to carry out, amount to?—So far as my recollection serves me, I think it was £500, but I am not sure; I would not like to be certain upon that point. I think it was £500.

Purchase of Clocks.

1180. Have you in your mind any recollection of a case in which the Irish Commissioners asked sanction for the purchase of clocks from a Dublin firm at £11 each?—I have, Sir.

1181. And that the Trinity House said they could get efficient clocks for £3 15s.?—I remember the occasion, Sir.

1182. Can you give us any information as to why that great disparity in price?—It hardly comes into my department. The Commissioners are most anxious to give every information in their power, and are only too pleased to do so.

Old Head of Kinsale: Improvement of light at, under consideration.

1183. There is just one other point I should like to ask you about. Have you any recollection whether the light on the Old Head of Kinsale has ever been under the consideration of the Irish Lights Commissioners, or whether representations were made to them in regard to that particular light?—Oh, yes, it has been very carefully considered by the Commissioners; they are improving it at the present time.

1184. They considered that the existing light was not as good as they would desire to have it?—We did not consider it sufficiently powerful, and desired to have it improved.

1185. Will the plan of lighting it be a fixed light still, or is it going to be a flash light?—I think it is going to be a flash light; I cannot give you the exact character of the light, but I think it is a treble flash.

1186. But, as a matter of fact, you have actually taken this question in hand, and you are taking steps with the Board of Trade?—To make that important light one of the best in the United Kingdom; and we are improving the fog-signal, as well—cotton powder instead of gunpowder. That will effect a certain economy as well as to cost per charge.

New Works: Choice of sites for,

1187. Who advises you—suppose a new lighthouse has to be constructed or erected—as to the situation of the lighthouses?—The Engineer and Inspector report invariably to the Board, and the Board refer it to the Inspecting Committee, who personally visit the proposed site and decide where the light shall be established.

1188. This is a thing which does not affect the present Board, but, from my own knowledge, at Wicklow Head there are three lighthouses, one over the other, which shows that errors must have been made in the selection of the original sites?—The idea of the authorities in days gone by seems to have been that the higher you put the lighthouse the better. Now they have altered their opinion, and they keep them as close to the water as they possibly can.

1189. (*Chairman.*) I suppose that may be regarded not as a mistake confined to that particular locality, but a general policy which, on scientific grounds, has ultimately been rejected?—Exactly, Sir.

Procedure for Initiation of,

1189a. (*Mr. Ennis.*) Do I understand the procedure to be—take the Kinsale light, of which I have spoken—would there have been negotiations? You refer in your evidence to the Fishguard and Rosslare. The lighting of the channel has been under consideration?—Yes, Sir.

1190. Do you, in the first instance, with your own Inspector and your own Committee, inspect and come to a conclusion whether or not it would be desirable before you communicate with the Board of Trade? You communicate first with the Trinity House?—First we apply for sanction to the Trinity House.

1191. After the Trinity House, you go to the Board of Trade?—The Trinity House pass on our application, with their decision, to the Board of Trade.

1192. Your communication is sent direct to the Board of Trade?—Not in the first instance.

1193. You reach the Board of Trade through the Trinity House?—In the first instance. But we approach the Board of Trade then as to the cost.

1194. So that, as to the financial portion of the case, you approach the Board of Trade for their sanction?—Yes. In the event of the Trinity House refusing to carry out what we consider our lawful requests we can apply to the Board of Trade to command the sanction of the Trinity House.

Irish Lights Board: Constitution of,

1195. Is it not a fact that the Irish Lights Commissioners are, and have been, practically a Dublin Board. I mean, there are eight outside members of the Commissioners?—At the present time there is Sir

William Goulding, whose firm is in Cork and Dublin as well, and Sir Daniel Dixon, of Belfast. Prior to that, there was Sir James Musgrave. Mr. King comes up from Ballylin Ferbane. It is not done with any malice, keeping and confining it to Dublin.

1196. I do not suggest that, by any means. But the constitution—it is a close corporation, it is a matter of co-option altogether?—I think the Commissioners call it self-election. They do not like the word co-option, I think.

1197. There are no interests in Ireland represented outside Dublin and Belfast. What I mean is, that any members who have been appointed do not represent any particular shipping interest, or anything of that kind, I take it?—I do not quite follow you, Sir.

1198. I mean the members of the Board are not representative of any particular shipping interest in out-ports in Ireland, with the exception of Belfast?—No, Sir, they are not.

Interchange of information between the General Lighthouse Authorities.

1199. (*Admiral Henderson.*) I wanted to ask you if your regulations and your system are the same as those of the Trinity House?—I do not know the system at the Trinity House, Sir.

1200. Have you any communication with the Trinity House on their various systems, regulations, arrangements, and methods?—No, Sir. The last communication I had bearing on that was: I wrote to the Trinity House asking for a copy of the rules and regulations for lighthouses and light-keepers, and I have not received it. That is three weeks ago.

1201. Do you communicate with the Scotch Board as to their method of regulation?—No, Sir; I have not done so.

—1202. There is no attempt on the part of the three Boards to copy from one another where they can? I am speaking now administratively—I am not speaking of lighthouses?—I must first of all excuse myself by saying I have only been Secretary for 18 months.

1203. Within that period do you know that there has been any attempt on the part of your Board to find out on certain questions arising what the Trinity House do, or the Scotch Board do?—No, not on behalf of the Board; but personally I do, for my own information.

1204. You may find out for your own information, but there is no general attempt at the dissemination of intelligence?—No, Sir; there is not.

1205. (*Sir Frank Adam.*) Interchange of ideas?—No.

1206. (*Admiral Henderson.*) No interchange of ideas; they look upon each other as independent Boards. I do not think you stated what your own duties were?—I decided to get that copied and send it across.

1207. That will be sent over?—That will be sent over.

Secretary's duties.

1208. Have you anything to do with accounts?—Every week when the docket has been made up which has to be presented to the Board (the account is made up by the week), and when it is completed and entered in this book, which is called the docket book, I get that book brought in to me, and I check over every item in it. I sign the cheques before they go into the Board, vouching their correctness. I sign every account that passes before the Board. I sign all accounts and all disbursement account cheques with three members of the Board.

Commissioners Allowances.

1209. What allowances has the Board?—The sum of £400 a year, to cover the cost of their annual tour of inspection and the lunches which are provided on the occasions when the Committees and the Board meet in Dublin.

1210. Where do you meet?—At Carlisle Buildings.

1211. You have got an office there?—An office there.

Buoys: Replacement of,

1212. I was asking you just now about the replacement of buoys. I understand you have one inspector, and that if a buoy is displaced, though it may be at the other side of the coast from Dublin, you send one of your vessels round?—Sometimes; but sometimes we send a local boat out.

1213. Do you do it by local effort at all?—Yes, Sir; we use hookers or row-boats sometimes.

1214. Have you no means of making a temporary contract for doing it?—Yes; sometimes, if we could get a local steamer, we would not hesitate to do so.

1215. These things happen so far away. If it is a minor case, your inspector cannot go and look after it himself?—We send an officer of some description down. I remember there was so much damage done on the coast that we had to get an old pensioner to replace some of the buoys—a very clever man, but very old.

Depôts for,

1216. What depôts have you besides the one at Kingstown?—We have a buoy depôt at Larne, and are just building a depôt at Roches Point entrance to Cork Harbour, and we have an application to make a buoy depôt at Killybegs Harbour, County Donegal.

1217. That would depend on the number of buoys you have to attend to?—We have six buoys, I think, at Killybegs.

1218. Are your buoys brought round to Kingstown for repair, as a rule?—Always.

1219. All repairs are done there?—All ordinary repairs are done at Kingstown. Buoys in need of heavy repairs are sent away.

Cables: Testing of.

1220. Have you means of testing cables there?—We get our cables tested at the proving house. For instance, when Brown Lenox has the contract they are tested at Cardiff.

1221. How do you send them there?—They are sent direct from the works.

1222. A cable which has been down for some time—do you test them at all? Do you test them at any time?—Yes. We examine them with the calipers, and if there is the slightest bit of wear we condemn that cable and bring it in. We sell all surplus cable.

1223. You do not use that cable, or some of it, for buoys?—We do.

1224. You have no means, to any extent, of applying a test, whatever necessary test it may be?—We cut out the worn links, judging by the appearance of the chain. Every link is tested passing over the bits.

Irish Seamarks: Efficiency of,

1225. Speaking in general terms, are the Irish lights up to date?—I should say so, Sir. I believe our lightships are better than any other lightships in the United Kingdom, especially the new lightships we are getting now with the fixed lanterns.

1226. That is your own design, I understand?—Yes.

1227. Entirely your own design; nothing to do with the Trinity House?—Yes, Sir.

1228. Are there any particular points, so far as you know, that the Board would wish to improve, or has the greater part of the work been done in improving the lights?—I think I am right in saying that my Commissioners would like to have as many of the actual fixed lights done away with as possible, there is only one in the lightships now, and it is about to be altered.

1229. That is the only one that is left a fixed light, but to improve the sea-lights?—That is, lightships.

1230. But of the shore lights?—We have 40 fixed lights, and 10 auxiliary lights fixed.

1231. Is there any wish to make any of them into flashing lights?—We are doing so as occasion offers, Sir.

Accounts: System of,

1232. Do you keep a capital account, separate from what is called a revenue account?—No, Sir; we have got no revenue account.

1233. You do not call what you get revenue?—The result of stores being sold?

1234. Do you separate your new work from what you call your renewals or replacements?—Oh, absolutely.

1235. It is kept on two separate forms of account?—Yes; it is Abstract L, "New Works," in compliance with the directions of the Board of Trade. It is absolutely separate from the cost of maintenance.

Library system for lightkeepers.

1236. Have you any library system?—Yes, Sir.

1237. Shortly, what is it?—Well, every year we buy about £25 to £30 worth of books, and each lighthouse is supplied with a little library. We take it from one station on to the next, and replenish it occasionally. The Committee do that. They examine the books to see whether they are a proper class of literature to put into light-keepers' hands.

Steamvessels.

1238. I think you said the "Alexandra" is the only ship fitted for inspection purposes by the Board?—Well, they carried out the inspection in 1903 in the "Tearaght."

Mr. H. G. Cook.
13 Nov. 1906.

1239. How many members of the Board will they carry?—Eight members of the Board in the s.s. Alexandra.

1240. They have got accommodation for?—Not in the s.s. "Tearaght." She was built for moving light-keepers.

1241. I see I have got a question here. You said before that your subordinate officers, right the way through, do not know anything about the Trinity House system of doing things?—Well, I do not think I could answer that, Sir.

1242. But you personally have made it your object to find out?—I personally have found out some things about it, but I have not got them officially.

Experiments.

1243. Do you spend any money on experiments?—Very little, Sir; but we do experiment.

1244. Are those experiments separate from those of the Trinity House?—I think so, Sir.

1245. You do not do what, I suppose, they do?—We are experimenting at the present time with the Grubb reflectors, the invention of one of the members of our Board.

Old Head of Kinsale: Improvement of light at,

1246. A question was put to you by Mr. Ennis with reference to the Old Head of Kinsale. That was a great question about 12 years ago. Has anything been done between 1894 and this date about the lights at the Old Head of Kinsale?—Yes; they have improved that light. That comes under one of the improved lights. We have put a 10-wick burner there, a new fog-signal at that station, and there were two new dwellings and an improved light. I have since ascertained this alteration was made in 1892.

1247. In what year?—That would be, I suppose, about eight or nine years ago—perhaps ten years.

1248. Now you are going to improve it further?—To improve it further—put an incandescent light in it.

Steamvessels: Attendance of Officers at Board meetings.

1249. You said the masters of steamers or any of your officers attended Board meetings?—Yes.

1250. Do they come as a matter of course?—They are told: "The officers must always be in attendance." They generally sit in my office during the Board meetings.

1251. Does not that take a good many people away from their work when they are supposed to be there, in that sort of way?—If they are in port they can spare the time.

1252. They come as a matter of course. Who comes besides masters of steamers?—They are the only people who come up specially. The office of the Inspector and Engineer are in the building.

Control of,

1253. Who regulates the work of the steamers—the Inspector?—The Inspector and the Engineer when he requires them.

1254. They manage the whole work of the steamers between them, without reference to any of the special committees?—What we do is this: The Engineer wishes to send, say, a fog-signalling apparatus, or a lighting apparatus to the Old Head of Kinsale—just take a case like that. He consults the Inspector with a view to loading the vessel with other stores for stations *en route*.

1255. The two stations are Kingstown and Castletown?—Kingstown and Castletown.

1256. I do not think you have said how many rock lighthouses you have?—I will give it to you.*

1257. You have given the total of the others?—I have given you the number of rock, island and land stations; I can give it you in five minutes.

New Works: Initiation of,

1258. (*Sir Frank Adam.*) In regard to important new works, absolutely new works, or the repairs of a previous lighthouse, the changes in it involving considerable expenditure, I understand you to say that often from outside bodies you obtain suggestions?—Applications for improvements of the lights.

1259. And you consider those applications?—In all cases.

1260. And they are referred to one of the Committees—the Inspecting Committee, I suppose, with their consulting Engineer and expert authorities—and may or may not be approved. But in the event of their being approved and passed, how do you treat them? If you have approved of them, in what order do you take them?—We get them all under way at the same time.

1261. Suppose they are expenditure which the Board of Trade will sanction?—We cannot undertake it till the Board of Trade have sanctioned it.

1262. I put the figures absolutely arbitrarily; suppose you had got an expenditure involving £55,000, and the Board of Trade will only sanction £30,000, what is the order in which you pick out the works?—We cannot put works in hand till they are sanctioned by the Board of Trade.

1263. The Chairman points out, after consultation with the Irish Authorities whether one work is more important than another, the Board of Trade decide; well, how does the Irish Authority, your Board, arrive at the conclusion that a particular work is more important than another?—I think it is very manifest, Sir. Take a place like Kinsale, where there is a large amount of shipping passing; it is important to proceed with it at once, with all possible dispatch; the same at St. Johns Point, we get the works under way at once.

1264. (*Chairman.*) It is matter of opinion, I suppose?—It is matter of opinion altogether, Sir.

Old Head of Kinsale:

1265. (*Sir Frank Adam.*) You mentioned Kinsale, but apparently there has been very long delay there?—We had a correspondence with the Board of Trade before the work was sanctioned.

Importance of light at,

1266. And during that correspondence did your Board take up the view that the Kinsale lights were important?—We did, Sir; we always knew it was an important place; it is one of the most important points in the United Kingdom.

Lightkeepers' Dwellings.

1267. There is only one other point that I want information about, and that is with regard to the dwellings of lighthouse keepers; what sort of dwelling do you give them in connection with the lighthouses?—They have five rooms—a kitchen, a parlour, and three bedrooms and outhouses.

1268. Substantially built?—Well, they must be substantially built, or they would not stand in the wild places they are built on.

1269. No other accommodation, I suppose? I suppose in lieu of a house you give them so much a week to find a house for themselves; but there are some places, I daresay, where that would be impossible?—They could not get anything but a mud cabin, with no fireplace, only a hole in the ceiling for chimney.

1270. (*Chairman.*) Is the building of your cottages put out to contract?—Not always; sometimes we have found it cheaper to do it ourselves, but in the majority of cases we have got contracts for them. In the time of the building of the Fastnet, when we wanted to economise the men's time when they were on shore, we utilised them for building these dwellings.

Control of Trinity House and Board of Trade over Irish Lights Board: Delays caused by,

1271. (*Mr. Ennis.*) I forgot to ask one question: You will give us a return, along with the other things you have promised us, of the wages of the lightship crews and the light-keepers? We want to compare them with the other Lighthouse Authorities. I also want to ask, arising out of the question Sir Frank Adam has put, have you found in practice your connection with the Trinity House and the Board of Trade to work satisfactorily in regard to the working of the lights of the Irish Lighthouse Commissioners on the Irish coast? Has there been any disinclination on the part of either of these bodies to sanction your proposals?—They raise objections sometimes; it is quite right to raise the objections.

1272. But I mean, speaking in a general sense, have you found any difficulty in getting work sanctioned that you consider imperative and essential?—Yes, we have a very great deal. Very often works which we have had not the slightest hesitation in carrying out ourselves have been delayed by the Board of Trade and the Trinity House.

1273. (*Chairman.*) Works which they would not have hesitated to carry out if they had unlimited money for the purpose?—They are ultimately passed both by the Trinity House and the Board of Trade. I could not recollect a single case that we put forward strongly that has had a very voluminous correspondence, that did not ultimately meet with the acceptance of the Board of Trade and the Trinity House. It is only delaying the matter for two or three years.

See Appendix B, VI.

ish sea-arks: efficiency of,

1274. (*Mr. Ennis.*) Do you consider the lighting of the Irish coast at the present moment what your Board would desire?—I think they are satisfied with the condition. We could bring the lights up to date, some of these catoptric lights, but the coast is very well lighted indeed.

1275. You are still anxious to have an improvement in the lights?—The Commissioners would like to have them as good as possible, and get rid of the catoptric lights.

1276. (*Chairman.*) That is being done?—It is being gradually done.

ocal Light-ouse uthorities:

1277. (*Colonel Herbert.*) There are other Lighthouse Authorities besides the Commissioners?—Oh, yes—the Local Harbours, Waterford, Cork, Wexford, Dublin, Belfast, Carlingford, etc.

1278. What are those—statutory authorities?—Well, the London and North-Western Railway Company are greatly interested in Carlingford; the local authorities are the Carlingford Lough Commissioners. The Belfast Harbour Commissioners are constituted the Lighthouse Authority for Belfast Lough.

1279. By what authority are they constituted; these different bodies?—Different Acts of Parliament.

1280. They are statutory?—Oh, yes, they are statutory.

1281. All of them?—All of them, I think.

urisdiction

1282. Is there any crossing of responsibility between the functions exercised by some of these authorities and your own?—No, Sir; they cannot alter any light, buoy or beacon, nor any floating mark in any way, without the sanction of the Commissioners of Irish Lights.

1283. How far do they go from the coast, if they put down buoys and so forth?—They are right along the coast. In the case of Dublin River you can see the lights when you are coasting; the same in Belfast Lough, you can see them when you are coasting.

1284. (*Mr. Ennis.*) The jurisdiction of the local authorities does not extend seaward to any distance?—No, not seaward.

1285. (*Admiral Henderson.*) Have you any disputes with the local authorities as to whether you or they should put down a buoy?—Very seldom, but very frequently in the case of the removal of wrecks, which we consider in the jurisdiction of the local authorities. They have, however, the right of appeal to the Board of Trade in cases of dispute.

Mr. H. G. Cook.
13 Nov. 1906.

and number of,

1286. (*Mr. Ennis.*) Can you tell us what number of harbours in Ireland possess statutory boards; I mean local statutory authority?—I asked for the returns to be made out; they were not given to me, but a Blue Book published by the Board of Trade gives the whole of the information.

1287. (*Admiral Henderson.*) Mr Cook might give us that return, if it is made out, of the number of local lights in Ireland.—I did not take that to be Mr. Ennis' question.

1288. (*Mr. Ennis.*) No, my question was, what was the number of Harbour Boards that were constituted by statute?—Yes. Do you include amongst local lights, lighted buoys?

1289. (*Admiral Henderson.*) I mean the lights that are not under your control?—You can get all these from the Admiralty List of Lights.

1290. (*Chairman.*) The Irish Commissioners are entrusted with the charge of looking after local lights; they must, therefore, have a list of the lights which they have to look after?—That can be got for you.

1291. We had better have a list?—A list of local lights.

1292. (*Colonel Herbert.*) The inspecting authority of these local lights is the Irish Commissioners?—A list of local authorities and lights.

(*Chairman.*) Local seamarks.

1293. (*Admiral Henderson.*) There is one question I might ask: Have you any suggestions to offer as to any improvement in the administration of the light-houses; are you empowered to offer any?—I am not empowered to offer any. It is a matter that did not come before the Commissioners at all; we did not know what form the Inquiry would take. I have to apologise for having my notes in such a slipshod fashion; I only brought them over in case I was asked a question.

FOURTH DAY.

Tuesday, 20th November 1906.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. Coventry Dick Peddie, called in; and examined.

1294. (*Chairman.*) You are Secretary to the Scottish Lighthouse Board?—I am, Sir.

1295. You are here to give evidence on their behalf? Yes.

Northern Lighthouse Board: Constitution of,

1296. Will you first describe to us the constitution of the Commissioners from the date of their original appointment onwards?—The Commissioners were constituted by Act of Parliament in 1786, the purpose then being to erect four lighthouses at different points on the coast of Scotland. I do not know that I need name the points; they were extreme points of the East, North, West, and South-West. That was by 26 George III., Chapter 101. The Commissioners were then 19, namely, the Lord Advocate, the Solicitor-General for Scotland, the Lord Provost, and Eldest Bailie of Edinburgh, the Lord Provost and Eldest Bailie of Glasgow; the Provosts of Aberdeen, Inverness, and Campbeltown; the Sheriff Deputes of the counties of Edinburgh, Lanark, Renfrew, Bute, Argyll, Inverness, Ross, Orkney, Caithness, and Aberdeen. Five then, as now, formed a quorum.

Mr. C. D. Peddie.
20 Nov. 1906.

1297. Were there no lighthouses in Scotland prior to that date?—There were lighthouses; there was one in the Clyde on the Cumbrae, and there were two light-houses on the Tay, the Buddonness lighthouses, which are still there, and there was a coal light on the Isle of May, but otherwise there were no lighthouses.

1298. How were those lights maintained?—The Clyde lighthouses were maintained, as they are now, by special Trustees constituted by Act of Parliament; the Tay lighthouses were maintained, I think, as they are now, by the Harbour Board. I do not know that the Harbour Board was constituted then as it is now, but it was a local body entirely.

1299. In fact, those were really lights under local authorities as they are now?—As they are now. Then, Sir, in 1789 the Commissioners were given a general

Mr. C. D. Peddie.

20 Nov. 1906.

power of erecting lighthouses, the earlier Act being confined to the four mentioned in it, and they were also given power to assume as Commissioners "when any new lighthouse shall be erected . . . the Provost, or Chief Magistrate of the nearest Royal Burgh, and also the Sheriff-Depute of the nearest County."

1300. When a Commissioner was assumed or co-opted in that way, I suppose he remained a Commissioner for life?—The question has been raised whether it was personal or attached to his office, but in practice it has been permanent.

1301. Attached to his office, that is?—Attached to his office. Once on the Board they have remained on the Board. In 1798, for business purposes, the Commissioners were made a body corporate with a seal. In 1815 they were empowered to erect two lighthouses on the Isle of Man. Mr. Robert Stevenson, who was the Engineer of the Commissioners, made a tour of inspection round the whole coast, and when he returned he reported to the Commissioners very strongly on the necessity for lighthouses on the Isle of Man. The trade in Liverpool also approached the Commissioners, and they brought a Bill into Parliament which was at first opposed, or, at any rate, was not acquiesced in, by the Trinity House, inasmuch as it was supposed to infringe on their jurisdiction. That opposition was, however, withdrawn, and the Commissioners erected these two lighthouses, mostly, I think, because they undertook to do it more cheaply than the Trinity House could, or thought they could do it. That afterwards became a general power. In 1836, the Commissioners were given a general power of placing buoys and beacons within their area, which they had not before.

Board of Trade control over, established.

1302. In 1854 all these Acts were repealed?—All these Acts were repealed and the Commissioners were re-constituted with practically the same powers, but under the financial control of the Board of Trade.

1303. The financial control of the Board of Trade was introduced for the first time under the Act of 1854?—In 1853 by the Merchant Shipping Law Amendment. The 1854 Act was the substantive Act. They were given power by that Act to assume certain members, which was rather more extensive, that is to say, it was "The Provost or Chief Magistrate of any Royal or Parliamentary Burgh on or near any part of the coasts of Scotland, and the Sheriff of any County abutting on such coasts." I may say, Sir, that the Board is now as it was shortly after the passing of the 1854 Act, and that the powers of assumption of the Commissioners are exhausted, as far as sheriffs are concerned, although I understand they could still assume about 40 provosts and magistrates of Royal or Parliamentary Burghs.

1304. That is to say, if they were to exercise all the powers of assumption which they possess?—That is so, Sir. By the same Act the Commission was given for the first time a general power to erect lighthouses on the Isle of Man.

Isle of Man placed under jurisdiction of,

1305. In other words, the Isle of Man was included for lighthouse purposes in the area?—Yes.

1306. Then were any further changes introduced under the Consolidation Act of 1894?—It was practically a repetition of the provisions of the 1854 and other Acts, with the exception that by inadvertence five of the Commissioners who had been originally named were omitted, and they were assumed by the Board immediately after the Act came into operation.

1307. The general power of co-opting members remains?—Exactly the same practically.

1308. And the fact of their being omitted from the Act therefore made no practical difference?—No; it was purely an inadvertence I understand.

Present members of,

1309. Would you describe to us the Commissioners by their offices at the present time?—The Commissioners are the Lord Advocate; the Solicitor-General for Scotland; the Lord Provost of Edinburgh; the Lord Provost of Glasgow; the Lord Provost of Aberdeen; the Lord Provost of Dundee; the Provost of Inverness; the Provost of Campbeltown; the Provost of Greenock; the Provost of Leith; the Eldest Bailie of Edinburgh; the Eldest Bailie of Glasgow; the Sheriff of the Lothians and Peebles; the Sheriff of Lanark; the Sheriff of Renfrew and Bute; the Sheriff of Argyll; the Sheriff of Inverness, Elgin, and Nairn; the Sheriff of Ross, Cromarty, and Sutherland; the Sheriff of Caithness, Orkney, and Shetland; the Sheriff of Aberdeen, Kincardine, and Banff; the Sheriff of Ayr; the Sheriff of Fife and Kinross; the Sheriff of Forfar; the Sheriff of Dumfries and Galloway; and the Sheriff of Roxburgh, Berwick, and Selkirk.

1310. The general object seems to have been then that all the various localities should be fully and properly represented. It was the interest of localities rather than any knowledge which these gentlemen might possess of navigation and the necessities of lights on the coast that prompted this particular constitution?—Yes, Sir, as far as one can see it was. As a matter of fact, it was brought up in the first instance at a Convention of Royal Burghs in Edinburgh, the necessity for lighting the coasts, but I do not know that it was only to safeguard the interests of particular localities. It was also to see that the interests of particular localities were not looked after to the prejudice of other localities. In fact, as far as I can see, the Board was appointed as being purely without prejudice from any point of view, and yet qualified to judge of the need of each locality and its special circumstances.

Powers and duties of,

1311. Will you now proceed to describe the statutory powers and duties of the Board?—As far as general management is concerned, the Commissioners have the superintendence and management of all the lighthouses, buoys and beacons in Scotland and the adjacent seas and islands and the Isle of Man. That is, however, subject to certain rights or powers which are exercised by local authorities. They are in various respects subject to the control of the Trinity House and the Board of Trade as regards their general management; the Trinity House has a power of inspection of their seamarks at any time, and the Board of Trade may also, on complaint, authorise a similar inspection by any person or persons.

1312. Do these inspections by Trinity House take place frequently?—In my experience, very seldom.

1313. Have there ever been inspections by the Board of Trade on complaint?—Not as far as I know; certainly not in the recent history of the Board.

1314. So that that particular form of control has remained a dead letter?—I know of no complaint to the Board of Trade which would have authorised an inspection by them. The Trinity Brethren have on occasions when they are in the vicinity of lighthouses visited them, and they, no doubt, inspect them from the sea when passing. The Board of Trade is entitled to ask for returns and information which they require. In financial matters the Commissioners are entirely under the influence of the Board of Trade. The Commissioners are not empowered to spend any money at all without the express sanction of the Board of Trade.

1315. I think you said that the financial control of the Board of Trade began in 1853?—In 1853, Sir. Before that the Commissioners were entirely uncontrolled as far as finance was concerned, except that they had to present annually an account to Parliament.

1316. And as regards the construction of lighthouses, etc.?—The Commissioners' lighthouse powers are to erect, place, add to, alter, remove, or vary the character of lighthouses, beacons and buoys. But that, in practice, has been entirely restricted, or nearly entirely restricted, to general as opposed to local seamarks, a distinction which has given rise to many anxious debates both with the Board of Trade and with the Trinity House, the circumstances of the Scottish coast being such that questions arise there which are not likely to arise in England, where there is a plain seaboard.

1317. The question arises, I presume, chiefly where there is no local Lighthouse Authority with power to establish seamarks, but where a lighthouse or other seamark would undoubtedly benefit the locality, though it might be of no benefit to passing trade generally. That is the point on which the difficulty turns?—That is the general line, Sir. I do not know that the Commissioners have ever gone the length of putting down a light which would only be of benefit to one locality and not of benefit to at least some general passing navigation.

1318. They would have power to do so, however?—I think so. Under their Acts they have power to put down lights anywhere where they do not inter-

fere with the rights and powers of existing local authorities.

1319. Speaking generally, it resolves itself into a question of degree. If there are two new works suggested, and one of these would be of more use to passing trade generally and the other of less, then the former would be preferred?—Undoubtedly, Sir. The lines that are followed were laid down, I think, in the 1836 Act. It was either laid down then or in the report of the Select Committee of 1834 that, as far as possible, the General Authorities should confine their attention to marks which were not within the scope of local authorities; but the real difficulties arise where the proposed seamark is apparently local, but there is no local authority.

1320. Then will you describe the nature of the control vested in Trinity House and the Board of Trade as regards the exercise of the lighthouse powers?—The Commissioners first of all put forward a scheme which is submitted to the Trinity House, with their reasons for desiring to carry out this scheme, and the Trinity House are asked for their approval. If they grant it the matter goes to the Board of Trade, which has to confirm that approval by its sanction. If the Trinity House refuses its approval there is still an appeal to the Board of Trade, their sanction being sufficient even if the Trinity House approval is refused. The scheme having been sanctioned, the Board of Trade have to be approached for financial sanction; that having been granted, the work then proceeds.

1321. So that for the erection of, say, a new lighthouse, first of all you have to get the approval of the Trinity House; if you obtain that approval you have to go to the Board of Trade and obtain their approval, and, in addition to that, there is a general financial control by the Board of Trade?—That is so. A special financial control it also is in this case, as a matter of fact, because we have not only to get general sanction to the estimated expenditure, but we have to submit after that every offer for special sanction before we can proceed with the work.

1322. But the Board of Trade once having sanctioned a work, would not, I presume, prevent its being carried out by making objections to the financial proposals, though they might ask for modifications of them?—They have not done so for a great many years, but in the early history of the Board of Trade control there seem to have been numerous contentions on that very point, owing to the desire of the Board of Trade to cut down the estimates and to their refusing in fact to allow the Commissioners to proceed unless they did the work for a smaller sum.

1323. So that in early days they made objections which were ostensibly financial objections but which were fatal to the proposal altogether?—They certainly delayed proposals for some years.

1324. That has not been the case lately?—No.

1325. Does it often happen that the sanction of Trinity House is refused to proposals by the Commissioners?—Yes, Sir, fairly frequently. In fact, in my experience of six years the Trinity House approval has been refused considerably more frequently than the sanction of the Board of Trade—that is to say, after the Trinity House have refused to approve, the Board of Trade on appeal have frequently agreed with the Commissioners. I do not say such cases are numerous in comparison with the number of the seamarks put forward, but they are annual; certainly I do not think a year has elapsed.

1326. Perhaps you will put in the list of proposals made by the Commissioners within recent years which have been objected to either by Trinity House or by the Board of Trade?—There is such a list in preparation at the present moment, and it will be put in.

1327. The control of the Trinity House began at what date?—In 1836, Sir, the Commissioners were forbidden to place any seamark without the approval of the Trinity House. Of course, the financial question did not arise there.

1328. Was there an appeal then?—There was an appeal to the Privy Council—to the King in Council.

1329. In fact, the Board of Trade take the place of the Privy Council, so far as appeals from Trinity House are concerned?—Yes. The Trinity House in 1836 had nothing to do with the financial aspect of the question, because each of the Lighthouse Authorities was master of its own funds.

Mr. C. D. Peddie.

20 Nov. 1906

1330. I think we are coming to that. Will you proceed, then, to give us an account of the method by which funds were obtained?—Prior to 1853 the Commissioners had their own funds, the revenue from their light dues, all this revenue being devoted entirely to lighthouse purposes, and an annual account being presented to Parliament. In 1853, with the inauguration of the Mercantile Marine Fund under the charge of the Board of Trade, the Commissioners ceased to have control over their funds. They still collected light dues, but these were paid into the Mercantile Marine Fund.

Expenditure: Method of obtaining funds.

1331. After that date, after 1853, the Scottish lights were paid for out of the general fund?—Yes, Sir.

1332. Up to that time they had been paid for out of the Scottish light dues?—Yes.

1333. Did Scotland gain by the change or lose?—Well, I am not prepared to say; I think that Scotland had more difficulty after 1853 in carrying out works which were thought to be necessary than before that, but whether that implied———

1334. Was more spent, on the average, or less?—Well, I cannot say; it is a matter I have not looked into, but I can easily ascertain if the Commission attaches importance to it. The light dues in Scotland were collected by the Commissioners till the 1st April, 1883, and then by arrangement the collection was taken over by the Board of Trade.

Collection of light dues in Scotland.

1335. That was an administrative arrangement?—Entirely, Sir; I think it was purely to save money. I rather think that at the same time the collection of the Irish dues was taken over.

1336. You are still legally responsible?—We are still legally responsible. Our expenditure is now met by imprest from the General Lighthouse Fund.

1337. (*Admiral Henderson.*) You are legally responsible for the collection of light dues?—We are still.

1338. The same as the Trinity House?—Yes.

1339. (*Chairman.*) It is an administrative arrangement?—Yes, and as a matter of fact, we take no practical concern with them. Then, Sir, there is a very close audit of all accounts, which are forwarded to the Board of Trade quarterly, and the Board of Trade has power at any time to inspect the Commissioners' books. That power was exercised in 1891, when there was an inquiry by the Board of Trade into the Commissioners' management of their office and books. Mr. Stoneham and Mr. Trevor then came to Edinburgh for the purpose.

Control of Board of Trade over.

1340. Did that arise out of any particular circumstance?—I think it arose out of applications for increase of salaries by members of the staff. It did not arise out of any shortcomings or fault in the accounts submitted to the Board of Trade, or anything of that kind.

1341. Then next as to local lighthouses?—The Commissioners were given a control over local and harbour seamarks in 1836, as the result of the report of the Select Committee of 1834. Their power has been extended in some ways, and is now embodied in the 1894 Act, Sections 652-4. I may say, Sir, that this matter of supervision of local seamarks gives rise to a great deal of work, and a large mass of correspondence in the office. The actual supervision is triennial. It is carried out by the Commissioners' Engineer, and a report of the triennial inspection is, through the Board of Trade, submitted to Parliament.

Local Lighthouses: Control of Northern Lighthouse Board over.

1342. You are not bound by the provisions of an Act of Parliament to make a triennial inspection?—Not to make a triennial inspection, but it has been done with the sanction of the Board of Trade since 1869.

1343. Can you give us an idea of the number of local lights?—Yes.

1344. We shall probably ask later for a detailed list of them?—There are 139 local authorities and 260 lights, not including lighted buoys; about 140 local authorities, with 260 lights, not including buoys.

Number of.

1345. And all those 260 lights are, as a matter of fact, inspected in the course of the three years?—They are.

Mr. C. D. Peddie.

20 Nov. 1906.

Wrecks: Powers as to removal of,

1346. And a report laid before Parliament?—The Commissioners send a report to the Board of Trade, and by the Board of Trade it is laid before Parliament.

1347. Removal of wrecks is included in the statutory power of the Commissioners?—Our powers regarding removal of wrecks are laid down in the 1894 Act by Sections 530 and 534, but the extent of the Commissioners' work under this head is not considerable. The results are inconsiderable, although the work of searching for wrecks, or, rather, searching for derelicts, is troublesome. The coast of Scotland seems to be such that wrecks, as a rule, do not become dangerous to navigation.

1348. You would not think it necessary, then, to deal with a wreck unless it were in the fairway?—Whenever there is a report of a wreck in any place we examine it at once to see if it is dangerous, but it seldom is dangerous. Our chief difficulty is searching for reported derelicts, especially in the North Sea.

1349. But whenever a report is made to you, you institute a search?—Immediately; and although the sum actually charged amounts to very little, about £50 a year, that, of course, does not include the expenses of the steamers searching for derelicts and wreckage.

1350. A considerable part of the time of your steamers is taken up in these searches?—Not a considerable part; but, for instance, this autumn, on two or three different occasions, the Firth of Forth boats have had to be out looking for derelicts, and standing by a wreck which was dangerous to navigation in the Forth; but, as a matter of fact, the time occupied is not very considerable in the whole year.

Administration of Northern Lighthouse Board:

1351. Passing to the machinery of administration, would you tell us how the Commissioners carry on their work?—In the first place, the headquarters of the Board are in Edinburgh, and there is no responsible official, no superintendent or other responsible official, permanently stationed elsewhere, with the exception, of course, of the steamer officers. The Commissioners' work is practically entirely carried on by the Board.

1352. The whole Board?—By the whole Board, Sir. There is a Committee, a standing Committee on Finance, and another standing Committee on New Works, and there are numerous occasional committees; but all these committees are practically advisory. They report to the Board, and a decision is come to, and action is taken by the Board.

1353. How often does the Board meet?—The Board meets on Wednesdays, as a rule fortnightly, with a short interval at Christmas, one at Easter, and one in summer, the average number of meetings for the last five years having been twenty in the year, with an average attendance of ten.

1354. The meetings are always in Edinburgh?—Yes, Sir.

1355. When questions of importance come before the Board, are they referred by the Board to committees for a report?—Frequently any question, the consideration of which is impracticable at a large Board or when further inquiry or consideration is needed, is sent to a committee, either to the Finance Committee or the New Works Committee, or to an occasional committee, of which there are many. I may say that the number of committee meetings on the average is 40 in the year, there being an attendance at each of between three and four.

Committees:

1356. What is the total number of the committees?—Well, they vary very much.

Finance Committee.

1357. They vary; tell us the numbers of the Finance Committee.—Even that varies. The Finance Committee is composed practically of all the members of the Board who take an active interest in the work of the Board who are resident in Edinburgh, and it probably numbers nine or ten, with a quorum of three.

New Works Committee.

The New Works Committee is practically a sub-committee of that—that is to say, that all the members belong to the larger Committee, although they do not report to it—and is composed of those members of the Board who, from having been on numerous inspection voyages, etc., are particularly conversant with the conditions of different places on the coast.

1358. But they also mostly consist of members resident in Edinburgh?—They do entirely, Sir.

1359. Could you give us any idea with regard to meetings of the Board, as to the attendance of members who do not reside in Edinburgh?—Well, Sir, that attendance is not considerable by any means. In fact, the only members outside Edinburgh who have attended, certainly of late years, with any regularity, have been the Sheriff of Lanark, who is resident in Glasgow, the Eldest Bailie—that is, the Senior Magistrate—of Glasgow, and the Provost of Leith. The latter attends with great regularity.

1360. Leith may be regarded the same as Edinburgh?—That is so; but the Provost of Inverness, the Lord Provost of Aberdeen, the Lord Provost of Dundee, the Provost of Greenock, and the Provost of Campbeltown are practically never at meetings.

1361. So that in effect the Board really resolves itself into Edinburgh members of the Board and a certain number of Glasgow members?—It does so, certainly for administrative work in the office. There are, however, representations at intervals from outside members of the Board on behalf of those interested in lighthouses. They have representations made to them, and they forward them to the Board. At the same time, there is an annual report of the proceedings of the service—rather a summary of what has been done in the year—and that is circulated to all the members, and they know what is going on. It might be of some use to the Commission if I produced our last annual report.

1362. Yes, we may as well have that put in. You said committees generally met 40 times a year?—Yes.

1363. But those 40 meetings are distributed over the various committees?—That is so; I have not divided them up. They do not meet on regular days. The Finance Committee meets as it is wanted, and I may say to some extent it takes the place of the Board in emergencies.

Finance Committee.

1364. It seems, from your description, that the Finance Committee very nearly is the Board; they are nearly the same thing?—The personnel is very nearly the same as that of the active Board, but it really has no powers, except in emergencies. Where it is impossible to summon the Board, the Finance Committee is summoned, and it may take action.

1365. Does the Board delegate power to these committees to act in emergency?—There is no express delegation, except in special cases, but there is certainly an understanding that the Finance Committee, which is much more easily summoned, and which has a much smaller quorum shall take action in emergency and report to the Board for its approval.

1366. In reporting to the Board they are practically reporting to themselves?—Yes, except that there are members of the Board who are not members of the committee. There are certain regulations about calling the Board. An agenda paper has to be posted; certain notice has to be given, which makes it necessary for some committee to have powers in emergency. That is really what it means.

1367. And this notice would enable any other members to attend?—At the Board meeting, where the Committee's action comes up for approval.

Occasional Committees.

1368. Then as to occasional committees, what are their duties?—If any question comes up which requires further consideration and inquiry, in fact, is not suited for being immediately dealt with by a large Board, it is remitted to a small committee, which is appointed by the chairman, and which consists, as a rule, of members who, to his knowledge, are qualified to deal with the special subject, whatever it is. They are on a few occasions appointed with powers, but very seldom. As a rule, they report.

1369. Is the work of inspection carried out by committees appointed for the purpose?—Yes, Sir, there is an Inspection Committee appointed every year.

Inspection Committee, work of,

1370. They carry out their work during the summer principally, I suppose?—Generally for about three weeks at the end of July and beginning of August.

1371. During that time do they go round the whole coast of Scotland?—No, the service is much too large. They are away for three weeks; but as their work has to be done during the day, landing being, as a rule, impossible at night, they can only cover a little more than half the service in each year. On an average, they land at 50 stations on each inspection voyage, and they examine everything from the light-rooms to the oil cellers and dwellings, and so on.

1372. Are they accompanied by the Engineer on these inspections?—No, Sir, the Secretary accompanies them.

1373. Only the Secretary?—Yes.

1374. (*Colonel Herbert.*) Are these included in the 40 meetings?—No. The Inspecting Committee varies in size, and naturally fluctuates from time to time with the ability of members to get away. It must not be less than two, and during the last five or six years it has generally been four or five, although it has been as many as seven.

orthern ighthouse oard: ppointment Chairman.

1375. (*Chairman.*) Is the chairman appointed from time to time?—Every six months a new chairman is appointed. It is taken in order of seniority, as a rule, and the chairman is available at all times to advise the Secretary on any points which may arise. He is in the office nearly every day; in fact, as often as there is any chance of his services being required, and he is always available.

1376. Almost from the nature of the case, he must be one of the residents in Edinburgh?—He always has been, Sir, or the Provost of Leith.

inutes of oard and ommittee eetings.

1377. We have asked the other Lighthouse Authorities for a copy of the minutes of the Board and of the Committees, including the Visiting Committee, from the 1st April to the 1st July of this year. You could furnish us, I presume, with the same information, together with the attendances of members. Perhaps we ought to have the attendances of members by name?—That happens to include a month during which the Board does not meet—the month of April—but if you would take from the 1st May, June, and July——

1378. Very well, we will take the 1st May till the 1st August?—Or, perhaps, the winter months would show more clearly the actual work which comes up. There is an important time, when most of the contracts come up; from the 1st January.

1379. Well, the 1st January to the 1st April.—Very well, Sir.

ew Works: ommittee n,

1380. Did you say you had a standing committee to which new works were referred, or are new works referred to an occasional committee?—There is a standing Committee on New Works, which is composed of four or five of the Finance Committee. The requests for new works which come up before the Board, if they are not immediately dealt with, are remitted to the New Works Committee, and in the summer of each year the New Works Committee considers all proposals, old and new, for new works round the coast.

nitiation of,

1381. How do these proposals for the most part originate?—The majority of the proposals have been before the Commissioners for a great many years. It is most unusual now to get an application for a seamark that has not already been contemplated by the Commissioners, and has been awaiting the necessary funds.

1382. When originally taken into consideration by the Commissioners, was it on the suggestion of the locality or some branch of the shipping trade?—Almost invariably, on application of people interested.

1383. You feel no doubt, therefore, that you are in close touch with people interested?—I think we are in as close touch as any general and impartial Board could be.

1384. The Board has not, as a general rule, made it its business to consider on its own account, and apart from any representations made to it, what lights may be required?—I can only say that there is an enormous programme before the Commissioners at the present time, and it really means in each year selecting what they consider out of these lights or seamarks are the most urgent, and what they are the most likely to obtain sanction for, in view of the state of the Lighthouse Fund and other considerations. I cannot at this moment recollect any light or any mark which has been proposed, say in the last six years, which has not been fully considered by the Commissioners, and determined on years ago, unless it be, perhaps, seamarks which have been rendered possible by improvements in the science of lighting, such as gas lights. For instance, in two cases we have unattended gas lightvessels, which were not within practical politics until recently; one boat 75 feet long, and the other 60 feet long, absolutely unwatched, but riding in localities that no ordinary buoy would ride in. But apart from matters of this kind, I do not think there is a case where the Commissioners have actually initiated any new work in recent years.

1385. When a proposal is received by the Commissioners, it is simply placed in a list which comes up for consideration each year?—I should hardly say that.

1386. Or is each proposal definitely dealt with when it comes up originally?—It is dealt with when it comes up originally.

1387. And the Commissioners then decide that it is desirable, or that it is undesirable, that a seamark should be erected in accordance with the proposal?—That is so; and further, if desirable, whether it is desirable at once to proceed with it, or whether there are some urgent works which should be undertaken first.

1388. There are a certain number of these proposals that I presume are definitely rejected?—Yes, Sir; generally on the ground that they are too local, although there are some rejected on the ground that they are quite unnecessary from any point of view.

1389. Then, in addition to that, you have to consider whether particular lights should not be improved, the lighting power increased, and so forth?—Yes, Sir, that is very often suggested by the Commissioners. There is no doubt they have put forward proposals in recent years, especially for the alteration of lights from fixed to flashing, for which there has been no specific request.

1390. Is it the business of any committee to consider whether the improvement of particular lights is desirable?—Yes; the New Works Committee consider that on a report by the Engineer, who submits all the particulars with an estimate of the cost, and they have taken the views of shipowners and shipmasters on the subject, in cases where there may have been some doubt.

1391. That has not been done as a matter of course, but only in special cases?—Yes, Sir.

Head Office Establishment: Personnel.

1392. Will you proceed to tell us the number and nature of the official staff employed?—The staff is situated in Edinburgh, and it consists of a Secretary, an Engineer, an accountant, five clerks, a Superintendent and his assistant, and three district superintendents. Although the superintendent, his assistant, and the three district superintendents are included in the headquarters staff, I may say that the Superintendent and his assistant are absent from Edinburgh, on an average, four to five months in the year, and the district superintendents are absent eight months in the year.

1393. It is the business of the district superintendents to see that the lights within their districts are properly maintained, and to report if they are not?—Well, they have special functions which I may be permitted to deal with later on.

Secretary's duties.

1394. Let us take these various officials in order then.—The Secretary, apart from mere secretarial duties of correspondence, preparing reports, keeping minutes, preparing business for committee and Board meetings, and the like, has also the legal work of the Board to do, except the work of important conveyancing, or, of course, any cases of law suits; but all contracts and agreements, minor leases, and the revising of minor feu charters, and so on, are done by the Secretary; the result being that the law expenses of the Board are trifling, except in cases where perhaps there has been, for instance, a Board of Trade inquiry, which necessitated the paying of witnesses, or an arbitration, but those are of very infrequent occurrence. Then, Sir, the Secretary is not only Secretary, but he is also general manager, and he is responsible to the Commissioners for every part of the service, and for the due performance of their duties by each member of the staff, both indoor and outdoor; and that being so, he has to inspect all the lighthouses, steamers and stores, in fact, every place out of doors; and to keep himself conversant with the whole work of the service, and to look after the health and welfare of all belonging to it. As far as the accountant's department is concerned, he has also to assure himself that the annual estimates are properly prepared, and to sign them. He has to sign the quarterly accounts; he has to balance the cash-book and check the cash transactions once a month; and he is consulted by the accountant on any question which may arise. In the same way he is consulted by the Superintendent on any question which may arise outside the routine of his department, and

Mr. C. D. Peddie.

20 Nov. 1906.

with the Superintendent, he arranges for report to the Commissioners the transfer of keepers and the appointment and promotion of the outdoor staff. The superintendent arranges all the programmes of the steamers, and submits them to the Secretary for approval, and so on. Therefore he is kept in constant touch with every department of the service.

1395. Do the representations of the Engineer go through the Secretary?—They pass through the Secretary, but they are addressed to the Board.

1396. The Secretary is the pivot of the administration really?—Well, he is the channel of communication between every department and the Commissioners, both for out-going and for in-coming business.

1397. As general manager, he would deal with all ordinary matters of administration himself, I suppose, without thinking it necessary to bring them before the Board at all?—The amount of responsibility taken by the Secretary is a matter of custom and varies with circumstances, but practically everything outside the established routine of the service is reported to the Board. In many cases action has necessarily been taken, but it is reported for approval, especially everything to do with their statutory functions.

1398. He is very much in the position of a general manager of a big works?—I think that is the case.

1399. Do questions of discipline come before the Secretary?—Yes, Sir, the Secretary deals with every question of discipline in the service. If the matter is serious, he reports it to the Board or to the Chairman, and if necessary he holds an inquiry on the spot. If the matter turns out to be of sufficient importance, it is there dealt with by the Board. Any question of a penalty of any kind is decided by the Board, but any disagreements between lightkeepers, any complaints about non-sounding of fog-signals or the efficiency of a light, are in the first instance inquired into by the Secretary, generally on the spot, if the matter is serious at all.

1400. Appointments and dismissals of lighthouse keepers would all be done by the Board, I presume?—Yes; and all transfers, promotions, everything of that kind, are done by the Board.

1401. Is that all you have to say as regards the Secretary?—Yes, practically "Secretary and General Manager" covers the whole ground.

1402. Is there anything more you would like to say?—No, Sir.

Engineer's duties

1403. Let us pass to the Engineer?—The relations of the Engineer to the Board are special. Down to 1853 the Engineer was a salaried servant of the Board, but when the Commissioners came under the Board of Trade, they objected to this, and insisted upon the Engineer being made merely consulting, which he has been since, although there have been proposals made on occasions by the Commissioners to have the old state of things reverted to. The Engineer, therefore, is consulting. He is paid a commission on the cost of new works,

and system of remuneration.

and for remits on various matters, which are very numerous, he is paid at a settled rate, really according to time; in fact, he is paid five guineas a day for work in connection with remits. In addition to that he attends all Board meetings, for which he is not remunerated, and he attends all committee meetings where his presence is desirable, and he attends the Commissioners in London at conferences at the Board of Trade, and so on. I may say, Sir, that Mr. Stevenson is not only the Commissioners' Engineer, but also their Scientific Adviser, being a graduate in science, and, of course, his knowledge of the coast is most exhaustive. For over 100 years now, from father to son, the Messrs. Stevenson have been Engineers to the Northern Lighthouse Commissioners.

1404. But the feeling of the Board, I take it from you, is that they would like to revert to the system in use before 1853?—That is so, and I may say that at the present time an application is before the Board of Trade to revert to that system.

1405. Do you think the present system works unsatisfactorily, or is a change desired on account of the prejudice which it may excite?—Entirely on account of the prejudice; I do not think it will make any difference whatever in the economy or efficiency of the service whether Mr. Stevenson is on a salary or not.

1406. Apart from any question of economy or efficiency, you feel the present system is open to criticism?—It has been criticised, and, in any case, the amount of work occasioned to Mr. Stevenson and our Accountants' Department in making up his accounts, the Commissioners think is absolutely unnecessary.

1407. Could you tell us how much time the Engineer gives on the average; is he always at your disposal?—Always.

1408. He would regard his duties to the Commissioners as coming before anything else?—I certainly think he would. I am sure that Mr. David Stevenson looks on his duties to the Commissioners as of most importance.

1409. As paramount?—As paramount. His firm have an office in the Commissioners' premises, for which they pay rent. They pay their staff; we have nothing to do with that, but Mr. Stevenson is available at any time for consultation by the Secretary or any other official, and, as a matter of fact, is consulted certainly daily, and often many times a day, for which, in the ordinary course, he receives little or no remuneration.

1410. You say he is also your Scientific Adviser: do you spend any money for experiments in the course of the year?—Very little, Sir; we do not spend quite as much money as we should like, as we have not been able to get the necessary funds on one or two occasions.

Experiments:

1411. Have you made application to the Board of Trade for funds to be used for the purpose of experiment?—Well, lately we did so; it was not a very large amount, but we did, and we were unsuccessful.

1412. Perhaps you would put in a report of the amount spent on experiments between 1901 and 1906?—Yes, Sir.

1413. Describing at the same time the nature of the experiments?—Yes, Sir.*

1414. You have nothing more to say with regard to the duties of the Engineer?—I do not think so.

Official Establishment: Accountant's duties.

1415. Let us come now to the Accountant?—The Accountant is also cashier; I do not know that it is necessary to go in great detail into his duties, as they practically extend to attending to all details of finance, from the preparation of the estimates to the rendering of the quarterly accounts to the Board of Trade. From the nature of the service, the amount of detail to be dealt with, and the number of accounts and payments, are very large, and the constant fluctuations of the scale of salaries, and so on, occasion much work and demand extreme accuracy. I may say that he has two clerks in his department.

1416. Out of the five?—Out of the five, one of whom is called the Examiner of Accounts.

1417. The other three are attached to the Secretary's Department?—No; one is attached to the Superintendent, and only two to the Secretary.

Superintendent's duties.

1418. The Superintendent and assistant, what are their duties?—The Superintendent has the actual supervision of the whole outdoor service. He has to visit and inspect lighthouses, the lightship, beacons, well, not beacons and buoys so much—that is more left to the masters of the steam tenders—but the gasworks, storehouses, and so on; he has to satisfy himself of the efficiency of every employé in the service away from headquarters, and to check the station books and returns to see that they are kept properly; he also arranges for the supply of all stores, and for the execution of almost all repairs, and he supplies all the details for the estimates under these two heads.

1419. Does he report to the Secretary?—Yes, Sir, on every station he visits. When I say "he," I mean the Superintendent and his assistant, because they work conjointly; they have very much the same powers; every station visited by them is reported upon.

1420. Do they visit every station in the course of the year?—Every station twice in the course of the year.

1421. In the steamboats belonging to the Board?—Yes, Sir, they go round with the stores and oil, and they send in a written report to the Secretary on printed forms, in which they deal with the lightkeepers, their families, their health, the state of the buildings, the state of the machinery, all repairs ordered, all repairs necessary next year, and add general remarks if necessary.

1422. And does the Secretary in his turn submit that report to the Board, or such parts as he thinks of

* See Appendix B., V.

importance?—Unless there is something outstanding, the Secretary merely notes anything for discussion with the Superintendents when they return, but very seldom anything in these reports is submitted to the Board. Anything of sufficient importance to submit to the Board would probably be embodied in a special report.

District Superintendents' duties.

1423. Then as to the district superintendents, how are their duties distinguished from the duties of the Superintendent and his assistant?—Well, they are mechanical engineers really; their duties are entirely confined to machinery almost. The service is divided into three districts; each is in charge of one district superintendent, who is attended by a hired mechanic, or two sometimes for heavy stations. They go away in April, and they are generally away for eight months visiting every station in the service. They do everything about the light-rooms, examine the domes, test the lightning conductors, overhaul all revolving machinery, examine and repair all the lamps, overhaul all the fog-signal machinery, and so on. They actually open up, and examine every bit of machinery in the service annually, and every necessary repair is carried out by them.

1424. It is their business to see that everything is in good order?—Everything in perfect order. They also report on the condition of the station generally, and on the manner in which the light-keepers perform their duties.

1425. They report to the Secretary also?—Yes. They have various other duties, but these are really their important duties. Any repairs which they find necessary for the ensuing year they take a note of, and on their return to Edinburgh they make all the necessary drawings and specifications, and superintend the making of small parts which may be needed for their next year's work. I may say, Sir, that they also do all the testing of oil when they are in Edinburgh.

1426. Now, supposing that during the four months when they are in Edinburgh some important repair was called for, they would visit the lighthouse where the repair was needed before anything was done?—They would go and make the repair.

1427. They would go and make the repair themselves with their mechanic?—They would, if necessary.

1428. So that they would always be ready to leave at a moment's notice?—At a moment's notice. I may say, however, that in six years I do not remember a case of such a breakdown in the service either in a light-room or in fog-signal engines as has necessitated the departure of a district superintendent to effect repairs.

1429. Their duties are so efficiently performed during the eight months when they are on inspection work that for the other four months nothing requires to be done?—It does not, that is my actual experience. In fact, in six years there has been no failure of a light or fog-signal on account of breakdown of machinery. There have been one or two cases, such as an air-pipe fractured in an extremely hard frost; I do not include things like that.

1430. The lighthouse keeper under such circumstances would at once telegraph?—At once.

1431. And one of these district superintendents would immediately go off with his staff to repair the damage?—Yes, Sir, if it was necessary and he was available.

Buoys and Beacons: Maintenance of,

1432. Have the district superintendents nothing to do with buoys and beacons?—No, nothing, Sir, except to a certain extent with the gas buoys, that is to say with the flashing apparatus, and the gasworks. They overhaul the gasworks and the retorts and the compressing engines, they overhaul them.

1433. Whose duty is it to look after the buoys and beacons?—The actual maintenance of the buoys and beacons is in the hands of the masters of the steam tenders in the respective localities. They are responsible for the buoys being maintained in proper position and in efficient repair, scraped, painted, sufficiently moored, and so on; they are solely responsible in this sense, that they have to do the work, but an account is kept of how every buoy is dealt with. They are in fact buoy masters for their districts.

1434. We shall ask you to put in a statement in detail of the establishment and scale of salaries, please.—Yes, Sir

Mr. C. D. Peddie.

20 Nov. 1906.

1435. Now as to the area of administration and the seamarks within it, what is the length of the coast-line?—According to the report of the Royal Commission in 1861 the coast-line of Scotland and the Isle of Man is 4,557 miles.

Extent of Jurisdiction of Northern Lighthouse Board.

1436. A great part of that consists in sea lochs penetrating far into the interior?—Part of it, but the Engineer has made up a statement of the coast-line which the Commissioners light, or might reasonably be called upon to light, and that amounts to 2,275 miles.

1437. That is leaving out these long indentations?—That is excluding lochs and estuaries, and so on, and places like the Clyde and the Tay, which are under local authorities.

Seamarks: Number of, in Scotland.

1438. Can you give us particulars of the seamarks and signals?—On that coast-line we now have 355 general seamarks and signals, of which 163 are lighted and 37 are fog-signals. The fog-signals do not include belled and whistling buoys, of which there are seven.

1439. What is the number of lighthouses?—There are 80 lighthouses; that is, fully-equipped lighthouses. There are 27 what are called "minor" lights, which are classed as unwatched, but which are attended by local residents, who are paid a small sum a year to visit them every four days, clean the lenses and lantern panes, and so on. They are called "minor" lights to distinguish them from the lighted beacons and buoys which are unattended except by the steam tenders which supply them with gas. There is one lightship, 55 lighted and 155 unlighted beacons and buoys and 37 fog-signals.

Lighthouses: Classification of,

1440. Would you describe to us the different classes of lighthouses? You class those according to their situation, do you not?—Yes, Sir.

1441. Mainland lighthouses, rock lighthouses, and island lighthouses?—The mainland lighthouses might more appropriately be called land or shore lighthouses, because they include stations on large islands as well as the mainland.

1442. A lighthouse on the Isle of Skye would be a land lighthouse?—That would be a land lighthouse. Of land lighthouses there are 45; of rock lighthouses, where the men have to be relieved at stated intervals and their families do not live with them on the rock, there are 12; of islands which are specially attended by boat, but where the families live on the island but there are no other inhabitants, there are 21, with 23 stations.

Lightkeepers: Number of, at each station.

1443. What is the usual complement of keepers at these different classes of lighthouses?—At an ordinary light station without a fog-signal, two; with a fog-signal, three; at a rock station, as a rule, four; three on the rock and one ashore; and at an island station—well, an island station is the same as a land station as far as complement is concerned—that is, there are generally two men, and if there is a fog-signal there are three.

Relief of, at rock stations.

1444. At a rock station, how long does each keeper serve before being relieved?—As a rule, six weeks on and two weeks off. There are exceptions where the towers are so near the shore that we only have two men on and one off, in which case they are on for four weeks and off for a fortnight.

Employment of rock lightkeepers while on shore.

1445. When a man is off is he given any sort of employment?—No, nothing, Sir, as a rule, except to look after the shore station. In ordinary circumstances there is nothing else for him to do, because the situation of the store stations is so out of the way that there is no work for them. The only exception of any importance is at Granton, where the keepers from the Bass are given a certain amount of work in the store. That is the only place where we have any work for them to do. There is another small exception up at Stromness, where the keeper ashore has to go off to an unwatched light and put it right if there is anything wrong.

1446. Speaking generally, a man may dispose of his own time?—Yes, except that he must be at or near the shore station day and night; he must not leave the shore station without leave. He has to look out for signals from the rock twice daily in most cases.

Number of, at each station.

1447. The shore station is the relief cottage?—The family dwellings are on shore. We supply family dwellings in every case for rock lighthouses. With reference to island stations, I should say that in some cases there are three men instead of two. That is merely from the great isolation of some of the stations.

Mr. C. D. Peddie.
20 Nov. 1906.

At ordinary gas stations we have only one keeper. We have nine of these stations now which a few years ago were fully manned stations, with two men, but since we have used compressed oil gas we have done away with one keeper. The stations are supplied with compressed gas from the Commissioners' own gasworks by the steam tenders. The light does not need to be constantly watched at night. It burns in an incandescent mantle. In the event of anything going wrong there is an alarm which rings down to the light-keeper's room. As a matter of fact, they have not gone wrong in our experience; we have had no trouble with them at all. That has effected a saving of £100 a year at each station on an average for a capital expenditure of from £500 to £350.

Lighthouses: Number of gas stations.

1448. How many gas stations are there?—Nine. Of course, such a system is not adapted for any but, I might say, stations in narrow waters. They are mostly on the West coast. Four are at the entrance to harbours of refuge—one at Loch Indaal, in Islay, one on Holy Island, Arran, another at Loch Ryan, near Stranraer, and one at Cromarty. The Commissioners have practically exhausted all the possibilities now in that line.

Isle of May, electric station.

1449. You mentioned an electric light station?—Yes, there is one electric light and fog-signal station on the Isle of May. That needs a much bigger staff of men. There are seven men there, one of whom, however, is taken up almost entirely in looking after a horse for carting coals, water, provisions, stores, etc.; he has a special appointment. There are five regular keepers and an engineer in charge.

1450. That is the most powerful light under your control?—It is one of the most powerful lights in the world. It is infinitely the most powerful light under our control; its power is measured in millions, while that of others is measured in thousands of candles.

1451. That, of course, is worked by steam-power?—Yes, by steam-power. We have two steam engines for the electric light, and one for the fog-signal, which is a siren.

1452. That is one of the reasons why you require so many men?—Partly that and partly from the configuration of the island. The engine-houses are at some distance from the lighthouse tower. Two men take the ordinary watches in the lighthouse tower, and three men take the watches in the engine-room. During the long winter days and in fog the work is heavy, especially as steam has to be kept up day and night.

Fog-signals: Number of,

1453. How many fog-signals are under the control of the Board?—Apart from sounding buoys, 37. I may say that the numbers I am giving include works in progress; not proposed works, but works which are actually in course of execution.

1454. Works which have been sanctioned?—And are approaching completion. The fog-signals number 37, 31 of which are sirens, one is a reed, and the other five are explosive signals.

Congested Districts Boards: Lights of,

1455. You have already, I think, dealt with the question of minor lights, but I see some of these minor lights are maintained for the Congested Districts Board?—Yes, Sir. In 1891 a Highlands and Islands Commission recommended that certain lights should be provided, especially on the west coast of Scotland and Shetland. They were considered too local to be made a charge on the General Lighthouse Fund, but by arrangement the Commissioners undertook their erection and maintenance out of monies voted by Parliament.

1456. You charge cost price for them to the Congested Districts Board?—Yes; for the actual erection we charge cost price; for maintenance we charge cost price, and a sum for each light for management expenses. In 1897 the cost of maintenance was transferred to the Congested Districts Board, with whom we now deal, but in all respects we deal with these lights exactly as our own, except——

1457. (*Sir Frank Adam.*) That they cost you nothing?—They cost us nothing but time and trouble. Accounts are rendered to the Board of Trade in the ordinary way, but the Board of Trade recover the money from the Congested Districts Board.

Seamarks: Average cost of maintenance of,

1458. (*Chairman.*) Will you tell us the approximate cost of maintenance of the fog-signal stations and minor lights? We should like on this subject to get as much detail as possible.—I can put in a detailed statement, but I have made out some averages.

1459. Could you give us the averages you have made out?—They are arrived at by taking, say, five typical stations in each class and giving the average of ordinary maintenance for five years. Land stations without a fog-signal, £285; land stations with a fog-signal, about £450; an island station with a special attending boat, £310; a gas station with one man, £170; rock stations it is extremely difficult to give an average for, but taking all the rock stations in the service, and including three explosive fog-signals and five attending boats, for the whole of them the average comes out at £680. If the fog-signals and the boats are not taken into account the maintenance is about £600.

1460. Will you put in that statement and show how it is arrived at, with an enumeration of the different seamarks?—I will put in a statement. The Isle of May costs £1,130.

1461. That has to be taken by itself owing to exceptional nature of it?—Entirely alone. I may say, Sir, that the expense of maintenance generally may appear large, but the difficulties of maintenance are so great that it is not really excessive. Most of the stations are extremely remote, and I may say that out of 24 lighthouses on the mainland of Scotland—there are only 24—two are 50 miles from a railway, and others are from 25 miles to 10 miles. They are almost inaccessible, some of them, at certain times in the year.

1462. (*Sir Frank Adam.*) That is from the sea?—From the sea or land. In the case of land stations like Cape Wrath and Stoer Head the chances are you would not in winter get to the station and away from it by land within, say, a week or ten days. In the case of any breakdown or other emergency it is impossible to send any relief.

1463. (*Chairman.*) What is your system of supplying these various stations with stores?—Perhaps I might just say about the rocks, in connection with difficulties of access, that four of them are over 10 miles, one is 20 miles, and one 40 miles from the nearest land. With regard to fog-signals, the actual cost of attaching a fog-signal to an existing station, which in the ordinary case means an additional keeper and dwelling, may be put down at £160 a year, not counting interest on the first cost of the work. That is a siren signal, a first-class siren. A minor light costs annually from £25 to £40, varying with the distance that the attendant happens to be from the light. In cases where the distance is small, his pay would be £15 a year; in others, where the distance is three or four miles, £25 to £30 a year.

Attendance on minor lights.

1464. How often do these minor lights require attention?—The keeper every night at darkening has to go and observe the light from the nearest convenient point, see if it is burning, and if everything is not right he goes and makes it so. He generally visits it twice a week, but once every four days he must go according to the rules of the Service. The newer minor lights burn acetylene gas; they require less attention than others. We find no difficulty in getting an ordinary fisherman or crofter to attend to an acetylene light after two or three days' instruction. It is a much brighter light and much cleaner.

1465. Now we come to the question of stores?—Perhaps I might say a word about supervision and inspection.

Inspection Scotch Seamarks.

1466. I thought we had practically dealt with that, unless you have anything you have not already told us?—I may just add that the Engineer makes a quinquennial inspection of the lighthouses and reports on them to the Board. Of course he visits the lighthouses oftener if required. And the Superintendent, apart from the fact that he and his assistant visit every lighthouse twice in the year, makes surprise visits, especially in winter, to stations that can possibly be approached at night. With regard to stores, to take oil first, it is entirely Scotch oil that we burn. We get tenders from all the Scotch companies, which are four in number at present.

Stores: Oil.

1467. Is that out of economy or patriotism?—Out of economy in the first place; in any case, it is an oil which suits us perfectly, and as far as I know it is cheaper than any other oil. The price in the estimates just now is only 5d. a gallon, and we have paid less than that recently. We get tenders, and the companies send in samples which are tested very carefully by the district superintendents for their different constituents and burning qualities by analysis for fractional distillation, and so on. A report is made to the Finance Committee,

which reports to the Board, and it decides which offer is to be accepted, and then, as in all cases, the sanction of the Board of Trade is obtained to the acceptance.

1468. Is the oil delivered straight from the contractors to the lighthouses?—No; we order oil as it is required, it may be in consignments of from 20 to 25 thousand gallons, and the storekeeper at Granton attends at the works to see the barrels filled. He takes away a sample, which is again tested, and the oil is then delivered alongside our steamboats at Granton, Oban, or Ardrossan, wherever it may be wanted, and it is delivered by them at the stations. The oil is not only placed above high-water mark at the stations, but in almost every case is taken up and emptied into the cisterns by the seamen.

1469. It is not placed in the storehouse belonging to the Commissioners first of all and then taken from there; it is delivered by the steamboats from the contractor?—Yes. It is sometimes delivered by the steamer to a store when the station is distant, and it has to be carted, but almost invariably it is delivered by the contractor alongside our steamboats. There may be an exception when perhaps from something unforeseen—the inability of a vessel to land its cargo—the oil is sent by rail, but that is the ordinary system.

House coal.

1470. What is the method of contract for delivering house coal?—For house coal we get tenders, as we do for everything practically. The lightkeepers are allowed so much a year: of Scotch coal, principal keepers 10 tons, assistants 8 tons; English coal, 8 tons to a principal, 6 tons to an assistant. Offers for the supply of the coal are reported upon by the Finance Committee and submitted to the Board. In all cases the contract is if possible to deliver the coal at the lighthouse. In some cases it is at the nearest railway station or the nearest public landing stage.

1471. But if possible you get the coal landed by the contractors?—Yes; it sometimes has to be carted to the station by the Commissioners, and except in a few cases they have to take the coal off to islands or to the rocks in boats after it has been landed at or near the shore station by the contractor.

1472. Do you advertise for tenders?—I am not quite sure, Sir; I would not be certain whether that is one of the advertised tenders or not. In any case it is known perfectly well when we are in the market, and we never refuse a schedule to anyone who asks for it, but I am not prepared to say off hand whether we advertise or not.

General stores.

1473. Then as to the general stores?—The stores are arranged for by the superintendent and his assistant when they are at the stations. They check all stocks in hand, then compare what the light-keeper has in his requisition with what he has in hand, and with what he got last year, and after carefully adjusting details, all the requirements of the different stations are tabulated in the office, and the estimates are based on the summaries of the total quantities. They are then divided up under different heads, and offers are obtained. I may say there are about sixty different contracts in each year for different classes of store. These are all submitted to the Finance Committee and reported on, and in any case where the lowest offer is not accepted the reason of that is explained to the Board, and also to the Board of Trade in requesting their sanction. The stores are delivered very much as the oil is, entirely by the steam tenders; in fact, it is the only way possible to deliver things at most of the stations.

1474. (*Admiral Henderson.*) Do the contractors send stores to the nearest depôt?—They send them to Granton.

1475. They do not send them to a single depôt?—All stores, I mean all general stores under ordinary annual contracts, are sent to the Granton store—the distributing store at Granton. There they are examined and passed by the superintendent, and in any case where it is necessary tests are made or analyses obtained. Having been passed, they are allocated by the storekeeper to each lighthouse, they are then packed, and they are then delivered on board the steam tenders for distribution. That applies to all the stores in the service.

1476. By rail, or otherwise?—Invariably taken by steamers, but the West Coast stores are sent across country by rail and then put on board at Ardrossan or Oban.

1477. (*Chairman.*) You wish to say something as to the duty of the superintendents?—With reference to the system of effecting repairs at lighthouse stations, these are arranged for by the superintendents when at the stations, when they note all repairs that are likely to be required in the following year, and afterwards make the necessary drawings and specifications, and make the required provision in the estimates. When they are at the station again in the spring, they give the necessary instructions for these repairs being carried out. In many cases it is impossible to get artisans or tradesmen; and the light-keepers do a large proportion of the repairs. For unskilled work they are paid 3d. an hour, and for skilled work 4d.

Mr. C. D. Peddie. 20 Nov. 1906

Repairs: System of executing.

1478. In addition to their usual pay?—In addition to their usual pay. That does not include, I may say, painting; all painting inside and outside, all ordinary painting is done by the light-keepers without extra pay, except limewashing, for which they get a small allowance at each station, depending on the extent of the work. It may be of interest to say that in 1906-7, apart from lime washing, the sum entered in the estimates for ordinary repairs was about £1,500, and that covered all the ordinary repairs and upkeep of over 200 dwelling-houses, 80 towers, 26 engine houses, 10 minor lighthouses, besides offices, oil cellars, boat houses, etc., 50 miles of road, many miles of wall and fences, and over 50 slips and boat landings. Machinery and apparatus are not included.

1479. Was the sum expended in that year exceptionally low?—No, Sir, that is just an ordinary average; in fact, the ordinary repairs are kept as much as possible at the same figure. When they are all priced out, and they are found to be in excess, they are gone carefully over, and, if possible, reduced; so that every year they are kept as nearly as possible at the same figure. That does not include, of course, special repairs such as extensive additions or improvements—for instance, building additional houses.

1480. Or an additional room to a cottage?—Or converting two houses into one; no, these would be called special repairs. In fact, any addition or improvement—not ordinary upkeep—say, over £30 is generally treated as a special repair; but a great many of the special repairs are really improvements, which as a matter of fact repay themselves in a short time owing to reduced expenditure on maintenance. Additional houses, and important special repairs on existing buildings, are as a rule arranged for by the Engineer, and carried out by him. With reference to repairs on machinery; as I said, the district superintendents arrange for all that.

Special repairs.

1481. I think you have told us of that already?—Yes, Sir, except for special repairs. Any important additions to or alterations of the machinery and lighting apparatus, and so on, are arranged for by the Engineer—that is to say, no alteration of importance is made with the Engineer. The work is generally carried out by the district superintendents and their mechanics.

1482. If the district superintendents considered that a repair of that magnitude was desirable, they would report to the Engineer or to you?—They would formally report to the Secretary in the first place; but the Commissioners decided whether these special repairs are to be carried out or not, on the advice of the Engineer.

Lightkeepers: Admission of,

1483. Now, as to light-keepers, how are they selected and appointed?—There are 204 of them. They have almost all been mechanics or tradesmen or sailors. When they apply to get into the service they are given printed questions to answer, and after having been interviewed by the Secretary or the superintendents, and found to be apparently suitable, they are put on a list which is called the candidates' list. Once a year, as a rule, we call up a certain number for examination in Edinburgh—an examination in general knowledge, which is not very stringent, and a very stringent examination by the Commissioners' medical officer. If they pass these examinations, they are sent away for training for three months each—probably about 15 or 20 of them—for six weeks at each of two stations, when they are boarded and lodged, but get no pay. If they are favourably reported on by the principal keepers at these stations they are put on the Expectants' list, and they then await their turn for appointment. But in the meantime they get no pay or allowance of any kind, and they may wait for two years; in fact, they generally wait for 18 months or two years. They go back to their trades. When vacancies

Mr. C. D. Peddie.

29 Nov. 1906.

occur they receive their appointments and they are insured.

1484. Is the post much sought after?—Yes, there are at the present moment, about 100 names on the candidates' list, and 14 on the expectants' list. No candidates have been examined this year; we do not need them; but we have 100 waiting.

Payment of,

1485. What sort of pay do the lighthouse keepers receive?—It is exactly the same scale in the three Lighthouse Services. I have the rates of pay here; I can put in a statement of the pay and allowances.

1486. I think it just as well they should be put in, but perhaps you might give us a short oral statement as well?—The scale is contained in the Instructions to Light-keepers, page 42. On appointment, assistant keepers get 3s. a day, that is to say, £54 15s. per annum; after five years' service, 3s. 2d. per day, that is £57 15s. 10d. per annum; after 10 years' service 3s. 4d. per day, that is, £60 16s. 8d. per annum, and after 15 years' service 3s. 6d. per day, or £63 17s. 6d. per annum. The principal light-keepers, on appointment—that is after promotion from assistant light-keeper—3s. 9d. per day, that is, £68 8s. 9d. per annum; after five years' service, 3s. 11d. per day, that is £71 9s. 7d. per annum, and after 10 years' service, 4s. 2d. per day, or £76 0s. 10d. per annum. There is a rather cryptic observation at the end, "From these rates a deduction, at the rate of 6½d. per day (equal to £9 17s. 8d. per annum), will be made in respect of land, which will be settled with the usual adjustments at Whitsunday annually." Originally, there was a certain amount of land attached to each light-house station, not only gardens, but agricultural ground, and that was valued at £10 for each station. At stations where there is no such ground, or if it is of little value, the men get money, and, as matter of fact, there is no station in the service now where the whole sum of £10 is charged to the keepers for land. It is not worth it; the rent varies from £5 down to £2.

1487. That is taken into consideration?—That is taken into consideration, and the pay adjusted accordingly.

1488. What allowances are made in addition to wages?—At fog-signal stations assistants get 2d. per day, equal to £3 0s. 10d. per annum.

1489. That is extra pay?—Yes. Principals get 3d. per day, that is, £4 11s. 3d. per annum. At gas or electric stations the assistants get 4d. per day, and the principals get 5d. per day, that is £6 1s. 8d and £7 12s. 1d. per annum respectively. At explosive fog-signal stations each keeper gets 1d. per hour while the signal is actually sounding, that is to say, each keeper actually at the station.

1490. A record of that is kept?—Yes, Sir.

1491. (*Sir Frank Adam.*) By whom?—By the light keepers. But we can tell from the consumption of explosives exactly how long they have been sounding. The principal keepers at rock stations receive £7 10s., and assistant keepers £5 per annum. Then there are special allowances at certain stations.

1492. (*Chairman.*) As you are going to put in a detailed statement, it is perhaps hardly necessary to go all through that. But, broadly speaking, in addition to the pay which you have now described, are there any considerable allowances?—Well, there are special

Allowances of,

allowances at four exceptionally isolated stations, there is £3 for garden, or, rather, in lieu of garden, where there is none at a station; £3 annually for insurance and then the keepers on rocks are rationed by the Commissioners in addition to their pay.

1493. What does that cover; does that cover their entire maintenance?—Everything, Sir, at 1s. 9d. per day. We do not give them the money; we give everything in kind throughout the service. We do that both on the steamers and on the rocks, because the Commissioners' experience is that they can get infinitely better food for the keepers and crews than the keepers and crews can for themselves.

1494. At those out of the way stations?—Yes, and they are also apt to stint themselves for the sake of their families.

1495. (*Admiral Henderson.*) You pay them 1s. 9d. a day?—No, we give it in kind; on the steamers 6d. of it is in money.

Superannuation of,

1496. (*Chairman.*) Are they pensioned after a certain number of years' service?—Yes, Sir, at 60 any keeper may retire; at 65 he must retire, and they are pensioned at the Civil Service scale under the Superannuation Acts. They may retire earlier on a doctor's certificate, in which case they get a commuted pension.

1497. As to efficiency and discipline, have you any observations to make?—Well, Sir, the discipline in the service is extremely good. There is seldom complaint of any kind, drunkenness, for instance, being practically unknown; at any rate, for many years. I may say in the six years I have been in the service there have only been two reports of a revolving light being stationary or of an extinguished or impaired light. The stationary light was reported by a Commissioner who happened to be passing at night, and inquiry proved that the keeper on watch was not to blame; and the impaired light was reported by the principal light-keeper. Take it all over, I can safely say the discipline is as high as it possibly can be.

High standard of discipline among,

1498. Have you a class of occasional light-keepers?—Yes, Sir, at practically every station in the Service there is an occasional light-keeper, who is one of the inhabitants of the district. He is trained in light-room duty; and in cases of emergency, holidays, and so on, he is called in to do duty. These men are paid from 3s. to 5s. a day—3s. 6d. is a fair average—with their board and lodging.

Occasional light-keepers.

1499. When they are actually employed?—When they are actually employed; they get nothing when they are not actually employed, but they are guaranteed twenty days' employment in the year. As matter of fact, it is the only way to maintain a great many of the lighthouses in emergencies, because they are, as I have said, almost inaccessible at certain seasons.

1500. Do you know if that system is followed by the other Lighthouse Authorities?—I think it is in the Irish, but not in the English service. I understand the Trinity House have supernumeraries that they send from headquarters. Whenever an occasional keeper has to be called in, it is at once reported to headquarters with the reason.

1501. I think you have already spoken on the subject of the attendants on minor lights, have you not?—Yes, Sir.

1502. What have you to say about attending boats?—There are 33 stations which are regularly attended either by the Commissioners' steam tenders or by special boats. Twelve of these are rocks and 21 are island. They relieve the keepers, deliver mails, provisions, coal and water. A great many of our stations have to have water carried to them; all the Firth of Forth stations, for instance. Even on the Isle of May, a large island, they have no drinkable water; that has all to be conveyed to them, sufficient for six or seven families.

Boats: Employed by Northern Lighthouse Board.

1503. Is there no water on the Bass?—No drinkable water. We were warned against it. As a matter of fact, the contractor's men who were there for nearly three years drank it and suffered not at all, but a bacteriological examination disclosed facts which rendered it necessary for the lightkeepers to avoid it, except for cleaning purposes. Then tenders attend 13 of these stations, boats 21, two of them being attended by both tender and boat. Only seven of the boatmen are covenanted servants of the Commissioners, wear uniform, and are entitled to superannuation. Seven of the others are paid a salary, and the boats belong to the Commissioners. In eight cases neither the men nor the boats belong to the service of the Commissioners.

1504. Have you a general arrangement with those boats?—Yes, Sir, we pay a stated rate per trip in one or two cases; in all other cases a salary, fixed according to the circumstances of each station.

1505. You have only one lightship, I think?—Yes, we have only one lightship, which is moored off the East Neuk of Fife, in the Firth of Forth, about 7 miles from the Isle of May. She was established in 1887.

Lightvessel:

1506. What is the complement of officers and crew?—All told there are two officers and nine of a crew; one officer and six men being on board at a time, and one officer and three men on shore.

Crew of,

1507. Do they have any duties while on shore?—Yes, Sir, they work in the buoy yard at Granton.

1508. That is the case you mentioned before?—Yes, at the chipping and painting of buoys, preparing moorings, etc.

1509. What is the approximate cost of the maintenance of this lightship?—For the last seven years the cost of maintenance including one overhaul—she is brought in every seven years for overhaul—has been £1,410.

Cost of maintenance of,

1510. (*Sir Frank Adam.*) Altogether?—Annually.

1511. Annually?—Without that overhaul it is £1,277.

1512. (*Chairman.*) Have you a reserve lightship?—No, Sir, we have not.

1513. What do you do?—When she was first laid down it was thought necessary to tow a lightship from the Thames to take her place when she was brought in, but now we hire a trawler; we equip her with a light—it is a fixed light, so that there is no difficulty about that—and with a fog-signal as nearly as possible the same as the signal on board. As it is in the summer months she is quite able to ride at the station.

1514. You have found that sufficient provision?—Quite, sir. There have been no complaints of any kind; it only happens once in seven years for a short time. The overhaul is carried out under the supervision of the Board of Trade officer for the East Coast of Scotland. Nothing is done which is not authorised by him.

Buoys and Beacons: Number of, in Scotland.

1515. I think you have already dealt with buoys and beacons; is there anything additional that you wish to say on that subject?—Well, Sir, perhaps I might give the number of lighted buoys and beacons; the gas service has extended greatly within the last few years.

1516. We shall ask for a statement of that in detail; perhaps you might also give it us?—There are 210 buoys and beacons in the service now, 78 beacons and 132 buoys. Of the beacons there are 23 lighted, and of the buoys there are 32 lighted, and I may say included among these buoys are the unmanned gas-light vessels to which I referred before. As regards the position of the buoys, when they are laid down for the first time the Board is advised by their Engineer, who takes the advice, if necessary, of the officers of the steam tenders in the locality, and also of masters of vessels navigating the locality. The responsibility for maintaining them in position is, as I have said, on the masters of the steam tenders, and their crews attend to them in the way of scraping and painting and overhauling, and so on.

Maintenance of,

Cost of,

1517. Have you made out the average cost of each buoy and beacon?—I could hardly do that; I could give the average cost of the lighted buoys and beacons, but further comparison is impracticable, because they vary from 10ft. steel buoys down to 5ft. or 6ft. wooden buoys.

Gas: Extent of employment of,

1518. But as to the cost of the gas?—Gassing has now become a very large business. Next year we expect to make nearly 700,000 cubic feet of gas, and that will be priced in the estimates at about 15s. 6d. per thousand cubic feet. That includes everything to do with the gasworks, the salaries, repairs, coke, oil, rent, and so on. The gas is made at three gasworks belonging to the Commissioners, one at Granton, one at Stromness in Orkney, and the other at Oban; and it is delivered to the different seamarks by three of the steam tenders which are equipped for the purpose, one in the Forth, one at Orkney, and one at Oban.

1519. Are the gas men servants of the Board?—Yes, Sir, they are permanent servants. They wear uniform, and they are entitled to superannuation. There are two regular gas men, one at Granton and one at Oban, and they are paid thirty shillings a week, with uniform and a right to superannuation. The gas maker at Stromness is also keeper of the store and pier there, and his wages are not allocated as far as the gas is concerned. He is paid £72 a year, with uniform and a house.

Steamvessels: Description of.

1520. Then I think we come to the steam tenders. Will you give us the number and description of those?—There are four steam tenders in the service now—two stationed at Granton, one at Stromness, and one at Oban. The two at Granton are the "Pharos," which was built in 1874; she is a paddle boat, 524 gross tonnage, 241 tons net, and 1,200 indicated horse power; and the "May," built in 1899; she is 242 gross tonnage, 70 tons net, and 500 indicated horse power; she is equipped and used almost entirely for gassing. The "Pole Star" is a twin screw, built in 1892, 460 gross tonnage, 197 tons net, and 1,150 horse power; and the "Hesperus" is a twin screw, built in 1896, 583 gross tonnage, 189 tons net, and 1,100 indicated horse power.

1521. Which of these vessels is used by the Committee of Inspection?—The "Pharos," Sir; she is the only one that has any considerable accommodation. She has seven cabins.

1522. Can you let the Commission see the logs of these steamers with particulars of cargoes as far as possible for a given period, say from the 1st January to 1st October of this year?—Yes, Sir.

1523. The original log will do; it need not be copied out.—The logs are copied and sent to the office.

1524. Then if you will send a copy of it that will be sufficient. It is suggested that you should put in a statement of the complements, ratings, and pay; that I think we might have?—Yes, Sir. May I just be allowed to say, as far as the overhaul of the steam tenders is concerned, that also is done entirely under the superintendence of the Board of Trade. A specification is prepared by the Superintendent, along with the officers, and that is submitted to the Board of Trade Surveyor for the East coast or the West coast of Scotland, as the case may be, and he decides finally what is, and what is not, to be done, and no addition is made to the work without his written order after that specification is once adjusted.

Storehouses: Granton.

1525. Now we come to the question of store houses. You have a distributing store for the whole service at Granton?—Yes, Sir, the stores are all sent there, except oil and, of course, coal; they are all packed and distributed.

1526. Are oil and coal as far as possible sent straight to their destination?—Not oil; the oil is sent straight to the steamers.

1527. Exactly, and the coal to its destination?—It is purely a distributing store at Granton; there are no large stocks kept of any kind. There is a small stock of paints, wicks, lamp glasses, and things of that kind, but we do not keep any large stocks.

1528. What does the staff consist of?—The staff consists of one store-keeper, two assistants, and a boy clerk. The store-keeper is paid £110, rising by £5 to £125 a year, with a house. At present one of the assistants receives £90 and the other £78 per annum; in future appointments the pay in both cases will be 25s. a week, rising by a shilling a week to 30s. a week. I may say that these assistants are also trained lighthouse keepers, and do occasional work for some of the stations in the Firth of Forth. One of them is also a trained gas maker, and can undertake the work in Granton gas works.

1529. For this purpose they may be regarded as emergency men?—They are, so far as lighthouses and gas-making are concerned.

1530. Will you give us the approximate cost of the Granton distributing store for this year?—For this year, £758. That includes £150 for rent of the store and about £160 for freight and carriage, and so on, which is really apart from the store.

1531. This store includes buoy yard?—Yes, buoy yard, but no coal store. The coals at Granton are brought alongside straight from the pit.

1532. Ship's stores are also provided from the distributing store?—Yes, Sir.

Stromness and Oban.

1533. At Stromness you have another store, and at Oban?—Really a steamer depôt at Stromness. There are a pier and a buoy store, and a coal store, and a ship's store, and a gaswork at Stromness. But there again there are no stores kept except ship's stores for the year, and a reserve of coal. At Oban the pier and stores are under construction. They are not in working order yet.

1534. Was Stromness chosen for the convenience of situations?—Yes. The "Pole Star" has to relieve, for instance, the Sule Skerry Rock, which is 40 miles due west of Orkney. That is one of her chief duties in winter; and in various other ways Stromness is much the most suitable place for the northern work of the service.

1535. The storehouse at Oban is still under construction?—Yes, Sir.

1536. That was sanctioned a few years ago?—Yes, three years I think.

1537. I think there only remains the question of the supervision of local authorities; you have dealt with all the other subjects?—The Head Office was not included in the establishment; do you wish that included?

Head Office Establishment.

1538. Oh, yes, I should like to have that put in. It is a separate abstract in the estimates. The building belongs to the Commissioners. There is only one house officer, and no messenger. The house officer does all the work and acts as messenger.

Mr. C. D. Peddie.
20 Nov. 1906.

1539. That might be included in the statement of salaries?—Yes, Sir. As far as the supervision of local authorities is concerned, I think I have said practically all there is to be said. When any authority desires either to establish a new light, or alter an existing one, they apply to the Commissioners for sanction. That is invariably brought before the Board, and, if necessary, remitted to the Engineer for report. A decision is then come to by the Board.

Local lights: Control of Northern Lighthouse Board over,

1540. You have nothing to add to what you have already told us?—I think not, Sir.

1541. (*Colonel Herbert.*) With regard to that particular question of local lights, I think I would like to ask a question with reference to this letter which came to us. (*Letter shown to Witness.*) The Commissioners have control over local lights, I understand?—Yes, Sir.

1542. The cost of the general lights, I understand, would be on the General Lighthouse Fund, and of the local lights, how would that be?—The Commissioners are not concerned at all with the cost of the local lights; the funds are local funds.

1543. I understood you to say that in some cases they are not actually under local bodies; in some cases the lights are under local bodies, and are established by local bodies; in other cases it rests with you to establish them. Then I suppose you would have to make provision for them?—What we call purely local lights have never been established by the Commissioners at the cost of the General Lighthouse Fund. There are certain lights erected and maintained by the Commissioners out of money supplied by the Scottish Congested Districts Board.

1544. Perhaps you might look at that (*showing letter to Witness*)? A case of that kind, where a grievance is felt with regard to the necessity for a local light, how would that be dealt with?—I know about this case; this came before the Board. The Commissioners decided that it was too local for them to undertake. It was pressed upon the Commissioners on account of its being useful as a harbour of refuge, but they came to the conclusion that the loch was not really suitable for a general harbour of refuge. That is the only case in which they can depart from their rule as to local lights, they will light the access to harbours of refuge. This was not a suitable harbour of refuge, and was not required. This is exactly the kind of case where the Congested Districts Board has stepped forward, and has supplied the funds.

1545. I see. Then a case of that sort, as I understand, is one purely for fishermen?—Entirely, I think.

Provision of, out of General Lighthouse Fund.

1546. You would not consider that that would come within your service?—The Commissioners have rather been driven to decide that seamarks purely for the convenience and safety of the fisheries are not within their province, because fishing boats pay no light dues, although the preamble of the 1786 Act which constituted the Commissioners, actually bore that it was for safeguarding navigation and the fisheries.

1547. With regard to that question of the interests involved, which is the fishing interest, I notice there is no representation of interests on your Board?—No direct representation, but the Sheriff of Aberdeen is a member of the Fishery Board for Scotland.

1548. You told the Chairman it was a local representation rather than a representation of interests?—I did not intend to express a definite opinion as to what it was; it is a question I should prefer you to ask the Commissioners, if possible. I did not mean to say it was a local repesentation.

1549. Has it ever been considered whether it would be desirable to have a representation of the shipping interests, and possibly of the fishing interests, on the Board?—Not formally, as far as I know, but certainly they have considered the advantages of having direct representation.

1550. And they have never come to any decision on that?—I think rather that the feeling is that it is impossible to have such direct representation as will safeguard the interests of everyone.

Northern Lighthouse Board: Responsibility of Secretary.

1551. Then, with regard to the functions of the different officers, I gather that practically all the administrative functions are centred in the Secretary?—I would hardly say that.

1552. Is not that so?—No, Sir, I think they are centred in the Board really.

1553. The Board is responsible?—Through the Secretary. It is marked what close attention the Commissioners devote to the work, and the interest they have in it, and the knowledge of its details. I will not say of them all, but there has been a continuity of Commissioners with great knowledge and keen interest in the work of the service, and they really do the administrative work.

1554. From what you said I gathered that the Secretary is practically a sort of inspector-general. He is responsible also for estimates, discipline, for the work of the steamers; all those different threads of administration go through his hands?—That is so, the threads certainly do. I should hardly like to say that the Secretary is entirely responsible for the steamers, or for the accounts and estimates, but he must take measures to see that the work of every department is properly performed.

1555. But all the threads go through your hands?—They do.

1556. I am not criticising, but what would happen supposing anything happened to the Secretary: Is there anyone who could take his place in an emergency?—At the present moment there certainly is, and I think, always would be.

1557. Who would that be?—The Superintendent, for instance, who acts for the Secretary in his absence. The Superintendent is perfectly qualified; in fact, in some ways much better qualified than I am, to see that the departments of the service are properly administered, as far as general management is concerned.

1558. But then he has not also got the special qualifications you have with regard to legal matters?—That is so. I take it that in no public department can a head permanent official go without being missed for a few days, but I have no doubt my place would very soon be filled, as it has been before. As far as the purely practical work of the service is concerned, that certainly could be carried on.

Constitution of,

1559. (*Mr. Ennis.*) The constitution of the Northern Lights differs very considerably in many respects from the constitution of the Elder Brethren of the Trinity House on the one hand, and the Irish Lights Commissioners on the other?—Yes, Sir.

1560. Your entire body, as far as I could gather from the evidence you have given us, consists of *ex-officio* members?—Entirely.

1561. Members who hold office as Commissioners of Northern Lights by reason of their holding office in some other capacity?—That is so.

Tenure of office of members.

1562. Can you give any information as to the general tenure of office of these various offices which carry with it membership of the Commissioners of the Northern Lights? For example, the Lord Advocate, the Solicitor-General for Scotland, I assume are political appointments which change with the Government; is that not so?—That is so, Sir.

1563. The Lord Provost of Edinburgh, the Lord Provost of Glasgow, the Lord Provost of Aberdeen, the Provosts of the Burghs?—They are all appointed for three years; they may be re-elected. For instance, the Provost of Leith, at the present time, is serving his third term. I think he has been on the Board for over seven years now.

1564. But, in any case, they are liable to change every three years?—That is so.

1565. Therefore, so far as the Lord Advocate and the Solicitor-General go, their tenure of office as Commissioners of Lights would terminate with the fall of the Government to which they belonged, and the provosts may terminate at the end of three years, or may be re-elected to the office they hold?—Yes.

1566. Well, now, with regard to bailies and sheriffs, and sheriffs-depute, who are a large number of members on the Board; how long does their term of office extend to?—Well, the bailies for one year; it may be repeated; it has on occasion been repeated, but not often.

1567. And the sheriffs?—The sheriffs for life, or until they resign or are promoted to the Bench in the Court of Session.

1568. Well, then, with regard to those members of the Northern Lights who are sheriff-depute of various parts of the country, they are practically members of the Northern Lights for life, except those that may be promoted to the Bench?—Yes, that is so.

1569. Well, how many of those, what may be called life-members, have you got?—Thirteen.

1570. And does that explain the reason why I notice here in your evidence also that your power as to the apointment of sheriffs has been exhausted; I think you made that statement?—Yes.

1571. That is that you have appointed all the sheriffs that it is possible to appoint?—Yes.

1572. The sheriffs must be sheriffs of maritime counties?—Yes, there is one debateable case; the Sheriff of Stirling might perhaps still be appointed. The Sheriff of Perth is the only one remaining.

1573. Practically, you have appointed all the sheriffs it is possible to appoint, but you have not by any means exhausted the provosts or chief magistrates?—No, Sir. I have not examined into it myself, but I believe there are about forty still.

1574. Do you believe the reason for the selection of the sheriff-depute, instead of provost or bailie, to have been chiefly that he would hold office longer, and be more a life-member of the Board. Is that the view that led to the appointment of sheriffs?—I do not know that the question of appointing the provosts of those Burghs has ever been considered.

1575. Because it has been put to you before that there are various interests affected by the question of lights on the coasts, and the larger towns and cities I assume would have a larger shipping community and maritime population than the counties?—Every large shipping town of the country, in fact every town with a port at all, is represented on the Board. The Royal and Parliamentary Burghs of which I spoke are small, and in many respects insignificant places; insignificant, that is, as far as the interests of general navigation are concerned.

1576. You consider that in the appointment of members of the Northern Lights Board the principle has been recognised that it is desirable that there should be a representation of large harbours and maritime towns on the Board?—That principle has been recognised. Since 1854 the Lord Provost of Dundee, the Provost of Greenock, and the Provost of Leith, have all been added as these places became more important.

1577. How is the appointment of sheriff-depute of a county in Scotland made; is it a Crown appointment?—It is a Crown appointment, not necessarily a political appointment, but a Crown appointment.

1578. In the same way I take it that the Lieutenant of a County is appointed in Ireland; you have no knowledge of that, but our Chairman would probably know?—A sheriff and his substitute combine the province of six or eight officials in England—High Sheriff, Recorder, County Court Judge, Coroner, Revising Barrister, etc.

1579. (*Sir Frank Adam.*) Everything but the High Court?—Very nearly. There are about 120 different Acts of Parliament dealing with the duties of Sheriffs.

1580. (*Mr. Ennis.*) As a matter of practice you have of your 25 Commissioners about 13 who are Commissioners for extended periods, and the remainder are what I may call a floating body, who change very frequently, the personnel of which changes very frequently?—Generally speaking, that is the case.

Attendance of members.

1581. You have promised to give us a return of the attendances of the various members of the Northern Lights?—Yes, Sir. May I ask, do you wish the personal attendances?

1582. (*Chairman.*) Oh, I think we ought to have the personal attendances as well?—Yes.

1583. (*Mr. Ennis.*) And I take it that as in other Boards also, you find in practice a few members of your body who are very energetic and active, and a large number who are not so?—Like every ex-officio unremunerated Board, that is so.

1584. Now, you have spoken of the Clyde lighthouses being governed by a special trust?—Yes, Sir.

Local Lighthouse Authorities: Clyde Authorities.

1585. Where do we obtain particulars of that special trust? Does that still hold good, or is the Clyde Trust one of the Acts that were repealed by the Merchant Shipping Act, 1854?—No, there are two lighting bodies in the Clyde; one is the Clyde Navigation Trust, which extends from Glasgow down to about Port Glasgow, and the other is the Clyde Lighthouses Trust, which administers the Firth of Clyde down to a line drawn across the Cumbraes. I may say Mr. Stevenson, our Engineer, is also their Engineer.

Mr. C. D. Peddie.

20 Nov. 1906.

1586. As the General Lighthouse Authority for Scotland you claim and exercise authority over all local Lighthouse Authorities, including the Clyde?—Yes, Sir.

1587. And, therefore, although the General Lighthouse Fund does not contribute to the upkeep of the lighthouses in the Clyde, still you regard it as incumbent on you, as a General Lighthouse Authority, to see that the lighting of the Clyde, a waterway of such importance to shipping, is thoroughly efficient. I mean, you consider that the onus devolves upon the Northern Lights to see that the lights erected in the Clyde by the local authority are sufficient and suitable for the purpose?—Yes, that is a duty imposed on the Commissioners by statute.

Control of Northern Lighthouse Board over.

1588. And that is a duty you carry out?—That is a duty we carry out; not only in the case of important bodies, but in the case of every local body.

1589. I instance the Clyde because it is such an important local authority, that any dereliction of duty on the part of the local authority, or on the part of the supervising authority, might lead to great disaster?—It might.

1590. (*Chairman.*) You do not regard it as your duty to make suggestions to these local Lighthouse Authorities?—Not as a rule, unless they come to us with a suggestion. If they do that, and we do not approve of it, we make a suggestion.

1591. (*Sir Frank Adam.*) A counter suggestion?—A counter suggestion—in fact, apart from financial questions, we really are in the same position towards them as the Trinity House and the Board of Trade are towards us.

1592. (*Mr. Ennis.*) Assuming that members of the shipping community felt aggrieved by the action of the Clyde authority—I am taking the Clyde as illustrating the general principle all round your coasts—assuming that shipowners felt aggrieved by the want of what they considered efficient lighting on the Clyde, and they applied to you without any application from the local authority, you, I assume, would take action?—We would.

1593. That is to say, if you considered the application proper you would take action to compel the local authority to provide efficient lighting?—If it were within the scope of the Acts, and we had the authority of the Board of Trade. We cannot compel a local authority to do anything without getting the authority of the Board of Trade.

1594. If the local authority will not do it, you go to the Trinity House?—The Trinity House have nothing to do with local lights in Scotland; we go direct to the Board of Trade. If the local authority refused to do what we wanted them to do, we would go to the Board of Trade and get authority to compel them to do it.

1595. Then the interests of the maritime trade and the shipping community of the country are safeguarded by the fact that if they find the local authorities are unwilling to carry out what they consider reasonable lighting arrangements, they can apply to your Board, and your Board take the matter in hand if they consider it reasonable?—If it is a matter within the statutes; the statutes are not quite general.

Trinity House Control over Northern Lighthouse Board.

1596. You have given us in detail the power exercised over the Northern Lights by the Trinity House and by the Board of Trade; do you find in practice the power exercised by the Trinity House in the first instance as distinct from the Board of Trade to be irksome or difficult for your Board. Have you in practice found it difficult to get schemes that you proposed carried through by reason of opposition on the part of the Trinity House?—These questions are more perhaps for the Commissioners than for me, but very generally I can say that on occasion, I do not say it has been found irksome, but there has been strong opposition.

1597. Perhaps I should not use the word "irksome"; it was rather with reference to a previous answer that you made that I put the question. I mean you have found difficulty in carrying some of your schemes through by reason of objections raised by the Trinity House?—Yes; frequent difficulty.

1598. In the cases where objections have been raised by the Trinity House to your carrying into effect work that your Board considered desirable and judicious, to your knowledge have the Trinity House had inspections carried out by their own officials before refusing

Mr. C. D. Peddie.

20 Nov. 1906.

your application?—Not in my time certainly. I know from the records of the service that in past times they certainly did in some cases.

1599. But so far as your knowledge goes have the refusals been made without previous inspection by the Trinity House experts?—Without previous inspection for the special purpose, but no doubt from their general knowledge of the coast and the circumstances.

1600. (*Colonel Herbert.*) Would it be going too far to say that Trinity House opinion generally has been in conflict with the Northern Lights Board?—I think that would be going too far. We have really not much difficulty on the whole with the Trinity House, although we do not see eye to eye with them on various occasions.

1601. (*Sir Frank Adam.*) Although they have not inspected where they have refused sanction they have had charts before them?—Oh, undoubtedly. I have no doubt they really had, or thought they had, all the information which was necessary, although, of course, we did not know what information they went on.

1602. (*Chairman.*) You always submit your case to them?—Always, with reasons, and if they want any information they get it.

1603. (*Mr. Ennis.*) Although that is so, and although you consider they may have had sufficient information, in a number of cases you have told us the Board of Trade on being applied to, reversed the decision of the Trinity House, and granted the Northern Lights Commissioners' requests?—Yes; that is so.

1604. Has the general effect been that works that you desired to carry out are delayed on account of the general arrangement that you must first apply to the Trinity House, and then go to the Board of Trade, and then obtain financial sanction of the Board of Trade subsequently?—No, I do not think so lately; I do not think it has affected it.

1605. You do not think it has caused unnecessary delay?—Not in recent years; I am not speaking of times past, but our proposals now have to come before the Board of Trade in the autumn, and their sanction is either granted or withheld in the spring or early summer following, and that is quite independent of whether the Trinity House have approved or have not approved, although I have no doubt the Board of Trade have had more difficulty with the cases in which the Trinity House do not approve; that might be.

1606. I notice in this pamphlet which you have handed in with your evidence a statement that the coast-line of Scotland is practically double that of England?—Yes, so I believe.

1607. Is it not a fact, or am I right in assuming that the lighting, especially of the East Coast of Scotland, is less—the number of lighthouses and lightships—than on a similar length of coast in England or Ireland?—Certainly, in England, but I cannot say for Ireland.

1608. But certainly in England?—Certainly in England.

Expenditure on New Works: Amount of, desirable annually.

1609. You have also spoken of your estimates, and of endeavouring to get work done, holding them over for some time. Is your annual expenditure limited? Is there a limit placed to the expenditure that you must incur in any one year?—No, Sir, not definitely.

1610. Why then do you find a difficulty in getting the work that you may consider to be desirable and essential in the interests of human life, and the shipping trade, and all that? Why is it that you find a difficulty in getting the work sanctioned in your finance estimates for three or four years perhaps?—There is what I may call an unwritten law, although it was recognised by a Departmental Committee on the subject of the Mercantile Marine Fund, that not more than a certain amount should be expended on new works in any given year.

1611. Can you give us that amount? I mean what has been the general principle?—It is a principle in which the Commissioners have never acquiesced at all, and they, as matter of fact, put forward what they think necessary.

1612. But can you give us an approximate idea as to what this unwritten figure has been?—I think it was £50,000 a year for the whole three services.

1613. Of which Scotland, of course, was not supposed to receive a full third?—Well, Scotland should have received a full half if we are to judge by the extent to which her coast is lighted, compared with the others.

Defects in lighting of Scottish coast.

1614. Is it not a fact that the coast of Scotland taken as a whole is not so well lit in proportion to the extent of the coast-line as England is?—It is not; there are far more dark blanks on the coast of Scotland.

1615. (*Sir Frank Adam.*) Is that taking Scotland as a whole, or a particular part of Scotland?—That is taking, I should say, Scotland as a whole.

1616. North and south of the Clyde and Forth?—For instance, there are dark blanks up the East Coast. There is a very serious dark blank on the North Coast; there are many dark blanks on the outer islands on the west, and also down the West Coast, but it is better lighted when you come to the Clyde and go south. There are also numerous unmarked outlying dangers.

1617. (*Chairman.*) Immense improvements have been effected of late years in the lighting of the Scottish coast, have there not?—Yes; for instance, there are 80 fully equipped lighthouses now, and 25 years ago there were only 60. As I have said, there are now 100 lights belonging to the Commissioners—general lights—more than there were 25 years ago.

1618. (*Admiral Henderson.*) Is the actual sea-going trade in some of these dark blanks sufficient to warrant additional lights?—The north-about trade now is becoming very great, and there is a large and increasing traffic coming up the Inner Sound on the west of Scotland, and up the Minch between Skye and the outer islands.

1619. (*Sir Frank Adam.*) Roughly, can you say how many lighthouses, if you had a free hand, your Commissioners think are wanted at the present moment on the Scotch coast?—I should not like to say offhand, but a great many lights and signals, although not very many fully-equipped lighthouses.

1620. (*Mr. Ennis.*) But still your Commissioners, if they had a free hand as regards finance and matters of procedure, would undoubtedly fill these dark blanks?—They would undoubtedly; and they have been trying for some years to fill some of them without success.

1621. Is it your Engineer who is your expert officer with regard to the lights, I mean as to the quality of the lights and all that kind of thing?—Yes.

1622. I understand you join in the inspections of the Committee round the coast?—Yes.

1623. Have you ever taken any steps to inspect the Norwegian coast opposite you?—Not in my time.

Linberg Light: Tried in Scotland.

1624. The class of light that the Norwegians try?—We have tried the same class of light.

1625. You have made yourselves acquainted with the class of light the Norwegians use?—Our Engineer is perfectly conversant with the details, and at the request of some shipowners or shipmasters the Commissioners did try a Linberg light in the Pentland Firth. It was quite unsuited for the locality, and had to be replaced by a first-class lighthouse and fog-signal. A great many of these minor lights that I spoke of are really very like the Norwegian lights, only they cost more in the first place.

Minor lights: Cost of,

1626. (*Sir Frank Adam.*) They do?—The minor lights cost between £450 and £600 each.

Difficulties as to jurisdiction of General and Local Authorities.

1627. (*Mr. Ennis.*) You have a certain number of local authorities controlling lights, and these local authorities bear the expenditure very properly, and control the lights, we will say, in different harbours, but there are outside approaches—what may be called outside approaches to those harbours—a kind of territory which at other parts of the coast there seems difficulty in determining whether the General Authority or the local authority should be responsible for them. Have you found anything of that kind in practice in Scotland?—Yes, Sir, we have.

1628. Really it seems, I will not say no-man's land, but a no-man's sea, in which the General Lighthouse Authority is not willing to erect lights, and yet for the carrying into harbours, in a continuous and proper method, a light is needed between the lights erected by your authority and the lights erected by the local authority. I mean that an in-bound ship to some of these ports having taken her departure from your outer light, the light erected by the General Authority, may possibly not be able to make the light of the Harbour Authority without some intervening light or warning or signal of some kind to guide her?—That is exactly the case of the majority of the minor lights which have been erected by the Commissioners out of public funds

and which are now maintained by the Congested Districts Board of Scotland.

1629. By the Congested Districts Board of Scotland?—Or rather maintained out of funds supplied by them; we maintain them.

1630. From what source does the Congested Districts Board of Scotland derive their funds?—A vote in Parliament.

1631. But you have recognised that difficulty, that there is frequent difficulty?—Oh, there is great difficulty.

1632. And I take it you hold that whilst local authorities should be compelled and encouraged to light their harbours effectively and properly they should not be allowed to interfere with the lighting of what may be called the maritime highway, because a failure on their part might be disastrous to general trade, the fate of passing ships. If the local authority is allowed to push their lighting arrangements too far out from the coast, instead of being a benefit it might become a danger?—I think that is so, Sir. I may say that the Commissioners on at least one occasion refused to allow the Congested Districts Board to put up a light because they thought the place too important for the class of light which they proposed to put up.

Inspection Committee:

1633. With regard to your Visiting Committee which goes round the coast to inspect the lighthouses, I understand the Visiting Committee goes round the coast?—Yes.

1634. The Engineer does not accompany them?—No.

1635. But you do accompany them?—Yes.

1636. Is that an annual trip?—Yes.

1637. And it is made on board the "Pharos"?—Yes.

Allowances of,

1638. I wish to compare yours with the arrangements in other countries. How is the cost of that annual trip borne?—The Board of Trade allows the Commissioners to spend in the year £460 for all the expenses in connection with the after-cabins of their four steam tenders, for any entertainments that they may give in their official capacity and for any refreshments they may have in the office at headquarters. That covers not only the expenses of the Inspection Voyage Committee, but the expenses of all the officials travelling in the after-cabins of the steamers, the Secretary, the Superintendents, doctors, contractors, the Engineer—in fact, everyone travelling in the after-cabins of the steamers. No personal allowance is made to a Commissioner or official when on board.

1639. Would that sum of £460 a year be available or applicable to paying travelling expenses of members of your Commission attending meetings of the central body?—I think, Sir, as a matter of fact, that they can charge that expense already, and that it would come under a different heading of the accounts altogether.

1640. But you have the power to pay the out-of-pocket travelling expenses of your Board?—Certainly, of the Commissioners travelling from headquarters on business.

1641. (*Sir Frank Adam.*) Attending a Board meeting?—I am sure the Board of Trade would never raise the question if these expenses were paid, but as a matter of fact they have not been paid.

1642. A Sheriff coming from Inverness to Edinburgh, would he get his expenses, coming to attend a Board meeting?—They have never been applied for as far as I am aware; the sheriffs are resident in Edinburgh. But the provosts might charge their expenses.

1643. (*Mr. Ennis.*) I merely asked the question because a Board constituted of members spread all over the face of the country, the attendance of members must be affected by the fact of high expenses if they were not paid?—Certainly, Sir; that is so.

Light dues: Collection of,

1644. You say that the work of collection of the lights dues has been transferred to the Board of Trade by arrangement, but the Northern Lights still remain with a statutory obligation to collect them?—Yes, we are nominally liable still by statute.

1645. You are statutorily liable for any failure to collect them?—Yes.

1646. As a matter of practice you are quite safe; they are collected by the Customs at a cost, as I understand, of about 1½ per cent.?—That is so, I believe.

1647. You do not spend any very large sums on the removal of wrecks, but you do search the North Sea for derelicts?—Oh, yes, when anything is reported we search. Of course, we have on occasion had to spend large sums on wrecks.

Wrecks: Removal of,

1648. With regard to your Board meetings, a quorum of your general body is five only?—Yes.

Northern Lighthouse Board: Quorum for meetings.

1649. Is not that rather a small number for a quorum of the Board consisting of 25 members?—I think not, when you consider the Commissioners are *ex officio* and unremunerated, because in fixing the size of a Board of that description you must take into account that there are certain to be members who will never attend.

1650. Your answer carries with it the assumption, which I have no doubt is well grounded as perfectly just and accurate, that in a Board constituted as yours is a considerable number of members will not attend regularly?—Do not, that is perfectly certain.

1651. But still, as a general principle, a quorum should be a reasonable number?—I think in the Irish service a quorum is three; I may be wrong.

1652. It does not follow that because I consider the quorum of the Irish Board too small I should not query it in your case also?—No.

1653. I mean the usual quorum in public bodies?—In our case it was fixed by Act of Parliament in 1786, and has been maintained ever since, the same quorum being fixed by Section 668 of the 1894 Act. The question has never been raised.

1654. You also consult shipowners and shipmasters with regard to works which your Board have done?—We do on occasion.

Representation of shipping community on,

1655. Would you consider it an improvement if it were possible to place on the Board of Northern Lights a limited number, a reasonable number, of very experienced nautical people?—Do you mean shipmasters?

1656. Shipmasters, people who have practical nautical knowledge; would you consider that a strengthening of your Board?—Well, it might be from the point of view of new seamarks. It would not strengthen the Board with regard to ordinary administration, which is very peculiar and has nothing to do with nautical matters. But as matter of fact I do not think the Commissioners ever felt the want of a nautical adviser. Mr. Stevenson has nautical knowledge; he can navigate a ship, and he has an unsurpased knowledge of the Scottish coast. We have also very experienced shipmasters on board our steam tenders who have also a most minute knowledge of the coast. We have, further, the whole of the Trinity House, and beyond them we have the expert advisers of the Board of Trade.

1657. But you would prefer to have your own body self-contained, and to have it a competent body irrespective of the qualifications of the Trinity House or the Board of Trade?—That is another matter.

1658. I mean you would prefer that your own body should be a thoroughly qualified body irrespective of the powers of the people who are over you?—The Commissioners consider that the Board is thoroughly qualified, and they think that has been proved.

1659. I do not raise the question as to what is past. It might be held as to your Engineer—it is a personal case—he is an exceptional Engineer?—I am perfectly certain the Commissioners would raise no objection whatever to there being a nautical element on the Board.

Head Office Establishment: Appointments of clerical staff.

1660. With regard to your staff of light-keepers, with regard to your office staff, I mean with regard to your officials, your clerical department, what method of selection is pursued?—For the clerks, that is?

1661. Yes; what is the general method as applied to the entire staff?—Well, Sir, the officials are appointed by the Board.

1662. Is that in the nature of a competitive examination?—No, not for the officials.

1663. There is nothing in the nature of a competitive examination, and then rising to the higher posts by promotion, that is not the system?—Yes, Sir, for the clerical staff, and they may be, and have been, promoted to the highest posts. The Commissioners make a short leet of a certain number, I think it is 6, which is submitted to the Civil Service Commissioners, who examine the candidate, and any vacancy is filled up on their recommendation. But that only applies

Mr. C. D. Peddie.

20 Nov. 1906.

to the clerical staff. I may say that my own position was advertised.

1664. With regard to the light-keepers and the staff generally, is there any provision for medical attendance?—Yes, Sir, there is. It varies, of course, with the local circumstances, but in remote stations we pay retaining fees to the doctors, and so much a visit. At stations which are near towns lighthouse keepers are entitled to call in any doctor they like, and we pay so much a visit. The expense as matter of fact is extremely large in some cases; we pay over £800 a year now for medical expenses.

Lightkeepers: Medical attendance for,

1665. For the families of the light-keepers as well as the keepers themselves?—For any of the family resident, except adults who should not be resident; we do not pay their expenses.

1666. I understand you to say that you supply—I am not quite clear about your answer on this point—to some class of the light-keepers provisions free to the value of, say, 1s. 9d. a day?—1s. 9d. a day. It is the same in all the services on the rocks; only on the rocks.

Allowances of,

1667. That means in effect something over £30 a year added to the fixed salary that you have given us particulars of?—Yes, Sir, but this has to be taken into account, that they have to maintain a separate establishment at home; their families are living on shore. It is only when they are on the rocks that they receive provisions.

1668. But you provide dwelling for them at home?—Yes, Sir, we do, but not food.

1669. Do you charge them rent out of their salary?—That is part of their pay; in every case the dwelling-house is part of what the man is entitled to.

1670. Do they receive the dwelling in addition to the figures you have already given us?

1671. (*Sir Frank Adam.*) It is part of their pay. It is part of the arrangement made when they are engaged; free house and so much salary?—With coal, light, and so on, which are valued for superannuation purposes at £25 a year, but when on the rocks they are entitled to get provisions. I believe in the other services they get the money and provision themselves.

Lightvessels and Rock Lighthouses: Provisioning and relief of,

1672. (*Mr. Ennis.*) This is a question I have been asking the other Lighthouse Authorities. How are the provisions delivered—you have only one lightvessel—to the crew of that lightvessel and to the rock lighthouses?—Every fortnight; fresh provisions are taken off every fortnight, and a return of the description and quantity is sent to headquarters. Every month another return is sent in, showing the stock of the preserved meats and so on—the reserve stock.

1673. I suppose you are aware in the case of Trinity House it is once a month only?—They relieve their rocks only once a month, I believe, as a rule.

1674. The Irish three times each month?—As I understand, they do not provision their men with fresh meat at all; they leave their men to provide for themselves out of their money allowance.

1675. But still the visit is made, so far as the lighthouses are concerned, three times per month?—I cannot tell you. Most of our places are tidal. We can only land at them as a rule at low water of spring tides, or once every fortnight.

1676. Could you give us this information for the purpose of comparison; you say you have eight cases in which you have boat owners who are contractors to your Board at so much per trip?—Most of them are paid salaries.

1677. Can you give us the amount of these salaries, or the rate per trip?—Do you wish a return?

1678. If you could give us the amount?—It varies greatly. The first one that comes to my mind is on the East coast, where there is a narrow passage between the mainland and the rock. A local salmon fisherman does it there, and he is paid £40 a year. I could put in a boating return.

1679. It is for the purpose of comparison with other places I am anxious to have it?—Yes, it rises to as much as £130 at one place.

Lightvessel: Cost of,

1680. Then I understand you to say that the cost of the only lightship you have is £1,450 per annum, including repairs?—Yes, that is the average of the last seven years, including one large overhaul.

1681. And £1,270 excluding the overhaul?—Yes.

1682. That does not include anything for the cost of administration; cost of the head office, things of that kind?—No, these are the sums which are entered to the special abstract of the accounts; that includes hiring a vessel when the lightship was off her station.

1683. I think you have promised to give us the rates of pay of the men in a return?—Yes.

Stores: Oil.

1684. With regard to the oil supply, I think you told us this is Scotch oil?—Yes.

1685. What class of oil is it; what type of oil?—It is made according to a specification of your own, with a certain flash point and firing point, a certain specific gravity, and fractional distillation has to bring out certain results, and so on.

1686. Is there competition for it?—There are four companies.

1687. And then you have competition?—Oh, yes, four companies always.

Coal.

1688. And the coal; you use what type of coal?—Scotch coal, except in Shetland, where we use English coal, partly because it is more easily obtainable there, and partly because, in the case of English coal, we supply a smaller amount to the lightkeepers, and it is therefore more easily landed.

1689. Any written question any Commissioner might wish to put you will reply to afterwards in writing?—Yes, Sir, certainly. My instructions from my Commissioners are to give the Commission every possible information.

1690. (*Admiral Henderson.*) Will you please put in a list of the wrecks and derelicts with which you have had to deal during these last two years; on how many occasions you had really to look out for derelicts and things of that sort?—Yes.

1691. Have you a map showing the position of your lights?—Yes, Sir, but I regret that I did not bring it.

1692. Will you send us one?—Yes; I am sorry that I omitted to bring it.

Conferences of Lighthouse Authorities with Board of Trade.

1693. What are the conferences which you have at the Board of Trade?—Well, Sir, there are two in the year, as a rule. One is a preliminary conference between the three General Lighthouse Authorities and the Board of Trade on the estimates for new works during the ensuing year, when any differences between the Authorities, or between the Authorities and the Board of Trade, are, if possible, provisionally adjusted. There is a conference later, when we meet the Advisory Committee of Shipowners, prior to which the Board of Trade gives no final decision.

1694. How many officials or members of the Scotch Board have to attend?—At this conference?

1695. Yes?—As a rule, two Commissioners, with the Secretary and the Engineer.

1696. That is four people?—Yes.

District Superintendents.

1697. Have you any suggestions to make as to any question of improvement in the arrangement of your districts and their superintendents?—None whatever, Sir. We have no districts in the sense of the English service at all; that is to say, we have district superintendents who go out from headquarters and return to headquarters, and have each a district, but that is all.

1698. You do not think it would be a greater economy to keep one of these up in the North, for instance, instead of always having to go from Edinburgh?—He does not always go from Edinburgh; he is away almost continuously for eight months. In my experience of six years I do not think a district superintendent has had to go three times specially from Edinburgh; they are away for eight months putting things in order. We have no workshops and no mechanics actually in the service. They are only hired to go with the district superintendents.

1699. What I was driving at was that Edinburgh was rather a far-off centre from many of these lights and places?—It is as convenient as any other centre would be. I do not know really what better centre we could get.

Engineering Workshops not desirable for Northern Lighthouse Board.

1700. (*Sir Frank Adam.*) Have you ever considered whether it would be an advantage to have your own engineering workshops?—Yes.

1701. And what was the result?—It would not be an advantage to have them.

1702. It would not be an economy?—No; at any rate, as far as the Commissioners can make out.

1703. We have had evidence before us that the Trinity House, who have engineering workshops, have saved money by doing their own work, and been able to do it cheaper than the tenders?—Well, Sir, I think if the accounts are compared of the two services, you will find that there is practically nothing in our service which is represented by a very large sum for workshops in the Trinity House Service. That is to say, all the work is charged directly to lighthouses or lightships, or buoys and beacons, or steamers, as the case may be, in our service, and we have nothing to correspond to that large sum for workshops.

1704. The point I wanted to bring out was, that you have considered the question, and decided it would not be an advantage?—Yes, Sir.

1705. (*Admiral Henderson.*) I think you said you were going to give the number of local lights you have to deal with and inspect?—Yes.

Buoys: Inspection of,

1706. The inspection of buoys; what are the regulations on the subject. Are they regularly inspected by the Commissioners?—In the spring there are block programmes made of the work to be done by the four steamers throughout the year. These having been adjusted special programmes are made for stores, buoying, and so on. Certain weeks in the year are almost entirely given up to buoy work, according to a programme. The steamers go round systematically from buoy to buoy, examine them, and see that every one of them is in its position, change them if necessary, renew moorings, etc.

Replacement of,

1707. What arrangements have you for the immediate replacement of displaced buoys?—On any report, of either a light out on a buoy, or a displaced buoy, the office is telegraphed to, and instructions are at once sent to the responsible steam-tender master in the locality.

1708. You do not employ any local people to do this work?—Not to replace buoys, because that is, as a rule, impossible with a small boat, but in the case of lights being extinguished we employ a certain number.

1709. Where do you keep your spare buoys?—We keep them at Oban, Stromness and Granton principally, but we have spare buoys at some other convenient places as well—at lighthouse stations principally.

Testing of cables for,

1710. What arrangements have you for testing your buoy and mooring cables?—They are tested before they are delivered. As a matter of fact, we do not test them after that.

1711. Not after delivery?—No, the lightship chain is the only chain which I remember is tested if there is any question about its being worn, and that has to be sent to Glasgow, but the other chains are tested at one of Lloyd's proving houses before they are delivered.

Steam-vessels: Work of,

1712. You have there, I think, a sketch of each steamer's work, with the number of miles steamed, for 1905?—Yes.

1713. You might put that in.—I shall be glad to supply it; but I can hardly put it in in this form.

1714. Is your system of administration based on that of the Trinity House; I am speaking of the details of administration, not the Board?—I do not think so.

Communication between General Lighthouse Authorities.

1715. Do you take any steps to confer with the Trinity House?—Yes, Sir; our Superintendent, for instance, was sent by the Commissioners, about two years ago, to London, where by the courtesy of the Elder Brethren he spent a considerable time in looking into every possible practical detail of their administration. He also went to certain lighthouse stations, and subsequently anything that seemed worthy of adoption was at once adopted.

1716. But is there no means of communication between the Scotch Board and the Trinity House as to efficiency of administration or general system of lighthouses and their management?—Well, Sir, we meet the Trinity House more or less at intervals throughout the year.

1717. Do you have any communication with the Irish Board?—We meet them in the same way.

1718. Are you yourself acquainted with their system?—Certainly not as well as I am with my own, but I am in many particulars.

1719. And with the Trinity House?—And with the Trinity House.

1720. And are your officers? When I say "your officers," I mean your Engineer and your Superintendent, and people of that sort?—Yes, Sir, in the same way they certainly are, and the Commissioners, too, I may say.

As to Experiments.

1721. Do you work with the Trinity House in regard to experiments?—We have not much; I am talking of recent times.

1722. Yes, recent times; I am not speaking of years ago, I am speaking within the six years of your experience.—The most important experiments that I know of made by the Trinity House were fog-signal experiments at St. Catherine's, in the Isle of Wight, and our Engineer was present at them.

1723. Do the three Boards at all unite for the purpose of experiments or to find out where information is wanted; how experiments should be made?—The Engineers are in more or less constant communication.

1724. There is no official touch?—No, not otherwise as regards experiments.

1725. (*Chairman.*) If Trinity House were carrying out an important series of experiments, I suppose they would communicate with you and inform you?—Oh, they would be certain to, and invite a representative of the Commissioners to be present.

As to Seamarks.

1726. (*Admiral Henderson.*) Is there any attempt to get a uniform system in the management of the lighthouses and lightships?—Well, I do not know that there is. The Commissioners consider that their system is as efficient and as economical as it can be, and they have no desire to depart from it.

1727. Are you aware of any complaints in Scotland against the Northern Lights Commissioners?—I have heard. I have read, for instance, resolutions passed by a Chamber of Commerce reflecting on the Board, without details of any kind, however; there has been no complaint to the Board.

Board of Trade Control: Nature of,

1728. What is the effect of the Board of Trade control on your administration; I mean to say, would you say that this control relieved you of responsibility?—No, Sir, I would not.

1729. Would you say that it involved a good deal of work and correspondence?—Certainly.

1730. Would you say more than is necessary?—No.

1731. Is there any tendency to increase this correspondence?—No, absolutely none, not in my time; in fact, it is very much less than it was at one time. It certainly was, I think I may say, with deference to the Board of Trade, vexatious at one time.

1732. Do you look upon it favourably, the check that the Board of Trade hold over you?—As chief responsible official I am glad of the Board of Trade control and audit.

1733. You do not consider that it interferes needlessly?—No; in my experience it certainly does not. I think it makes for economy.

1734. On the whole?—Certainly, in ordinary maintenance and administration. I am not at this moment speaking of new works; that is rather outside my province.

1735. You say there is no tendency to increase it?—None, Sir; certainly not in my time.

1736. Then the Board of Trade do nothing for you excepting in financial control and new works control really?—Well, I do not know that there is anything else.

1737. Do you have to put every contract before it?—Every contract.

1738. Every single contract?—Every contract, except, of course, for the merest trifles, but they must be provided for in the estimates.

1739. But for the yearly contracts, before you can make them you have to get the Board of Trade approval?—For all expenditure for work or stores we have to go to the Board of Trade, and for every payment which is to be continued from year to year, even a shilling a week, we have to go to the Board of Trade.

Mr. C. D. Peddie. 20 Nov. 1906.

1740. Does the Board of Trade undertake any work such as it did with the "Pole Star" some years ago? The "Pole Star" was more or less built by the Board of Trade, or the Scotch Board practically did not hold themselves responsible for it, and put it on the Board of Trade?—There was a difference of opinion on some points.

1741. Is there anything of that sort?—No, there has been nothing of that kind lately. The Board of Trade officers on the East and West Coast, as I say, superintend all our overhauls of steamships, and so on.

1742. The Loch Eireboll light; is that one of yours, or is that one of the Congested Districts Board?—That is a Congested Districts Board light.

1743. Do you suppose that there would be any tendency to economy in any form if you could go beyond a year in laying down new proposals for work; I mean to say would it tend to efficiency if, instead of laying out actually from year to year, you were able to lay out for two or three years ahead?—Well, I do not know that it would. Of course, most of our proposals which come up just now involve expenditure extending over the next three years. Very few of the works, except the smaller ones, are completed in one year.

1744. (*Chairman.*) When a work has been sanctioned by the Board of Trade it may last over several years; the fact that it is once sanctioned and begun involves a certain amount of expenditure on it in each year?—That is so.

1745. (*Admiral Henderson.*) Do you know what amount of the Lighthouse Fund for 1905 was collected in Scotland?—No. I could easily ascertain it. We have absolutely nothing to do with the light dues; they do not now come before us in any form.

Local Lights: Applications for sanction of,

1746. Do you get very many applications from the local light authorities for new work?—For sanction?

1747. Well, nominally for sanction; yes, for sanction, but also on the boundary line; what we call the boundary line between your function and their function?—No, Sir, not from local authorities. Our principal difficulty is when we get requests from outside for lights which are on the boundary line between local and general seamarks.

1748. (*Chairman.*) The local authorities are not very anxious to extend their activities beyond their own territory?—That is so.

1749. (*Admiral Henderson.*) I suppose they are not.—As a matter of fact, I do recall one now quite recently where a local harbour authority—it has two or three harbours—did invite us to put up a light which was really of no use whatever except to facilitate access to one of their piers; but that is very unusual.

1750. Are many of these lights demanded from small and local interests?—Yes, many of them.

1751. Is there any difficulty in discriminating between these demands and demands for sealights proper?—Very great difficulty; it is one of the greatest difficulties in a small way that the Commissioners have to deal with.

Disputes as to,

1752. And do many disputes arise in consequence?—There has frequently been a difference of opinion between the Commissioners, the Trinity House, and the Board of Trade, as to whether a light was local or general. I may say a report was prepared at the request of the Board of Trade by the Commissioners some years ago on this very question, which I have no doubt they will be glad to supply to the Commission.

1753. So far as you are aware in any of these questions, either for the general lighthouses or local lighthouses, is there any local or political pressure brought to bear?—Absolutely none on the Commissioners, but the Sheriff of the bounds or a Provost may be requested to submit local views to the Board.

1754. Is there a light on the Vee-Skerries now?—No.

1755. It has never been taken in hand?—No.

Inspection of Scotch Seamarks: By Northern Lighthouse Board.

1756. Do you look upon the inspections by the Commissioners themselves, this annual inspection, as of any great value?—To whom, sir—to the service?

1757. Well, to the service?—I think it is. I may say that the stations are in such good order that there is really extremely little for the Commissioners to remark on, but I do think it is valuable both to the service and to the Commissioners.

1758. For information?—Yes, and efficiency.

1759. Do you think that when the Trinity House has come up and inspected any of your lighthouses or stations it has been of any value?—Well, Sir, I cannot say. They have not done it for many years. They have been in our lighthouse stations when they were passing, and they have informally expressed themselves pleased with what they saw, but there has been no formal inspection. By Trinity House.

1760. Do you issue hydrographic notices, Notices to Mariners?—Yes, we do.

1761. Separate from the Trinity House?—Yes.

1762. Do you send them to England?—Yes; in England they are distributed by the Trinity House, just as we distribute theirs. They send us notices to distribute in Scotland. *Notices to Mariners*: Issue of,

1763. How many notices do they send to you?—It depends on the importance of the light; it may be 2,000.

1764. You send them to the shipping interest?—And to local authorities; we have an exhaustive list.

1765. And do you do the same by the Irish Lights?—Yes; and we also supply them to the Board of Trade and the Admiralty.

1766. Have you any library system?—Yes, Sir; there is a library at every lighthouse and steam tender, and there is a circulation of magazines and newspapers. *Lightkeepers*: Library system for,

1767. (*Sir Frank Adam.*) You have been asked several questions with regard to masters of steamers being responsible for buoys being out of place?—Yes.

1768. Would it be possible for a buoy to be out of place and them not to notice it for any length of time?—No, quite impossible.

1769. Your system protects you against that?—Yes.

New Works: Initiation of,

1770. As regards new works, I understand from what you said in your evidence-in-chief that the Commissioners do not take the initiative as a rule, or not at all perhaps, in suggesting new works?—I would rather say, as a rule. It is unnecessary.

1771. Whence does the initiative come?—Well, almost every possible new work, certainly of any magnitude, has been before the Commissioners for a great many years. They practically pick and choose among works which they think eminently necessary, but which cannot possibly be proceeded with all at once.

1772. And the suggestions in regard to which have come from outside?—Have come from outside as a rule.

1773. Do the Commissioners take any measures to acquire a knowledge of the views and requirements of the trade?—They do if they have any doubts about the matter. If any questions are raised the Board of Trade sometimes invites them to do it.

1774. But you have no systematic way from year to year of endeavouring to ascertain whether anything particular is urgently required by the trade?—No, Sir; we have no systematic method apart from being informed of the views of the Advisory Committee of Shipowners.

1775. Under the present system, as indicated by you, is it possible that sufficient local pressure could be brought to bear upon the Commissioners to do a new work in any particular district which might be to the detriment and delay of another work equally important?—Absolutely impossible.

1776. When you are considering what new works you are to undertake, do you call in of yourselves and take the advice of the representatives of the shipowning fraternity?—Not generally, Sir. If we have doubts, as I said, on any special seamark we do take or have taken advice.

1777. Suppose you have two particular lights, for instance, under consideration, and the question is which would you do first, would you consult them as to which you would consider most important or do first?—No, Sir; we should put them both in for discussion with the Board of Trade.

1778. Supposing you could not get sanction for more than one that particular year, how would you decide which was the more important?—If it came to that, when we went to the Board of Trade we would say, if we can only have one of them we would rather have so-and-so.

1779. You would decide that yourselves?—No, not necessarily; we might take advice.

1780. Take the opinion of the trade?—Yes.

FIFTH DAY.

Friday, 30th November 1906.

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. Arthur Norman Hill, called in; and examined.

Mr. A. N. Hill.
30 Nov. 1906.

1781. (*Chairman.*) You are, I think, the Secretary of the Liverpool Steamship Owners' Association?—Yes.

1782. And are here to give evidence on behalf of the Association?—Yes.

Liverpool Steamship Owners' Association: Amount of shipping owned by,

1783. Can you tell us the amount of steam shipping which the members of the Association owned at the end of 1905?—We owned at the end of 1905, 3,524,426 tons of steam shipping, comprising upwards of 21 per cent. of the total British steam tonnage afloat.

Light dues paid by,

1784. And what was the amount paid by members of the Association during the preceding year in light dues?—I cannot give it for 1905. I ascertained from each member of the Association the amount he paid in 1902, and the total exceeded £70,000.

1785. What fraction does that represent of the total amount collected in light dues?—The total amount collected is in round figures £500,000 per annum, and it is estimated that of that sum from £130,000 to £170,000 is collected from foreign ships. If that estimate is a reliable one, then it leaves £350,000 collected from British shipowners, of which sum the members of the Liverpool Steamship Owners' Association pay upwards of one-fifth.

1786. The inference being that, whether measured by tonnage or by the dues paid, your Association represents something like one-fifth of the whole British steam shipping?—That is so, Sir.

1787. Have you any observations to make on the general system of management in operation at the Lighthouse Boards?—The members of the Association know so little of the system of management at present in operation at the Lighthouse Boards that they have great difficulty in submitting any suggestions.

Expenditure of General Lighthouse Authorities:

1788. Even as regards new works?—Well, Sir, the appointment by the President of the Board of Trade of an Advisory Committee in relation to the new works has enabled the Association (through its representative, Sir Alfred Jones) to obtain some insight into the system of management, in so far as it relates to new works undertaken by the Lighthouse Boards. The expenditure on new works, however, only represents about one-fifth of the total expenditure, and the Association has, except from general results, no opportunity of judging of the general management.

1789. But with regard to the general results?—I have prepared a table showing the expenditure of the Lighthouse Boards during each of the last six years, the average annual expenditure during those years and the average annual expenditure during the preceding years, and I would like, Sir, to put in that statement if I might.*

1790. Have you any special reason for taking periods of six years?—I have compared the expenditure since the 31st March, 1899, with the expenditure prior to that date, because the Merchant Shipping (Mercantile Marine Fund) Act, 1898, enacted that from that date the light dues should be applied to the payment of the cost of maintaining the lighthouse services and to no other purpose whatever.

1791. You regard that change as of importance from the point of view of good and economical administration by the Lighthouse Authorities?—Yes, Sir, I regard that change as having taken away the only effective check which existed up to that date from the economical point of view of the management.

1792. Yes; we will come to that point presently?—If you please.

1793. In the tables which you submit I think you deal only with the direct expenditure of the Lighthouse Boards?—That is so, Sir. I have omitted the cost of maintaining the electrical communications and the cost of collection.

1794. These are not very large, I take it?—No, Sir, they are quite small, and I cannot compare them with similar expenditure in the years prior to 1899.

Average total for the last six years.

1795. Will you broadly summarise the result of your tables?—The average annual expenditure of the three Lighthouse Boards during the six years ending the 31st March, 1899, was £412,635. During the six years ending the 31st March, 1905, the average annual expenditure had increased to £487,940; that is, the expenditure of the three Lighthouse Boards had increased during the six years by 18.2 per cent.

1796. And dealing with the Lighthouse Boards separately, what are the figures which you have got out?—The average annual expenditure of Trinity House has in the six years increased from £236,341 to £276,250, an increase amounting to 16.3 per cent. The average annual expenditure of the Irish Lights Commissioners has increased from £93,329 to £119,442, an increase of 27.9 per cent. The average annual expenditure of the Northern Lights Commissioners has increased from £82,964 to £92,247, an increase of 11.2 per cent.*

1797. I observe that 1905 is the last year for which you give the figures. The figures for 1906 I think are available, are they not?—I have not had them yet, Sir; it may be my fault. I try and get them as soon as they are published.

1798. It has been given in evidence by Mr. Pelham that the amount expended on new works by the three Lighthouse Authorities for the year 1905-6 amounts to £50,456?—For last year?

1799. For last year?—I do not think those accounts have been published, Sir. As a rule they are published in February. In February, 1907, we should get the accounts up to March, 1906.

1800. If the year 1905-6 had been included the results would have appeared a little more favourable on the side of economy, would they not?—The percentage increases, Sir, would have been reduced.

1801. In addition to increases of expenditure on new works there have been increases, I think, in other items of expenditure?—Yes.

Average, on New Works for the last six years.

1802. As we are on the subject of new works, let us have that first?—The increases have been heaviest under the head of new works. Lord Courtney's Committee

* See Appendices C, I. and II.

Mr. A. N. Hill.
30 Nov. 1906.

reported in July, 1896, that they were informed by the representatives of Trinity House, the Northern Lights Commissioners, and the Irish Lights Board, that £25,000, £10,000, and £15,000 respectively expended annually in new works would be fairly satisfactory. The actual expenditure during the five years ending in March, 1895, had averaged £57,458. The expenditure for the six years ending March, 1899, averaged £65,103. The expenditure for the six years ending March, 1905, has averaged £95,852. This expenditure exceeds by 91.5 per cent. the estimates placed before Lord Courtney's Committee by the Lighthouse Boards, and by 47.2 per cent. the average expenditure during the six years ending March, 1899.

1803. I think I am correct in saying, am I not, that the Northern Lights Commissioners objected to the evidence given on their behalf before Lord Courtney's Committee?—Yes, they objected, Sir, but they did not give to the Committee, as the Committee reported, any figures upon which they based their objections, and the Committee adopted the estimate of £50,000 per annum after having received the Northern Lights Commissioners' objection without details.

1804. Is that the case—do they do more than record the opinion then given by the representatives of the Lighthouse Authorities?—May I quote, Sir, from the Committee's report?

1805. If you please; what page?—This is on page 6, Sir, near the end of page 6. "Thus we were informed by the representatives of the Trinity House, the Northern Lights Commissioners, and the Irish Lights Board respectively that £25,000, £10,000, and £15,000 expended annually in new works would be fairly satisfactory; and although the Commissioners of Northern Lights have in a later communication demurred to the adequacy of the estimate made on their behalf, they offer no specific correction of it. The average amount actually spent during the past five years on new works have been £18,173 by the Trinity House, £24,109 by the Northern Lights Commissioners, and £15,176 by the Irish Lights Board; or an average total exceeding £57,000, the average represented as sufficient being £50,000 only."

1806. Would it not be rather a fairer description of that statement to say that Lord Courtney's Committee recorded the opinion then expressed by the Lighthouse Authorities, but did not adopt it necessarily as their own?—In advising on the basis of charge I think I am right in saying they used the figure of £50,000.

1807. At all events they had no other evidence before them?—No, Sir, there is no evidence except that of the Lighthouse Boards qualified by an objection of the Northern Lights Commissioners without any evidence being submitted in support of that objection.

Average, excluding New Works for the last six years.

1808. Well, now, passing from that to increases in other items of expenditure?—Excluding new works, the average annual expenditure of the three Boards has increased from £347,531 to £392,088, an increase of 12.8 per cent. I would like, Sir, to submit a further table dealing with that expenditure. The disturbing factor appears to me to be new works, which vary very much in amount from year to year. I have therefore in my second table stated separately the expenditure on new works and the other expenditure, and I would like to put that in, because it shows that whilst the increase in the average yearly expenditure is 12.8 per cent., the expenditure other than expenditure on new works during 1905 exceeded by 16.6 per cent. the average expenditure of the six years ending 31st March, 1899. In other words, Sir, the expenditure other than on new works is a steadily increasing expenditure.

1809. Some increase might reasonably be expected, might it not?—On those six years; I do not think so, Sir; I know of no reason.

1810. With the increase in new works alone additional expenditure will become necessary?—The supervision of the additional new works; yes, that would be so

1811. And has there not been a general tendency of wages to rise?—No, I think not during the six years.

1812. An increase in the price of materials and so forth?—No, Sir, I should say not.

1813. I am merely asking for information.—Yes.

1813a. I do not wish to express any opinion myself. —There has been no increase in seamen's wages during the six years; in coal there has been no increase; materials have been up and they are down—shipbuilding materials. I do not think there has been any general increase in prices during the six years.

1814. I think that you refer somewhere in the *précis* of your evidence to the expenditure on lighthouses in the Mersey?—Yes.

Mersey Docks and Harbour Board: Expenditure of, for the last six years.

1815. Has there been any increase in the expenditure on those lighthouses during the six years. The Commission are naturally anxious to obtain all the materials for comparison of particulars that they can? —I can give you that; I have extracted the six years somewhere. The figures, Sir, are from the Mersey Conservancy Account:—

1900 - - - - -	£34,194.
1901 - - - - -	32,047.
1902 - - - - -	33,526.
1903 - - - - -	30,120.
1904 - - - - -	34,149.
1905 - - - - -	30,187.

that is an average, Sir, of £32,371.

1816. I think it would be of great interest to the Commission if you could let us have a detailed statement of the expenditure on the Mersey Lighthouses for the last six years?—I am afraid I could not give it you.

1817. Would not that be possible?—I have no doubt you could get it from the Docks Board. The Docks Board publish annually their accounts, and one account deals in particular with the Conservancy account, and that is the only account which is made public. I had to write to the Docks Board to get the number of lighthouses, buoys and lightships. I have on previous occasions asked them for information as to details of the cost of maintaining lightships and such things. They have given it to me, but they have always made me promise not to use them or not to publish them; but I feel sure if you communicated with the Mersey Docks and Harbour Board they would put any information that they had at your disposal. I can hand in their published accounts if that would be of any value.

1818. I am much obliged to you, but perhaps it would be better for us to address a communication direct to them.—Yes.

Expenditure of the General Lighthouse Authorities: On Steamvessels is excessive.

1819. I think the next item of expenditure is that on the maintenance of steam vessels?—Yes, that has averaged during the last six years £79,483. During the preceding six years the average annual expenditure under this head was £67,512, the increase £11,971 represents an increase of 17·7 per cent. In the opinion of the Association an expenditure of £79,000 on maintaining the communications with the lighthouses and the lightships cannot be justified.

1820. Your Association is of opinion that that expenditure cannot be justified?—Yes.

1821. Do you base that opinion upon specific facts or upon general impressions?—Well, Sir, we know as a matter of fact that there are some vessels kept otherwise than for the purpose of maintaining the communications. To our mind it is incredible that £79,000 can be spent in maintaining communications.

1822. Do you express that opinion without having gone, or having had the opportunity of going, into the details of the expenditure?—Yes, Sir, but we know what ships, for instance, the Trinity House has afloat.

1823. Have you any calculations that you could submit to us?—No, Sir, but a very substantial sum out of the £79,000 must be spent on maintaining and running Trinity House yacht.

1824. Is that a conjecture?—Well, it must be, Sir; it is nowhere else in the accounts.

1825. You are so confident that you must have some figures to rely on, however vague?—If you please, Sir, it is an assumption, but we know what the Trinity House revenue is apart from the light dues. That has been published in a Parliamentary paper, and we know the Trinity House maintains its yachts, and we contend that the yacht is certainly not necessary for maintaining the communications.

1826. Do you refer to the "Irene"?—Yes.

1827. But is the "Irene" only used as a yacht for the Trinity House?—Well, Sir, if I might put it this way, we do not believe that all the steamships that the Trinity House have afloat or that any of the Boards have afloat are necessary for maintaining the communications.

1828. That remains a general impression, Mr. Hill; I do not want to press you too hard, but it is only a general impression; you cannot give us any figures?—No; but, of course, the members of the Association are all practical shipowners. They know how they would maintain communication; they know how such communications can be maintained by hired tugs and by such means, and knowing the steamships that the Boards have afloat they are of opinion that they are not necessary to maintain the communications.

1829. I should be very glad to see any calculations bearing upon that point; if such calculations could be put before us they would be of very great service to us?—If we might have an opportunity of having the accounts—the accounts which show this average expenditure of £79,000, how that had been expended, how the vessels have been employed, the number of days that they have been on the service, the number of days that they have been in port, what crews are maintained on those vessels, we could deal with it, Sir, but in the only accounts that are published this expenditure is treated so much in a lump that we cannot submit any useful criticisms to you on points of detail.

1830. But still you consider yourself justified in expressing the strong opinion which you have just expressed, although you have not got the details before you?—Certainly, Sir. It is unnecessary to maintain this number of vessels to maintain efficient communications with the lightships and the lighthouses and to supervise the buoys.

1831. And in support of that you are not, at all events at the moment, able to give more than your general impression that such must be the case?—That is so, Sir. If you will give us the accounts we will point out where we believe the waste is. We know there is waste.

On Head Office expenses.

1832. Passing on to head office expenses, miscellaneous expenses, superannuation allowances?—£80,186 has on the average of the last six years been spent on account of head office expenses, miscellaneous expenses, and superannuation allowances, the details are as under:—Head office expenses, £36,159; miscellaneous, £17,791; superannuation allowances, £26,236. Such a charge as £80,000 per annum in respect of the administration of a total expenditure of £500,000 requires, in the opinion of the Association, most careful investigation. Might I add, Sir, that there again my first table shows a very great increase under those heads. The average expenditure under those heads for the six years ending 1899 was £67,908. There has been an increase therefore on the average of £12,278, or 18 per cent.

On Superannuations.

1833. And salaries and wages?—Well, Sir, with regard to the superannuation the published accounts do not show how much of the £392,000 is represented by salaries and wages, and it is therefore very difficult to form any opinion as to a reasonable amount to allow in superannuations, but it is very difficult to understand how those allowances can possibly amount to as much as £26,000 per annum.

1834. Do you know the system under which superannuation allowances are granted?—No, it is nowhere published.

Merchant Shipping Act, 1898: Effect of, on Lighthouse Expenditure.

1835. We now come to a point on which you have already touched in your evidence, and that is the effect of the passing of the Act of 1898 upon the economical administration of the lighthouses?—Prior to the passing of that Act the Treasury was directly interested in keeping down the expenditure of the Lighthouse Boards. Up to that date the surplus collected in light dues over and above the amount expended by the Lighthouse Boards went in general relief of taxation. Since March, 1899, the Treasury has ceased to have any interest in either the amount collected in light dues or in the expenditure of the Lighthouse Boards, and as from that date there has been an extraordinary increase in the expenditure of the Lighthouse Boards.

1836. Is it really the fact that up to the year 1898 the surplus collected in light dues over and above the amount expended by the Lighthouse Boards went in relief of general taxation?—Yes, the light dues up to 1899 went into the Mercantile Marine Fund Account. It is rather ancient history, Sir, but if I might just trouble you on that point I can give you some information. In 1882 the shipping fees, which had also been paid into the Mercantile Marine Fund Account, were abolished by Parliament as a relief to shipping. Immediately that account showed a deficiency each year. There was charged against the Mercantile Marine Fund Account the expenditure of maintaining the lighthouses, the expenditure of maintaining the shipping offices, and the salaries of all Board of Trade surveyors, and such things. Because the shipping fees were abolished the expenditure charged against the Fund immediately exceeded the receipts. For some years the deficiency was made good out of accumulations of light dues from previous years. Then after those accumulations had been exhausted the light dues were increased substantially. At the time they were increased the amount collected from light dues exceeded—far exceeded—the cost of maintaining the lights, and I think, Sir, there was no question that the light dues were then increased with a view of making good the deficiency on the account, and that system continued until Lord Ritchie brought in his Bill providing that the amounts collected from light dues must be applied in the maintenance of the lights, and for no other purpose. From 1882 until Lord Ritchie's Act there had been collected certainly upwards of £1,000,000 in excess of the amounts required to maintain the lights, and that £1,000,000, through the Mercantile Marine Fund Account, had been used to pay Board of Trade surveyors, and for the Mercantile Marine offices, and similar purposes.

Position of Mercantile Marine Fund prior to,

1837. But that is hardly the same thing as saying that the surplus collected in light dues over and above the amount expended by the Lighthouse Boards went in general relief of taxation; as a matter of fact it went to swell the Mercantile Marine Fund?—Well, Sir, I have omitted one point. The Mercantile Marine Fund Account was put on a new basis in 1882, when they were dealing with this deficiency, and it was then provided that Parliament should pay such a sum as should be agreed annually into the account. It was fixed originally at £50,000, and it was believed that that £50,000——

1838. £40,000, was it not?—£40,000 or £50,000, would make up the deficiency. But I say it was clearly the intention of Parliament in passing that Act that any deficiency should be made up by Parliament, that it should not be made up by increasing the light dues, and I venture to think that was the opinion of Lord Ritchie and the Government at the time when they separated the accounts and put aside the light dues solely for the purpose of maintaining the lighthouse services.

1839. Yes, but I am looking at the question purely from the point of view of Treasury control, and the interest which the Treasury may have had in keeping down the lighthouse expenditure, and the question I asked you was whether it was really correct to say that any surplus collected in light dues over and above the amount expended by the Lighthouse Boards went in general relief of taxation. Surely it went to swell the fund for the time being. Is it not the case that at one time the Fund actually borrowed in the open market because there was a deficiency in its funds?—Yes.

1840. It did not come to Parliament to supply that deficiency, but it borrowed?—It borrowed, but that I believe was for lighthouse purposes.

1841. Was it not for the purposes of the Fund generally?—It went into the common fund, but the deficiency was caused because the receipts from light dues were not sufficient to maintain the lighthouse service. Might I give you an example? From 1882, when the shipping dues were abolished till Lord Ritchie's Act come into operation, there were collected in light dues £7,879,064. There were expended in the maintenance of the lighthouse service £6,532,182. When Lord Ritchie's Act came into operation there was a surplus in hand of, I think, between £200,000 and £300,000. Although, Sir, there had been collected upwards of £1,300,000 in excess of the amount expended in the maintenance of the lighthouse service, there was only a surplus of between £200,000 and £300,000. Now, Sir, if it had not been for the surplus the Treasury each year would have had to go to Parliament under the Act for a grant to meet the charges on the Mercantile Marine Fund other than the lighthouse services.

Mr. A. N. Hill.
30 Nov. 1906.

1842. I do not wish to be captious, Mr. Hill, but does not the statement you have just made show that the surplus collected from light dues did not, as a matter of fact, go in general relief of taxation, but was accumulated?—No, it was only £200,000 out of £1,000,000.

1843. But it was accumulated none the less?—No, the £1,000,000 was not; the surplus was used to pay the Board of Trade surveyors and the Mercantile Marine offices.

1843a. But when a surplus arose from light dues that surplus did not go to the Treasury to reduce general taxation, it went to the Mercantile Marine Fund?—It went to meet the charges of the Mercantile Marine Fund.

1844. And so far as these charges were met, and a surplus remained, that surplus was paid to the fund; it was not paid direct to the Treasury?—That is true, Sir, but the Treasury would have had to go to Parliament if the amount collected in light dues had only been sufficient to maintain lighthouses.

1845. It did not, as a matter of fact, do so between the years 1882 and 1898. On one occasion when there was a deficiency the Board of Trade borrowed on behalf of the fund?—Well, Sir, it repaid it out of light dues.

1846. It repaid it out of light dues, but I am merely considering the question from the point of view of the interest of the Treasury?—Yes.

1847. It does not seem to me that the Treasury had this direct interest to which you attach so much importance in keeping down lighthouse expenditure. Perhaps it is not worth while pursuing the matter any further, but let me ask this question. Granting that it was the direct interest of the Treasury to keep down the lighthouse expenditure, what means had they of doing so?—Well, Sir, of course we do not know what means they exercised, but we know that the lighthouse witnesses before Lord Courtney's Committee referred to the extraordinary pressure to which they had been subjected to keep down expenditure.

1848. By the Board of Trade or by the Treasury?—I do not think they referred to who it was. "The extraordinary pressure" are the words Mr. Murdoch used; I have not got the passage, but I can give you the reference to it.*

Local Lights: Provision of, from General Lighthouse Fund deprecated.

1849. There is one point to which you particularly desire to draw the attention of the Commission in connection with payments for local lights, I think?—Yes, Sir. Trinity House, I believe, maintains eight lightvessels, twelve lighthouses, 114 ordinary buoys, and sixteen gas buoys for the port of London. It has provided these lightvessels, and has built these lighthouses, and it maintains them out of the light dues. The Association contend that the light dues are levied to provide the "passing lights"—that is, the lights which are of general use. Each separate port, other than London and possibly two or three other ports under the direct control of the Trinity House, has to provide and pay for the lighting of its own approaches.

1850. In Liverpool, for instance?—In Liverpool we maintain 7 lightvessels, 8 lighthouses, 125 ordinary buoys, and 40 gas buoys. The average annual cost of lighting the approaches to the Mersey has during the last six years been £32,371. The ships using Liverpool have had to pay this annual charge of £32 371, in addition to paying in full the general light dues.

1851. Do you know what the historical origin is of this difference of treatment between the port of London and the port of Liverpool?—I think, Sir, it arises from the fact that Trinity House had always in the old days, when lighthouses were held under patents, held the patents for the London lighthouses, and being in that position—being the Lighthouse Authority for the port of London—and having done that work well, gradually the duty of supervising all the other lighthouses round the coast was placed in its hands, and the general revenue from these lighthouses passed over to Trinity House, and it seems to me it was forgotten that Trinity House were acting in a dual capacity, one a Local Lighthouse Authority, the other the National Lighthouse Authority.

1852. Does Trinity House levy dues which might otherwise be paid to a Harbour Authority for the port of London, if such an authority existed?—No, there are no analagous dues to those levied in Liverpool, which pay for our lighthouses and lightships.

1853. So that in effect the port of London is lighted at the expense of the general shipping community?—That is so, Sir.

Trinity House Outports.

1854. Are there other ports in the same position?—I am not sure, but I think it is possible that the Trinity House out-ports, such as Southampton, Fleetwood, Barrow, and Holyhead, and there are some others, may be treated in the same way; those are part of the original establishment of Trinity House before Trinity House was given the national work of lighting the coasts. The Association have been endeavouring to find out in particular with regard to the port of Barrow. There is the Walney light there, and we have been promised, through Parliament, that we should have an opportunity of seeing the accounts; we have not seen them yet.

1854a. The arrangement seems *primâ facie* an unequal one. I suppose in every case there is some historical reason for it?—I believe it is that they have held the old patents either direct or by purchase for the port of London.

1855. And some similar reason possibly exists in the case of the other ports as well?—Yes, Sir, that is their old jurisdiction.

1856. Their old jurisdiction?—You see, Sir, up to about 1822 the principal lighthouses round the coasts were held under patents from the Crown by private individuals, who were making a big profit out of them, and Parliament interfered; the rights of those patentees were bought out, and the management of those lights was handed over to Trinity House, and I think it was forgotten that it would not be reasonable for Trinity House to pool the whole of this revenue for the purpose of meeting all the expenses that it had to meet. There should have been two separate accounts kept, one for its own local work, and the other for national work.

1857. But that was not, as a matter of fact, done?—Never done.

1858. Have your Association contested the justice of that arrangement?—We think it is unjust that any particular port should be maintained out of the General Lighthouse dues.

1859. Do you know if any representation has been made to Government on this subject?—No, Sir, it has never been pressed home very vigorously. I had the honour to submit the point to you, but perhaps I did it very ineffectively, on a deputation.

Constitution of General Lighthouse Authorities:

1860. Well, we come to the constitution of the Boards; has your Association anything to say as to that?—In the opinion of the Association the members of the existing Boards are neither representative of the payer of the dues, nor, speaking generally, qualified by practical knowledge to control the lighting of the coast, or the general expenditure incident to such a public service.

Objections to.

1861. Do you consider that the Elder Brethren of Trinity House are not qualified or practical enough to control the lighting of the coast?—In their case, Sir, I should say that they are not qualified to control the general expenditure incident to the service. I would lay much greater stress on that, Sir. There are some complaints, but not many complaints, as to the lighting.

1862. Quite so; but with respect to the other two Lighthouse Authorities, your Association would be disposed to make both criticisms?—Yes, Sir, and if we might add special emphasis with regard to the Irish Lights Commissioners.

Board of Trade Control over Lighthouse Authorities: Is inefficient.

1863. As to the control by the Board of Trade over the Lighthouse Authorities, have you any representation to make upon that?—We are of opinion that no effective control is exercised by the State over the Lighthouse Boards.

1864. On what do you base that opinion; is this also a general impression?—Oh, no, we know that under Section 640 of the Merchant Shipping Act, 1894, certain new works must be sanctioned by the Board of Trade, that under Section 660 of the same Act the Lighthouse Boards are bound to submit to the Board of Trade

* The witness subsequently sent in the following reference: "p. 403 of Blue Book. C. 8168."

estimates of the cost of the maintenance of the service, and that under Section 664 of the same Act the Lighthouse Boards are bound to account to the Board of Trade for their receipts and for their expenditure. Notwithstanding these sections, the Association is of opinion that the Board of Trade, except with regard to the new works, has no effective control over the management of the lighthouse service. The Lighthouse Boards are statutory authorities to whom have been entrusted the superintendence and management of the lighthouses, and the powers vested in the Board of Trade are, at best, powers of audit and not powers of control.

1865. Have you any specific ground for making that statement. I gather from what you say that you admit the legal powers of the Board of Trade are sufficient to enable them to exercise control over expenditure?—Oh, no, Sir, I think not.

1866. Oh, you think not?—I think, for instance, the Board of Trade have no power to insist on Trinity House using any particular form, or any particular force, for lighting its lighthouses. For instance, suppose the Board of Trade came to the conclusion that electricity was the best means of lighting all the lighthouses round the coast, the most economical, and the most effective; I believe the Board would have no power of enforcing the observance of such a regulation on Trinity House.

1867. Except the power that comes from the right to refuse to sanction expenditure?—It could refuse to sanction expenditure, and the lights would not be lit.

1868. But, taking that instance, do you think that it would be desirable that the Board of Trade should exercise such supervision as that, that it should be the business of the Board of Trade to go into the question whether lighting by oil or lighting by electricity was the best?—It is the business of the State, Sir; it is the business of the representatives of the payers of the dues.

1869. Does that not amount to saying that it is the business of the State to take the administration out of the hands of the present authorities?—Certainly.

1870. That begs the whole question then, because that is one of the matters which we have now to investigate?—Well, Sir, in considering that question the Association trusts that the Commission will have regard to the fact that the State now exercises no control on such matters.

1871. But I want to get at your reasons for thinking that the State exercises no control; are they based upon such an example as you have now given?—That is one example; let me give you another example. I think if you will send for the correspondence that passed between the Board of Trade and the Irish Lights Commissioners, some time back, with regard to certain improvements on the Fastnet, you will see, Sir, that the Irish Lights Commissioners defied the Board of Trade. They would not do what the Board of Trade, and what I believe, Trinity House thought very reasonable.

Defied by Irish Lights Board.

1872. Do you remember the particulars of that?—It was when Sir Courtenay Boyle was Permanent Secretary; it must be now ten or twelve years back. I, on behalf of the Liverpool Association, made strong representations to the Board of Trade, and it got to the point at which, I believe, the Board of Trade told the Irish Lights Commissioners that the position was such that they would bring the whole matter before Parliament unless they gave way.

1873. That was in connection with the Fastnet Light?—That was in connection with the Fastnet Light. Then may I give another instance from Liverpool. We have for years endeavoured to get a sound signal established at Three Castles Head, a point upon which we have lost several of our Liverpool ships. I believe, Sir, we satisfied the Board of Trade that it was desirable that there should be such a signal, but the Irish Lights Commissioners said that it was ridiculous that a signal should be established there, and for years and years they refused to establish a signal there. Now at last they are putting it up. There have been wrecks and wrecks of valuable ships on that point.

1874. Two of the instances you have given us are in connection with new works; but I think you yourself say with regard to new works the Board of Trade has effective control over the management of the Lighthouse Authorities?—To negative them; not to order them.

1875. I see; you are now speaking not with a view to economy?—No, efficiency.

1876. Efficiency of the administration?—That is so, Sir.

1877. What you say in your *précis* with regard to the control of the Board of Trade has economy in view, has it not, rather than efficiency?—It is both. We attach greater importance to efficiency than we do to economy.

1878. Let us take the two considerations separately. I should like to have all the evidence possible that the want of control on the part of the Board which you allege has led to inefficiency; secondly, that it has led to want of economy?—If you would send for the correspondence with the Irish Lights Commissioners with regard to the Fastnet Light I should guess—it is only a guess—that you would see exactly what the Boards believe to be their statutory positions. The Lighthouse Boards say that under the Act of Parliament the management is placed by Parliament in their hands and the Board of Trade cannot interfere with their management.

Lack of, leads to want of efficiency,

1879. There is no doubt about this that the initiative of new works cannot come from the Board of Trade?—That is so, Sir.

1880. Do I understand you to argue that the initiative ought to come from the Board of Trade?—Certainly, Sir, I am speaking of the Board of Trade as the direct representative of the payers of the dues. The money is not the money of the Lighthouse Boards.

1881. But we are now on a question of efficiency?—Yes.

1882. You say in your view the present administration is not so efficient as it would be if the Board of Trade had not merely a power of veto on new works, but a power to compel the Lighthouse Authorities to put up new works?—Yes, Sir, if I may explain that. When I refer to the Board of Trade I am only doing so as the direct representative of the payers of dues; as a public department that can be held responsible to the payers of the dues.

1883. But do you consider that the administration would be more efficient if more powers were given to the Board of Trade in the direction of initiation as well as control of expenditure on new works?—Yes, Sir, I say it should have absolute power.

1884. Well, then as to economy?—Well, Sir, as to economy, I can only deal with the figures in the broad, general way I have placed them before you. I can tell you that if the Lighthouse Boards were the directors of a public company, and I was speaking on behalf of the shareholders of the public company, and there had been any such extraordinary increase in the expenditure during the last six years, the accounts would have been referred to a committee of investigation who would have gone all through the books to find out the reasons for this extraordinary increase.

and of economy.

1885. In the case of a public company there is no control except that of the shareholders; in the case of the Lighthouse Authorities there is the control of the Board of Trade, but you contend that the control of the Board of Trade has been wholly inadequate?—It is audit, Sir; it is only a power of audit.

1886. But surely something more than a power of audit is involved when the supervising body can and does call for all the contracts, and no contracts can be entered into without its approval?—The auditor of the public company calls for the contracts and checks the expenditure, but the auditor of the public company cannot question the judgment of the directors; that is outside his province.

1887. The auditor of the public company would see the accounts after the contracts had been entered into?—Yes.

1888. Are you not aware that the Board of Trade sees the contracts before they are entered into?—That is so.

1889. And has a veto upon them?—Yes.

1890. Therefore the position of the Board of Trade is not that of an auditor?—Well, Sir, it may veto them, and if the Lighthouse Board says "We have no other proposal to put forward," the light will go out.

1891. Have you any further observations to make upon that subject?—We say there are no other taxes or dues collected by the State that are administered in any such way. In the present session the House of Commons at the instance of the President of the Board of Trade has deprived the local Marine Boards of all effective control over the Mercantile

Mr. A. N. Hill.

30 Nov. 1906.

Marine Offices on the ground that it was intolerable that any statutory body not immediately responsible to Parliament should exercise control over offices maintained at the cost of the State.

Constitution of the General Lighthouse Authorities:

1892. I do not think we need go further into that question. Have you any suggestion to offer for the revision of the constitution of the Lighthouse Authorities?—On behalf of the Association I can offer no suggestions for the revision of the constitution of Trinity House. Trinity House has an independent existence, and through its Elder Brethren is possessed of very great political and social power. It is idle to suppose that it will ever alter its constitution so as to make itself either a State department or a body elected by the payers of the light dues.

1893. It would not be in its power to alter its constitution even if it had the will to do so?—Except by going to Parliament, Sir, I suppose.

Objections to,

1894. Yes. As to the Northern Lights Commissioners?—Well, Sir, that is a body constituted by Parliament for the sole purpose of managing the lighthouse service in Scotland. They were first constituted in 1798. A Commissioner to qualify must first become a lawyer. If he succeeds in that profession he may in time be appointed a sheriff, and if he happens to become a sheriff to one of the counties named in the Act of George III. he will be duly qualified to undertake the management of the Northern Lighthouses.

1895. And as to the Irish Board?—Well, Sir, they have only been in existence since 1867. No qualification is required, and it is impossible to imagine a body less representative of either the payers of the dues or of the State.

1896. I think under another name they have a much earlier origin than 1867?—The Port of Dublin Board it was called originally.

1897. (*Mr. Ennis.*) They were under half a dozen different names?—The Port of Dublin Corporation the Irish Lights were originally vested in, and their control come to an end in 1867 when the Irish Lights were first established.

1898. (*Chairman.*) In effect they were a body dating considerably before 1867, whatever that antiquity may be worth?—Yes, Sir, they date from 50 of George III., 1810, Sir, they came into operation.

Expenditure of the General Lighthouse Authorities: Is excessive.

1899. (*Colonel Herbert.*) There is one point on which I do not think you gave the Chairman your views. With regard to this cost of £80,000 per annum with respect to administration, what is the basis of your opinion; on what do you base that?—To spend £80,000 for controlling an expenditure of £420,000 per annum seems extraordinary.

1900. Yes, but that is a mere pious opinion; I was anxious to know a little bit further, and get some idea as to where you think that excess comes in; it would help us in our inquiry.—I have no means, I am afraid, of helping you. My figures are prepared from the figures which are presented each year to Parliament, and the accounts are stated in a most summary form, and there are no details given of this expenditure. I have got accounts here, if you care to refer to them: head office expenses, salaries and allowances, so much; office and house expenses, so much; these are the only two items that are published.

1901. It is merely a general statement, then?—That is so.

Local Lights: Maintenance of, from local funds.

1902. Then you spoke about the Mersey lights, and made a comparison with regard to the port of London. As regards the effect on the shipping interest, how does that comparison apply with reference to other ports—say, the Firth of Forth or the Humber?—They all pay for their local lights. Every port, with the exception of London, pays for the lights which only serve that port. Directly you get off the highway and turn for the port, then all the lights after the turning are maintained by the port at the cost of the port, except in London.

1903. Is that universal—I mean all such interests as that of the Mersey are maintained in the same way, and does the expense fall in the same way on shipowners?—Yes, I believe in every case, except possibly these Trinity out-ports.

1904. Are there not some that are free; where there are no light dues in respect of local light?—No, I know of none.

1905. (*Chairman.*) These out-ports you have mentioned would be instances in point?—I am excepting the out-ports.

1906. (*Colonel Herbert.*) You are excepting the out-ports of the Trinity House, you mean?—You see, under the Merchant Shipping Act the local port authority is bound to keep its expenditure in respect of lighting the port separate from its other expenditure, and the amount it collects in respect of such expenditure has to be kept separate, so that it may satisfy the Board of Trade that it collects no more than is necessary to maintain the lights. That has to be stated as a separate account for the Board of Trade, and I do not think it would be possible to comply with the Act and lump the cost of maintaining the lights into the general charges of the port.

1907. Then your contention is that the port of London is in an exceptional position as regards every other port?—That is so, Sir.

1908. It is the only one in which the lighting expenses are charged on the General Lighthouse Fund?—That is so, Sir, and it was so stated to the Port of London Royal Commission by Captain Vyvyan.

Reconstitution of General Lighthouse Authorities: Suggestions for,

1909. You made a statement with regard to the Trinity House, that you did not think it would either consent to become a department of State or an elected body; would you go a little further and say which of those views you would favour—the lighting authority being a department of State or its being an elected body?—The Association think it should be a department of State; they think the service is a national service, and should be undertaken by the State.

1910. They do not urge that there should be a representative element?—If the service is not to be undertaken by the State, then I do not think the shipowners, as the payers of the dues, would elect such a body as Trinity House as their representatives.

1911. Assuming that the functions of lighting were taken over by the State, the shipowners then would consider they were sufficiently represented in Parliament?—Certainly.

1912. (*Mr. Ennis.*) Perhaps I might just continue Colonel Herbert's subject before taking up the others. With regard to that, when you say you would prefer to see lighthouse administration controlled by the State, would you prefer to see lighthouse administration controlled by the State or by an elected body, assuming the payment of light dues remains precisely as at the present?—By an elected body, Sir.

1913. Does your reply that you would desire to see it controlled by the State imply that you consider that the State ought to pay for it?—Undoubtedly. If you levy the light dues as they are now, then their expenditure should, we contend, be controlled by an elected body; a body elected by the payers.

Liverpool Steamship Owners' Association: Amount of shipping owned by,

1914. I just wanted to get your definite opinion on that point. Well, you say that your Association controls about 21 per cent. of the British steam tonnage afloat?—Yes.

1915. Therefore, I assume, making a very rough calculation, that the total steam tonnage afloat is something like 16,000,000 tons?—Yes.

1916. Can you give us any calculation as to the British sailing tonnage afloat?—16,000,000 will really be our total tonnage.

1917. Sailing and steam?—I have forgotten for the minute what the sail is.

1918. It is not very material?—Sailing ships are dying out, decreasing each year.

1919. I understand that; I just wanted for general information to get a general idea as to how it will compare with the steam tonnage for the present?—I am sorry I cannot remember.

1920. Possibly you will give us the figures later on?—I will, Sir, with pleasure.

Light dues: Amount paid by various classes of vessels.

1921. I am right in assuming, I think, that the total amount of light dues leviable upon any steamer in the year amounts to 1s. 4½d. a ton?—Yes.

1922. And on a sailing vessel to a shilling, I think; is not that so?—Yes.

1923. The figures are something like that, I think; we had the figures before?—A steamer cannot be

Mr. A. N. Hill.

30 Nov. 1906.

required to pay more than 1s. 4½d. per ton, and no sailing vessel can be required to pay more than 1s. 1½d. in any year.

1924. A difference of 3d.?—Yes.

1925. I should like to ask you a question which I do not expect you to answer accurately, but only a matter of opinion. Assuming a steamer shall not be called upon to pay more than 1s. 4½d., and the other 1s. 1½d., taking the oversea trade of the country as compared with the coasting trade, a coasting vessel plying repeatedly between British and French ports, or British and Irish ports, in the coal trade or a trade of that character, making constant voyages, of necessity will pay her 1s. 1½d. before any extended period passes?—Yes.

1926. Whereas a vessel in the oversea trade, say the San Francisco trade, the New Zealand trade, long voyages of that class, in all probability will not pay the full quota that she may be made to pay?—Yes, I see.

1927. Therefore I should—taking these figures into account—just like to ask your opinion—it can be nothing more than an opinion, I believe—as to whether in proportion to their registered tonnage the coasting trade does not pay a somewhat larger proportion of the total light dues—I do not mean of the total amount of the light dues, I mean in proportion to their tonnage—than the oversea trade?—No, Sir, I think the best answer is the figures I have given you showing the tonnage of the vessels entered in the Liverpool Steam Ship Owners' Association, and the amounts they pay in dues, and you see, Sir, they are practically one-fifth in each case. Of course, from Liverpool, we may be in a special position. All the big Atlantic liners of very big tonnages pay their full 1s. 4½d. in the year, and the amount that is collected in Liverpool from those vessels is very large indeed. Amongst the members of the Association are the owners of all the lines in the Atlantic trade, but there are also all the lines trading to the East, that perhaps only come back to Liverpool three times in the year, and twice in the case of the Australian lines; and we have a great number of the coasters. As far as I could judge when I took out the figures for 1902, the adjustment that was made as between steamships and sailing ships at so much per voyage, with the maxima, have worked out fairly as between the different classes of vessels.

1928. You are of opinion that the 3d. imposed on the steamer, that is what I may call the oversea trade, practically covers the actual difference between that and the coasting trade with regard to the payment of light dues?—Yes, Sir, it is 1d. per ton for the home trade sailing vessels.

1929. I mean the maximum figures, 1s. 4½d. as against 1s. 1½d.—that is a difference of 3d.—and you think that those figures would fairly equalise the position of light dues on both classes of ships, coasting and oversea trade?—I think so.

putes as urisdic- of ral and al Autho- es.

1930. Then with regard to different classes of shipping, has it ever come under the notice of your Association, have you heard any complaints from shipmasters or others of an area between the lights established by the General Lighthouse Authority and the local lights established by the Harbour Authority; that is to say, in regard to the lights established in the interests of passing trade by the General Lighthouse Authorities round the coast? Is there any hiatus, as it were, between those lights and the harbour lights which might make great difficulties for shipping? Has any such claim as that been made by shipmasters to your knowledge; that is to say, the kind of area in which the General Lighthouse Authority did not consider it was their duty to put lights, and in which the Harbour Authorities did not consider it was their duty to put up lights?—Yes, Sir, we are brought into that kind of dispute—most years there is a dispute of that kind—whether a light can fairly be put on the General Lighthouse Fund, or whether it is an affair for the Harbour Authority. We are brought into those disputes, since we have had the opportunity of considering the estimates for new works, nearly every year, and that is a matter which is debated.

1931. But do you think that in practice this dispute, or these disputes, going on between the General Lighthouse Authorities and the Harbour Authorities leaves something to be desired in the matter of lighting any areas such as I have described?—No, Sir; I do not think, from the information that has been brought before me, that I could say there has been an unlighted area left in consequence of that kind of dispute.

1932. As you have spoken with regard to the opportunity of considering new works, you refer to the Advisory Committee?—Yes.

Advisory Committee:

1933. I should like to know in what light shipowners generally—your Association and shipowners generally—regard the establishment of this Advisory Committee; whether you regard it as a Committee which efficiently fulfils all that you desire to have in the way of control or in the administration of the lighting of the coasts of the United Kingdom, or whether you consider that it is merely a formal control, that it carries no real power with it, and that it is less than you are entitled to?—I think we regard it as a step, but a very small step, in the right direction. To begin with, our opinion is only asked with regard to the expenditure of about one-fifth of the total expenditure, and the Committee have absolutely no power of pressing their views, except by giving their opinion at meetings which are held annually. They have no separate organisation, no secretary, and no office; they have no powers of making independent investigations; they have to judge on the material which is placed before the Board of Trade by the Lighthouse Boards and from their general knowledge; they have no effective powers of investigation into the expenditure of even the one-fifth of the total upon which they are consulted.

Value.

and Position of,

1934. But I take it also that when special cases arise a communication is made to the Advisory Committee, but that communication is only made in an individual form, a kind of circular or communication addressed to individual members of the Committee?—I think they are only consulted once a year; they are only consulted on the estimates for the new works.

1935. We have been informed that on special occasions communications have been made to the Committee, but from what you say, that they possess no secretary, no means of communication one with the other, that can only mean the opinion of individual members of the Committee.

1936. (*Chairman.*) Is it correct to say they have no secretary? I seem to remember communications sent to me?—From Mr. Cooke, Sir. The Secretary of the Chamber of Shipping sits as their secretary when they have their annual meeting before they go down to the office of the Board of Trade to meet the Board of Trade and Lighthouse Authorities.

Shipowners: Representation on present Lighthouse Authorities not desired by

1937. (*Mr. Ennis.*) If your Association had to-morrow your choice of a continuance of the Advisory Committee or to direct representation on the Lighting Authority by the shipping community, which would you prefer?—I do not think we should take representation on the existing Lighthouse Boards, Sir.

1938. You do not desire that?—No, Sir, I do not think it would be possible to produce a Board which would work harmoniously by adding a few representatives of the payers of dues to the existing Boards, to be in a hopeless minority on those Boards; I do not think we would take that under any circumstances.

1939. I take it that your evidence, taking it in a general sense, means that you are under the impression that the increase in expenditure which has taken place during the periods which you have given us in this table is not justified, and that the cost of administration is out of proportion to the total sum expended upon these services?—That is so.

1940. I think in a broad sense that is your contention?—That is so.

Light Dues: Cause of recent reduction.

1941. But at the same time you are aware, I take it—I am not certain whether it was during the period covered by this return, but within a comparatively recent period—that it is true that the light dues have been reduced by 12½ per cent.?—Yes.

1942. And that a further reduction of 7½ per cent. is contemplated, or has been spoken of?—Yes; but then, on the other hand, you must remember that the tonnage of our ships is constantly increasing, and the entries and clearances from our ports at which the dues are paid is constantly increasing; the reduction has not been made out of economies, as these figures show.

1943. That is, your contention is that the reduction is due altogether to an enormous increase of the tonnage paying these dues?—That is so.

Mr. A. N. Hill.
30 Nov. 1906.

1944. And that whilst that reduction has been made, you claim that if economies had been effected, which you say can be effected, the reduction might have been still greater.—Oh, very much greater.

1945. And you further claim, I take it, that with regard to this statement of yours as to the port of London—it is not possible for me, looking at the figures here roughly, to arrive at an exact figure—but I take it that the amount of money expended on the lighting of the port of London, taking the expenditure on your own port of Liverpool as a guide, must be something close to £40,000 per annum?—I should think it would be above that; I should think it would be between £40,000 and £50,000.

1946. Assuming £40,000 to be the figure just for the purpose of comparison, you contend, then, that if the lighting of the port of London were paid for by the port of London, that would enable a further reduction of about 10 per cent. in the light dues to be made to the shipping community?—Yes, that is so—in the general dues.

Amount of local light dues paid by Liverpool Steamship Owners' Association.

1947. And may I further ask if you can give us some further information bearing upon this? Would it be possible to arrive at approximate information as to what your Association would roughly pay towards local light dues—towards the light dues of Harbour Authorities, as distinct from the General Lighthouse Authorities?—I could ascertain it, Sir. You mean in the United Kingdom, not elsewhere?

1948. I mean the tonnage represented by your Association. What their annual expenditure on local lights would probably amount to?—Local light dues in the United Kingdom?

1949. Yes. You tell us you expend about £70,000 a year in payments to the General Lighthouse Authority?—Yes.

1950. I should like to have, if it can be given us without any serious difficulty, an approximate figure as to what the cost to your Association would be for local light dues?—To get the actual figure would involve a very great deal of work, analysing the accounts of all the voyages for any particular year. I think I could get you estimates.

1951. Just an approximation?—I think I could get you estimates. Of course, with regard to foreign countries, it is a little difficult, because there they charge no particular item in respect of light dues; but the State——.

1952. Suppose we exclude foreign countries—an approximation as to the amount paid by your Association for local light dues in the United Kingdom during the same year that payments to the General Lighthouse Fund cost £70,000?—Yes.

Expenditure of the General Lighthouse Authorities: Is excessive.

1953. You raised a question about steam vessels kept by the Trinity House, and I understand also by other Authorities?—Yes.

1954. For purposes that you could not admit were necessary?—Yes.

1955. Could you give us any idea—you know the number of lighthouses, I presume, on the coast?—Yes, Sir, I have got it here, Sir; I have not it in my hand at the moment.

1956. Quite so, but you have the figures before you?—Yes.

1957. Can you lay before the Commission any approximate idea as to the figures that you consider would be reasonable for the service of these?—No, Sir, I am afraid we cannot. If we are given the details of the expenditure, and the logs of the boats, showing how they have been employed when in port and when on service, we would be very glad to submit our detailed criticisms, but without the information we could not really submit details.

1958. Then you also question superannuations. You said that £80,000 a year in respect of administration is excessive, but of course of that £80,000 a year, £26,000 is set down as against superannuation allowances?—That, I submit, is cost of administration, you get your salaries lower because of your superannuation allowances.

1959. I just want to get on that, what your idea as to that is. Your idea is that if superannuation amounts to such a sum as this, the salaries in the first instance should be on a lower scale?—Yes.

1960. In other words, that the salary itself should practically bear the cost of superannuation?—That is so, I believe, in all other services.

1961. You say that the light dues amounted to £1,000,000 in excess of the expenditure between 1882 and 1898?—Yes. *Light Dues:* Application of, prior to 1898.

1962. And you have stated in your evidence here that it went in general relief of taxation. Our Chairman questioned that statement, and I am inclined to agree with him; but is what you meant to convey that it went in relief of some taxation, perhaps not general taxation, but that whilst it was not applied to lighthouse purposes, it was applied to Trinity House purposes other than lights; is that what I understand your contention to be?—Yes, Sir; I am afraid I have not made my point very clear on that case.

1963. As I understand your replies to our Chairman, I took you to mean that this million in excess of expenditure on the lighthouse service proper during that period was actually applied to purposes such as pilotage services, and services of that kind; is that so?—Yes, Sir. When the Act of 1882 was passed, there was a statement submitted to the House by Mr. Chamberlain, who was then President of the Board of Trade, showing the position of the Mercantile Marine Fund account. The Secretary to the Treasury explained that, as a relief to shipowners and crews—the seamen—it was proposed to abolish shipping fees, which had brought into the account about £70,000 per annum, partly paid by the seamen and partly paid by the shipowners, and proposed that Parliament should pay into the account such sum as was necessary to keep the account in credit, to enable the account to pay its way, and the Bill was passed on that footing. When the Bill was passed—the Chairman says £40,000; my recollection is £50,000, but no doubt I am wrong—a certain sum was voted by Parliament to be paid into the account to keep it in credit. Now, Sir, from 1882 onwards, Parliament set to work to create new inspectors, new salaries, extra supervision, and such things, all of which they charge against the Fund.

1964. The Mercantile Marine Fund?—The Mercantile Marine Fund. From the time of fixing the £40,000 to be paid out of general taxation into the Fund, Parliament steadily increased the charges on the Fund, and never increased the £40,000. The Treasury did not go to Parliament to have that increased, but through the Board of Trade it increased the light dues, although the amount that was being collected from the light dues was far more than sufficient to pay for the cost of maintaining the lighthouse services.

1965. It was a joint fund at that time?—It was a joint fund at that time.

1966. And they increased the revenue from the Light Fund branch of the service?—Yes.

1967. And did not increase it at the other end to meet the increased expenditure they were incurring under other heads?—That is so, Sir; they made the light dues meet the increased expenditure, instead of going to Parliament to increase the £40,000 that had been voted annually.

1968. Then I take it that your contention means, not quite as you have put it here, that it went in general relief of taxation, but that it went in aid of the Marine Fund, which fund did not pay, and that the amount paid into that Marine Fund was largely in excess of the amount required from the fund for lighthouse purposes?—Perhaps it was not in relief of taxation; it was in the place of taxation.

1969. In any case, your contention is that it went into that fund, and was utilised as a matter of fact for other purposes, and therefore you contend now that as the Act of 1898 provided that the amount of light dues should be expended on lighthouses and lighthouse service only, monies derived from that source, not being applicable to any other service, the incentive to economy from the point of view of the Treasury has largely vanished?—Has vanished absolutely.

1970. You said with regard to the Irish Lights Board that you consider practically—I do not remember your exact words, but they amount to this—that you consider them the worst offenders of all?—That is so, Sir. *Irish Lights Board:* Inefficiency of administration of,

1971. Would you give us some reason for that? I should like to know some details; cases in which you consider the Irish Lights Board have shown a want of business efficiency and proper management of their affairs?—Well, Sir, our great case against the Irish Lights Commission is with regard to the sound signal station on the south-west corner of Ireland.

1972. Is that the Mizen Head?—The Three Castles Head. It is a very dangerous part of the coast. We have ships of the largest size, carrying very large numbers of passengers and crews, of very great value, constantly passing there, and we have over and over again made the strongest representations to the Irish Lights Commissioners as to the absolute necessity of establishing a sound signal station on that place. The necessity has been emphasised by the fact of some of our vessels having got on the rocks there; and, in spite of all this, year after year, they insist that they know better than we do what is necessary. They take up the extraordinary position that if they established a sound signal station there it would take us into danger, and that was their last ground for refusal.

1973. That is that vessels running in from the Atlantic would run into the Mizen Head in the hope of hearing the signal?—To try and make the signal. We wanted it placed in such a position that if it were heard on that bow (*indicating*) the only course was to stand out to sea. It was not like the Fastnet, where a vessel could pass on either side, though in thick weather she should pass outwards. But there are no inducements for getting anyway near where we wanted this sound signal placed; and they persist year after year that they know better what is wanted for the safety of navigation on that point, although all the Atlantic ships pass there.

1974. Are you aware whether any representations were made by the Board of Trade or the Trinity House on that subject?—I believe by both, and I believe they both supported our view.

1975. Do you believe that a correspondence exists on that subject between the bodies you referred to—a correspondence on the Mizen Head sound signal?—I do not know; I believe there must be a correspondence, and now it is provided for in the estimates; after years of work it is now going to be established.

astnet ighthouse: efusal of ish Lights oard to tablish ectrical mmunica- on with,

1976. With regard to the Fastnet, what information can you give us? You have told us that the Irish Lights Commissioners practically defied the Board of Trade with regard to the Fastnet. Can you tell us what the details of the dispute were—what the dispute was about?—Well, with regard to the Fastnet, before wireless telegraphy was introduced, the Liverpool shipowners came to the conclusion that it would be of the greatest importance to put the Fastnet in communication with the mainland, so that vessels could be reported without having to stand in to make the mainland. They took up the question as a matter of business, as it would have facilitated their work, but the main reason was to secure safety. They wished to avoid any inducement to their captains to endeavour to pass between the Irish coast and the Fastnet, so that in anything like thick weather they would always pass outside the Fastnet, reporting from the Fastnet.

1976a. The Irish Lights Commissioners absolutely refused to facilitate in any shape or form that being done?—Well, it was with regard to electrical communication that the trouble was, because there has been some large expenditure in connection with the Fastnet.

1977. We have heard details of that?—Yes.

1977a. But there has been some large expenditure of money there?—Yes.

1978. Was not that in connection with electrical communication?—Yes. We had to satisfy the Board of Trade and we had to satisfy the Admiralty that such a station could be prudently established there. The Admiralty were at one time under the belief that if the lighthouses were used as reporting stations it might be risky in time of war. I believe we satisfied the Board of Trade, I believe we satisfied the Admiralty, and I believe the Trinity House was with us.

1979. You say the Mizen Head is in the estimates for the current year, but you have nothing in the estimates with regard to this?—Well, we have now wireless telegraphy; it is not of the same pressing moment. I forget if the Fastnet is now in communication by wireless telegraphy. We can report our vessels from far out now; but for many years I believe all the Atlantic ships trading from Liverpool were exposed to unnecessary risk through the action of the Irish Lights Commissioners.

1980. Have you been in the habit of making representations to them with regard to lights on other portions of the coast, or are there other portions of the coast of Ireland at present where you consider lights are necessary, and where you have asked the Irish Lights Commissioners to consider them?—I think we have none outstanding now.

1981. None?—I think there are none outstanding at the moment.

Mr. A. N. Hill.

30 Nov. 1906.

1982. (*Chairman.*) Are there any recommendations that the Advisory Committee have made for new works which have been definitely refused?—No, Sir; I think there are none outstanding now. I think there are none—you mean in favour of new works?

Advisory Committee: Recommendations of, as to New Works.

1983. In favour of new works?—There are a good many recommendations that have been made against new works.

1984. I am speaking of recommendations in favour of new works.

1985. (*Mr. Ennis.*) Do you happen to know whether your Association made representations to the Irish Lights Commissioners with regard to the Barrels Lightship?—No, Sir, I do not recollect. When I say all our points are disposed of I am not quite sure whether there is not an open point with regard to the lighting of Moville.

1986. It is within my own knowledge that this Barrels Lightship was a ship which for many years was needed on the coast of Wexford. Vessels coming up Channel frequently mistook Coningbeg for the Tuskar, and bore up, coming ashore on the coast. Since the Barrels Lightship has been provided that has practically ceased. I can remember numerous wrecks along that coast. I was just anxious to ascertain whether the Irish Lights Commissioners established that lightship on their own initiative, or whether you were instrumental in establishing it?—No, Sir, we were not instrumental.

Constitution of the General Lighthouse Authorities: Is unsatisfactory.

1987. With regard to the Trinity House, the Commissioners of Northern Lighthouses, and the Commissioners of Irish Lights—and I suppose the same applies to all of them—you can offer no sugestions for the revision of the constitution of Trinity House. I suppose that does not imply that you do not consider that it would be very desirable if the constitution of Trinity House were revised?—Well, Sir, we look upon it as if it would be rather a matter of impertinence to suggest that Trinity House, as Trinity House, should alter its constitution. The Trinity House is a very old foundation, and with a very celebrated history behind it, and we have no business to make suggestions in regard to its constitution. Our point is we do not want Trinity House to have power over the management of these lights, and the expenditure of our money.

1988. Quite so; that is to say, in general terms, that you are not satisfied with the present constitution and organisation of any one of the three Lighthouse Authorities round the coast?—That is so.

1989. You take it in a general way; you think that the entire system needs amending?—That is so.

New Works.

1990. (*Admiral Henderson.*) Would not a fixed allowance, as indicated by Lord Courtney's Committee, continued for some time, lead to waste? I mean, if you were to allow each Board a certain fixed sum for new works, lights might not be required in Ireland, and might be very largely required in Scotland, or in England?—I did not understand that Lord Courtney's Committee recommended a fixed allowance. I thought they were getting at the probable expenditure in the future with a view of recommending this new scale of charge, and they had to show that the scale they recommended was sufficient both to provide for the maintenance, and also to provide for all probable new works. I do not think, Sir, it was recommended as a fixed allowance.

Expenditure on, for the last six years.

1991. The increase of 12.8 per cent., which is the increase on maintenance; do you think that a large sum on the total capital sum expended for new works in the period?—Expended on new works £575,117 during those six years.

1992. The total?—The total.

Local Lights: Administration of, by local authorities advocated.

1993. Do you think it would tend to economy and efficiency of administration if, under a new organisation, the cost of lighting of the larger ports was thrown on the General Fund and administered by it?—No, I do not think it would tend either to efficiency or economy. I think the ports manage their own works to the best advantage.

1994. I speak of the larger ports?—Yes.

1995. Supposing there was a general system of lighthouse administration, would there not be very much greater economy in staff and appliances?—Yes, there would be undoubtedly economy in appliances, duplicates, and relief ships and spares, and such things. The bigger the organisation is, the more opportunity the would be for saving under those heads.

Mr. A. N. Hill.

30 Nov. 1906.

1996. The cost of the Mersey lightage and buoyage is £32,000 approximately, while that of the three Boards, exclusive of new works, is £392,000; that is nearly one-twelfth. Do you know what the percentage is when the number of lighthouses, lightvessels, and buoys, etc., are compared?—No, Sir; I have not worked out any figures, because I do not believe they would afford any real basis for comparison. You cannot compare one lightship with another, and there are not enough of them to arrive at any real basis of average. Local circumstances are so important. The cost of the lightship, the cost of the moorings, the cost of keeping the man there and provisioning the ships, they are all so special to each particular ship, that I think you must get the accounts and analyse them. Of course, if you got the detailed accounts you would at once, for instance, if you ask the Mersey Board to give you their details with regard to cost of building a ship, mooring a ship, manning a ship, provisioning a ship, then you could compare that with the similar items from some other ship. The charges you can compare, and the provisions you can compare, and the system adopted of reliefs, and how often the moorings are changed; all those you can compare, but you have to make adjustments with regard to the local circumstances of the ship or the light.

1997. Reverting to a previous question, the Mersey Board, I believe, control outside lights, what the Trinity House call outside lights?—You mean they claim that Point Lynas is a passing light, and not a local light. I have got a chart of the bay which will show you where we go down to. Here is Liverpool (*indicating*). From here right down to Point Lynas. Point Lynas is the Mersey district; the whole of what is within that line (*indicating*) is treated as the approaches to Liverpool, and the lights, the lightships, and the buoys are all maintained out of our £32,000.

1998. Therefore if you take Liverpool as a centre, it would be economical to administer part of the coast north and south of it under one head?—I think if you got really a very efficient and well-organised local body, that it could administer its own district, and perhaps an extended district; but you would want to know exactly what local bodies you did appoint. I mean, it would not do to have the lighting of the coast administered in a parochial spirit.

Board of Trade control over Lighthouse Authorities: Is inefficient.

1999. You mentioned about the question of Treasury control; now, is not the Board of Trade control just as good?—No, Sir; I think it is no control unless the Board of Trade can direct, give directions with regard to management and control of the lighthouses, as to what is to be done; how they are to be lighted; how they are to be built. I think it exercises no control, although it audits the accounts most carefully.

2000. (*Chairman.*) Has there been any control by the Treasury at any time, in any sense?—No, Sir; the control of the Treasury has been what the lighthouse people have described as "severe pressure," or some such words as those.

2001. (*Admiral Henderson.*) Is it not better to avoid Government control as much as possible, if representation of interests concerned can be secured?—You mean, should we not treat the lighting of the coasts as purely a shipowners' affair, and leave the shipowners to manage it for themselves?

2002. I do not mean that Government control should be done away with altogether, but that Government control should be reduced to a minimum. The tendency is always when you begin Government control to work it to a maximum. The tendency is for Government control to increase, and for the responsibility of the administrative authorities to decrease?—Yes, but my view would be, you have first to decide whether this is a State matter, whether the State is bound to see to the efficient lighting of the coast. The coast is lighted, not only for the British Mercantile Marine, it is lighted for the Royal Navy, and it is lighted for foreign nations. We cannot leave the coast unlighted.

2003. (*Mr. Ennis.*) Fishermen?—Fishermen, yes. If you are going to say this is a matter for the shipowners for the sake of argument, and leave them to maintain it themselves, it is possible the shipowners might place the State in a most unfortunate position for not discharging those duties, having done what they want for their own business purposes.

2004. (*Admiral Henderson.*) I do not mean, of course, to do away with State control in that sense. Do you know what the Board of Trade control is at the present moment over the Lighthouse Boards?—I presume the Board of Trade exercises all powers given to it under the Merchant Shipping Act of 1894. As to how far that is effective, I think, Sir, would be decided if you got the correspondence with the Irish Lights Commissioners.

2005. Can you tell me for certain whether Southampton and Barrow are lit by the Trinity House?—No, I cannot tell you that; they are both what are described as Trinity House out-ports.

Shipowners Principal Association of,

2006. What other associations are there, besides the Liverpool Steamship Owners' Association, that deal with large quantities of tonnage?—The Chamber of Shipping in London represents all the shipowners' associations all round the coast in all ports, with the exception of Liverpool. The Liverpool Association is not a member of the Chamber of Shipping.

2007. Is there any other chamber or association with which you have correspondence or dealings in connection with lighthouse administration?—Oh, yes, constantly, Sir, with the associations all round the coast.

2008. What associations are there principally concerned?—There are two associations in Glasgow, the Clyde Steamship Owners' Association, and the Clyde Sailingship Owners' Association. There is a very powerful association in Newcastle, the North of England. In Hull it is the shipping section, I think, of the Chamber of Commerce, but I could give you a list of the associations. It is a little difficult to recall all their names.

2009. Could you give us a correct list?—I have got a long list here. Those were the shipowners' associations that were interested in promoting a Bill introduced by Mr. McArthur for the abolition of the light dues. I could furnish your Secretary with a copy of that list if that would give you the information you want.

Suggestions for alteration in system of Lighthouse administration.

2010. (*Chairman.*) I understand your Association is not in favour of leaving lighthouse administration in its present hands?—No, Sir, it is not.

2011. Neither is it in favour of entrusting it to a committee of shipowners?—The question is put on the basis of light dues being left as they are, and collected only from merchant ships.

2012. Yes?—Then we should be in favour of its being entrusted to the shipowners.

2013. Supposing on the other hand the State were to undertake the payment which is what you would like best, then you would prefer to see the lighthouse administration in the hands of a Government department?—That is so, Sir, and we should like to have the opportunity of offering suggestions to that department; we should like to be given the chance, in the way of an advisory committee, of making our suggestions.

2014. (*Admiral Henderson.*) That is to say, a standing committee that took all new proposals and additions into consideration?—And the general administration as well.

2015. That met infrequently?—If I might put it in this way, the shipowners would be very glad to assist the State in every way they could, to secure both efficiency and economy.

2016. Have you any suggestions to offer as to how that committee should be described?—No.

2017. Could you give us an idea as to what sort of body you would suggest?—Well, under the Merchant Shipping Bill which is now before Parliament we have been told by the Board of Trade that anything in the nature of an advisory committee must be appointed solely at the discretion of the department, that it would be unconstitutional to give statutory powers to an outside committee which was not answerable to the House of Commons, and that we must leave the selection of these committees entirely to the ministers responsible to the House. I have no doubt, if the selection of the committee were left to the Board of Trade, the shipowners could agree, and the underwriters could agree, and the seamen, as to the names to be submitted to the Board of Trade for the Board of Trade to select from. I do not think there would be any difficulty, and that is, I understand, the procedure that

will be adopted with regard to the advisory committee to be constituted under this present Bill.

2018. Have you any other suggestions to offer as to reorganisation?—No, Sir, we do not know enough, of the accounts, but if you will give us the accounts, Sir——

iciency of yhting of sts of ited King- n.

2019. (*Mr. Ennis.*) I just wish to ask another question, and it is this: With your large connection with the shipping community, is it your impression that the present lighting of the coast of the United Kingdom, taking it in a general sense, is satisfactory and efficient? I am not speaking of the cost, but I mean of the actual lighting of the coasts; do you regard it as being in a general sense satisfactory and efficient, or do you desire to see improvements effected?—Generally, I should say it was efficient.

Mr. A. N. Hill.

30 Nov. 1906.

2020. Could you say further whether it is the opinion of the shipping community that the lighting of the coasts of the United Kingdom is as efficient as the lighting of the coasts of France and adjoining countries? Have you ever heard comparisons instituted by shipmasters as to the lighting?—Yes. I have heard comparisons, and one constantly hears the French lights spoken of in terms of great praise; but I believe, Sir, the lighting of the coast, taken as a whole—of course, there are exceptions where it might be improved—I believe it is generally efficiently lighted.

SIXTH DAY.

Wednesday, 5th December 1906

PRESENT:

The Right Hon. G. W. Balfour (*Chairman*).

Sir Frank Forbes Adam, C.I.E.
Colonel I. J. C. Herbert, C.B., C.M.G., M.P.
Vice-Admiral W. H. Henderson.
Mr. M. A. Ennis.
Captain C. Bigham, C.M.G. (*Secretary*).

Mr. Thomas Matthews, called in; and examined.

Matthews: point- nts of,

2021. (*Chairman.*) You are Engineer-in-Chief to the Trinity House?—Yes, Sir.

2022. At what date were you appointed?—On 25th December, 1892.

2023. Previous to that you were already in the Trinity House service?—Yes, Sir.

2024. In what capacity?—As assistant to Sir James Douglass.

2025. You were appointed assistant at what date?—1st December, 1873.

2026. As assistant engineer?—Well, yes, Sir. Of course, I was then a very young man. I was in a smaller capacity; as a junior assistant, I should say.

2027. You have risen through the different grades of the service?—Yes, Sir, right through.

2028. Are you a member of the Institute of Civil Engineers?—Yes, Sir.

ghthouses nstructed

2029. And what has been your experience in the way of construction of lighthouses and shore works?—Well, during the time I was with Sir James Douglass we constructed the Eddystone, reconstructed the Bishop Rock, and many of the shore important stations, and I was connected with him in the general development of lighthouse illuminants, and also through the Board of Trade we constructed the Little Basses, Dondra Head, Barberyn, Minicoy, and many lights in Burma.

2030. There is a list put in?—The list are those which have been constructed since I have been Engineer-in-Chief.

2031. I see. Will you enumerate those places?—Withernsea, Beachy Head, Berry Head, Dungeness High and Low, Foreland, Lundy North and South, Portland Bill, Pendeen, Spurn, St. Mary, Nash, and at present we are constructing Strumble Head. But then, in addition to that, of course, there has been a general improvement of a great many of the old establishments. I mean such as where we have superseded the old form of catoptric apparatus with dioptric apparatus, and where we have installed in some cases an electric light. For instance, when I joined the service the Lizard was a catoptric light; now it is a dioptric light.

ties of, as gineer to inity ouse.

2032. Will you describe to us your duties as Engineer-in-Chief?—My duties are the engineering work in connection with the maintenance of the service, in addition to the lighthouses, the steam vessels, the Blackwall workshops, the buoys and beacons throughout the service, and generally advising the Corporation as to the granting of statutory sanction for new lights, or improvement of lights, to the Scotch and Irish Boards, and also in advising the Board of Trade, and the India Office, the Colonial Office, and the Crown agents. Their lighthouse work all goes through our hands.

Mr. T. Matthews.

5 Dec. 1906.

2033. It is your duty to attend meetings of the Trinity House Board?—Not regularly, Sir.

2034. Only when summoned?—Only when summoned, that is, to the Board. As you are probably aware, the Board meetings are on Tuesday, but there are meetings of committees on Tuesdays and Fridays, and those committees I frequently attend.

2035. You attend all meetings of committees?—I should not say all, but a large percentage.

2036. Now, do the committees refer various matters to you for report?—Yes, Sir. All engineering questions that come before the Board for consideration are referred to me for my opinion on reference.

2037. Would the Board take your advice as to whether a particular work was advisable or not?—Yes, Sir.

2038. A particular new work, let us say?—Well, the Board would decide as to the advisability of the construction of a lighthouse, for instance. If you will allow me, may I quote Strumble Head? The Board decided there should be a light at Strumble Head or in the vicinity of Fishguard. Then that was referred to me, and in connection with that it was decided there should be a fog-signal. Then we carried out on the site, and in the vicinity of the site, experiments with a fog-signal, which we use on a lightvessel, which we call the manual fog-signal, which is quite portable, and we move it from point to point on the coast, so as to decide as far as we could the most efficient position for the fog-signal.

2039. But the Board would not refer to you for a report in the first instance as to whether a particular work was or was not desirable?—No, Sir.

2040. Having decided themselves whether a particular work was or was not desirable, they would refer to you all matters connected with engineering questions?—Matters of engineering detail. I always accompany the committee in the selection of sites, and

Mr. T. Matthews.

5 Dec. 1906.

give them my opinion, but the Board is mainly responsible for the selection of sites on the experiments which I make.

2041. Then a new work having been decided upon, would it be your business to prepare estimates?—Yes, Sir, my first duty then is to prepare an estimate, which goes into the annual estimates. They go to the Board of Trade, and then after that, if the work is approved by the Board of Trade, a detailed survey is made, together with detailed drawings and estimates of the proposed works.

2042. It would be your business to make the working drawings and specifications in the case of any work which was decided upon?—Quite ; I have brought with me just a print of a set of such drawings as we make, if you should desire to see it.

2043. Yes, I think it would be of interest to the Commission. Then in addition to making the working drawings and specifications, is the correspondence with the contractors carried out through you?—Yes.

2044. You would report upon any tenders?—What follows is this. After approval by the Board of Trade the work would be proceeded with. If it is at all possible we advertise it to public tender, and then the tenders come to me for report, and if we are satisfied that the lowest contractor can carry out the work for the amount of his tender, and his bond is satisfactory, it is let to the lowest contractor. Take, for instance, some work I have in hand for which we did not advertise for tenders. At the present moment I am working on the South Bishop, erecting a new fog-signal. Well, there we save a very large sum of money by carrying out the work ourselves, because all the material must go through Neyland, and the South Bishop is situated about eight miles from land. Then I have the service of one of the Corporation vessels for taking the material to the island. Of course, if it were let to a contractor it would entail a very large cost. On the other hand, we are working at Flatholm, and there the work is let to a contractor.

New Works: Saving effected by erection of, by Trinity House staff.

2045. I presume that it is the Trinity House, subject, of course, to the assent of the Board of Trade, which decides whether a work shall or shall not be carried out by contract?—Well, in the first instance, Sir, I report recommending what course should be taken, and then, if the Board are satisfied that my arguments are reasonable and sound, they would say that it should be done by contract. Sometimes they would agree and sometimes not, but invariably in dealing with rock stations we find it a great advantage to do the work ourselves. Then, again, take the instance of Beachy Head. There we went to tender, and I reported that the tenders were high, and as a result we carried out the work ourselves, and between the lowest tender and the estimate there was a saving of several thousand pounds—I can give you the amount—£5,556.

Beachy Head.

2046. Could you give us the list of the works carried out by yourself and the engineer's staff since you became Engineer-in-Chief?—I can tell you of a great many, Sir.

2047. Can you put in a statement showing what the lowest tender was, and what the actual cost was?—Certainly.

2048. Has experience shown that in every case where the Board undertook the work itself that work was carried out for less than the lowest tender?—Well, I should not like to say in every case, but I believe it is so. At Lundy we did the work ourselves ; we built both the new lighthouses at the North and South ends.

Lundy.

2049. Under the estimate that was sanctioned, but did you seek to obtain tenders?—Not for Lundy.

2050. You did not seek to obtain tenders for Lundy?—No.

2051. Why was that?—For the reason I have explained, that in dealing with Lundy I had the advantage of the Corporation's vessels. In constructing a work at Lundy Island, such as those two stations, you must remember the whole of the material had to be taken to the island with the exception of the stone for the rubble masonry—everything.

2052. But did you make no attempt to obtain tenders at all?—No, Sir, not at Lundy.

2053. You determined before asking for tenders that it would be cheaper to carry out the work yourselves?—Yes, Sir.

2054. And that view was sanctioned by the Board of Trade?—Yes.

2055. Is that the only case in which no tenders were asked for?—No, Sir. No tenders had been asked in the case I have just told you about—the South Bishop.

South Bishop.

2056. Were tenders asked for in the case of Beachy Head?—Yes, the lowest tender, if I remember right, was Sir John Jackson's, and the work was completed for £5,556 under that tender. Again, Sir, we had a work at Gibraltar ; there tenders were invited, and we had a saving under the lowest tender.

2057. Perhaps you will put in a list of the works which have been carried out by the Lighthouse Authority itself, indicating the cases in which tenders have been asked for, and the amount of the lowest tender?—Certainly, Sir.

2058. And the actual cost of the work?—And the actual cost of the work, certainly.

2059. When was the Engineers' Department of Trinity House established?—In 1863, Sir.

Engineer's Department of Trinity House:

2060. What arrangements were in existence prior to that date?—Mr. James Walker was the Engineer, and the work was done by him in the ordinary way of engineering work by fees ; a percentage on the work done.

2061. Like the present Scotch system?—Yes, Sir.

2062. Mr. Walker was in the same position as Mr. Stevenson is now?—Practically in the same position, Sir ; he was appointed in 1858.

2063. And who succeeded Mr. Walker?—Sir James Douglass.

2064. And Sir James Douglass was the first Engineer-in-Chief on the new system?—In the Trinity House. Then the Engineers' Department was formed.

2065. What is the present cost of the staff?—£4,313.

2066. That does not include the cost of the staff for the Engineering works at Blackwall?—No, Sir.

2067. That is independent?—Yes.

Salaries of staff of,

2068. I think the Secretary of the Trinity House put in a statement with respect to the personnel of the engineer's staff, but perhaps you might recapitulate?—My salary as Engineer-in-Chief is £1,000, increasing by annual increments of £50 to £1,500, my present salary being £1,450. The assistant engineer's salary is £400, increasing by £20 per annum to £600—present salary, £540. Chief engineering clerk, £300, increasing by £20 to £500, present salary, £500. Mechanical engineering assistant, £200, increasing by £15 to £400, present salary, £355. Marine engineering assistant, £200, increasing by £15 to £400, present salary £355. Civil constructive assistant, £250, increasing by £15 to £350, present salary, £265. Draughtsman, £225. Assistant clerk, £150, increasing by £15 to £250, present salary, £250. Three junior clerks—one at £100 per annum, increasing by £10 to £180, present salary, £150 ; one at £1 per week, increasing by 5s. to 30s. per week, present salary, £65 ; and one at 15s. per week, increasing by 1s. to 19s. per week, present salary, £44 4s. Messenger, £114, making the total annual cost of the twelve members of the staff as at October, 1906, £4,313 4s.

Cost of work executed by

2069. And what has been the annual cost of works executed on the average?—About £69,000.

2070. From what year is that average calculated?—That is a mean of the last three years.

2071. What proportion of that £69,000 consists of new works?—About £22,000.

2072. And the rest?—The rest is any improvement and upkeep of the service and repairs.

New Works Works included under

2073. When you speak of improvements, are those improvements which would be accounted under the head of new works?—No, Sir ; it would be such an improvement as converting a light from a fixed to occulting, or from fixed to flashing.

2074. Such changes as those would, I think, be technically regarded as new works, and would come before the Advisory Committee, would they not?—No, Sir, not those. You are probably aware we have recently been introducing into the service an incandescent system, a new form of illuminant which I developed about four years since. None of that goes through the Advisory Committee ; it goes through the Board of Trade.

2075. Everything goes to the Board of Trade?—Only

Abstract L (New Works) goes to the Advisory Committee.

2076. Would not the conversion of a light from one type of light to another come under the head of new works?—No, Sir. What has been done is this. About three years ago I developed an illuminant which we called incandescent. That was laid before the Board of Trade, and we had their approval for doing a certain number of stations each year, with the result that we have practically now completed our service, and the result of that has been that, roughly speaking, we have increased the intensity of our lights about three and a half, and we are saving about £2,100 a year on oil, without the cost of conveyance, which, of course, is a very serious item. Take, for instance, the Wolf. On the Wolf we used to consume about 2,500 gallons of oil per annum. Now we are consuming about 600 gallons per annum. Well, all that would have been poured into five-gallon oil drums, which are iron drums for convenience of landing. First of all they have to be taken to the rock by steam vessel, the tender of the district, then they have to be taken by boat to the tower, and then poured from these small drums into the cisterns in the lighthouses, and this, of course, is a very costly item.

2077. But surely there have been cases where stronger lights have been substituted for weaker lights, which have been regarded as new works, and have come before the Advisory Committee?—Yes. I would not say before the Advisory Committee, but certainly they have come specially before the Board of Trade. I do not know if you have in your mind the Nash, but that was an exceptional case. There we had two lighthouses, and we laid out a considerable sum of money, because we removed the old lanterns, and improved the towers as well. Additional quarters were built for the keepers, and the lights were adapted from catoptric to dioptric. If the Advisory Committee had been in existence then that would have come before them, because the expenditure was so large. The Smalls did come before the Advisory Committee.

2078. So it is the fact that certain improvements of lights at all events have been regarded as new works?—Yes, Sir, but no such case as I have been mentioning to you—the change of illuminants.

2079. Will you put in a detailed statement of these new works?—Yes, Sir, certainly.

2080. Showing the cost and character of each?—Yes.

2081. For the three years, distinguishing, of course, between new works and improvements other than new works. Let us have a complete statement of the expenses on the engineering side, giving a detailed analysis of the works executed?—Yes, Sir, I can tell you now what our expenditure is through our Blackwall workshops.

2082. One statement would cover the whole?—Yes, Sir.

Improvements carried recently:

2083. Will you describe to us any improvements in lamps, fog-signals, or otherwise, that have been made since you were Engineer; I think you have already spoken of the incandescent oil burner?—I have explained to you what we are doing about the incandescent oil burner. Would you like me to give you any further details, or shall I pass on to some other improvements?

2084. I think you had better give us the statement which is in your *précis*?—The actual money which we are saving by the introduction of the incandescent system in the value of the oil itself is £2,100 per annum, and the total amount which has been spent to bring that alteration through the service is about £15,000.

Incandescent burner.

2085. Was the incandescent oil burner an invention of your own?—Yes, Sir.

2086. Subsequently adopted by other Lighthouse Authorities?—Yes, Sir, but not on my system. The incandescent system has been followed by the other Lighthouse Authorities, but they have designed rather a different kind of burner.

2087. But the invention was in the first instance due to yourself?—For lighthouse purposes, yes, Sir. And I may say, if I may detain you for a moment, that it has been so successful with us that I am now turning my attention to try, if I can, to design a burner to introduce into the lightships, where, of course, we should have the same result of the saving if I succeed.

Mr. T. Matthews.
5 Dec. 1906.

As a matter of fact the burner is now in the experimental stage at Trinity House, and as far as I have gone I think it is very promising. Under the head of improvements we have single lights at the Lizard and the South Foreland. We had two lighthouses, as you are probably aware, at the Foreland and the Lizard, one of which has been done away with at each station, and at the Lizard we have a very powerful flashing light in place of the two fixed lights which were there before. We have been able to dispense with the services of two men at the Lizard.

Electric Light: Stations where used

2088. At which of your lighthouses is electricity used?—At the Lizard.

2089. Is that the only one?—No; we have four. Electricity is used at the Lizard, at the South Foreland, at St. Catherine's, and at Souter Point.

2090. What is your experience of electric light as an illuminant?—On the question of intensity, I presume?

2091. Well, on the question of general efficiency, as compared with oil?—Well, of course it is much more expensive to maintain than oil, and the justification some years ago in going in for electricity was because you could obtain an intensity which it was impossible to obtain by any other form of illuminant. But with the incandescent system we are getting now a greater intensity from oil than had hitherto been possible, and I should say there is not the smallest probability of electricity being extended.

Extension of use of, improbable.

2092. In all future cases the probability is that incandescent oil will take its place?—Until something else is done which in the ordinary way will supersede incandescent oil. I have just been experimenting with what are known as flame carbons for electric lights, of which, of course, I am speaking, and the result of that has been that we have very much improved the lights. We are using these carbons on the South Foreland and at Souter Point, and we have very much improved our lights through that, and no doubt we shall extend the system to the Lizard and St. Catherine's. I may say that I think the lights on the Lizard and St. Catherine's—both of which are of the same intensity, but not quite of the same character; Lizard giving a flash every three seconds, and St. Catherine's every five—are the most intense lights in the world.

Improvement of, due to flame carbons.

2093. Do they exceed the May Island in candle-power?—Yes, Sir.

2094. What is the candle-power at the Lizard?—Well, that I cannot say, Sir, for this reason—that it was a question of debate. The Irish Commissioners have no electric light, but it was a question between Mr. Stevenson and myself as to the proper method of measuring the electric light; and the system which I thought should be adopted would involve such a large expenditure that I advised the Elder Brethren that I did not think it was justified, and I thought it would suit the purpose of the mariner quite as well if we described the Lizard as an electric light of great brilliancy. I am speaking now of the Admiralty list, Sir, and with that view our Scientific Adviser (Lord Rayleigh) agreed.

Use of, in French lighthouses.

2095. What are the most important lights on the French coast—are they electric or incandescent?—I think they have about 13 electric lights, but since the experiments at South Foreland on lighthouse illuminants some years ago, which they had the opportunity of witnessing, they have not largely extended their system of electric lights, and they, as well as ourselves, are introducing the incandescent system of oil.

2096. Is Cape Grisnez lighted with electric light?—Yes, Sir.

2097. The modern tendency, then, is to abandon electric light?—Well, Sir, not to develop it. We should not abandon it for this reason—because if we were to abandon our electric light at St. Catherine's or any of our electric stations, as a matter of fact the change in introducing the new system would involve such an expenditure that we should not be justified. It is cheaper to run it as it is, Sir, because we have all the electric plant there, and it is taken very great care of. I may mention that the boilers at Souter Point and at the Foreland have been working about 32 years, and as far as I can see—I have recently had them opened out and examined—they are as good as the day they were put down.

2098. Have any experiments been made by you or

Mr. T. Matthews.

5 Dec. 1906.

other Lighthouse Authorities as regards the fog-penetrating powers of the electric light as compared with other lights?—Yes, Sir; and relatively for candle-power it is not so efficient as the old oil light, but of course it is greater in intensity.

2099. In thick weather that is?—Of course; I am speaking of thick weather. But the intensity you obtain with the electric light is so far beyond what it is possible to obtain with any other light that it is a distinct advantage even in fog. That is why we have been experimenting with the flame carbons, because we get the same intensity, and instead of having the light so white we restore to it some of the yellow and red rays, which are more penetrating in fog than any other colour; and I am experimenting now with the view to tinting mantles for incandescent burners, with the same object.

Advantage of,

2100. On the whole, however, supposing it was a question of putting up a new light at the Lizard, you would not nowadays select electric light for the purpose, but would prefer incandescent oil?—I think so, Sir. May I amplify that by saying that about 15 years since there was a new system introduced of floating dioptric apparatus. Previous to that time all dioptric apparatus had been rotated on rollers, and then the idea was conceived by the French engineers of floating a dioptric apparatus on mercury. The result of that has been that we have much less friction than with rollers, and it is possible to revolve a dioptric apparatus of greater weight than had hitherto been the case at greater speed, which enabled us—when I say "us" I mean the Lighthouse Engineer—to use a panel of greater size in our apparatus than had hitherto been the case, which meant an enormous increase in the intensity, so that with that idea and with the incandescent as an illuminant, if we were now going to put up a new lighthouse at the Lizard or any other station I do not think we should introduce electricity.

Dioptric Apparatus: Introduction of mercury float.

2101. Is the Engineering Department in constant consultation with the Engineering Departments in other parts of the United Kingdom or abroad?—Well, I am in constant touch with the Engineering Department in France.

Trinity House: Communication between and Foreign Lighthouse Authorities.

2102. You are?—Oh, yes, Sir. Monsieur Ribière and myself have been in constant communication ever since I held my present position, and if I succeed in developing anything I always let him know, and he does the same with me. When he comes to London he always calls and sees me to know what we are doing. If I go to Paris, which I do frequently in connection with dioptric apparatus work, I always make a point of calling to ascertain what they are doing.

2103. Are you not in similar communication with the engineers of the Scotch and Irish lights?—Oh yes, of course; but really the other Engineers—for instance, the Engineer of the German Government I know quite well, but with the exception of the Engineers to the French, German, and Swedish Governments, I am not well acquainted with foreign lighthouse engineers. We all exchange ideas, and the Trinity House have lent many of them our incandescent burners for experimental purposes. I have lent the Engineer of the Canadian Lighthouse Authorities one of our burners. They wanted to experiment with it, and we lent them one of our burners, and they have decided to introduce the system into some of the lighthouses in Canada.

2104. Do you co-operate similarly with the Engineer of the United States Lighthouse Authority?—Not to that extent, Sir. They send us copies of their annual reports, and of anything we are doing, if they were to ask, we should supply them with full details.

Fog-signals: Different kinds of, in use.

2105. As to fog-signals, have considerable improvements been introduced into fog-signals of recent years?—Yes, Sir, we have recently been doing mainly with the siren. There are three forms of fog-signals we have in the service. There is first what we call the manual fog-signal, which is a small reed signal which I designed about 12 years since, to supersede what had hitherto been the fog-signal on small inside ships, viz., a gong, a small reed. The fog-signal sounds at a pressure of 2½ to 3 pounds, and it is generally serviceable for a range of about two miles. It has this advantage—that if a ship is standing-in to danger, or in close proximity, the man working the signal can keep it continually in action.

2106. That is worked with compressed air, I suppose?—Yes, Sir.

2107. Do you use explosive fog-signals?—Yes, Sir; but we do not use them if we can avoid it.

Explosive, unsatisfactory on account of cost.

2108. You do not regard them as very satisfactory?—Well, yes, Sir, they are to some extent very satisfactory, but they are very expensive indeed to maintain. In some cases we have had to put an explosive signal where it has been impossible, owing to the character of surrounding signals in that neighbourhood, to introduce anything but an explosive, because, of course, the most important thing is distinctiveness in character. To give you an illustration, Sir, at the present moment we have an explosive fog-signal at Flamborough Head, and it gives one explosion every five minutes, and that costs us to maintain in explosives about £500 a year, and we have had very strong petitions indeed from the owners of passing ships to shorten the period of silence.

2109. (*Sir Frank Adam.*) During fog?—Of course, it is only in action during fog. To bring it down to 2½ minutes would cost us £1,000 per annum.

2110. (*Mr. Ennis.*) From?—It is now every five minutes. We have now gone to the Board of Trade, instead of doing that, for their approval for establishing a siren that will cost us to establish about £4,500, and we shall be able to maintain it with the same staff as at the present establishment, and the annual upkeep of the siren would be, of course, very small indeed, merely the question of oil and stores, not more than about £100 a year, and we could also have the advantage of probably giving the mariner a signal of three or four seconds every half-minute, instead of every 2½ minutes.

2111. (*Chairman.*) Is the siren the most satisfactory signal you possess?—It is for important positions, Sir, but for less important positions we use reed signals.

Experiments with, at St. Catherine's.

2112. I think at one time a series of experiments was undertaken with a view to test the relative merits of sirens and reeds, was there not?—Yes, Sir, at St. Catherine's. The result of those experiments was that the siren fog-signal was pronounced as being the most efficient signal. Approximately speaking, the arc to be recorded by our signals is 180 to 200 degrees horizontal. Our old system was always to direct the mouth of the horn into the wind when a signal was in action, and it occurred to me we should get greater efficiency if we had two horns, each horn having its own siren, automatically connected, so that they should be driven at the same speed, producing exactly the same note, and from experiments we found that a horn would guard about 120 degrees, so that with the two horns we could cover an angle of 240 degrees.

2113. (*Mr. Ennis.*) One at either side?—They would be parted—120 degrees between the axes.

2114. And the interval between them in the direction of the wind?—They are fixed; we never move them at all; and the result of that has been that we found the arc was better guarded, and that is the system that we are working on. Lord Rayleigh agreed with that view, but he gave us a design for a new form of horn, and at the present moment our most approved signal, and the most efficient signal, is with the old form of Trinity House siren, which is five inches in diameter, and is worked at a pressure of 25 lbs. per square inch in Lord Rayleigh's horn—what we call the Rayleigh horn—and that type of signal we have recently established at Whitby and Nash, in the Bristol Channel, and we are now establishing at South Bishop and at Flatholm.

Rayleigh horn.

Areas of silence.

2115. (*Chairman.*) All forms of sirens have hitherto been liable to the defect of zones of silence, have they not?—That is so; but I do not think it is any fault whatever of the siren. That is due to some peculiarity of the district in which the signal is stationed. For instance, we had some experiments at the Skerries off Holyhead. Lord Rayleigh was with the Committee on that occasion, and the result was perfectly satisfactory, excepting that over a certain area we got this arc of silence. Well, we went into the matter very carefully, and we thought we would try and locate exactly the silent area. A day or two afterwards when we came to locate it, the silent area had all gone; the sound was as good there as anywhere else. We have been carrying out experiments with a siren on a lightvessel, and I remember on one occasion the order to the light vessel was that when the steamer was approaching, on a certain signal being hoisted, they would commence their experiments, and we went on. We were about five miles away, and we went on, and suddenly we lost the sound. I thought that something had gone wrong

on board, but when we were about half a mile from the ship we heard the signal as distinctly as possible. It had been sounding the whole time.

2116. You attribute that to local peculiarities?—Yes.

2117. Depending upon differences in the wind and temperature, and so forth?—Yes, Sir. We have been experimenting with signals at St. Catherine's, which we have carried twenty-one miles, and the next day we have carried the same signal two miles, and then lost it for a little, and then picked it up again, and then carried it for eight or ten miles; and perhaps the next day you would experience no sound shadow, and that is the effect you would have with whatever character of signal you are dealing with.

periments h sub- rine nals.

2118. Are you now experimenting with submarine sound signals?—Not at the present moment, but we have been making some experiments, and we have asked statutory sanction of the Board of Trade in next year's estimates for a sum with a view of introducing the system into several of our lightvessels.

2119. So far as they have gone have those experiments been successful?—I should say yes, Sir, most certainly.

2120. Submarine signals could never replace a siren unless all vessels were fitted to receive the signal?—I do not think you could possibly supersede land signals for this reason. At any shore station, it would be necessary to have a buoy or something lying off the station in the water. You could maintain the bell perfectly well with a lightship, but to maintain it from a rock lighthouse, or to maintain it from a place like the Lizard, it would be necessary that the bell be carried from a buoy, and the buoy would have to be connected with the shore by a cable.

2121. But over and above that difficulty would it be necessary for vessels to be specially equipped in order to receive the signal?—They must, Sir. I should not go so far as to say it would be very expensive to equip the receiving ship. There are merely two receivers which are fitted on either side of the ship, close to the skin of the hull, about five or six feet under the surface of the water in the full of the ship as much as possible, and then wires are taken from the receivers to the chart house, or any other place that you like, and attached to an ordinary telephone.

ain Cables:

2122. Have you any observations to make upon the manufacture of chain cables for lightvessels?—Well, Sir, we attach very great importance to that question. The chain cables of the service represent a contract of about £4,500 per annum, and it is let not by public competition, but by inviting selected firms. Our vessels are under a different condition to any other vessel that is moored by cable, because practically it does not so much matter to the other vessel in the case of parting the cable. They have their sails or steam to revert to, but our men have to stand by, and the whole thing depends upon the strength of your cable. What we do is this, Sir, we invite tenders from what we believe are the best firms in England and the Admiralty do practically the same thing, and their specification is almost identical with our own. But our test is different, and it is different in this sense, that we take three four-foot lengths from each three cables, and the samples are sent to our Blackwall workshops, where we have a proving machine of our own, and if the test does not come up to our contract requirements, which is 16 tons per square inch on each side of the link, and the quality of the iron is 23 tons per square inch, we reject the three cables. The Admiralty take three links from each length (there are seven lengths to a cable), but if there is a fault what they do is they reject the single length from which the sample was taken and accept the other lengths.

lethod of sting,

2123. Yours is a stricter test than that which is required by the Admiralty?—Well, why we have done it is this: it is to secure as far as we possibly can the very best men in the factory, because you will readily see from what I have stated to you as being the case that the fine on the manufacturer is so heavy that if one man is better than another his tendency will be to put him on the Trinity work? Would you like me to give you the names of the firms?

2124. I think it is hardly necessary; you might tell us the number of firms who are invited to tender?—We go to four, and sometimes six. I can tell you the names, but I should not like them to be made public.

2125. I do not think it is necessary for us to ask for that?—No, Sir.

2126. Is there much difference between the tenders sent in by these different firms?—No, Sir, not much.

2127. They are all approximately the same?—Well, very nearly, Sir; very near indeed. It would be no use going to the smaller men, because they could not possibly fulfil our requirements, and it is of the utmost importance, I assure you, to do all that we possibly can. You see, it gives the men in the ships such confidence. Take the vessel, for instance, riding at the Seven Stones; it is of the utmost importance to do all that you can for the men to be quite satisfied.

2128. Does it often happen that the cables supplied fail to pass the tests?—No, Sir, I should not say it often happens; of course, we do have rejections. Under the present contract, curiously enough, we had our last test this month, and it has been most satisfactory, but still we have had during the three years several rejections.

Cases of parting of,

2129. (*Colonel Herbert.*) Have you ever had cases of failure of cables on ships?—Yes, we have had cases where vessels have parted.

2130. Have those been frequent?—No, Sir, we use all the precautions we possibly can—and we keep a man in the factory who inspects every link—still, the strength of the cable when you have finished with it and done your best is its weakest link, and that weakest link perhaps has merely passed the Board of Trade test, because, as you are probably aware, all the cables have to pass through the Board of Trade machine; and the tests, of which I have been speaking to you, made by ourselves, with our own machines, are done after the Board of Trade have passed them.

2131. (*Chairman.*) Where the cables have actually failed in use, has that been through some defect in the cable or because the cable itself was not strong enough?—A defect in the cable, Sir.

2132. It was a defect in the cable?—We have succeeded in most cases in obtaining the defective link; perhaps it came up with the end of the chain, Sir, and it invariably would be in the well.

2133. Have these failures caused disasters?—Only in one case, Sir, since I have been in the service, and that was a vessel off the Selker, near Whitehaven.

2134. Did the cable part in a storm on that occasion?—Yes, Sir, and the vessel came ashore on the sands close at Selker. Every case is submitted and reported on to the Board, and we could give you a return if you wish it, but I should think that it would be of not more than a dozen cases during my recollection.

2135. In which cables have parted?—Where cables have parted, and the case of which I told you is the only time, I think, on which a vessel has gone ashore.

2136. What happened in the other cases?—Of course, they are all fitted with stand-by anchors, Sir. They would slip their stand-by anchor, and sometimes what really has happened is this, that the chain itself has brought the ship up. Supposing it is an outlying ship, and the weather is such that you could not see the land, he would not know that she had parted until night time, when he could see his lights.

2137. Were lives lost in the disaster at Whitehaven?—No, Sir.

Blackwall Workshops:

2138. Will you tell us what work is carried on at the engineering workshops at Blackwall?—The engineering workshops at Blackwall are generally occupied in the maintenance of the service as much as possible. The main object of the shops is to have a staff of mechanics who are available for the upkeep of the service—that is having men at our disposal for going to the stations in the event of any breakdown of machinery or in connection with the fog-signals or the lights. And then, again, you are aware that we have a staff of steam vessels in the service, and at the shops we keep men to act as engineers in case of sickness or in the case of leave of the engineers of the vessels, and we repair the machinery of the vessels in the vicinity of London. At the present time we have the "Satellite," at the Blackwall workshop—that is the vessel from Harwich.

Work done at,

2139. Are you satisfied that you can execute all these repairs at less cost at Blackwall than they would involve if they were done by private firms?—I am, Sir. We do not do any new works at Blackwall that I can possibly avoid, excepting, of course, I am compelled to have a certain amount of work there to keep the men

Mr. T. Matthews.

5 Dec. 1906.

employed when they return from the out-stations. Our average number of men at Blackwall is about 150. Sometimes we have over 30 men out, and that they will come home, and, of course, when they come home you must have a certain amount of work in the shops to keep them employed. The new work in connection with the Smalls we are doing at Blackwall, with the exception of the dioptric apparatus, because it is not a straightforward work in which you can make detailed drawings and specification and get tenders.

2140. You mean that your object is to keep the number of men in employment as steady as possible, and there are occasions, therefore, when you are obliged to put them to work which you would not execute at all otherwise, or which you would execute in other ways?—It would be executed in other ways.

2141. Notwithstanding that difficulty, you are convinced that the works at Blackwall effect an economy in the service?—I do not see how we could carry on the service without them.
